● Mr. LAUTENBERG. Mr. President, I rise to pay tribute to Thomas J. Stanton, Jr. who is being honored on February 8, 1990, by the Hudson County Chamber of Commerce and Industry.

After 36 years in the banking industry, Tom is retiring on February 1, 1990. Now chairman emeritus, the former chief executive officer of the National Westminster Bank NJ of Jersey City can look back with pride at his illustrious career.

It is a career that has been distinguished as much by Tom's contributions to civic affairs, as by his contributions to banking and business. Tom has given of his time and applied his considerable skills and energy, in making New Jersey a better place to live and work. He's helped build pride in the State, as he's helped to chart a brighter future for its residents.

He has dedicated his time and energy to civic affairs, forging public-private partnerships, helping to chart a better future for our State. As New Jersey chairman of the Regional Plan Association and now vice chairman, he has worked to promote balanced economic growth in our region.

He has given of his time to improve the education and training of New Jersey youth. He is on the board of regents of St. Peter's College, and is a trustee of St. Peter's Prep and the Stevens Institute of Technology. He is also a trustee and treasurer of the foundation of the University of Medicine and Dentistry of New Jersey. Past chairman of the Annual Business Conference at Rutgers University, he served as a member of the Commission on the Future of Independent Higher Education in New Jersey. He has been a moving force in establishment of a State science museum in Liberty State Park. Active in the National Alliance of Business, which is involved in developing programs to train and retrain workers, Tom served as its regional chairman.

Tom has contributed his time and efforts to State and local government reform. He is chairman of the Hudson County Tax Research Council Executive Committee and served as chairman of the State of New Jersey Commission on Budget Priorities. He is a member of the State of New Jersey Commission on Government Costs and Tax Policy.

Tom's love for the State has lasted a lifetime. He grew up in New Jersey. He went to school and graduated from St. Peter's Prep in Jersey City and received his bachelor's degree from Georgetown University. He attended New York University Graduate School of Business Administration. He has received honorary doctorates from St. Peter's College, Jersey City State College, and Stevens Institute of Technology.

Tom began his career in banking in 1954 at First Jersey National Bank. He rose steadily through the ranks and was elected president in June 1967, and named chief executive officer in December 1967. In October 1975 he was elected chairman and continued as chief executive officer.

In February 1988 National Westminster Bank acquired First Jersey National Bank and it became National Westminster Bank NJ. In September 1988 Tom announced his February 1990 retirement and was elected chairman emeritus.

Under Tom's guidance, the bank grew to be the fourth largest in New Jersey with assets of approximately $6 billion. Starting with the acquisition of the Bank of Commerce of Newark, a total of 14 mergers through the years made First Jersey a statewide institution. It operates 160 branches in New Jersey.

Not just a banker, but a visionary, Tom worked hard over the years to help change the image of Jersey City and Hudson County, NJ. He helped pioneer the development of the Jersey City waterfront. He was instrumental in the construction of a 30-story building on the Hudson County waterfront which now houses the executive offices of the bank.

Active in business and the community, Tom will continue to play a role through his directorships which include the Hudson County Chamber of Commerce and Industry, New Jersey Bell Telephone Co., the Reliance Insurance Group, and the National Conference of Christians and Jews. He is also completing a term as a director of the American Bankers Association and is director and treasurer of the New Jersey State Chamber of Commerce.

Mr. President, I am proud to have known Tom as a friend, a neighbor and a fellow businessman, and as a partner in our common effort to make New Jersey a better place to work and live.

I join the Hudson County Chamber of Commerce and Industry in saluting Tom, and extend to him my warmest wishes for his continued good health, happiness, and success in the future.●

TRIBUTE TO COL. GEORGE HENNRIKUS, JR., USAF-RETIRED

● Mr. McCAIN. Mr. President, I rise today to offer tribute to Col. George Hennrikus, Jr., who at the end of the month retires from his posts as director of legislative affairs for the Retired Officers Association, chairman of the Military Coalition and cochairman of the Coalition for Affordable Health Care. This is not the first time Colonel Hennrikus has retired, as 16 years ago he concluded an Air Force career that spanned three decades and saw him serve his country in three different conflicts. But not unlike the last time he retired, I do not think this signals an end to his service to his fellow man—rather, just another transition.

It is often said that the measure of leadership is not limited to an individual's singular accomplishments, but extends more broadly to the impact the individual has on the environment in which he works and to those around him. For the past 16 years, as director of legislative affairs for the Retired Officers Association, Colonel Hennrikus has been, in every sense of the word, a leader. As spokesman for the association, he has been a powerful voice on issues involving the health and well-being of all members of the uniformed services—Active, Reserve and retired—plus their families and survivors.

As reported by the military community, some of Colonel Hennrikus' more notable accomplishments were in his role as chairman of the military coalition. Through his leadership, some 22 military affiliated organizations, with over 1½ million Active, Reserve, and retired members, have been melded into a powerful voice for issues regarding military issues on Capitol Hill. The following are among the legislative issues in which Colonel Hennrikus played a key role: Modification of the Gramm-Rudman-Hollings Budget Deficit Reduction Act to ensure that equitable treatment of cost-of-living adjustments be provided for all retirees; preservation of the military retirement system as the services' most important retention tool; thwarting countless attempts to diminish commissary benefits; and advocacy of enhancing medical readiness which concurrently honoring previous commitments to provide quality health care to military beneficiaries. I am sure that there are countless individuals within the Active, Reserve, and retired military community who owe a debt of gratitude to Colonel Hennrikus for his many years of service on their behalf.

In my opinion, however, his greatest test of leadership came in the role that he played in the effort to reform the Medicare Catastrophic Coverage Act. I for one, am greatly indebted to Colonel Hennrikus for the support and counsel he provided me throughout this debate, in his capacity as cochairman of the Coalition for Affordable Health Care. Colonel Hennrikus helped form this coalition, including 49 organizations representing some 19 million members, which was truly a dominant force in the debate to overturn the surtax imposed by this act. I am hopeful that the coalition will continue its active role in health care issues, in spite of Colonel Hennrikus' retirement.

In closing, I would just like to again congratulate Colonel Hennrikus on this, the eve of his retirement from the posts of director of legislative affairs for the Retired Officers Association, chairman of the Military Coalition and cochairman of the Coalition for Affordable Health Care. I would like to thank him for the wise counsel he has provided all of us on issues that are of concern to Active, Reserve, and retired military personnel alike. I am sure I speak for many of my colleagues in wishing him well in his retirement, and in saying that while George may be officially retiring we know this does not signal the end of his service on behalf of his country and his fellow man.

George, we wish you well. And, I thank you for the pleasure of being able to work with you these past couple of years on issues of importance to Active, Reserve, and retired military personnel and their dependents and survivors.●

TRANSPORTATION EMPLOYEE TESTING ACT

● Mr. HOLLINGS. Mr. President, in August of last year, Senator LEVIN of Michigan notified my office that he wished to be a cosponsor of S. 561, the Transportation Employee Testing Act. However, his name was inadvertently left off the cosponsorship list. That legislation has since passed the Senate, but I wanted to take this opportunity to make clear in the RECORD that Senator LEVIN wished to be listed as a cosponsor of it prior to its passage by the Senate.●

HONORING MR. ROBERT W. GRAHAM

● Mr. GORTON. Mr. President, on January 5 of this otherwise promising new decade, I lost an honored friend, as did our country and my home State of Washington. On that day Robert W. Graham died, leaving a legacy of accomplishments that will serve his memory well. Let me mention just a few of those accomplishments.

In 1985, Bob received the National Jewish Fund Distinguished Service Award, and was named "First Citizen" of 1986 by the Seattle-King County Board of Realtors. In 1986, Secretary of Defense Caspar Weinberger selected him to serve as a negotiator in the mutual and balanced force reduction talks in Vienna, Austria. Bob also served as a national officer for the U.S. Jaycees, and a national board member of the American Cancer Society. On the local level, he either directed or served on the boards of United Good Neighbors, the Seattle Symphony, Swedish Hospital and the Downtown Seattle Development Association. He was cofounder of the World Affairs Council of Seattle.

Bob Graham was truly a man for all seasons: accomplished attorney, respected civil leader, international negotiator, world-class athlete, devoted husband and father. And he was my friend. He was the first to welcome me to Seattle when I moved there as a young lawyer. His advice as I sought my first legal position was invaluable, as was the counsel I continued to seek over the years.

As a friend, I will miss Bob. As an American, I know that he is irreplaceable. I extend my sympathies to his wife, Margaret; to his children, Robert, Douglas, Priscilla, Scott, and Laura; and to us all. Mr. President, I honor today a man whose life enriched the lives not only of those who knew him, but also of those who never knew him. He was a good and honorable man, and he will be missed.

As a final tribute to Robert W. Graham, I ask that the Seattle Times front page announcement of his death be printed in the RECORD, to stand as a permanent testimony to the life of an outstanding American.

The announcement follows:

[From the Seattle Times, Jan. 6. 1990]

CIVIC, NATIONAL LEADER ROBERT W. GRAHAM DIES

(By Stephen Clutter)

Robert W. Graham, a Seattle attorney and civic leader and a U.S. representative in arms talks, died yesterday after a long illness. He was 74.

In the twilight of his career, Graham had become a globetrotter, representing the U.S. in negotiations with the Warsaw Pact to reduce conventional arms.

But his first love was Seattle, where he staked his claim in 1939 and rose through civic and social ranks to become one of the city's most influential citizens.

After he went to work for the law firm of Bogle & Gates, local newspaper articles about Graham began detailing his accomplishments with civic and charitable groups.

At age 29, he was chosen Seattle's Junior First Citizen in 1944, and a Newsmaker of Tomorrow by Time magazine in 1953. He was president of the Seattle Chamber of Commerce, Downtown Seattle Rotary, head of the Whitman College board of trustees, a Seattle school levy campaign chairman and an inspector for the State Department.

In 1968, he was appointed by President Lyndon Johnson to the National Administrative Conference, a group that analyzes federal bureaucracies. In 1970, he was named to the State Department task force looking into embassy operations in the Far East.

In 1985, Graham received the National Jewish Fund Distinguished Service Award,

and was named "First Citizen" of 1986 by the Seattle-King County Board of Realtors.

Graham was a national vice president for the U.S. Jaycees and a national board member of the American Cancer Society. He also directed or served on the board of United Good Neighbors, the Seattle Symphony, Swedish Hospital and the Downtown Seattle Development Association, and was co-founder of the World Affairs Council of Seattle.

In 1986, a year after retiring as a senior partner with 46 years at Bogle & Gates, Graham was selected by then-Secretary of Defense Caspar Weinberger to travel to Vienna, Austria to serve as a negotiator in the Mutual and Balanced Force Reduction talks.

He left Vienna in November 1986 after being diagnosed with thyroid cancer, said his son, Scott Graham.

"He was proud of his work in Vienna, but he was very committed to Seattle," Scott Graham said. "This city was his real love."

As an attorney, his principal clients included the Port of Seattle, the Bechtel Corp. and Alyeska Pipeline.

In politics, he served for a time as co-chairman of the Washington state Republican Finance Committee and as steering committee member for the Washington State International Trade Center. Graham was co-chairman of former Sen. Dan Evans' bid for the Senate in 1983.

Born in Payette, Idaho, Graham graduated in 1936 from Whitman College, where he earned honors on and off the field.

Graham, a student body president and valedictorian, lettered in four sports and still holds records at Whitman in the 220-yard and 100-yard dash. He went to the U.S. Olympic trials in 1936, but suffered a leg injury and was not able to travel to Berlin.

Graham moved to Seattle after receiving his law degree in 1939 from Columbia University.

He is survived by his wife, Margaret Jane Graham, and five children: Robert Graham Jr., Seattle; Douglas Graham, Issaquah; Priscilla Wycoff, Prosser, Benton County; Scott Graham, Seattle, and Laura R. Graham, of Austin, Texas.

The family suggests remembrances to Whitman College or Rotary Service Foundation. Funeral arrangements are pending.●

ORDERS FOR TUESDAY

RECESS UNTIL 9:30 A.M. TOMORROW; ORDER FOR MORNING BUSINESS

Mr. MITCHELL. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 9:30 a.m., Tuesday, January 30, and that following the time for the two leaders there be a period for morning business until 10 a.m. with Senators permitted to speak therein for up to 5 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS BETWEEN 12:30 P.M. AND 2:15 P.M.

Mr. MITCHELL. Mr. President, I further ask unanimous consent that on tomorrow the Senate stand in recess from 12:30 p.m. to 2:15 p.m. in order to accommodate the party conferences.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS UNTIL 9:30 A.M. TOMORROW

Mr. MITCHELL. Mr. President, if no other Senator is seeking recognition, and I know of none who now seeks recognition, I ask unanimous consent that the Senate stand in recess under the previous order until 9:30 a.m. Tuesday, January 30.

There being no objection, the Senate, at 4:48 p.m., recessed until Tuesday, January 30, 1990, at 9:30 a.m.

NOMINATIONS

Executive nomination received by the Senate after the recess of the Senate on January 25, 1990, under authority of the order of the Senate of January 3, 1989:

DEPARTMENT OF JUSTICE

JOHN R. DUNNE, OF NEW YORK, TO BE AN ASSISTANT ATTORNEY GENERAL, VICE WILLIAM BRADFORD REYNOLDS, RESIGNED.

Executive nominations received by the Senate January 29, 1990:

DEPARTMENT OF JUSTICE

RICHARD J. HANKINSON, OF VIRGINIA, TO BE INSPECTOR GENERAL, DEPARTMENT OF JUSTICE (NEW POSITION)—PUBLIC LAW 100-504).

WITHDRAWAL

Executive message received January 25, 1990, after the recess of the Senate withdrawing from further Senate consideration the following nomination:

DEPARTMENT OF JUSTICE

WILLIAM LUCAS, OF MICHIGAN, TO BE AN ASSISTANT ATTORNEY GENERAL, VICE WILLIAM BRADFORD REYNOLDS, RESIGNED, WHICH WAS SENT TO THE SENATE ON MAY 1, 1989.

EXTENSIONS OF REMARKS

A TRIBUTE TO MAXINE BRITT

HON. WALTER B. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1990

Mr. JONES of North Carolina. Mr. Speaker, the citizens of the United States have just witnessed the closing of a decade which will long be remembered in history. Millions of people who had long suffered from repressive regimes have toppled those regimes in their quest for freedom and democracy. Take, for example, the Berlin Wall which is now crumbling to the ground. The people of East Germany have removed the wall which signified a barrier to freedoms and choices that we as Americans enjoy everyday. We, who have benefited from the longest lasting constitutional democracy in history, should rejoice in the overthrow of those tyrannical governments and in the recognition by their citizens of the importance of the principles and values of free government we have cherished so long.

We must wish the people of these nations well in the difficult tasks that lie ahead. And, we must do everything we can to insure the success of their endeavors to establish governments based upon the principles of constitutional democracy.

At the same time, we must not neglect to pass on to our own youth the understanding of the fundamental principles and values of our democratic institutions that leads to a reasoned commitment to their preservation and improvement. In this regard, I am most pleased to commend the efforts of district coordinator, Maxine Britt, educational leader in my congressional district, whose dedication to the improvement of the civic education of our students has been exemplary. Maxine Britt coordinates the We the People—Bicentennial Programs on the Constitution and the Bill of Rights, which includes the National Bicentennial Competition, its noncompetitive companion program, Congress and the Constitution, and the National Historical Pictorial Map Contest in my congressional district.

Through the dedicated and voluntary efforts of Maxine Britt, thousands of upper elementary, middle, and high school students have studied the program's curriculum. This curriculum, incorporated in the We the People text, introduces students to the philosophical ideas of our Founders, the historical background of the Philadelphia Convention, and the issues and debates that shaped the writing of our Constitution. Students learn how our Government is organized and how it protects the rights and liberties of all citizens. Finally, and most importantly, students learn of the responsibilities which accompany the rights of citizenship in a democracy.

It is ironic that while those who have experienced repressive regimes throughout the world are clamoring for the right to vote in free elections, in the United States, only one out of five eligible voters under the age of 30 takes advantage of that very right. With so few young people understanding the purpose and importance of our Constitution, it is clear that we must do all we can to turn the tide of political apathy into a wave of active and informed participatioin. I am pleased to express my admiration and appreciation to Maxine Britt for her impressive contributions to the development of competent and responsible citizenship.

PRISON CROWDING

HON. NEWT GINGRICH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1990

Mr. GINGRICH. Mr. Speaker, Dick Williams wrote this editorial for the Atlanta Journal last December 19. I urge all my colleagues to read it and realize that Congress must begin to take the necessary steps to address the problem of prison crowding.

[From the Atlanta Journal and Constitution, Dec. 19, 1989]

CONGRESS HAS THE POWER TO EASE PRISON CROWDING

(By Dick Williams)

When Atlanta police find the killer of JoAnne Hanmaker, the odds are good the accused will be a repeat offender.

Sadly, it's almost an even bet these days that the person who beat the Candler Park resident will be a former Georgia prison inmate who served something much less than his sentence.

He (not likely to be she) will have been freed on the old earned-time system or been turned loose through one of the various programs to relieve prison overcrowding.

The career criminal owns our cities, making paint-up, fix-up neighborhoods like Candler Park and Little Five Points inhospitable to families with children and the provinces of large dogs, shrieking security systems and loaded guns.

We often shake our heads in frustration. Georgia is building prison beds by the thousands, yet the projections show the system will be overwhelmed again by the middle of the next decade.

Even bedrock conservatives like Gov. Frank Harris start to mumble about alternative sentences, electronic parole schemes that only Isaac Asimov could love and how dollars for education can mean less spending for prisons.

Liberals, of course, concentrate on the latter, with an emphasis on gun control and dollars for social services (Ms. Hanmaker wasn't shot; she was bludgeoned and strangled).

The supply-side economist and former Reagan treasury official, Paul Craig Roberts, focused earlier this year on the absurdity of Georgia's dilemma.

He wrote of the high-sounding programs of furlough and rehabilitation that allow politicians to buy votes with special-interest spending. As legislators look for ways to duck the high cost of prison-building and inmate support, they ignore fact.

The average criminal loose on the streets costs society $430,000 a year, according to the U.S. Justice Department.

Georgia is turning loose felons under constant threat of federal court intervention in the state prison system. The chief advocate for inmates' comfort is Georgia Legal Services Inc., which receives virtually all of its funds from Washington and the state government.

The felons turned loose, says the Department of Corrections, are not Good Neighbor Sam. A state study predicts with authority that 41 percent will be back in the slam within two years. Many Anne Hanmakers and Julie Loves meet them in the middle.

The best solution to problems of government resides in those closest to the problem. County jails should be expanded and state prisons built. The state should be looking for work-camp settings that meet federal court guidelines and are less costly than today's comfort-laden prisons.

But it is apparent state and local resources are inadequate. In the case of crime and punishment, Washington can play a role. And not just by grandstanding.

A Heritage Foundation study last month described a nation in the midst of a national crime emergency, with reported crime rising 24 percent in the last 10 years.

"Instead of passively allowing the courts to shift the burden from prisons back to the streets," said the study, "lawmakers need to take decisive action to provide more prison space as quickly and economically as possible."

The foundation recommends that Congress step in to curb the federal courts. A law requiring strict standards would limit the discretion of judges in ordering releases simply because of prison overcrowding.

The notion of Rep. Newt Gingrich, the Georgia Republican, that federal surplus lands can provide prison sites comes in for special mention. With the coming reduction in the defense budget, barracks, brigs and other facilities will be available for use as minimum security prisons.

Few today would advocate a return to the chain-gangs of old, but tents, Quonset huts and barbed wire can help a national prison system whose inmate population has almost doubled in 10 years.

Federal courts move to ease prison overcrowding on the grounds that too often it represents cruel and unusual punishment. But the combination of plea-bargaining and early releases make a mockery of justice.

Congress has legitimate reason to rein in the courts.

ATTLEBORO, MA, COMMEMORATES MARTIN LUTHER KING BIRTHDAY

HON. BARNEY FRANK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1990

Mr. FRANK. Mr. Speaker, on Martin Luther King Day there were, fittingly, commemorative ceremonies in many parts of this country. I was privileged to attend a very impressive ceremony in Attleboro, MA, where a committee headed by Robert Brown took the lead in giving the citizens of the Greater Attleboro Area a chance to demonstrate their recognition of the important work of Martin Luther King, Jr. With the racial tensions that continue to rack the world, it is particularly fitting that we pay tribute to Martin Luther King, Jr., and even more important that we spread his message that all of us have an obligation to combat racial bigotry and hatred. Mr. Speaker, Attleboro is not a city with a large black population, but it is a city in which the residents, black and white, understand the importance of combating racism and as an example of that, I ask that the following excerpts from the Attleboro Martin Luther King, Jr., Holiday Program be printed here.

MARTIN LUTHER KING, JR., HOLIDAY PROGRAM, ATTLEBORO CITY HALL

Assembly—Town Crier, Lawrence Fitton.
Opening Prayer, Rev. Dr. John Knight.
Proclamation, Mayor Kai Shang.
Reading, "Making The Dream Come True," by Mr. Robert Brown, Robert Brown.
Martin Luther King Jr. Holiday, Planning Committee, Glady's Durant, chair of committee.
Speaker, Rep. Stehen Karol, Massachusetts Representative.
Speaker, Rep. Barney Frank, U.S. Representative.
Invitation to all: Join the March from City Hall to the Second Congregational Church.
Benediction, Rev. Dr. John Knight.

DR. MARTIN LUTHER KING, JR., HOLIDAY PLANNING COMMITTEE

Robert Brown Jr., Providence, R.I.
Edna Cason, Attleboro, Ma.
Gladys Durant, Norton, Ma.
Lawrence Fitton, Attleboro, Ma.
Rachel Garvin, Norton, Ma.
Rev. Arlene Hambrick, Attleboro, Ma.
Hazel Knight, North Attleboro, Ma.
Rev. Dr. John Knight, North Attleboro, Ma.
Rev. Theodore Lockhart, Attleboro, Ma.
Judith Robbins, Attleboro, Ma.
Gloria Wyatt, Norton, Ma.

PROCLAMATION

(By Mayor Shang)

Whereas, Martin Luther King Jr. born in Atlanta Georgia in 1929, later following in his family footsteps entered into the Southern Negro Ministry; and

Whereas, Martin Luther King Jr. became a crusader for the Civil Rights movement in the late 50's and 60's. In his crusade, he used his fresh voice and image to turn local conflict into moral issue of National concern; and

Whereas, King lectured in all parts of the Country, discussed problems of blacks with civil rights and religious leaders at home and abroad, visited Ghana and India and conferred with heads of State. King was convinced that nonviolent resistance was the most potent weapon available to oppressed people in their struggle for freedom; and

Whereas, King realized World-Wide acclaim when he won the Nobel Prize for Peace in 1964 for his application of the Principles of Nonviolent resistance, patterned after Mahatma Gandhi, in the struggle for racial equality in America; and

Whereas, An assassin's bullet ended King's life on April 4, 1968. But, this did not end the struggle for equality of man. His famous speech "I Have A Dream" will live on in the hearts and souls of all oppressed people.

Now, therefore, I Kai Shang, Mayor of the City of Attleboro do hereby proclaim Monday, January 15, 1990 as a holiday celebrating the birth of Martin Luther King Jr. and urge all citizens of this City to pause a moment in honor of Martin Luther King Jr.

KAI SHANG,
Mayor.

MAKING THE DREAM COME TRUE

(By Robert Brown, Jr.)

Making the dream come true.
It is easy to take a part
All it takes to cross the bridge
Is to open up your heart.

The road to understanding
Is just the extension of your hand.
A symbol of respect and courtesy
Known throughout the land.

"We shall overcome",
Together let's make it true
The world can be a lovely place
It's up to me and you.

Many doors have been opened
Yet many are still closed.
We could let it stay this way
Or change it, I suppose.

Together we can live in peace.
It is up to me and you.
Let's walk together hand in hand
And make the dream come true.

STATEMENT

(By Gladys Durant)

I am Gladys Durant the chairperson of Dr. Martin Luther King Holiday Planning Committee.

We are happy to be here at City Hall once again. This is our fourth year at city hall and we would like to thank Mayor Shang, who will go down in history as the mayor who started the proceedings at Attleboro City Hall back in 1987. We can look back and see how it has grown. I would like to introduce members of the committee who are here. Some are probably at the church. I'll ask them to stand as I call their names. Rachel Garvin, Gloria Wyatt, Edna Cason, Bob Brown, Larry Fitton, Rev. John Knight, Judith Robbins. Thank you very much.

REMARKS BY REPRESENTATIVE STEPHEN KAROL

It's really a privilege to join with all of you today in celebrating the memory of Dr. Martin Luther King and celebrating his life and everything that wonderful life stood for, for all of us in this city, commonwealth and throughout the nation. I mentioned to someone at the state house on Friday when they were talking about a long weekend said are you going away? I said, "no, I have to attend a function in Attleboro on Monday". They said, "what is it"? I said, "it's a Martin Luther King Day Memorial Celebration at City Hall and the Second Congregation Church." They said, "God, there are virtually no blacks in Attleboro." You know it's true but doesn't that really miss the message of Martin Luther King and everything that Martin Luther King stood for?

Martin Luther King will go down in the annals of this nation's history as one of the giants of the Twentieth Century who led the struggle for freedom and for civil rights for black Americans. But, in a very real sense, his was a struggle for all Americans and for all people throughout the world. You know, it's fitting that we gather at this, our new city hall, on the edge of Attleboro's East side because the East side throughout history is in many ways the epitome of the struggle of Martin Luther King and that for which he stood. This is the neighborhood in our community to which generation after generation of immigrants came to Attleboro . . . from Irish Americans who went to look for work in the stores and shops of Attleboro and saw signs that said, "No Irish Need Apply," to French Canadians who came from Quebec or Montreal to work in factories for slave wages under conditions that today we cannot comprehend . . . in terms of their severity to the human beings who were there.

In more recent years it has become home to Hispanic and to the largest South East Asian Community in Southeastern Massachusetts . . . a people who today continue to engage themselves in the struggle for which Martin Luther King gave his life. Not just a struggle for racial equality, for certainly that's a major part, but also a struggle for justice and economic equality and for reaffirmation of the American Dream and the basic foundation upon which this nation was founded in the Declaration of Independence and the Constitution. And while the struggle continues it must be reaffirmed every day by every person in this room and every one of our fellow citizens. You can see the tremendous contribution that Dr. King made to us all.

So here today while we commemorate and celebrate the life of Martin Luther King, his struggle, his battle, the giving of his life for black Americans, he really gave his life for everyone who has ever suffered, everyone who has felt the pain of injustice, everyone who has tried to make a better life for themselves and for their families.

I would like to present a proclamation to Bob Brown in recognition of all the work he and the committee have done to put this ceremony together and to insure that all of us never forget Martin Luther King's dream and all he stood for. Thank you very much.

HONORING COMMISSIONER AND MRS. STANLEY DITMER

HON. GARY L. ACKERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1990

Mr. ACKERMAN. Mr. Speaker, I rise today to pay tribute to a couple who have distinguished themselves in their service to others. Commissioner Stanley and Mrs. Catherine Ditmer will announce their retirement from the Salvation Army in a ceremony on February 2 at the Centennial Memorial Temple in Mid-

town Manhattan where they will be presented with a certificate of retirement by the national commander of the Salvation Army.

Stanley and Catherine have devoted the better part of their lives to the Salvation Army and in that time they have served in some of the highest positions the Salvation Army has to offer. Stanley has diligently climbed the ladder of responsibility from secretary responsible for administration of groups in the eastern territory to his present position as territorial commander for all Salvation Army operations in the eastern territory.

Catherine has also served in leadership positions through the years and at present is president of women's organizations in the eastern territory. In this capacity she is responsible for organizing all women's activities in the Home League, the army's main program for women; the League of Mercy, the army's visitation program to institutions; and the women's auxiliaries.

Over the last two decades the Salvation Army has been fortunate to be the recipient of Stanley's many talents. Stanley has earned wide respect for his work as a musician, composer, well-known author, poet, and speaker. It is in the area of composition that Stanley has received the greatest recognition. His music and songs have been published in Salvation Army songbooks that have been distributed worldwide. One of his songs "I'm in His Hands" has been published in the new Salvation Army International Song Book. As commissioner, Stanley also had the enormous responsibility 4 years ago of joining with 45 other commissioners in London to elect the general of the Salvation Army.

Although Stanley and Catherine have both served in responsible times consuming positions, they have still found time to raise four wonderful and successful children: Philip, a business administrator for an architectural firm in Glendale, CA; Stephen, a Salvation Army lieutenant working in Fall River, MA; Timothy, a director of trust bureau at territorial headquarters in New York; and Julie, a physical therapist with Gwinett Medical Center in Lawrenceville, GA.

Mr. Speaker, in an era when the old-fashioned ideals of helping others and building a family have appeared to have been rejected by so many, it is a pleasure to observe a couple that has accomplished these two tasks so ably. I ask my colleagues to join me today in thanking Stanley and Catherine for all their service to the Salvation Army and to communities throughout the Eastern United States, and to wish them the best of luck on their retirement.

COUNTDOWN TO EARTH DAY

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1990

Mr. MAZZOLI. Mr. Speaker, on January 23, I joined House and Senate colleagues and representatives of many environmental groups to commence countdown to Earth Day. 1990 will mark the 20th anniversary of Earth Day.

This anniversary comes at a timely moment in the Nation's environmental history. The 101st Congress will grapple in the present session with many environmental issues—notably, with clean air legislation. Though I am from a coal State, we need tough clean air legislation.

Back home, officials of the city of Louisville led by Mayor Jerry Abramson, Deputy Mayor, Joan Riehm, and Rudolph Davidson, director of solid waste management, are preparing a series of events to commemorate Earth Day, 1990.

My commemoration of Earth Day, 20 years later, will be to introduce legislation to deal with one of the most pressing environmental problems facing the United States today.

My legislation, which I am asking my colleagues to support, calls for a White House conference on solid waste reduction and disposal.

Despite the proliferation of seminars and meetings to discuss solid waste management, the only mechanism to develop the national focus and momentum to deal successfully with the problems of solid waste disposal is a White House conference.

In other words, the only way to give lowly and smelly garbage cachet respectability and fragrance is to carry it into the White House and place it on the President's desk.

I will keep my colleagues advised of developments, and I hope you will join me in this effort.

THE NAMING OF RICHARD R. GREEN JUNIOR HIGH SCHOOL

HON. ELIOT L. ENGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1990

Mr. ENGEL. Mr. Speaker, this week in my district, Olinville Junior High School 113 on Barnes Avenue is being renamed in honor of Richard R. Green, the late chancellor of the New York City school system. This is a most appropriate way to honor a man who dedicated his life to strengthening our educational institutions and improving the lives of the students who walk through our halls of learning each day.

Although he served only a short time as chancellor of the New York City school system, Dr. Green taught us all some valuable lessons—the most important of which is that the children always come first. Dr. Green was most comfortable around our young people and in our school buildings. He inspired students to do better and served as a positive role model. He was an educational leader who dared to take chances and cared enough to make a difference.

Dedication, honesty, and integrity—these are the types of values we want to instill in young men and women throughout the United States, and I know these are the types of values Richard R. Green Junior High School will promote.

I congratulate all of the Bronx residents who had the insight to honor Dr. Green in this way, including district 11 Superintendent Frank Arricale, Principal Joseph Powlis, and Voncile Oliver, the coordinator of the committee to rename the school. May your good work be a lasting tribute to the legacy of Dr. Richard Green.

COMBAT NOTHING NEW TO WOMEN

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1990

Mr. EDWARDS of California. Mr. Speaker, I submit for the RECORD an article entitled "Combat Nothing New to Women," which appeared in today's issue of Stars and Stripes. This article was written by Sarah McClendon, who is not only a distinguished reporter, but is also a World War II veteran herself. She states the case succinctly, and I highly commend her article to our colleagues.

[From the Stars and Stripes, Jan. 29, 1990]

COMBAT NOTHING NEW TO WOMEN

(By Sarah McClendon)

Panama was certainly not the first time U.S. women have been in combat although it would be difficult to prove who was the first and in which war. So why all the stew and fuss? This proves how ignorant the American people are about the roles women have played in the history of their country.

Women have participated in all our wars and shouldered guns and knives in battles with Indians and bandits. They were not considered too frail to share the trails westward. It is a matter of record that women picked up the ramrods and shot cannon in the Revolutionary War against the British and in at least one instance a woman distinguised herself and fought as a man.

They received pensions for this. The spouse of one woman received benefits from her service. There were numerous women on both sides in the Civil War as combatants. At times their gender was not known until they were killed or wounded. They sometimes went to war alongside their husbands. Women died from combatant fire on Anzio beachhead in Italy in WW II and in Vietnam. Many died in airplane crashes connected with war and a large number of nurses died from disease contracted from service overseas while 83 women were taken prisoner by the Japanese in World War II and one women was a prisoner of the Germans.

It is true that women had to fight their way into authorized service even though the men opposing such realized their need of them as nurses and doctors and as assistants replacing them in jobs so that more men could go to the front lines. Oveta Culp Hobby, newspaper executive and ace parliamentarian, brought in for duty in the women's section at the Pentagon, and the late Rep. Edith Nourse Rogers (R-MA), had a long struggle to get approved in 1942 their legislation authorizing the Women's Army Auxiliary Corps for women to serve in WW II.

Women at the beginning of WW II taught men how to fly planes and ferried planes from factory to sites where men could take the planes into combat. Perhaps the hardest lot of women who served in WW II were the Women's Army contingent sent to New Guinea. They slept in Navy hammocks at sea, climbed down the ladders from the ship to small boats for landing, went to bed in grass-floored huts with huge rats running

around and endured sniper fire from Japanese still at large in jungles nearby. Their job: To dispatch volumes of mail from soldiers to home folks.

It was not until the early 1900s that first the Army and then the Navy admitted women nurses to be an official part of service, then paid them little. They did not give them full rights until many years later.

All during these wars, civilian women were volunteering as pilots for the British, driving ambulances for the U.S. in France and occasionally getting killed without official recognition.

Gen. Pershing begged for women to come to Europe in WWI as telephone operators but they did not get their veterans' rights until 1977, when many of them were dead. Other women who had served in the Army, Navy or Marine Corps did not get full veterans' benefits until 1977. Many of the over 3 million women veterans today are unaware that they are entitled to hospitalization and treatment at veterans' hospitals so they pass it up. It is now too late for many who were entitled to such service.

Women were at times so desperately needed to augment the forces in WW II that the Army authorized multimillion dollar advertising programs on Madison Avenue to recruit more women. In the Vietnam War, commanders at headquarters asked for women to work behind the lines to release men for fighting but opponents at the Pentagon waited a long time before sending the women there.

It was in Europe between the wars many years ago that the Army decided it should teach women to fire guns so that they could defend themselves and possibly the men if sent up front with a truckload of food for troops who might be under attack.

It is true that the repeated studies conducted by the Military of where to place military women and how to train them have brought about as much confusion as sense. Women are now in what is called combat support units. That could mean they would have to go very close at times to the front lines. They could be under attack and could be killed. Most probably they will be. Who knows today where the front will be? There was no front or back line in Panama.

Women have duty assignments that are important and in dangerous places. Often they are in Army intelligence units which must go ahead of the front battalions. They must know how to repair their equipment on the ground. They are in military police companies assigned to evacuate German residents in case of bomb threats. They carry pistols.

Women have for years maintained the aircraft that flew in the Middle East and that monitored peace-keeping in the Sinai desert. Women died on the troop plane that crashed in Gander, Newfoundland. Women were put in charge of security and of protecting troops from sniper fire in Grenada. They interrogated the Cuban prisoners. They were required to carry rifles daily as they went about their duties.

Opponents of women serving in the military say they cannot lift as much as a man. Many men cannot lift heavy loads either. But women have learned to pull heavier loads, to run faster and to pull themselves up on bars much more now that they have been given a chance for physical development. Remember the U.S. government formerly provided money for gymnasiums for men only in schools and colleges.

Women do have children and are now allowed to stay in the service with them if they can arrange to have someone look after them while working. The same goes for male soldiers. It ought to be noted that there are more men single parents than women single parents in the services. Women report to duty more regularly, records show, with less signs of alcoholism, drugs and absences without leaves.

As a footnote, let me say that the author served in WW II as a public information officer, publicizing the military to get more women to serve. She served three years on the defense Advisory Committee on Women in the Military and for six years on the VA advisory committee on women. In 1985-86 she compiled a book on military women and their jobs and the policy that affected them.

(A publisher for this book is now being sought. But many publishers say they are not interested in the subject of military women. When a woman veteran of WW II asked her editor in Youngstown, Ohio, to print a story about a women's reunion of those who served in WW II, he declined, saying "No one is interested in that subject but you.")

TRIBUTE TO THE FRANKFORD GROUP MINISTRY

HON. ROBERT A. BORSKI

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1990

Mr. BORSKI. Mr. Speaker, I rise today in recognition of the outstanding contribution of the Frankford Group Ministry to its community.

Frankford is one of Philadelphia's oldest and most unique neighborhoods and has a rich history of cultural diversity and accomplishment. The Frankford Group Ministry, a coalition of area churches, donates its resources and leadership to a number of activities that preserve this diversity and strive for the improvement of the community.

Over the years, the ministry has been the guiding force behind important projects like the Frankford United Neighbors Community Development Corp., a program that stimulates job creation and economic development in the area. In appreciation and support of the cultural diversity of the community, the ministry has also initiated and donated valuable resources to the Frankford Human Relations Commission and the Frankford Style Community Workshops.

The Frankford Group Ministry has also focused and directed the efforts of area businesses, churches, and individuals to charitable causes. Because of this spirit of cooperation, more needy people in Philadelphia have received a wider range of services. The ministry has literally fed the hungry and provided assistance to the men, women, and children who desperately need it.

Mr. Speaker, more than a dozen outstanding individuals of the Frankford Group Ministry make tremendous contributions every day. But I would like to single out its executive director, the Reverend John Schol, for particular recognition. Reverend Schol's primary ministry has been to every segment of his community and has been a blessing to everyone who lives in, works in, or cares about Frankford and Philadelphia.

Because of the willingness of the pastoral leaders of the area to devote so much time and so many resources to the community, the Frankford Group Ministry has become a tremendous positive force for the betterment of Frankford. And for that, Mr. Speaker, I would like to thank them.

NATIONAL CRIME VICTIMS' RIGHTS WEEK

HON. GEORGE W. GEKAS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1990

Mr. GEKAS. Mr. Speaker, due to an unfortunate clerical error the names of six distinguished Members of this body were omitted from the list of original cosponsors to House Joint Resolution 464, "National Crime Victims' Rights Week." These Members requested and were intended to be named as original cosponsors of House Joint Resolution 464, "National Crime Victims' Rights Week," when the resolution was introduced on January 25, 1990. I apologize to my colleagues for this error. Herewith is the list of omitted names: Mr. CHUCK DOUGLAS of New Hampshire, Mr. JIM JONTZ of Indiana, Mr. JIM MCDERMOTT of Washington, Mr. MIKE PARKER of Mississippi, Mr. OWEN B. PICKETT of Virginia, and Ms. LOUISE MCINTOSH SLAUGHTER of New York.

TRIBUTE BY CHARLES B. RANGEL ON THE OCCASION OF CITY UNIVERSITY'S BARUCH COLLEGE COMMEMORATION OF BLACK HISTORY MONTH

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1990

Mr. RANGEL. Mr. Speaker, black Americans in politics, particularly those in Congress, have positively influenced public policy across decades of our history. Senator Hiram R. Revel of Mississippi was the first black American elected to Congress in 1870. Since then 65 African-American men and women have been elected to Congress to represent the interests of a broad and diverse constituency.

As we celebrate Black History Month, it is important that reflections on our past include recognition of those, like Revel, that have personified the best in the American political tradition and on those whose most recent mayoral and gubernatorial elections hold a promising vision for the future. The victories of Mayor David Dinkins in New York and Gov. Douglas Wilder in Virginia represent a new direction in American politics; a direction that transcends race; a direction that builds on the noteworthy traditions of the past and on our rich cultural heritage; one that inspires hope for all people as we confront the immense challenges before us.

Our response to these challenges will determine in large part the quality and content of this new and exciting chapter in American history.

Indeed, some of the most remarkable achievements in the history of this great Nation have been written in the blood, shaped by the sacrifice and molded by the effort and ability of black Americans.

It is therefore, appropriate and extremely important that all Americans support, as I do, Black History Month and all that it signifies.

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of the meetings, when scheduled, and any cancellations or changes in the meetings as they occur.

As an additional procedure along with the computerization of this information, the Office of the Senate Daily Digest will prepare this information for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD on Monday and Wednesday of each week.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Tuesday, January 30, 1990, may be found in the Daily Digest of today's RECORD.

MEETINGS SCHEDULED

JANUARY 31

10:00 a.m.
Banking, Housing, and Urban Affairs
To resume oversight hearings on the activities of the Resolution Trust Corporation (RTC).
SD-538

Budget
To hold hearings in preparation for reporting the first concurrent resolution on the fiscal year 1991 budget.
SD-608

10:30 a.m.
Governmental Affairs
To hold hearings on the nomination of George W. Haley, of Maryland, to be a Commissioner of the Postal Rate Commission.
SD-342

2:00 p.m.
Armed Services
Closed meeting to discuss the nomination of Victor Stello, Jr., of Maryland, to be Assistant Secretary of Energy for Defense Programs.
SR-222

FEBRUARY 1

8:30 a.m.
Veterans' Affairs
To hold hearings on the nomination of D'Wayne Gray, of Virginia, to be Chief Benefits Director, Department of Veterans Affairs.
SR-418

9:00 a.m.
Judiciary
Business meeting, to consider S. 438, to amend the Racketeer Influenced Corrupt Organizations Act (RICO—18 U.S. Code 96), and other legislative business.
SD-226

9:30 a.m.
Agriculture, Nutrition, and Forestry
Agricultural Production and Stabilization of Prices Subcommittee
To hold hearings on proposed legislation to strengthen and improve U.S. agricultural programs, focusing on the soybean industry.
SR-332

Banking, Housing, and Urban Affairs
Securities Subcommittee
To hold hearings on S. 647, to amend the Federal securities laws to revise the enforcement remedies for civil violations of those laws.
SD-538

10:00 a.m.
Armed Services
To hold hearings to review the amended authorization for fiscal year 1991 for the Department of Defense and the five year defense plan.
SH-216

Commerce, Science, and Transportation
To hold hearings on the nomination of William D. Hathaway, of Maine, to be a Federal Maritime Commissioner.
SR-253

Environment and Public Works
To hold hearings on S. 1076, to increase public understanding of the natural environment and to advance and develop environmental education and training.
SD-406

10:30 a.m.
Budget
To continue hearings in preparation for reporting the first concurrent resolution on the fiscal year 1991 budget.
SD-608

11:00 a.m.
Foreign Relations
To hold hearings on foreign policy priorities for the 1990's.
SD-419

2:00 p.m.
Select on Intelligence
To hold closed hearings on intelligence matters.
SH-219

FEBRUARY 2

9:00 a.m.
Armed Services
To resume hearings on the implications of changes in the Soviet Union and Eastern Europe for Western security.
SH-216

9:30 a.m.
Joint Economic
To hold hearings on the employment-unemployment situation for January.
SD-106

10:00 a.m.
Appropriations
Labor, Health and Human Services, Education Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Education, focusing on the Office of the Secretary of Education and Special Institutions.
SD-192

Finance
Medicare and Long-Term Care Subcommittee
To hold hearings to examine issues relating to Medigap insurance policies.
SD-215

Judiciary
To resume hearings on the national drug control strategy program.
SD-226

10:30 a.m.
Joint Economic
To resume hearings to examine the economic outlook for 1990.
SD-106

1:30 p.m.
Appropriations
Labor, Health and Human Services, Education Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Education, focusing on the Offices of the Assistant Secretaries of Education and the Office of the Inspector General.
SD-192

FEBRUARY 5

10:00 a.m.
Budget
To resume hearings in preparation for reporting the first concurrent resolution on the fiscal year 1991 budget.
SD-608

Energy and Natural Resources
To hold hearings on the nominations of John Wesley Bartlett, of Massachusetts, to be Director of the Office of Civilian Radioactive Waste Management, and Robert H. Gentile, of Ohio, to be an Assistant Secretary of Energy for Fossil Energy, both of the Department of Energy.
SD-366

2:00 p.m.
Finance
To hold hearings on proposed legislation to reduce Social Security taxes.
SD-215

FEBRUARY 6

9:30 a.m.
Agriculture, Nutrition, and Forestry
Agricultural Production and Stabilization of Prices Subcommittee
To hold hearings on proposed legislation to strengthen and improve U.S. agricultural programs, focusing on crop insurance.
SR-332

Commerce, Science, and Transportation
To hold hearings on the nomination of Edward J. Philbin, of California, to be a Member of the Interstate Commerce Commission.
SR-253

Energy and Natural Resources
Water and Power Subcommittee
To hold oversight hearings on S. 1554, to implement water rights settlements involving the Pyramid Paiute Tribe, the States of California and Nevada, and other parties with respect to the waters of the Truckee and Carson Rivers and Lake Tahoe in Nevada and California.
SD-366

Governmental Affairs
To hold hearings on S. 2006, to establish the Department of the Environment, and to provide for a global environmental policy of the United States.
SD-342

10:00 a.m.
Appropriations
Labor, Health and Human Services, Education Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Labor, focusing on the Office of the Secretary of Labor and the Office of Inspector General.
SD-138
Commerce, Science, and Transportation
Foreign Commerce and Tourism Subcommittee
To hold oversight hearings on chemical exports to Central and South America.
SR-253
2:00 p.m.
Agriculture, Nutrition, and Forestry
Domestic and Foreign Marketing and Product Promotion Subcommittee
To hold hearings on proposed legislation to strengthen and improve U.S. agricultural program, focusing on export and market development programs.
SR-332

FEBRUARY 7

9:00 a.m.
Armed Services
To hold hearings on the military strategy and operational requirements for NATO defense.
SR-222
9:30 a.m.
Agriculture, Nutrition, and Forestry
To hold hearings on proposed legislation to strengthen and improve U.S. agricultural programs.
SR-332
Commerce, Science, and Transportation
Communications Subcommittee
To hold hearings on S. 1643 and S. 1660, to provide protection to consumers in connection with telephone services.
SR-253
Governmental Affairs
To continue hearings on S. 2006, to establish the Department of the Environment, and to provide for a global environmental policy of the United States.
SD-342
10:00 a.m.
Appropriations
Labor, Health and Human Services, Education Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Health and Human Services, focusing on the Office of Civil Rights and Policy Research, the Family Support Administration, Human Development Services, and the Office of Inspector General.
SD-192
Appropriations
Treasury, Postal Service, General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Office of National Drug Control Policy.
SD-116
Foreign Relations
To hold hearings on United States policy toward China.
SD-419
10:30 a.m.
Commerce, Science, and Transportation
Consumer Subcommittee
To hold oversight hearings on the safety of child passengers.
SD-628
Finance
To resume hearings on the implementation of the Omnibus Trade and Competitiveness Act of 1988 (P.L. 100-418).
SD-215
1:15 p.m.
Appropriations
Labor, Health and Human Services, Education Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Health and Human Services, focusing on the Social Security Administration and the Health Care Financing Administration.
SD-192
2:00 p.m.
Energy and Natural Resources
Public Lands, National Parks and Forests Subcommittee
To hold hearings on provisions relating to fisheries protection and buffer zones (sec. 104(e)), and the designation of additional wilderness areas on the Tongass National Forest (title III), of H.R. 987, the Tongass Timber Reform Act.
SD-366
Select on Intelligence
To hold closed hearings on intelligence matters.
SH-219

FEBRUARY 8

9:00 a.m.
Armed Services
To hold hearings on the military strategy and operational requirements of the commands oriented to Pacific defense.
SR-222
9:30 a.m.
Agriculture, Nutrition, and Forestry
Agricultural Research and General Legislation Subcommittee
To hold hearings on proposed legislation to strengthen and improve U.S. agricultural programs, focusing on grain quality enhancement.
SR-332
Energy and Natural Resources
Business meeting, to consider pending calendar business.
SD-366
Governmental Affairs
To continue hearings on S. 2006, to establish the Department of the Environment, and to provide for a global environmental policy of the United States.
SD-342
Veterans' Affairs
To hold hearings on the nominations of Ronald M. Holdaway, of Wyoming, and Hart T. Mankin, of Delaware, both to be Associate Judges of the United States Court of Veterans Appeals.
SD-562
10:00 a.m.
Finance
To resume hearings on proposed legislation to reduce Social Security taxes.
SD-215
10:30 a.m.
Joint Economic
To resume hearings to examine the economic outlook for 1990.
Room to be announced
2:00 p.m.
Agriculture, Nutrition, and Forestry
Agricultural Credit Subcommittee
To hold hearings on proposed legislation to strengthen and improve U.S. agricultural programs, focusing on agricultural credit.
SR-332
Armed Services
To hold hearings on the military strategy and operational requirements of the unified commands oriented to Third World defense and unconventional warfare.
SR-222

FEBRUARY 9

10:00 a.m.
Appropriations
Labor, Health and Human Services, Education Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Health and Human Services, focusing on the Office of the Assistant Secretary for Health, the Office of Health Care Policy and Research, the Centers for Disease Control, the Alcohol Drug Abuse and Mental Health Administration, and the Health Resources and Services Administration.
SD-192
Budget
To resume hearings in preparation for reporting the first concurrent resolution on the fiscal year 1991 budget.
SD-608
Finance
International Trade Subcommittee
To hold hearings on proposed legislation to make permanent the Caribbean Basin Initiative.
SD-215

FEBRUARY 20

10:00 a.m.
Appropriations
Labor, Health and Human Services, Education Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Health and Human Services, focusing on the National Institutes of Health, the Office of Director, Buildings and Facilities, the National Cancer Institute, the Heart, Lung, and Blood Institute, the National Dental Institute, Diabetes, Digestive, and Kidney, Allergy and Infectious Diseases, Child Health and Human Development, and Environmental Health.
SD-138
1:30 p.m.
Appropriations
Labor, Health and Human Services, Education Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Health and Human Services, focusing on the National Institutes of Health, the Neurology Institute, the Deafness Institute, General Medical Sciences, the National Eye Institute, the National Institute on Aging, Arthritis, Musculoskeletal and Skin Division of Research Resources, Nursing Research, Human Genome, and the National Library of Medicine.
SD-138
2:30 p.m.
Agriculture, Nutrition, and Forestry
Agricultural Credit Subcommittee
To resume hearings on proposed legislation to strengthen and improve U.S. agricultural programs, focusing on agricultural credit.
SR-332

FEBRUARY 21

9:00 a.m.
Armed Services
To hold hearings on the military strategy and operational requirements for rapid reinforcement and associated transportation requirements.
SR-222

9:30 a.m.
Governmental Affairs
To hold hearings on S. 1742, to further the goals of the Paperwork Reduction Act (P.L. 96-511), and comprehensively strengthen agency responsibility and accountability of information resources management.
SD-342

10:00 a.m.
Appropriations
Treasury, Postal Service, General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the U.S. Customs Service, and the Federal Election Commission.
SD-116

Foreign Relations
To hold hearings on the report on arms control prospects following Moscow and Ottawa Ministerial meetings.
SD-419

FEBRUARY 22

9:00 a.m.
Armed Services
To resume hearings on the implications of changes in the Soviet Union and Eastern Europe for Western security.
SR-222

9:30 a.m.
Agriculture, Nutrition, and Forestry
Agricultural Research and General Legislation Subcommittee
To resume hearings on proposed legislation to strengthen and improve U.S. agricultural programs, focusing on grain quality enhancement.
SR-332

Commerce, Science, and Transportation
Consumer Subcommittee
To hold hearings on S. 1400, to regulate interstate commerce by providing for a uniform product liability law.
SR-253

Energy and Natural Resources
To hold oversight hearings on the implementation of the Department of Energy's Office of Civilian Nuclear Waste Management.
SD-366

Governmental Affairs
To continue hearings on S. 1742, to further the goals of the Paperwork Reduction Act (P.L. 96-511), and comprehensively strengthen agency responsibility and accountability of information resources management.
SD-342

Rules and Administration
To hold hearings on S. 1543, to authorize the Colonial Dames at Gunston Hall to establish a memorial to George Mason in the District of Columbia.
SR-301

Small Business
To hold hearings on implications of technology transfer on small business.
SR-428A

10:00 a.m.
Rules and Administration
To hold hearings on the nomination of Robert William Houk, of Ohio, to be Public Printer for the Government Printing Office.
SR-301

FEBRUARY 23

8:30 a.m.
Veterans' Affairs
To hold hearings on budget recommendations for veterans programs and on proposed legislation to reorganize the Veterans Health Service and Research Administration.
SR-418

FEBRUARY 27

9:30 a.m.
Rules and Administration
Business meeting, to consider S. 1543, to authorize the Colonial Dames at Gunston Hall to establish a memorial to George Mason in the District of Columbia, the nomination of Robert William Houk, of Ohio, to be Public Printer for the Government Printing Office, and other pending executive, legislative, and administrative business.
SR-301

Veterans' Affairs
To hold joint hearings with the House Committee on Veterans' Affairs to review legislative recommendations of the Disabled American Veterans.
SH-216

2:00 p.m.
Armed Services
To resume hearings on the amended authorization request for fiscal year 1991 for the Department of Defense and the five-year defense plan.
SR-253

FEBRUARY 28

9:00 a.m.
Armed Services
To continue hearings on the amended authorization request for fiscal year 1991 for the Department of Defense and the five-year defense plan.
SR-253

10:00 a.m.
Appropriations
Agriculture and Related Agencies Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Department of Agriculture.
SD-138

Appropriations
Treasury, Postal Service, General Government Subcommittee
To hold hearings on proposed budget estimates for fiscal year 1991 for the Bureau of Alcohol, Tobacco and Firearms, and the Federal Law Enforcement Training Center.
SS-116

1:30 p.m.
Appropriations

HOUSE OF REPRESENTATIVES—*Tuesday, January 30, 1990*

The House met at 12 noon.

The Chaplain, Rev. James David Ford, D.D., offered the following prayer:

We are appreciative of our own backgrounds—our families, our experience, our cultures. Yet, we pray, O gracious God, that we will be more aware that You have created the whole world and all the peoples—of every experience, many families and cultures. May each of us so see the majesty of Your creation that we will grow to understand Your purposes for us and for all people. In Your name, we pray. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

PLEDGE OF ALLEGIANCE

The SPEAKER. The gentleman from Hawaii [Mr. AKAKA] will please come forward and lead the House in the Pledge of Allegiance.

Mr. AKAKA led the Pledge of Allegiance as follows:

I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

COMMUNICATION FROM THE CLERK OF THE HOUSE

The SPEAKER laid before the House the following communication from the Clerk of the House of Representatives:

WASHINGTON, DC,
January 29, 1990.

Hon. THOMAS S. FOLEY,
The Speaker, U.S. House of Representatives, Washington, DC.

DEAR MR. SPEAKER: Pursuant to the permission granted in clause 5 of rule III of the Rules of the U.S. House of Representatives, I have the honor to transmit a sealed envelope received from the White House at 2:05 p.m. on Monday, January 29, 1990 and said to contain a message from the President whereby he transmits, in accordance with the Impoundment Control Act of 1974, two new deferrals and four revised deferrals of budget authority now totalling $8,251,604,695.

With great respect, I am
Sincerely yours,
DONNALD K. ANDERSON,
Clerk, House of Representatives.

SUNDRY DEFERRALS OF BUDGET AUTHORITY—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, referred to the Committee on Appropriations and ordered to be printed:

(For message, see proceedings of the Senate of Monday, January 29, 1990, at page S474.)

APPOINTMENT AS MEMBERS OF BOARD OF VISITORS TO U.S. COAST GUARD ACADEMY

The SPEAKER laid before the House the following appointments of Members of the Committee on Merchant Marine and Fisheries to serve the members of the Board of Visitors to the U.S. Coast Guard Academy:

COMMITTEE ON MERCHANT MARINE
AND FISHERIES,
Washington, DC, January 24, 1990.

Hon. THOMAS S. FOLEY,
Speaker of the House, U.S. House of Representatives, Washington, DC.

DEAR MR. SPEAKER: Pursuant to Public Law 301 of the 78th Congress, I have appointed the following Members of the Committee on Merchant Marine and Fisheries to serve as members of the Board of Visitors to the U.S. Coast Guard Academy for the year 1990: The Honorable W.J. (Billy) Tauzin of Louisiana, The Honorable William J. Hughes of New Jersey, The Honorable Robert W. Davis of Michigan.

As chairman of the Committee on Merchant Marine and Fisheries, I am authorized to serve as an ex officio member of the Board.

With warmest personal regards, I am
Sincerely,
WALTER B. JONES,
Chairman.

APPOINTMENT AS MEMBERS OF BOARD OF VISITORS TO THE U.S. MERCHANT MARINE ACADEMY

The SPEAKER laid before the House the following appointments of members of the Committee on Merchant Marine and Fisheries to serve as members of the Board of Visitors to the U.S. Merchant Marine Academy:

COMMITTEE ON MERCHANT MARINE
AND FISHERIES,
Washington, DC, January 24, 1990.

Hon. THOMAS S. FOLEY,
Speaker of the House, U.S. House of Representatives, Washington, DC.

DEAR MR. SPEAKER: Pursuant to Public Law 453 of the 96th Congress, as amended, I have appointed the following Members of the Committee on Merchant Marine and Fisheries to serve as members of the Board of Visitors to the U.S. Merchant Marine Academy for the year 1990: The Honorable George J. Hochbrueckner of New York, The Honorable Nita M. Lowey of New York, The Honorable Norman F. Lent of New York.

As chairman of the Committee on Merchant Marine and Fisheries, I am authorized to serve as an ex officio member of the Board.

With warmest personal regards, I am
Sincerely,
WALTER B. JONES,
Chairman.

PRESIDENT'S BUDGET WILL KILL TINY TIM

(Mr. VISCLOSKY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VISCLOSKY. Mr. Speaker, yesterday President Bush wrote that his budget's chief emphasis was on the future. In the last century Charles Dickens also wrote about the future. In the Christmas Carol, Scrooge asked if Tiny Tim would live. He was told if the shadows of the future remained unaltered, Tiny Tim would die.

In the Bush future, budget authority for housing the elderly and handicapped children like Tiny Tim would decline by $201 million from the fiscal year 1991 baseline, but there is more relative growth in the defense spending than in fiscal year 1986.

In the Bush future, budget authority for child nutrition programs for children like Tiny Tim would decline by $460 million from the fiscal year 1991 baseline, but there is more relative growth in defense spending than in fiscal year 1987.

In the Bush future, budget authority for Medicaid for children like Tiny Tim would decline by $88 million for fiscal year 1991 baseline, but there is more relative growth in defense spending than in fiscal year 1990.

This budget is not dead on arrival. President Bush may be able to live with it, but it's going to kill Tiny Tim.

URGING CONSIDERATION OF CONVENTION OF RIGHTS OF THE CHILD

(Mr. SMITH of New Jersey asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SMITH of New Jersey. Mr. Speaker, I am pleased to join my colleagues, Congressmen GUS YATRON and DOUG BEREUTER, in introducing a

resolution today calling for the timely consideration of the Convention on the Rights of the Child. The Convention was adopted by the 44th General Assembly of the United Nations on November 20, 1989, and must now be ratified by the member States—at least 20 in order to make it binding. The U.S. Government is currently involved in an interagency review of the Convention.

As Congressional Representative of the U.S. Delegation to the United Nations, Mr. Speaker, I had the opportunity to present the United States position on approving the Convention on November 10, 1989 in New York. For the sake of summary, I will highlight some of the United States concerns expounded upon in that statement. And put the entire statement in the Extension of Remarks.

First, the Preamble of the Convention recognizes that a child, "by reason of his physical and mental immaturity, needs special safeguards and care, including appropriate legal protection, before as well as after birth." Mr. Speaker, children—both the born and the unborn—are precious and extremely vulnerable. The U.S. Government believes that the protection of all children, to the maximum extent possible irrespective of age or condition of dependency, is the duty and sacred obligation of government.

The right of each child to the "freedom of thought, conscience and religion" underscores the human right of religious tolerance fundamental of all people in every country. Children are no exception. The United States sought to have the Convention include language outlining a child's "right to freedom to change his religion or belief, and freedom, * * * to manifest his religion or belief in teaching, practice, worship and observance," as stated in the Universal Declaration of Human Rights. Unfortunately, consensus was not possible for the Convention to include these supplementary rights.

The United States is also strongly supportive of the articles pertaining to family reunification, the prevention of physical and mental abuse against children, the special needs of the handicapped and disabled and the importance of legal encouragement and safeguards for the adoption of children. Through adoption, many millions of children have found loving, caring families who love and care for them, as they would their own natural children. Clearly, adoption needs to be encouraged on a global scale.

Mr. Speaker, I look forward to the day when the Senate considers ratification of the Convention. I am hopeful that the ensuing debate will foster a better understanding of, and a renewed commitment to, the legal protections which all children need. Ratification of the Convention would be most appropriate to usher in the 1990's—a decade which, I believe will become known as "the Decade for the Child—born and unborn."

IT IS TIME TO CHANGE THE WAY WE BUDGET

(Mr. SMITH of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SMITH of Florida. Mr. Speaker, I say to America, good morning: how do you feel today? After a decade of being given a heavy dose of budget deficits from the President of the United States, we enter a new decade and we are being asked to have more hair of the dog, the dog that bit us. More budget deficits.

Another budget from the President with a huge budget deficit, this time openly to borrow from the Social Security fund, to steal from the trust fund to cover it.

And what do we have with that? A peace dividend? That is the biggest joke of all time. If Members read the budget and do not read the newspaper, they would think there is nothing happening in Eastern Europe, nothing happening in the Soviet Union.

We are spending more, and according to the President we need to spend more. We are going to cut Medicaid $8 billion and we are going to cut guaranteed students' loans and we are going to cut the Environmental Protection Agency and we are going to cut energy conservation and on and on and on. More of the same.

This country ought to be ashamed of this administration. I hope it is. I am. It is time to change the way we budget.

□ 1220

IDAHO CENTENNIAL COMMEMORATIVE

(Mr. CRAIG asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CRAIG. Mr. Speaker, entry into the State of the Union is truly an event of national significance, one which deserves special attention. Therefore, I proudly join my Idaho colleague, RICHARD STALLINGS, in introducing legislation to designate July 3, 1990, as Idaho Centennial Day, and I ask our colleagues here in the House to join us by cosponsoring.

Since its statehood in 1890, the people of Idaho have made substantial contributions to the economic and social well-being of the United States by harvesting the abundance of natural resources our great State has offered. In turn, a great wealth has been produced, enabling the building of cities, educational institutions, a rich culture, and an envied quality of life.

For centuries, the State of Idaho, with its rugged mountains, densely enriched forests and high deserts, has offered Idahoans and visitors alike an array of beautiful scenery, unlimited recreational opportunities, and a diverse economy.

This centennial celebration marks the recognition of the State whose people are proud of their heritage and of their contributions to this great Nation. Therefore, I ask my colleagues to help Idaho celebrate its 100 years of statehood this July 3d.

THE PRESIDENT'S BUDGET: WHAT IT DOES AND DOES NOT PROVIDE

(Mr. TORRICELLI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TORRICELLI. Mr. Speaker, this is the budget of the U.S. Government. It weighs over 5 pounds. It is more than 3 inches thick, and it includes just about everything America needs, $1.25 trillion worth of expenditures, everything America needs except leadership. It has none of the hard decisions, none of the tough choices, none of the challenges to be frank and honest with the American people about our future. It says none of the things that we must do and sacrifices we must make for quality of education, to clean our environment, to invest again in America, and to secure a future for our people.

The budget of the United States, $1.25 trillion, here is what it does not do, Mr. Speaker: It does not buy us more time, it only postpones the real choices America must make.

Be he a Democrat or a Republican, a liberal or a conservative, Mr. Speaker, the President owed us more. He was neither frank nor fair with the American people.

CAPT. DALE KOONS LAID TO REST

(Mr. DONALD E. "BUZ" LUKENS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. DONALD E. "BUZ" LUKENS. Mr. Speaker, Americans will never forget the Vietnam war. Through the medium of books, movies, songs, demonstrations, and heartfelt vigils, this painful decade of our history lingers in the hearts and minds of most Americans. However, for some 2,300 families, the aftermath of this war is still a reality which no song can capture. Today, there are still some 2,300 Americans who are not yet accounted for in Indochina.

For the family of Capt. Dale F. Koons of Preble County, OH, at least

part of this war can be put to rest. Captain Koons was shot down over North Vietnam 18 years ago, December 26, 1971. On January 28, 1990, his remains were finally buried on American soil in Ohio. Hundreds of friends and family members attended the funeral in Gratis, OH, as four Phantom F-4 jets flew over the ceremony in the famous "missing man" formation. Capt. Dale Koons, the last Vietnam war casualty of Preble County, OH, is home at last.

PREBLE COUNTY "HERO" FINALLY LAID TO REST

(By Ed Richter)

GRATIS.—The Vietnam War ended Saturday morning for Preble County as the remains of Air Force Capt. Dale F. Koons was laid to rest with full military honors.

For Koons' wife, daughter, and parents Saturday's wind-swept services ended 18 years of pain and uncertainty about the F-4 Phantom jet navigator who was shot down over North Vietnam on Dec. 26, 1971, as well as the last two years of identifying the remains and persevering through other bureaucratic snafus which only continued the family's pain and suffering.

The funeral also allowed some 250 friends, relatives, area veterans and neighbors to pay their respects to the county's last war casualty of the Vietnam era. Flags throughout the county were lowered to half-staff to pay homage to Koons.

Honor Guards from the 2750th Air Base Wing, Wright-Patterson Air Force Base, the Miami University Air Force ROTC, and the Dayton Vietnam Veterans Association as well as representatives of area law enforcement agencies were present at Fairview Cemetery for the services.

As the six airmen serving as pallbearers lifted the American flag and stretched it over the solid hard-wood coffin, a flight of four F-4 Phantom fighters from the Indiana Air National Guard in Fort Wayne flew toward the services from the east at 1,500 feet. Just before the jets came over the cemetery, one of the fighters broke away from the group and flew skyward, honoring Koons with a missing man formation.

After the flyover, the Rev. Dennis Jones, of the Trinity Presbyterian Church in Herndon, Va., and formerly of Preble County, gave a short eulogy. After comments from other officials, two airmen played Taps, followed by a 21-gun salute by a seven-man firing squad.

As the six pallbearers began to fold the flag draping Koons' coffin, the brisk wind began to pick up. When his part of the flag was folded each airman gave a salute to Koons.

Capt. Stephen O'Neill presented the flag to Koons' 18-year-old daughter, Kristin, a freshman at Eastern Michigan University. Frances Koons, his mother, was also presented a flag by Capt. Alvin Haggen.

Area veterans then passed by the coffin, each saluting Koons' remains and the family.

Kristin and Koons' widow, Phyllis, went back toward the coffin. With her flag clutched in one hand, Kristin brushed her other hand several times along her father's coffin as her mother held her in her arms.

Family members, who declined to speak with the media during Saturday's services, held a press conference Friday in Eaton. Koons' wife, who has since remarried and is living in Ann Arbor, Mich., did not attend.

However, Kristin read a prepared statement from her mother, expressing her thoughts on finally being able to grieve over the loss of her husband, being thankful that the family knows what happened to Capt. Koons and finally being able to honor him with a proper burial at home.

Koons' father, Dale A., said he was all for the military funeral for his son "because he's a hero."

He still was not happy with delays and some of the other problems he and his family endured with the Air Force and the government.

Mr. Koons said if the government grave marker has his son's legal death date in 1973, instead of his MIA date of 1971, he'll have it removed and will pay for a new marker so people will know his son died during the Vietnam War and not after.

Shortly after Capt. Koons and pilot Maj. Laurence Stoltz of Indiana were shot down, the Koons family said they remembered seeing a television news report in which the North Vietnamese authorities were releasing pictures of their ID cards and other personal belongings saying that both aviators had been killed.

The Air Force listed him as missing in action after he and Stoltz failed to return to their base. On Oct. 11, 1979, Koons' status was changed from missing in action to killed in action.

In April 1988, the remains of Koons and 26 other servicemen were released by the North Vietnamese to the U.S. government, and were sent to the Army's Central Identification Laboratory in Hawaii for indentification.

A positive identification was made in October 1989. However, there were some remains which were intermingled and could not be identified. The Air Force suggested that the unidentified remains be buried in a third grave in a national cemetery with both names on the marker.

The Koons family asked if the third set of remains could be divided and not have a third grave. The military agreed as long as both families agreed.

The Stoltz family was not satisfied and asked for another opinion in Colorado. Those findings were forwarded to the Armed Service Review Board, which disagreed with the findings and sent the remains back to Hawaii for further study. The board also reinstated the three graves proposal.

Both families contacted the Secretary of the Air Force asking that their wishes be granted as well as contacting U.S. Rep. Donald "Buz" Lukens for assistance to relay the wishes of the families.

The Secretary of the Air Force granted the request and had the remains flown to California to be divided and released to the families, Koons' remains arrived in Dayton on Tuesday night.

Earlier Saturday morning, some 200 people attended memorial services in an Eaton funeral home, including Lukens. There were 65 cars in the funeral procession from Eaton to Gratis.

Koons was a 1964 graduate of the former Lanier High School near Gratis and a 1968 graduate of Ohio State University. He was the first runner-up nominee to the Air Force Academy in 1964 and 1965 and had always wanted to be a pilot.

He entered the Air Force in 1969 and was trained as a navigator on the F-4 Phantom fighter. After training at two bases in California and Florida, Koons went to Vietnam in September 1971, the month after his daughter was born.

PRESIDENT BUSH'S USER FEES ARE REALLY TAXES ON MIDDLE-INCOME AMERICANS

(Mr. GLICKMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GLICKMAN. Mr. Speaker, the President's budget proves that Mr. Bush is a master ventriloquist—his lips may not move, but his voice is coming through loud and clear—President Bush is raising taxes again this year on middle-income Americans by over $6 billion.

Mr. Speaker, the American people are not dummies. They know that a user fee is a tax. His 25-percent increase in new taxes on airline travel for people who fly comes out of the pockets of average Americans. He claims it will be used to improve safety, but there is currently $8 billion in the aviation trust fund for that very purpose which has not been spent in order to make the deficit appear smaller.

His desire to raise new taxes on airline tickets is like his silence on the Social Security payroll tax increases on working Americans—in both cases you are increasing taxes to hide the deficit.

His push for new user fees in veterans programs and Medicare will continue to squeeze middle-income Americans. All in all, President Bush is proposing over $6 billion in new taxes on average wage-earning Americans—the people he claims to be fighting for when he says he will not raise taxes.

A user fee by any other name is a tax, Mr. Bush, and it is time to stop the trickery and deal honestly with the American taxpayers.

BUDGET CRITICS URGE REDUCED DEFENSE SPENDING WHILE INCREASING SPENDING FOR THEIR OWN PRIORITIES

(Mr. GEKAS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GEKAS. Mr. Speaker, what a surprise; the Members from the other side of the aisle one by one are tearing apart, criticizing adversely the budget of the President of the United States. What a great surprise.

Yet it is these same Members who year after year add to the spending of Congress, add to the deficit, propose measures to exacerbate the deficit problem that we have, and they participate in polemics and in rhetoric that serve no purpose other than to bring back the same story year after year.

Their answer is, most of the time: Reduce defense spending, "We have a peace dividend now that we can share among the other spending priorities"

that these very same Members propose. But they will forget very easily, as they have already done so, that the defense buildup, the strengthening of America brought about, helped bring about the situation in Eastern Europe, where the cry for freedom is now being heard.

IN SUPPORT OF A HONOLULU STOCK EXCHANGE

(Mr. AKAKA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. AKAKA. Mr. Speaker, the Aloha State of Hawaii has a chance to become a financial leader of the Pacific Rim. We can accomplish this with the creation of the Honolulu Stock Exchange.

Business and government in my State are working together to establish a financial center that would trade stocks, commodities, currencies, options, and other products.

In today's global economy, this is an idea whose time has come. A Hawaii stock exchange would fill in a 4-hour time gap between the closing of the New York Stock Exchange and the opening of the Tokyo Stock Exchange.

A Hawaii stock exchange would make it easier for American exchanges to trade with Asia, and for Asian exchanges to trade with America. Americans and Asians would no longer have to conduct trade at odd hours of the night.

In many ways, the Pacific Rim has become the financial center of the world, and our country needs to trade and grow together with the nations of the Pacific.

The State of Hawaii stands ready to serve as a new financial link between East and West.

INTRODUCTION OF THE AUGUSTUS F. HAWKINS EARLY CHILDHOOD AND ELEMENTARY TEACHER PREPARATION AND RETRAINING ACT

(Mr. GOODLING asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GOODLING. Mr. Speaker, last Friday, Chairman AUGUSTUS F. HAWKINS announced that he will not seek reelection to Congress. This marks the end to a long, dedicated, and successful career in public service of an extraordinary man. I am saddened to learn of his decision. During my years of service in Congress, I have come to know this gentleman as a strong advocate, a visionary leader, and statesman of educational policy in this country. And, I have come to know him as a friend. I deeply regret that the Congress will lose the wisdom this august man has brought to this Chamber.

Today, I hope to honor Chairman HAWKINS by introducing a bill regarding educational issues of great concern to him. This bill, the Augustus F. Hawkins Early Childhood and Elementary Teacher Preparation and Retraining Act, is designed to strengthen the teaching force in this country.

As you may know, we are experiencing a great shortage of teachers in certain critical areas. Unfortunately, the data indicates the shortage will get worse before it gets better. As a result, our Nation's young people and ultimately our country will suffer from the loss.

Recent estimates project that about 185,000 new teachers will be needed per year between 1990 and 1993. The same projections indicate only 140,000 teachers per year will enter the profession. The demand for the hiring of new teachers is expected to rise because of student enrollment increases, pupil/teacher ratio improvements, and retirement of the current pool.

This bill is designed to attract and retain the best and brightest into the teaching profession. The bill has three major provisions.

The first provision creates a Stafford loan forgiveness program for teachers in early childhood and elementary schools. Due to the critical shortage of minority teachers, the bill adds incentives for minority teacher recruitment.

The second provision creates a teacher training program within States to help improve the quality of teaching in early childhood and elementary schools. I hope that this program will help to strengthen the skills of these teachers.

The third provision honors Chairman HAWKINS by naming the Federal program for historically black colleges and universities the Augustus F. Hawkins Program for Strengthening Historically Black Colleges and Universities.

Chairman HAWKINS has helped to shape the direction of educational policy in this country. I hope you will join me in honoring his work by cosponsoring this bill.

□ 1220

WHO DOES RICHARD SECORD KNOW?

(Mr. TRAFICANT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. TRAFICANT. Mr. Speaker, last week Richard Secord had his day in court. It was the moment of truth for the retired Air Force major general. Federal Judge Robinson looked at Mr. Secord and he said, "Mr. Secord, you are guilty, guilty as charged. You are guilty for having lied to the Congress of the United States of America." He said, "That is no small thing. That threatens the basic rights and freedoms of all Americans."

News reports said that Secord actually shuddered. The judge raised his gavel, and he says, "You are guilty, but there will be no jail time. You are guilty, but there will be no community service. You are guilty, and there will be no fines," even though he could have gotten 5 years and one-quarter of a million dollars in fines. The judge said, "You have suffered enough, Mr. Secord."

Mr. Speaker, I say there is liberty and justice for all, if a person knows the right people. I think Richard Secord does. I think it is time we start telling it like it is and just think about all he did, and that was lie to Congress.

GOVERNMENT SUBSIDIZES PRIVATE RANCHERS

(Mr. DARDEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DARDEN. Mr. Speaker, young Americans cannot afford homes; older Americans cannot afford health care; middle Americans cannot educate their children; but wealthy cattle ranchers got another break from the Federal Government this year. The grazing fees charged to private ranchers for using Federal grazing lands have been reduced.

It costs the Federal Government about $63 million to administer 307 million acres of Federal grazing lands. However, the grazing fee income for this land totals about $22 million. Incredibly, the Government charged far less than market value for these lands, requiring only $1.86 per animal unit a month in 1989 for grazing rights worth at least three times that amount. And, in March 1990, this charge will be further reduced to $1.81.

My bill, H.R. 775, would mandate that ranchers pay fair market value for these grazing rights. With our budget deficit requiring cuts in many worthy programs, subsidizing private ranchers is a luxury we cannot afford. Please join me in eliminating this costly inequity.

REPORT POINTS TO CONTRAS AS NUNS' MURDERERS

(Mr. KLECZKA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KLECZKA. Mr. Speaker, on Sunday, January 28, the Respected Human Rights Group Americas Watch released a report detailing the results of its thorough investigation into the murder of two nuns in Nicaragua on New Year's Day.

The inquiry, which seven other Members and I requested, concluded that Contras were responsible for the killing of Sister Maureen Courtney and Sister Teresa Rosales and the wounding of another nun and a bishop.

Congressman JIM MOODY and I will be circulating a "Dear Colleague" letter later this week summarizing the investigation's findings. Also, I will be placing the entire report into today's CONGRESSIONAL RECORD.

Now that those responsible for this senseless crime have been identified, I hope they will be brought to trail.

The murder of Sister Maureen and Sister Teresa was especially tragic because they were waging peace and prayer, and had played no part in the country's war.

These deaths have struck me particularly because, on my recent visit to Nicaragua, I was privileged to witness the good and charitable work being done by religious orders for the children and the other victims of war.

Knowing of the caring and generous acts Sister Maureen performed in Nicaragua, I am surprised at the persistent use of the term freedom fighter to describe those who so indiscriminately ended her life.

Continued use of this term for those who committed such a ruthless act makes a mockery of the many true freedom fighters around the world.

A TRIBUTE TO CONGRESSMAN GUS HAWKINS

(Mr. ANDERSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ANDERSON. Mr. Speaker, though premature in one sense, it is not too early to comment on the announcement by my very dear friend, GUS HAWKINS, of Los Angeles, CA, of his intention to retire from this body at the end of the session. In the coming months, all of us will find ways to show our gratitude to our colleague, but right now I want to express my feeling of deep loss as this great legislator moves on in his crusade for better education and a better America. GUS HAWKINS has been a devout public servant in this House for almost 28 years, and before that, he served for 28 years in California State Assembly, where I count myself lucky to have had the privilege of serving with him. Men of such untiring energy and devotion to cause are a rare breed in this day. A commitment of 56 years to his State and his Nation. Few have given so much. His work for civil rights and education will carry on even after he has moved to the private sector. One only has to look around to see evidence of all the good that he has brought to his countrymen. I would like to take this moment to say "thank you," an insufficient token of all that I owe him as a friend and that we owe him as a nation.

OUTDATED BUDGET-BUSTING REQUESTS BY PENTAGON

(Mr. SCHEUER asked and was given permission to address the House for 1 minute and to include extraneous matter.)

Mr. SCHEUER. Mr. Speaker, for months the American people have watched, fascinated, at the apparent unraveling and disintegration of the Soviet empire. And as that empire has crumbled, the threat of a major nuclear war, seemingly, has disappeared like the morning mist.

Now, without question, we do have threats out there that require any army, navy, air force, and marines. Regional instability, terrorism, yes, but not the threat of a superpower nuclear attacking against the United States in the middle of the night. Yet, yesterday, we saw this absolutely absurd and unbelievable sight of a budget being presented to the Congress that seems to include every budget-busting big-ticket item that the Pentagon generals could possibly dream up.

Imagine in this day and age, in January 1990: $5.5 billion for the B–2—a bomber whose mission has vanished even as its price-tag has soared; $4.7 billion for star wars—to shoot down Soviet missiles that no one in their right mind believes the Soviets ever would fire; $2.2 billion for putting MX missiles on trains—even though these sorts of mobile ICBM's may well be banned by upcoming arms-control treaties; $1.4 billion for yet another unneeded Trident nuclear submarine; and an additional $1.75 billion for the Trident II missile—a multiwarheaded, dangerously destabilizing nuclear weapon.

Mr. Speaker, the cold war is over. It is high time we develop a military strategy that reflects the realities of today's world and our real military needs in mid-January 1990.

And Mr. Speaker, now that the Berlin Wall has come down and the Iron Curtain has gone up, we in America need to rethink what our concept of "national security" really means.

Let us all make a commitment today to ensuring that every child in America can read, that every drug addict that wants to can enter a rehabilitation program, and that every American who needs it has access to adequate health care.

That is where we must concentrate our scarce resources if we want to ensure true "national security" for the United States in the 21st century.

INTERN RECEPTION INVITATION

(Mr. DREIER of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DREIER of California. Mr. Speaker, it is very apparent that the debate on the budget has clearly begun.

However, I would like to focus our attention for just a moment on a short-term item, and that is that we are looking forward to the first State of the Union Address from President Bush, right here tomorrow evening. I will say that one of the things President Bush is clearly doing is looking at innovative approaches to deal with the challenges that these countries, moving from Soviet repression toward freedom, are facing. Those challenges have to be addressed not simply with an influx of cash from the United States of America, but we have to look at innovative ways in which we can help these countries.

One of those is going to be a project that I have been working on with the National Forum Foundation. This evening we have 11 interns who are students from Poland, Hungary, and Czechoslovakia, coming into the United States. We are going to be having these people spread throughout Washington, DC, working here on Capitol Hill, in the media, and in business. We hope that they will be able to carry the message from the West back to their part of the world. Tomorrow evening we will have a reception for these people here on Capitol Hill. For any of my colleagues who would be interested in meeting these fine young people, I hope Members will get in touch with our office.

□ 1230

HEROIC RESCUE EFFORTS HIGHLIGHT LONG ISLAND AIR CRASH

(Mr. MRAZEK asked and was given permission to address the House for 1 minute, and to revise and extend his remarks and include extraneous matter.)

Mr. MRAZEK. Mr. Speaker, on January 25 the Cove Neck area on the North Shore of Long Island was shaken from its customary evening tranquillity by the sound of the crash of an Avianca Airlines 707 en route to JFK Airport. It crashed into a wooded hillside, killing 73 of its passengers and crew members.

Within minutes the tragedy brought a swift and sure response. Despite dark and gloomy conditions and one-lane roads leading to the crash area, the area's fire and emergency community volunteers were mobilized and responded with an effort which saved scores of lives among injured survivors.

In all, 37 different volunteer fire and rescue units from Long Island were mobilized to aid in sifting through the

carnage, and they picked out 97 percent of the dead, as well as the survivors, and transported the injured to area hospitals. While the loss of life from the crash was horrendous, the quick reaction of the men and women forming these volunteer units contributed to the significant number of survivors.

On other nights, victims of house fires and car wrecks and countless other emergencies which befall Long Island residents are the beneficiaries of these heroic men and women. These volunteers are living practitioners of the finest instincts which reside within each of us, and they deserve our gratitude and our support for their efforts.

Mr. Speaker, under leave to include extraneous matter, I enter into the RECORD the names of the 37 fire and rescue corps from Long Island that were involved in the heroic efforts to save lives at the crash site of Avianca flight 52, and I also include the list of the hospitals that bore the brunt of the burden, as well as a letter from our illustrious Governor Cuomo praising their efforts. Those items are included as follows:

VOLUNTEER FIRE AND RESCUE UNITS MOBILIZED FOR THE AVIANCA AIR CRASH OF JANUARY 25, 1990 AT COVE NECK, NY

Oyster Bay Fire Company No. 1.
Oyster Bay Atlantic Steamer Fire Company.
Syosset Fire Department.
Wantagh-Levittown Vol. Amb. Company.
Locust Valley Fire Department.
Bayville Fire Department.
East Norwich Fire Department.
Jericho Fire Department.
Glenwood Fire Company.
Glen Cove Fire Department.
Hicksville Fire Department.
Roslyn Rescue Fire Company.
Roslyn Highlands Fire Company.
Sea Cliff Fire Department.
Cold Spring Harbor Fire Department.
Melville Fire Department.
Westbury Fire Department.
Plainview Fire Department.
Bethpage Fire Department.
Williston Park Fire Department.
Massapequa Fire Department.
Levittown Fire Department.
East Meadow Fire Department.
Garden City Fire Department.
North Bellmore Fire Department.
Bellmore Fire Department.
Great Neck Vigilant Fire Company.
Port Washington Fire Department.
New Hyde Park Fire Department.
Elmont Fire Department.
Franklin Square Fire Department.
Valley Stream Fire Department.
Merrick Fire Department.
North Massapequa Fire Department.
Huntington Community First Aid Squad.
Bellmore-Merrick Volunteer Ambulance Corps.
Mineola Volunteer Ambulance Corps.

LIST OF HOSPITALS RECEIVING INJURED FROM AVIANCA FLIGHT 52

Central General Hospital.
Glen Cove Hospital.
Huntington Hospital.
Long Island Jewish.
Mid-Island Hospital.
Nassau County Medical Center.
North Shore Hospital.
St. Francis.
Syosset Community Hospital.
University Hospital, Stony Brook
Winthrop-University Hospital.
City Hospital Center.

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, NY, January 30, 1990.

Hon. ROBERT J. MRAZEK, HOUSE OF REPRESENTATIVES
Washington, DC.

DEAR BOB: Millions of Americans felt a profound sense of loss following the Avianca jet crash on Long Island. Yet, at the same time, we were inspired by the compassion and courage displayed by so many of your neighbors as they responded to the tragedy with remarkable speed and dedication.

While last Thursday's accident was indeed tragic, it would have been far worse if not for the immediate outpouring of local assitance. Hundreds of rescue and medical workers, firefighters and police officers, religious leaders, translators, and just concerned citizens volunteered in truly heroic fashion. I also commend the Long Island hospitals for their superb work.

I share your pride in knowing that citizens from all walks of life can work so well together in the face of severe hardship.

Sincerely,

MARIO M. CUOMO,
Governor.

CHENEY TARGETS 90 PERCENT OF BASE CLOSINGS IN DEMOCRATIC DISTRICTS

(Mrs. SCHROEDER asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. SCHROEDER. Mr. Speaker, I do not think Republican National Committee Chairman Lee Atwater could have devised a more partisan, less logical military base closure list than the one Defense Secretary Dick Cheney released yesterday.

Cheney called for closing 21 military bases in the United States, 19 of which—fully 90 percent of the total, are in Democratic congressional districts.

In terms of civilian and military personnel affected by the closures, 99 percent of the civilian personnel and 91 percent of the military personnel are assigned to bases in Democratic districts.

The mix of domestic versus overseas bases is equally skewed. While two-thirds of the bases proposed for closure are domestic, 97 percent of the civilian personnel and 90 percent of the military personnel affected by the colsures are domestic.

INTRODUCTION OF THE UNIVERSAL HEALTH COVERAGE ACT OF 1990

(Mr. OBEY asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. OBEY. Mr. Speaker, for more than 40 years the United States has been stalled in a rigid debate about whether we ought to have national health insurance. Millions of working people are still left without coverage, and they are getting tired of it.

In an attempt to break the stalemate, I am today introducing legislation called the Universal Health Coverage Act of 1990, which will require every State in the Union to have in place by 1995 an operating program that provides basic health coverage to every human being living in that State. States would be allowed wide latitude in designing the kind of plan which best fits their situation, but they would have to meet minimum Federal standards of coverage.

Once State programs are operating, in 1995 the Federal Government would take the next 3 years to evaluate the effectiveness of each State's approach. By January 1, 1998, the Secretary of Health and Human Services would be required to determine which State plans did the best job in providing universal health coverage at a reasonable cost and decide whether the administration of health coverage should be moved to the Federal Government or should remain at the State level.

Mr. Speaker, a new trust fund would be established to help States pay the cost of that program. This bill is designed to use States as laboratories of democracy so that we can learn as we go in constructing a health system which will be the most effective and most efficient which we can produce.

A NEW WIND OF FREEDOM

(Mr. FAUNTROY asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. FAUNTROY. Mr. Speaker, as we prepare for the President's State of the Union Address tomorrow, I want to remind America that there is a fierce wind blowing in our world today. It is blowing with hurricane intensity, tearing down old systems and sweeping away a crumbling order and ushering in a new order. If you will listen with your spiritual ears, you can hear the wind blowing its rumbling chords in Namibia and throughout southern Africa. The sound of the wind is heard from Tiananmen Square and throughout Asia. The sound of the wind is heard as it blows fiercely in Romania and Hungary and Poland and throughout Eastern Europe. The wind rises from the huddled masses yearning to breathe free in Haiti and Central and South America.

It is a wind of freedom. It is a wind that blows to America and to the

world a golden opportunity to resolve a backlog of problems built up over the past decade of neglect of human need across our Nation and through the world.

Mr. Speaker, I want to take this opportunity to invite the Members to view the special order I have taken for today, for I will deal with this subject of East-West tensions and North-South needs. Now that the winding down of the East-West conflict is happening, we have a golden opportunity to use resources freed up to deal with the human needs here and across the world. I invite the Members to remain for my special order.

INTRODUCTION OF THE REVERSE MORTGAGE INSURANCE FOR OLDER AMERICANS ACT OF 1990 AND COSPONSORSHIP OF THE HOME REPAIRS FOR OLDER AND DISABLED HOMEOWNERS ACT OF 1990

(Mrs. LLOYD asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. LLOYD. Mr. Speaker, I am pleased to introduce the Reverse Mortgage Insurance for Older Americans Act of 1990 today with Representatives PALLONE, PRICE, and SCHUMER. The legislation, which was initially introduced in the House by Representative JAMES J. FLORIO (H.R. 3006), has also been introduced by Senator GRAHAM of Florida and incorporated into the Senate's housing reauthorization package.

A reverse mortgage operates in the opposite way from a forward mortgage. Rather than borrowing a lump sum to buy a house and repaying it monthly—forward mortgage—the homeowners instead receive monthly advances based on their home equity. The repayment plus interest will be paid in the form of a lump sum at a future date—when the borrower dies, sells the house, or upon reaching a previously agreed-to date. This arrangement allows homeowners to receive a stream of income based on the accumulated equity in their homes.

Homes are the most commonly held and most valuable assets that older Americans possess; three out of four elderly persons own their own homes, and it is estimated that 80 percent of these homeowners do not have mortgages. However, despite $750 billion of home equity held by the elderly, 6 out of every 10 older homeowners are low income or very low income. When older Americans are fortunate enough to own their own homes but are cash-poor, the demands of household and health care expenses can become overwhelming and lead to the sale of their homes.

The current Home Equity Conversion Mortgage Insurance Demonstration Program, which is administered by the Department of Housing and Urban Development, insures 2,500 reverse mortgages. The mortgages are available to homeowners who are 62 years of age and older, and who have little or no mortgage debt remaining on their property. The demonstration, which is authorized through September 1991, enables elderly homeowners to convert the equity in their homes into cash. The Federal Housing Administration [FHA] insures the reverse mortgages and protects both the lenders and the homeowners against risks such as default and eviction.

The bill I am introducing today expands the number of reverse mortgages from 2,500 to 25,000 and adds important consumer protections. In addition to expanding the number of mortgages, the bill clarifies that each financial institution offering the mortgages must offer the homeowner a range of options and allow the homeowner to switch from one type of reverse mortgage to another. The bill also allows a homeowner to conserve part of the accumulated equity in the home to be used for future needs or to leave to heirs.

Further consumer protections require the lender to explain the definite limitations on the liability that the homeowner is assuming. The legislation also states that the lender must provide to the homeowner, prior to closing, a statement of the projected total cost of the mortgage to the homeowner. This information must be provided as a single annual average interest rate under at least two different appreciation rates for not less than two projected loan terms.

The reason for this legislation is simple: the demand for reverse mortgages far exceeds the 2,500 that are currently available. Over 20,000 older adults have contacted HUD for information, and many financial institutions are unable to meet the overwhelming demand by older homeowners for these mortgages. Given the tremendous amount of equity tied up in the houses of people 65 years of age and older, the majority of whom are considered to be low-income, there is considerable justification to expand the program and allow these homeowners to utilize their resources. An expansion of the demonstration would also more clearly demonstrate the demand for the reverse mortgages, the types of financing arrangements selected by homeowners, and the long-term benefits of the mortgages.

This legislation has broad based support. Secretary Kemp, the Federal National Mortgage Association—Fannie Mae—and the Federal Home Loan Mortgage Corporation—Freddie Mac—have endorsed expansion of the reverse mortgage program to between 25,000 and 30,000 mortgages. In addition, the National Center for Home Equity Conversion and the American Association of Retired Persons have endorsed this legislation.

I am also pleased to be an original cosponsor of the "Home Repairs for Older and Disabled Homeowners Act of 1990," which is being introduced by my distinguished colleague and good friend MARY ROSE OAKAR. The act will allow homeowners who are faced with fixed incomes and unmanageable repair costs to remain in their homes, and will also preserve valuable housing stock for future generations.

The legislation provides grants through HUD to nonprofit organizations, local governments, and Indian tribes to provide home repairs and accessibility modifications for low-income, older and disabled homeowners. The bill also requires grantees to provide, upon request of the homeowner, information on assistance in the community such as nutrition, health care, employment, and other services. Last, the legislation requires that standardized collection of data by grantees, including information on housing quality and conditions. This data will help paint a clearer picture of the needs of older and disabled homeowners and the condition of our Nation's housing stock.

Mr. Speaker, these bills fill a void in the present comprehensive housing proposals in the House and Senate. We must not allow older homeowners to be forced to move unnecessarily from their homes when we can help creat alternatives and preserve housing options for them. As the newly appointed chair of the Subcommittee on Housing and Consumer Interests of the Select Committee on Aging, I look forward to working with the members of the Committee on Banking, Finance, and Urban Affairs, particularly the distinguished chairman, Mr. GONZALEZ, in incorporating these proposals into the Housing and Community Development Act. I will also continue working with other Members to improve housing options for older adults and to protect their rights as consumers of health care, social services, and other products.

CONGRATULATIONS TO THE 49'ERS ON THEIR SUPER BOWL VICTORY

(Ms. PELOSI asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. PELOSI. Mr. Speaker, as a Representative of San Francisco in Congress, I come to praise and congratulate the World-Champion San Francisco 49'ers. Mr. Speaker, they did it again. The 49'ers, under the skillful guidance of rookie head coach, George Seifert, treated a worldwide audience to a 55-to-10 rout in the Super Bowl. A

tremendous performance by the 49'er offensive line gave our remarkable quarterback, Joe Montana, the time he needed. And there were plenty of touchdowns to go around—Jerry Rice sailed in with three; Tom Rathman two; John Taylor got one as did Brent Jones and Roger Craig.

Montana shattered almost every Super Bowl quarterback record. He broke records for most passes attempted, most passes completed, most touchdown passes, most pass attempts without an interception—Montana was invincible.

Mr. Speaker, after last year's Super Bowl victory and the Bay Area world series, you may have wondered what could possibly come next. Well, with back to back Super Bowl victories, the champion San Francisco 49'ers have emerged not only as the best team of the decade but perhaps the best team in the history of the game. The bay area is indeed the sports capitol of the world. Under the leadership of team owner Eddie Debartolo, the 49'ers, with brilliant coaching, flawless execution and championship spirit, showed that they are still No. 1—winning the second Super Bowl in a row. Congresswoman BOXER joins me in extending congratulations to the 49'ers and to the people of San Francisco. Let us make it three straight.

□ 1240

REMOVAL OF NAME OF MEMBER AS COSPONSOR OF HOUSE CONCURRENT RESOLUTION 147

Mr. VENTO. Mr. Speaker, I ask unanimous consent that my name be removed as a cosponsor from the concurrent resolution (H. Con. Res. 147).

The SPEAKER pro tempore (Mr. TORRES). Is there objection to the request of the gentleman from Minnesota?

There was no objection.

WHEN CORPORATE RAIDERS FLAUNT OUR LAWS

(Mr. SHARP asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SHARP. Mr. Speaker, I want to inform Members of this Chamber of a very serious matter involving an outstanding company headquartered in my district, and the alleged actions of an international corporate raider which go to the very heart of our Nation's securities, antitrust, and racketeering laws.

Few, if any, of us have not been confronted with some type of hostile takeover activity in our districts and our States. The last decade, after all, were very good years for international corporate raiders, motivated by quick, huge profits.

In their wake, these corporate raiders have often left behind discarded workers, traumatized communities, vanishing pensions, and dismembered or heavily leveraged businesses.

I recognize not all hostile takeovers are necessarily bad. But when the behavior of today's corporate raiders bears a striking resemblance to plunder and piracy—when their actions flaunt norms of law and decency—then I think we must take notice. And we must say "enough is enough."

Cummins Engine Co., which is headquartered in Columbus, IN, is now facing a fight not only for its life, but for the very kind of corporate citizenship that has made it a model in American manufacturing. That fight is worth our attention because the offshore raider appears to have repeatedly ignored our laws; that fight is worth making because of the kind of company Cummins is.

When faced with foreign competition some years ago, Cummins adopted a long-term strategy for its future. It invested in research and development, in its employees and in new technology. Sacrificing quick quarterly profits, it cut costs for its product and boosted productivity. It maintained market share in the United States, and even expanded market shares abroad. All the while, even when profits were flat, it did not neglect what it sees as an obligation to continue philanthropic investments in communities, people, and charities in the United States.

This long-term view has, unfortunately, exposed Cummins to foreign takeover artists. Perhaps soon this body will take action against hostile takeovers motivated by mindless greed and little else. But in the meantime, we simply cannot allow our securities, antitrust, and RICO statutes to be treated as though they did not exist by the hostile pirates of our day, foreign or domestic.

THE PRESIDENT'S BUDGET NEEDS TO BE REPLACED WITH A REALISTIC PROPOSAL

(Mr. DEFAZIO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DEFAZIO. Mr. Speaker, after a day's research into the facts behind the fiction in the President's budget we find that it is a bit like "Alice in Wonderland Through the Looking Glass." It gets curiouser and curiouser. Four-fifths, 80 percent, of the cuts fall on domestic programs. Real cuts in needed programs. Five and one-half billion dollars out of Medicare. Home heating assistance programs will be slashed. Student loans will be cut. Dislocated worker training programs would be terminated.

Mr. Speaker, the list is long on the domestic side. How about the Pentagon?

Well, Mr. Speaker, they have been handed a decrease in their projected increase, known in this budget wonderland as a cut. A 30-percent increase in the Stealth bomber, $5.5 billion; 50-percent increase on the MX missile on rail cars, $2.8 billion. There is a 20 percent increase in the star wars fantasy: $4.5 billion.

Cuts? Well, the cuts in the Pentagon: $2.7 billion through a spare parts transfer, $2.3 billion in unspecified management reforms.

Finally, what we have been waiting for, the big ticket: $9.8 billion through a budget scrub, a budget scrub.

Mr. Speaker, the principal thing that needs to be scrubbed here is the President's budget, and it needs to be replaced with a realistic proposal that contains the real deficit reductions we need and the priorities that reflect the needs of the United States in the 1990's.

THERE MUST BE A COST SHARING PROVISION IN ACID RAIN LEGISLATION

(Mr. APPLEGATE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. APPLEGATE. Mr. Speaker, no, no, a thousand times no. If there is no cost sharing provision in the acid rain legislation between the House and the Senate, then we should reject it outright.

Why? Well, if everybody is to share the benefits of good clean air in this country, then everybody should share in the cost of it. It makes more sense than all of the States having to share the cost of defunct savings and loans in just a few of the States throughout the country, but each of us do. We all share the cost of projects in each other's States, projects that correct water pollution, toxic waste dumps, sewer and treatment plants, and a host of other things.

Yes, Mr. Speaker, we all pay for that, and so we are all sharing the cost.

I say to my colleagues, "My friends, there is no free lunch. We helped you. Now those in the States that are being affected adversely need your help."

The road goes both ways, Mr. Speaker.

INTRODUCTION OF VIOLENT CRIME CONTROL AND CRIMINAL PROCEDURES REFORM ACT OF 1989

(Mr. DENNY SMITH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DENNY SMITH. Mr. Speaker, America's law-abiding citizens deserve tough, effective anti-crime measures to ensure that those who commit violent crimes are kept behind bars. I rise today to introduce the Violent Crime Control and Criminal Procedures Reform Act of 1989, a companion of the Senate version introduced by Hon. STROM THURMOND.

America needs this bill. Murder statistics are up. Rape, bank robbery, and theft are up. The number of drug dealers in our neighborhoods is higher as well as the the number of criminals using drugs. In New York City alone, 90 percent of all males arrested in 1988 tested positive for drug use.

Judges, prosecutors, police officers, and millions of Americans are appealing to Congress for reforms that will lead to a safer America.

The Federal death penalty, which has been bogged down by Congress for the past decade, is addressed in this bill as are the rights of criminal victims. No longer can criminals abuse the habeas corpus procedure to indefinitely delay a previous conviction. No longer will substantial amounts of validly seized evidence be excluded from our courts on legal loopholes. No longer will the rights of criminal defendants be exalted over the safety and security of society and its victims.

This legislation also reflects the stated goals and priorities of President Bush and Drug Policy Director William Bennett. Implicit throughout the strategy is the realization that in order to eliminate drug related crime, we must reform the very laws and procedures by which we punish violent offenders.

Enacting a comprehensive death penalty, enhancing the penalties for those who use firearms to commit crimes, and reforming the criminal procedures, will respond to the delay and injustice which threatens the effectiveness of our criminal justice system. This bill encompasses the real reform America wants and so greatly deserves.

BORROWING AND SPENDING ON ALL THE WRONG THINGS

(Mr. DORGAN of North Dakota asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DORGAN of North Dakota. Mr. Speaker, it is a curious thing to see the President's budget defy the laws of physics. The budget is a thick document weighing slightly over 5 pounds, but it contains enough hot air to lift the Hindenburg. My colleagues might have thought that perhaps the President and OMB Director Dick Darman would have learned from the confessions of David Stockman, but unfortunately they did not learn a thing. Instead, they have used tricks, games, and slight of hand to stitch together a fundamentally dishonest budget.

First, Mr. Speaker, this budget does not have a $63 billion deficit, and everybody in this room knows it. The read deficit is actually closer to $160 or $180 billion. First, they used over $70 billion of Social Security trust funds to show a lower deficit, and then they stitched together phoney economic assumptions to lower it an additional $30 or $40 billion. So, the real deficit for this budget is close to $180 billion.

Second, Mr. Speaker, this administration's priorities, to use a carpenter's term, are about a half a bubble off plumb. The President says, "I want to build star wars, I want to take a trip to Mars, and I want to give the richest of the rich Americans another tax cut."

But the President also says, "We don't have enough money here at home to do the things we need for a strong America: Provide health care for all Americans, educate our kids, and provide some help to family farmers."

Mr. Speaker, I say to the President, "It's not old fashioned, Mr. President, to invest here at home in America. That ought to be our first priority, not our last priority."

Sadly, Mr. Speaker, this is one more chapter of the book started by the last administration entitled, "Borrowing and Spending on All the Wrong Things."

My colleagues, America deserves better.

"SLIDE THROUGH TO '92"

(Mr. LEVIN of Michigan asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LEVIN of Michigan. Mr. Speaker, Mr. Darman stirred great expectations only to dash them. In his introduction to the budget he spells out, indeed in forceful terms, the fiscal challenges that lie ahead of us, but his plan for action falls far short. "Slide through to '92": That is the reality.

My colleagues, take a look at the centerpiece of the administration's revenue plan, a cut in the capital gains tax. Last year, the administration conceded that after 5 years this tax break, going mostly to the wealthy, would increase the deficit. Now we hear it will never lose revenue.

Mr. Speaker, this is "déjà voodoo." Cut taxes and raise revenues. Last time, we heard this it was from Ronald Reagan and David Stockman.

Here we go again. When it comes to decisive action on the budget, Mr. Darman philosophizes, yes; but acts, no.

□ 1250

NO JUSTIFICATION FOR HIGHER OIL PRICES

(Mr. BATES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BATES. Mr. Speaker, gasoline prices in San Diego, which are usually 2 or 3 cents per gallon higher than in Los Angeles, have recently widened to 10 to 13 cents per gallon higher than Los Angeles prices. Some industry sources have blamed oil company profiteering for the price discrepancy. San Diego has no operating refineries in the county, so motor fuel is moved from the Los Angeles basin refineries by truck or pipeline.

Transportation costs might justify and have in the past a 2- to 3-cent price increase, but for the gap to reach 10 to 13 cents per gallon is outrageous.

San Diego has the worst gasoline price situation for consumers on the west coast. The situation is hurting consumers, while taxable sales are lost to other counties.

In short, it appears again the oil companies are exploiting a marketplace where there is little competition and a controlled distribution system. This abuse is inexcusable.

I call on the oil companies to reduce their prices immediately. I think it raises the specter of an antitrust issue and I think Congress must immediately address this problem.

A CRISIS IN MEDICARE FUNDING

(Mr. PEASE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PEASE. Mr. Speaker, I rise to express my great distress over President Bush's proposal to reduce Medicare funding by $5.4 billion.

We stand on the brink of a health care crisis in our country today. Thirty-seven million Americans lack health insurance. For those that can afford insurance, premiums are on the rise. Hospitals, including one in my own district, are closing their doors.

The good news is that technological advances in medicine continue at a rapid pace. Special treatments and operations are keeping people alive longer than ever and are allowing them to enjoy their longer lives free of painful conditions like arthritic knees.

Unfortunately, these technological advances have caused medical costs to skyrocket, forcing Medicare and private insurance companies to keep up.

This has occurred at a time when our mounting budget deficits make fiscal austerity necessary. Throughout the last decade, Medicare has made a significant contribution to our Na-

tion's budget cutting efforts. These Medicare cuts have often had a detrimental effect on our hospitals.

Many hospitals are finding it difficult to provide health care services to the elderly and disabled. According to the American Hospital Association, 65 percent of hospitals will suffer losses in covering the cost of treating Medicare beneficiaries in fiscal year 1990. Clearly, this situation is not sustainable. This is not the time to again hit American hospitals with severe budget cuts.

A nation as wealthy as ours can afford to keep its Medicare program healthy. Hospitals should be reimbursed a fair amount for services rendered to the elderly and disabled even as we continue to look for ways to keep medical costs under control.

In many ways, hospitals are the backbone of our communities. They provide essential services at critical times of our lives. We need to make sure that they are alive and well, not just barely surviving.

ONCE AGAIN PRESIDENT DUCKS TOUGH CHOICES ON BUDGET

(Mr. RICHARDSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RICHARDSON. Mr. Speaker, here we go again, a new budget for the President. Once again a popular President ducks the tough choices and says everything is rosy and we do not have to worry about the deficit. Just close your eyes and everything will be all right.

Last year the President said to wait until next year. Well, here we are and what do we see? Smoke and mirrors, gimmicks, "read my lips," cut Medicare for the elderly, cut education, science, research and development, speak loudly on drugs and crime but do not do anything if it means money.

Forget the peace dividend. What is happening in Eastern Europe is only an illusion.

Mr. Speaker, we have been hearing this same debate for 8 years, and it is wearing thin.

I say to the President that he has made one tough choice, the boat owners of this country will be slapped; but after they lobby, they probably will get off the hook, just like everybody else.

THE CENTENNIAL YEAR IN THE GEM STATE

(Mr. STALLINGS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. STALLINGS. Mr. Speaker, it is the centennial year in the Gem State. One hundred years ago this July, President Benjamin Harrison welcomed the great State of Idaho as the 43d member of the Union. Today, along with my esteemed colleague Mr. CRAIG, I am introducing a joint resolution to commemorate and acknowledge Idaho's admission, and to call the Nation's attention to the significant and continuous contributions our citizens make to the United States.

Mr. Speaker, when Sacajawea led the Lewis and Clark expedition over the Bitteroot Mountains into her Idaho homeland, the explorers discovered a world of untouched beauty. In the years that followed this land captivated the imagination of explorers and settlers alike and many chose to stay and call it home. Pioneer farmers made the desert bloom, turning sagebrush into fertile ground. Miners followed the promise of silver and gold into the mountains and delivered untold riches. Loggers harvested the forests and provided the materials to build towns and industries. Ranchers raised cattle and sheep to feed and clothe the Nation. By 1890 so much growth occurred that the Idaho territory had earned the right to join the United States of America.

One hundred years later it is our turn to celebrate. The spirit of local communities has made Idaho great for a century and in 1990 that spirit is stronger than ever before.

Mr. Speaker, there has never been a better year to visit and discover the treasures of Idaho, and I hope that all Americans will join in this celebration of a century.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore (Mr. TORRES). Pursuant to the provisions of clause 5 of rule I, the Chair announces that he will postpone further proceedings today on the motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 4 of rule XV.

Such rollcall vote, if postponed, will be taken on Wednesday, Janaury 31, 1989.

RELATING TO THE POLICE FORCE OF NATIONAL ZOOLOGICAL PARK OF THE SMITHSONIAN INSTITUTION

Mr. CLAY. Mr. Speaker, I move to suspend the rules and pass the senate bill (S. 1521) to amend Public Law 91-34 relating to the police force of the National Zoological Park of the Smithsonian Institution, and for other purposes, as amended.

The Clerk read as follows

S. 1521

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. INCREASE IN THE MAXIMUM RATES OF BASIC PAY FOR THE POLICE FORCE OF THE NATIONAL ZOOLOGICAL PARK.

(a) IN GENERAL.—Section 5375 of title 5, United States Code, is amended to read as follows:

"§ 5375. Police force of the National Zoological Park

"The Secretary of the Smithsonian Institution shall fix the annual rates of basic pay for positions on the police force of the National Zoological Park as follows:

"(1) Private, not more than the maximum annual rate of basic pay payable for grade GS-7 of the General schedule.

"(2) Sergeant, not more than the maximum annual rate of basic pay payable for grade GS-8, of the General schedule.

"(3) Lieutenant, not more than the maximum annual rate of basic pay payable for grade GS-9 of the General schedule.

"(4) Captain, not more than the maximum annual rate of basic pay payable for grade GS-10 of the General Schedule.

(b) CLERICAL AMENDMENT.—The item relating to section 5374 in the table of sections for chapter 53 of title 5, United States Code, is amended to read as follows:

"5375. Police force of the National Zoological Park.".

SEC. 2. EFFECTIVE DATE.

The amendments made by section 1 shall apply with respect to pay periods beginning after he date of the enactment of this Act.

The SPEAKER pro tempore. Is a second demanded?

Mr. GILLMOR. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from Missouri [Mr. CLAY] will be recognized for 20 minutes, and the gentleman from Ohio [Mr. GILLMOR] will be recognized for 20 minutes.

The Chair recognizes the gentleman from Missouri [Mr. CLAY].

Mr. CLAY. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the general schedule pay system for Federal employees provides for 10 step increases within a GS pay grade. Under current law, the pay scales for police at the National Zoo have been capped at step 5. S. 1521 amends section 5375 of title 5 of the United States Code to permit the salary scales of the officers of the National Zoo Police Force to extend through the full 10 steps within grade. The amendments to the bill as passed by the Senate are solely technical in nature.

This bill does not change the grade level for any rank of officer on the zoo police force. It merely provides that those officers may progress within grade from step 5 through step 10. Salaries on the zoo police force are currently capped at grade 7, step 5 for the rank of private; grade 8, step 5 for sergeant; grade 9, step 5 for lieutenant; and grade 10, step 5 for captain. Based on the January 1990 General Sched-

ule, S. 1521 would increase the maximum salary for the rank of private from $22,887 (GS 7-5) to $26,252 (GS 7-10) or $3,365. The maximum salary for a sergeant would increase from $25,351 (GS 8-5) to $29,081 (GS 8-10) or $3,730. For lieutenant, the maximum salary would increase from $28,001 (GS 9-5) to $32,121 (GS 9-10) or $4,120 and, for captain, the maximum salary would increase from $30,834 (GS 10-5) to $35,369 (GS 10-10) or $4,535. In the wholly unlikely event that every officer on the zoo police force immediately receives the maximum increase possible under this legislation, the total cost of this bill is still less than the salary of a single House employee employed at the current House salary pay cap. The Office of Management and Budget has advised that it has no objection to the enactment of this legislation.

Zoo police officers have not received a pay increase, other than cost of living increases, since 1969. As a result, the salary levels for the zoo police have not kept pace with those of other area Federal, State, and local police forces. This in turn has greatly complicated the efforts of the Smithsonian to either retain existing officers or attract new, qualified applicants.

The problems this poses for the National Zoo are immediate and pressing. When the Smithsonian first requested this legislation, there were 21 members on the force. At that time, 50 percent had been at the top of their salary levels for periods ranging from a minimum of 12 months to a maximum of 11 years. Since that time, 4 officers have left and the force is presently down to 17 members. While the zoo continues to expand its facilities, the police force continues to lose qualified, intelligent, experienced officers because their base pay has been seriously outdistanced by that of other area police forces.

The animals of the National Zoo are a priceless national treasure. The lives of the people who work with and come to visit them are even more valuable. It is incumbent upon us to ensure that the animals and the tens of thousands of citizens who visit them every year are adequately protected. At a very minimal cost to the Government, this bill will go a long way toward facilitating that end. I urge my colleagues to support passage of this bill.

Mr. GILLMOR. Mr. Speaker, I yield myself such time as I may consume.

I rise in support of S. 1521, a bill which amends title V of the United States Code to allow the ±salary scales of the National Zoological Police Force to progress through step 10 within each grade. As my distinguished chairman has stated, since 1969, the zoo police officers pay has been capped within grade at step 5. This cap has limited the ability of the zoo management to attract and retain qualified, experienced officers. Passage of this bill would allow the police force to continue to provide adequate protection for the zoo's valuable resources and many visitors.

I thank the gentleman from Missouri for his fine leadership in bringing this bill to the floor and I urge my colleagues to support S. 1521, as amended.

Mr. Speaker, I yield such time as he may consume to the gentleman from Massachusetts [Mr. CONTE].

□ 1300

Mr. CONTE. Mr. Speaker, I rise in support of S. 1521, a bill designed to equalize an outdated pay system now governing the salaries of the National Zoo Police. This bill is the companion for H.R. 2866, an identical bill introduced by myself, Mr. MINETA, and Mr. WHITTEN.

I want to thank Congressman BILL CLAY, the chairman of the Subcommittee on Libraries and Memorials and his ranking member, the distinguished gentleman from Ohio [Mr. GILLMOR] for their expeditious consideration of this legislation. As a member of the Board of Regents, I can say without hesitation that both gentlemen and the leadership of the House Administration Committee are great friends of the Smithsonian Institution. Their assistance over the years has enabled the Smithsonian to remain the premier museum complex in the world, and on behalf of the Institution, I thank them for their interest and their service. All Americans who visit the Capitol or who are touched by some of the diverse Smithsonian programs owe this committee a great debt.

The bill under consideration today is designed to remedy a problem left unexamined for some time. Salaries of the National Zoological Park Police are determined by Public Law 91-34 because the National Zoo Police are not covered by the Classification Act of 1949. Zoo police officers have not received a pay increase since June 1969, although the Secretary has accorded them cost-of-living increases elsewhere in the Federal service.

The zoo police have become seriously outdistanced by units such as the U.S. Park Police and the Uniformed Branch of the Secret Service, whose starting salaries range from $24,450 to $34,136, as opposed to the zoo police pay, which starts at $19,943 and tops at $22,093, for police privates. Increased wages for private security and other protective jobs also put the zoo at a salary disadvantage.

As may be expected, the Office of Police and Safety at the zoo has experienced difficulty in recruitment for zoo police officers. Over the past decade, the principal pool of applicants has been retired military and law enforcement personnel rather than applicants from viable competitions with other police recruitment sources. The force is currently composed of retired or second-career officers—55 percent—and first career or nonretired individuals—45 percent. The average age of zoo police officers is 47.9 years.

Eliminating the current restrictions on pay to the fifth step of each grade, thereby permitting salary scales to flow through the full 10 steps, will ease problems of recruitment as well as retention, and will provide a more equitable pay system.

Mr. Speaker, again, I want to thank Chairman CLAY, my dear and beloved friend, who together we put through the plant closing legislation, and Congressman FORD also, and PAUL GILLMOR for this leadership on this issue, and urge all members to support this bill.

Mr. GILLMOR. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

Mr. CLAY. Mr. Speaker, I yield myself such time as I may consume.

I thank the gentleman from Ohio [Mr. GILLMOR] for his support and assistance on this bill. I also wish to thank the gentleman from Massachusetts [Mr. CONTE], the sponsor of the House companion bill, who did push through the plant closing bill along with myself and that fellow, Mr. FORD, that he referred to. That is our private joke, Mr. Speaker.

I also wish to thank my colleagues on the Subcommittee on Libraries and Memorials and the Committee on House Administration for their willingness to facilitate and expedite enactment of this legislation.

Mr. MINETA. Mr. Speaker, I rise in support of S. 1521, which concerns the pay of the National Zoological Park Police. Because the National Zoo's police force is not covered by the Classification Act of 1949, the zoo's police officers have not received a pay increase since June of 1969, other than across-the-board cost-of-living increases. This bill will correct that problem by allowing the pay for National Zoo Police to flow through the full 10 General Schedule steps rather than being limited to the first five steps of GS-7 through GS-10.

This measure will bring the National Zoo police salaries more in line with those afforded the National Park Police and the Uniformed Branch of the Secret Service. Given the important function of the zoo police in protecting the millions of annual visitors to the National Zoo as well as the priceless collection of animals, this is the least that can be done.

For these reasons, I am proud to have cosponsored this bill in the House and urge your support of its enactment.

Mr. CLAY. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

The SPEAKER pro tempore (Mr. TORRES). The question is on the motion offered by the gentleman from Missouri [Mr. CLAY] that the House suspend the rules and pass the Senate bill, S. 1521, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the Senate bill, as amended, was passed.

The title of the Senate bill was amended so as to read. "An act to provide for an increase in the maximum rates of basic pay for the police force of the National Zoological Park."

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. CLAY. Mr. Speaker, I ask unanimous consent that all Members have 5 legislative days in which to revise and extend their remarks on S. 1521, the Senate bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

EAST-WEST TENSION AND NORTH-SOUTH NEED

Mr. FAUNTROY. Mr. Speaker, as the Nation prepares to receive the State of the Union Address from our beloved President, I want to share with the American people some thoughts on the golden opportunity that we have in the decade of the nineties to resolve the backlog of problems built up over the past decade of neglect in our Nation and our world in education, housing, and homelessness, drug control, AIDS research, infrastructural repair and environmental rehabilitation. This opportunity flows from the fact that the winding down of the East-West conflict in our world may release billions of dollars in money, manpower, and research which for decades have been devoted to military uses to concentrate now on pressing human and environmental needs that are getting out of hand in our world today.

It is for that reason that I want to speak to the American people on the subject: East-West Tension and North-South Need.

Mr. Speaker, there is a fierce wind blowing in our world today. It is blowing with hurricane force: tearing down old systems, sweeping away a crumbling order and ushering in a new day. If you listen with your spiritual ears, you can hear the wind blowing the rumbling chords of freedom in Angola, and Namibia and throughout South Africa. The echo of the wind is heard from Tiananmen Square in China and throughout Asia. The sound of the wind is heard from Poland, Czechoslovakia, Romania, and throughout Eastern Europe. It rises from the huddled masses who yearn to breathe free in Haiti and through Central and South America. It is the wind of freedom; it's a wind of change.

These winds of change that are sweeping the globe today have profound significance for improving the quality of life for those who suffered most during the decade of the eighties because of decisions made by both our President and Congress and by the developed, industrialized nations of the Northern Hemisphere. It is, therefore, my hope and prayer that in the decade of the nineties, East-West tension will yield to North-South need.

MILITARY EXPENDITURES AND SOCIAL NEED

It was President Dwight David Eisenhower who said in 1953 that:

> Every gun that is made, every warship that is launched, every rocket that is fired, signifies a theft from those who are hungry and are not fed, those who are cold and are not clothed. This world in arms is not spending money alone. It is spending the sweat of its laborers, the genius of its scientists, the hopes of its children!

We are only now beginning to understand how the political obsession with military force which has dominated national priorities on our planet since World War II has drained the world's vitality and wealth and robbed us of the ability to meet pressing human need.

In the 13th edition of "World Military and Social Expenditures" released last fall, Ruth Leger Sivard against documents the fact that in the decade of the eighties global spending on the military has been $1 trillion a year. Half of that spending has been by the United States and the Soviet Union. In contrast, global spending on human need and development assistance has been only 2.8 percent of that amount: $28 billion. One thousand billion for defense, only 28 billion for development. The costs of that social neglect have been tremendous.

In a table documenting the victims of war over the past 45 years and the victims of social neglect, Ms. Sivard points out that the chances of dying from social neglect—from malnutrition and preventable disease—are 33 times greater than the chances of dying in war. Look at the annual toll of victims of the 127 wars we have had in the world since 1945 compared it to the annual toll of victims of social neglect over the past 45 years: A total 525,000 people have been killed annually in war but 3.5 million children have died a year of dehydration, preventable by oral therapy at a cost of $1 dollar per child; 525,000 died annually in wars, but 4 million children died a year of six diseases, preventable by immunization at a cost of $10 per child; 525,000 died annually in wars but 10 million children a year did not survive their first birthday; 14 million a year died before their fifth birthday; and 500,000 mothers still die in the child birth annually in our world today.

The study shows that 1.2 million people were wounded a year in the 127 wars fought since 1945, but compare that to the walking wounded victims of social neglect in our world today; 1.2 million people are wounded in wars a year but 600 million women in childbearing years suffer from nutritional anemia; 1.2 million people are wounded in wars a year but 250,000 children are paralyzed by polio and another 700,000 go blind a year due to vitamin A deficiency; 1.2 million people are wounded in wars a year but each year 10 million mothers who are themselves malnourished bear malnourished children.

Our world's neglect of human needs causes an appalling number of lives to be lost to hunger and killer-diseases that are preventable at the cost of a few dollars a piece. A trillion dollars a year spent on military uses and only 2.8 percent of that amount on human need. The greater tragedy is that only half of the development assistance offered by the industrialized nations of the North goes to the underdeveloped, low-income nations of the South; 14 billion annually or only 1.4 percent of what the world spends on military uses.

If only a fraction of the money, manpower, and research devoted to military uses were diverted to development, we could not only end the health and education woes of the Third World nations of the South but also so invigorate their market economies as to provide the millions of people of the Caribbean and South and Central American economies alternatives to the wretched illicit drug industry that threatens to destroy civilization from within. For example: A mere 5 percent reduction in current military outlays of $1 trillion a year, if allocated instead to health care, could double public expenditures for the health care of 4 billion people in the Third World, providing enough resources to immunize every baby and to bring fresh water and basic sanitation within 10 years to every village; the World Health Organization declares that with a modest contribution from the nations of the world of $450 million, less than one-thousandth of the world's annual military spending, they would wipe malaria from the face of the globe at a time when millions die needlessly from this disease every year in the Southern Hemisphere; the cost of a 10-year program to provide essential food and health needs in developing countries is less than half of 1 year's military spending; for the price of one jet fighter, $20 million, 40,000 village based pharmacies could be established; one-half of 1 percent of 1

year's world military expenditures, $5 billion, would pay for all the farm equipment needed to increase food production and approach food self-sufficiency in all of the food deficit low-income countries of the world over the next 5 years.

President Dwight David Eisenhower was right:

Every gun that is made, every warship this is launched, every rocket that is fired, signifies a theft from those who are hungry and are not fed, those who are cold and are not clothed. This world in arms is not spending money alone. It is spending the sweat of its laborers, the genius of its scientists, the hopes of its children!

To bring it home to America, let me remind Members of what Senator MARK HATFIELD and Congressman HOWARD BERMAN of our Arms Control and Foreign Policy Caucus told us in sending us the Sivard report. They said:

At a time when the United States is facing unprecedented competitive pressure from Japan and the European community, the U.S. Government allocates only 25 percent of our research and development budget to civilian technology and 75 percent to the military, compared to European community nations which spend 70 percent on civilian and only 30 percent on military technology.

Those kinds of misplaced priorities are reflected in our neglect of human need during the decade of the eighties in almost every category, whether it be housing or health care or education or infrastructural and environmental rehabilitation. In the decade of the eighties we cut housing programs by 77 percent, throwing 3 million people homeless on the streets of America. Cuts in Medicaid funding in the eighties reduced the number of poor people covered by the program from 64 percent to 46 percent at a time when medical costs have doubled from $248 billion to $496.6 billion. We cut training of health care professions by 39 percent exascerbating the national shortfall of qualified nurses and doctors. We caused 37 million people in our country to have no health care insurance of any kind now.

In the area of education in the decade of the eighties, poor children receiving federally supported basic, skills training fell from 7 million in 1981 to 5.7 million in 1988; this, during a decade when the number of poor children increase to 8.5 million. American children's report card of September 1989—computed by the National Association of Secondary School Principals—gave our children C+ when compared to South Korean children who got A- and West German children who got B+.

While we are losing jobs in the labor intensive, smokestack, auto, rubber and steel industries which used to be the means of upward mobility for millions of the American people, we are cutting the very programs that would prepare our children for the capital intensive, information based, service oriented jobs of the present and future.

Please forgive me if I have assaulted you with so many facts documenting the social costs of our world's preoccupation with military expenditures but as the Reverend Jesse Jackson has so eloquently put it, "we must have information to gain the inspiration to reach our destination." And if our destination is a world free of the barbarism of war, the decadence of racism and the scourge of poverty, then the decade of the nineties must be one in which we change direction. East-West conflict must yield to North-South need. We must change a situation in which the poorest fifth of the world's population has had to attempt to survive on 2 percent of the global national product whereas the wealthiest fifth absorbs 78 percent of the global pie. On a per capita basis this works out to an annual income of $238 for those in the poorest fifth and $12,286 for those in the upper fifth. It means a life expectancy of 57 years in the South versus 75 years in the North and an infant mortality rate of 110 per 1,000 in the South versus 14 per 1,000 in the North.

Dwight David Eisenhower was right:

Every gun that is made, every warship that is launched, every rocket that is fired signifies a theft from those who are hungry and are not fed, those who are cold and are not clothed. This world in arms is not spending money alone. It is spending the sweat of its laborers, the genius of its scientists, the hopes of its children!

Ah, but as we stand today in this the first month of the first year of this the last decade of the last century of this millenium, there is good news tonight! The good news is that the military giants of the North seem now poised to release billion of dollars a year from their 45 year wasteful spending binge on military uses. The good news is that Secretary of Defense Richard Cheney and Budget Director Richard Darman are seeking ways to cut our Nation's enormous spending on military uses. The good news is that the Soviet Union has already begun a unilateral reduction of its large forces in Europe. The good news is that both superpowers are lending more support to nonviolent resolutions of regional hostilities. The most striking evidence of that is that, for the first time in 31 years, no new wars have started.

The winds of change that are sweeping the globe are blowing the world a golden opportunity to make long overdue investments in human need and infrastructural and environmental rehabilitation.

The question of the decade of the nineties is "will this peace dividend that will flow from the winding down of East-West conflict be invested in human resources and economic development to close the gap between the haves and have nots of our Nation and world, or will it serve to widen the gap between the North and the South, between the one-third of the world's population that lives primarily in the developed, industrialized nation's of Northern Hemisphere and the two-thirds of the world's population that is lives primarily in the Southern Hemisphere: Central and South America, Africa, the Caribbean, India and parts of Asia?" That is the question of the nineties.

NORTH-SOUTH NEED

As chairman of the Subcommittee on International Development, Finance, Trade and Monetary Policy, I am as concerned as leaders of the economically embattled developing countries of the South about several things: First, that financial support for Eastern Europe will mean less for a developing world already beset by reduced official and private flows.

That fear is not without foundation. Acting AID Director, Mark Edleman, told the Financial Times that "ensuring the triumph of democracy and peace in Europe may become our top priority. American resources are limited and money for Eastern Europe will come out of what would otherwise go to Africa, Central America and the Middle East."

My fear is that it will also come out of desperately needed initiatives to restore the 77-percent cuts that were made in domestic housing programs in the decade of the eighties throwing 3 million people homeless on the streets of America. My fear is that it will also come out of critical education and training programs that were severely cut in the eighties and that have crippled our efforts to prepare our young people for the capital intensive, information based, service oriented jobs of America's present and future.

My fear is that it will come out of programs that must be developed and expanded to deal with the most serious internal security problem confronting our Nation today: Illicit drug traffic. Should we not invest substantial amounts of the peace dividend in drug education, drug treatment and drug enforcement programs if we are to avoid entering the 21st century as a nation crippled by drug addicted zombies unable to compete in the world economy, thereby forcing those who live in the ghettoes and barrios of America, like those farmers in the Andean countries of South America wince come the drugs, to sink deeper into the underground drug economy because there are no alternative means of economic survival available to them? That's my concern!

The Third World nations of the South, afflicted with heavy debt burdens and net capital outflows, urgently need increasing quantities of aid, grants and soft money. The inner city

and rural poverty-stricken populations of our nation need much of the peace dividend to flow to them in terms of government programs to assist them in becoming productive citizens. My fear is that those official resources will not flow to them but rather to Eastern Europe or to pay off our Nation's $3 trillion Reagan debt to those who benefited most from the enormous tax breaks of the eighties and who then loaned the money back to the country at 10 percent interest to pay for its military spending binge.

Acting U.S. AID Director, Mark Edleman, also points out that "savings from the defense budget will not mean more aid for any one but it will mean less reductions for current aid recipients". The Gramm-Rudman budget cuts, he points out now demand this. Savings from the Defense budget are likely to be used to reduce the budget deficit. That's my concern!

My concern is that the benefits of the peace dividend will not flow from North to South, from the haves to the have nots. But I also have a second concern as well.

My second concern is that financial support for Eastern Europe will not only mean less flows of economic assistance from official government institutions, but that it may also mean less flows of private capital investment to the lesser developed communities of our Nation. Such private investment is essential if the "have nots" of our Nation and world are to become active participants in the world economy to the mutual benefit of both North and South, East and West.

That Financial Times article that I quoted earlier also pointed out that: Developing countries hoping to attract foreign private investment are also likely to lose out to an Eastern Europe with market economies. The competitive edge in production costs which many developing countries have used to attract foreign business may not now be considered the best bargain by investors.

In other words, the changes in Eastern Europe may well have an effect on flows of private investment capital to the low income countries of the South. If the nova rich companies of the Far east—Japan, Taiwan and Korea, for example, which are contemplating investments, feel they can get a better deal by going into Eastern Europe, then they will. My fear is that Eastern Europe will be more attractive for direct investment and capital flows than poor nations with high potential and great need like Mozambique and Zambia, Haiti, Jamaica and Namibia.

Yes, my fear is the "peace dividend" will not flow North to South, from "the Haves to the Have nots," but West to East with reduced flows of both official aid and private investment capital to the debt burdened lesser developed nations of the Third World.

A BALANCED PUBLIC AND PRIVATE AGENDA FOR THE NINETIES

The final question, then, is "what public and private initiatives must we pursue in the decade of the 1990's to assure that both official government aid and private capital investment function to close the gap between the 'haves and the have nots.' What must we do to insure that flows of public and private trade do not all go West to East further dividing our planet whites from nonwhites, highly developed nations from lesser developed countries, the North from the South?"

In my view, the watch word of our public policy agenda for the decade of the nineties must be balance: balance in addressing the needs of the haves and the have nots; balance in addressing the need of Eastern Europe and those of the poorer nations of the Southern Hemisphere; balance between our need to reduce the $3 trillion Reagan national debt and our need to fund adequately the housing, education, and human services programs that were so severely cut in the decade of the eighties, which cuts threw 3 million people homeless in the streets of America, reduced the quality of public education in our country to levels far below that of our economic competitors in the Far East and Western Europe and crippled our efforts to meet the health care needs of our Nation's poor.

BALANCE DOMESTICALLY

Such a balanced approach will mean that, domestically, all of our savings from defense reductions should not go to Deficit reduction but that adequate amounts will go to restoring the 77-percent cuts to our housing programs that were made in the decade of the eighties. It means that all of our peace dividend should not invested in further "tax relief" for the wealthy few but in education, urban and rural development and the war on drugs for the benefit of the unmonied money. As the second ranking member of the House Banking, Finance and Urban Affairs Committee and as a member of the Select Committee on Narcotics Abuse and Control, that will be my agenda for the second session of the 101st Congress and the decade of the nineties.

You may expect me to pursue, therefore, full funding of our Nation's housing and community development programs including the passage of H.R. 1180, the Omnibus Housing Act of 1990. You may expect me to oppose further tax breaks for the rich, indeed, to pursue the restoration of at least a portion of the taxation levels that we shamefully reduced in the decade of the 1980's for the exclusive benefit of the top 5 percent income earners of our Nation. You may expect me as a member of the Select Committee on Narcotics Abuse and Control to pursue full funding of a comprehensive war on drugs that provides adequate resources for not only the criminal justice system but also for drug education, drug treatment, and skill training to provide the have nots of our Nation an alternative to the illicit drug industry that too many feel is their only means of economic survival.

Balance should be the watchword in our initiatives to distribute the peace dividend in the decade of the nineties.

BALANCE INTERNATIONALLY

Internationally, a balanced approach means that not all of our foreign aid and trade initiatives will flow to Eastern Europe and the Middle East but that we will achieve a far better balance in our foreign relations budget between the developed nations of the Mediterranean Sea and above, and the lesser developed nations of Africa, the Caribbean, Central and South America.

Accordingly, you may expect me as chairman of the Banking Subcommittee on International Development, Finance, Trade and Monetary Policy to pursue the following public policy initiatives in the second session of the 101st Congress and beyond: First, An adequate replenishment for the International Development Association [IDA], with a proviso that at least 45 percent of the replishment be lent to Africa; $14 billion, of which $3 billion is the expected U.S. contribution, second, a quota increase in the IMF, about $50 billion, of which about $7 billion is the expected U.S. share, third, ongoing efforts to fashion means for reducing the burdensome overhang of commercial and official debt owned by the poor countries, fourth, trade initiatives to reduce the barriers which developing countries face in selling their goods in America.

How we achieve the desired balance will be the most hotly debated peace dividend issue in the 1990's.

BLACK AMERICA'S ROLE

Let me say this to my African-American brothers and sisters: We dare not find ourselves on the side-lines in this debate. Our very survival and future advancement toward freedom depend on our being active participants in shaping this debate.

As president of the National Black Leadership Roundtable, and a member of the Congressional Black Caucus, I will recommend that the CBC Foundation sponsor over the next 2 years, a National Commission on Post-Cold War Priorities as a vehicle for gathering together our best minds to sort out the balancing of the peace dividend.

The findings and recommendations of such a commission would establish a truly African-American imprint on the peace dividend debate. They would form the basis for interaction with both the Democratic and Republican

Parties, our congressional leadership and the administration.

OUR YOUTH ARE OUR FUTURE

In the meantime, as African-Americans, we have a responsibility, as never before, to get our own house in order; to devise effective self-help means of strengthening the social fiber of our threatened communities. Here, the bottom line is our youth. They are our future. We owe it to them, as our leaders of tomorrow—and to ourselves—to inspire them toward a new sense of commitment and sacrifice for the future betterment of our communities. Toward this end, we must actively enlist their participation in a movement of voluntary community service. Otherwise, more and more inner city communities risk becoming bloody battlegrounds in drug trafficking, violent crime and social chaos.

I am of the firm belief that the recruitment of African-American youth into a national network on voluntary community service—service specifically tailored to the urgent needs of black America, may offer us the best hope for transforming the peer group environment in our communities and around the country, away from the path of youth self-destruction.

Again, in my capacity as a member of the Black Caucus and president of the National Black Leadership Roundtable, I will seek to stimulate a dialog among my colleagues on the need for creative self-help approaches that rescue the future for our youth, especially our young black men, thereby ensuring the future vitality and stability of our communities.

Balance should be the watchword of our initiatives to distribute the peace dividend internationally in the decade of the nineties.

A NATION WITH A HEART

Dr. Tony Campolo, chairman of the department of sociology at Eastern College in St. Davids, PA, tells this story about a school teacher friend of his that I think sets the right tone for our Nation and our world as we move boldly into the decade of the nineties. He says:

I have a friend, he said. Her name's Jean Thompson. It was the first day of school, she said what school teachers always say the first day of school. "Boys and girls, she said, I love you all the same."

Teachers lie. I was one of the those boys that teachers didn't like. How about you? Little Teddy Stollard was a boy that Jean Thompson did not like. He sat slouched in his chair. He didn't pay attention. His mouth hung open in a stupor. His eyes were always unfocused. His clothes were musty, his hair unkept. He never bathed often enough to get rid of an upleasant odor. He was an unattractive boy and Jean Thompson did not like him.

When she spoke to him, he answered in monosyllables; "yeah. . .nahh. .yeah. When she marked his paper, she got a perverse delight out of putting x's next to the wrong answers. And when she put the "F" at the top of the paper, she always did it with a flair; and she should have known better.

Teachers have reocrds. And she had records. She had records on Teddy Stollard. First grade; Teddy's a good boy. He shows promise in work and attitude. But poor home situation. Second grade: Teddy is a good boy. He does what he is told. But he is too serious. His mother is terminally ill. Third grade: Teddy is falling behind in his work, he needs help. His mother died this year. His father shows no interest. Fourth grade: Teddy is in deep waters, he is in need of psychiatric help. He is totally withdrawn. She had records, she should have known better.

Christmas came and the boys and girls brought their presents and piled them on the desk. They were all in brightly colored paper except for Teddy's present. His was wrapped in brown paper and held together with scotch tape. And on it, and scribled in crayon, were the words, "For Miss Thompson from Teddy." She tore open the brown paper an out fell a rhinestone bracelet with most of the stones missing, and a bottle of cheap perfume that was almost empty. The other boys and girls began to giggle, but she had enough sense to put some of the perfume on her wrist, put on the bracelet and then holding the wrist up to the other children said, "Doesn't it smell lovely? Isn't the bracelet lovely?"

And taking their cue from the teacher, they all agreed.

At the end of the day, when all the children had left, Teddy lingered behind. And he came over to the desk and he said, "Miss Thompson, all day long, you smelled just like my mother. And her bracelet, that's her bracelet, it looks real nice on you too. I'm really glad you like my presents." And when he left, she got down on her knees and buried her head in the chair and she begged God to forgive her.

And the next day, when the children came, she was a different teacher. She was a teacher with a heart. She was a teacher whose heart had been broken by the things that break the heart of God. That's what it means to be a decent human being. To let your heart be broken by the things that break the heart of God. And she cared for all the children, but especially those who needed help. Especially Teddy. She tutored, she put herself out, for she had a heart for God. A heart for God. By the end of that year, Teddy had caught up with a lot of the children. He was even ahead of some.

Several years later Jean Thompson got this note:

DEAR MISS THOMPSON, I'm graduating an I'm second in my high school class. I wanted you to be the first to know.

Love,

TEDDY.

Four year later she got another note:

DEAR MISS THOMPSON, I wanted you to be the first to know, I'm the first in my class. The University has not been easy, but I liked it.

Love,

TEDDY STOLLARD.

Four years later there was another note:

DEAR MISS THOMPSON, As of today, I am Theodore J. Stollard, M.D. How about that? I wanted you to be the first to know. I'm going to be married in July, the 27th to be exact. I want you to come and sit where my mother would have sat, because you're the only family I have. Dad died last year.

And she went and she sat where that mother should have sat because she deserved to be there. She had become a decent human being. Do you have such a heart of gold? Do you care so much for those who hurt? Then, join me and freedom loving people across this Nation and around the world in the noble quest in the decade of the nineties to have East-West resources flow to meet North-South need.

Don't tell me it cannot be done. That's what they told Joshua and Caleb. "You can't enter the land of Canaan. There are giants over there and we are like grasshoppers in their sight." But Joshua and Caleb said, "Oh no, with God's help we shall overcome." And they merely walked about the walled city of Jericho and the walls came tumbling down.

That's what they told Martin Luther King, Jr. in Birmingham, AL in 1963. They said, "You can't change America; they'll never take down the 'for white only' signs; it will never happen! But Martin said, "Oh no, with God's help, we shall overcome." I shall never forget how he led our people out of the 16th Street Baptist Church on a Sunday afternoon. We stood before Bull Connor with his bull whips and fire hoses and biting dogs like David before Goliath saying "you come before us with a sword and a shield but we come in the name of God: We're going to be free. You can beat us with your billy clubs, but we'll keep on marching. You can knock us down with your fire hoses, but we'll get up and keep on marching. You can bomb our churches and kill our children, Bull Conner, and we'll keep on marching. Because there is something within us that fire can't burn out and water can't drown out and billy clubs can't beat out and bombs can't bomb out. It is our belief in ourselves." And we marched! We marched until the patter of our feet became the thunder of the marching men of Joshua and the world rocked beneath our tread; rocked until I could sit in the East Room of the White House with Martin Luther King, Jr. and watch President Lyndon Johnson sign a piece of paper that declared "make of the man's dream a living reality! Don't tell me it can't be done.

If you believe it, join people of goodwill all over the world in the noble quest to meet human development needs in the decade of the nineties. Join us with the determination of Dr. Charles Adams of the Hartford Memorial Baptist Church of Detroit, Michigan:

Don't let anything paralyze your mind, tie your hands or break your spirit. If you have a hard way to go, walk it by faith. If you face a mean problem, work with it until you work through it. If you have a misunderstanding, settle it. If they have a grudge, drop it. If you have hatred or resentment, shake if off. If you have a high mountain, move it by faith or climb it by work. If you have a battle, fight it. If you have a handi-

cap, rise above it. If you have race prejudice, overcome it. If you have a temptation, conquer it. If you have an evil, destroy it. If you have a challenge, face it. If you have trouble, take it. If you have a cross, bear it. If they knock you down, get up. If they push you against the ropes, come out swinging. If they laugh at you, keep smiling at them. If they talk about you, keep praying for them. If they hate you, keep loving them; and if they kill you, just rise again.

Ain't no power on earth that can stop a people with heart of gold who are determined to do God's Will.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF H.R. 2190, NATIONAL VOTER REGISTRATION ACT OF 1989

Mr. MOAKLEY, from the Committee on Rules, submitted a privileged report (Rept. No. 101-396) on the resolution (H. Res. 309) providing for the consideration of the bill (H.R. 2190) to establish national voter registration procedures for elections for Federal office, and for other purposes, which was referred to the House Calendar and ordered to be printed.

□ 1400

AMERICAN OPPORTUNITIES AND THE BUDGET OF THE UNITED STATES

The SPEAKER pro tempore (Mr. MCNULTY). Under a previous order of the House, the gentleman from Georgia [Mr. GINGRICH] is recognized for 60 minutes.

Mr. GINGRICH. Mr. Speaker, I am going to talk today about American opportunities and the budget of the United States.

As my colleagues know, I have mentioned several times recently the concept of an American Opportunities Workshop on May 19, the idea that the real key for us is to find new solutions for the 1990's, to recognize that we have to change America in the 1990's for Americans to succeed in the 21st century, and I have emphasized the idea that by having an American Opportunities Workshop open to all that we could develop some new approaches, some new ways of solving problems, some new solutions.

I was looking through the budget of the U.S. Government which was released yesterday and which includes the budget message of the President and the Director's introduction to the budget. I was very struck with the fact that this budget contains, I think, the best possible framework for thinking about new solutions and new approaches and for explaining why we have to get in the habit of applying common sense focusing on opportunities.

Let me start with sheer scale. The fact is that the new budget proposal which some of our liberal friends have already said is too small and does not have enough money, the budget proposes to spend $1,233,300,000,000. Let me emphasize that again, because I think when the average American hears somebody explain that it is not enough or not big enough or somehow we never quite have enough money in government, we should recognize the size of the Federal budget: President Bush is proposing for next fiscal year that we spend $1,233,300,000,000.

When I was young, Everett Dirksen used to say that a billion dollars here, a billions dollars there, pretty soon it adds up to real money, but imagine that we are talking about a $1,233,300,000,000 budget. That means, to give a sense of scale, that $1 trillion is a million million dollars. In other words, if we had a million-dollar bill sitting here, we would have a million million-dollar bills to represent a trillion, or to put it differently, we are going to spend 1,233,000 million-dollar bills in the proposed budget. It is an enormous amount of money.

One way to put it, as Budget Director Darman says, and I quote from page 7 of the Director's introduction to the budget.

> The sheer size of the budget makes it seem like a monster. It contains almost 190,000 accounts. At the rate of one per minute, eight hours per day, it would take over a year to reflect upon these! The budget's annual outlays are larger than all countries' economies except those of the United States, Japan, and the Soviet Union. (The Federal budget is roughly the size of the entire West German economy.) Clearly, at some point, green eyeshades must be put aside. Detail must be considered; but the capacity to abstract should not be lost.

The thing that is important for the average American to recognize is when we are talking about a Federal Government that has 190,000 accounts, a Federal Government whose spending is equal to the entire economy of West Germany, that maybe we have enough money, maybe the problem is not the scale of money. Maybe in fact the problem is what we do with the money, how we establish priorities, and the bureaucracy and the redtape with which we spend the money.

It is interesting also for those who are perennially after us to raise taxes that avoiding tax increases and encouraging growth in the economy has in fact worked. But if we look back over the last few years, the fact is that year by year we have increased our ability to get money into the Government just because the economy has been getting larger, that as more people go to work, they pay more taxes, as they pay more taxes and as their income goes up, we get more money in Washington.

Let me give the Members some numbers from recent years. Without a major tax increase, and these are in fiscal years, here is what has happened starting in fiscal year 1989: In 1989 we received $990 billion in receipts. In 1990 it is estimated that we will receive $1,073,000,000,000. In 1991, it is projected that the Federal Government will receive $1,170,000,000,000. In other words, the Government is projecting, without a major tax increase while President Bush keeps his pledge to oppose tax increases, that our total income, compared to 1989, that our revenues in fact will have gone up $180 billion over 2 years. In other words, there will be $180 billion more to spend in the Federal Government than there was in 1989 just because of economic growth. A bigger economy, more people at work, and higher incomes leads to more revenue for the Federal Government.

The reason we still have not balanced the budget is that even though we are seeing a steady increase in revenue by the Government, spending has also gone up. It went up from $1,142,000,000,000 in 1989 to a projected $1,233,000,000,000 in 1991. However, the good news is that by keeping the lid on spending, by trying to control the amount which the Federal Government spends, the deficit continues to come down. The projected deficit for 1989 was $152 billion. The projected deficit for 1990 was $124 billion. The projected deficit for 1991 is $63 billion. In the President's budget proposal which was submitted yesterday, he proposes that in 1993, by continuing the process of keeping a lid on spending and keeping the economy growing, that in fact we will get to a narrowly balanced budget at a $5 billion surplus, which would be the first time, I believe, since 1969 that we would have a budget surplus.

How do we get to that? We get to that, first of all, by steadily controlling spending so that it goes up at a rate slower than the increase in revenues. Second, once we get to that surplus in 1993, the President proposes that we begin to take Social Security off budget so that during the rest of the 1990's we would continue to apply the Gramm-Rudman process, and we would get to a balanced operating budget late in the 1990's.

There are a couple of principles here to look at. The first principle, as I suggested, is that we should expect that at $1,233,300,000,000, maybe the major policy debates should not be how to raise taxes, that maybe the major policy debates should be how to set priorities and how to rethink and reform government so that we can get the kind of return on that kind of investment that we would like.

The President and Budget Director Darman began that process in this new budget by focusing on five large categories. They focus on investing in the future, on advancing the States as laboratories, on reforming mandatory programs, on acknowledging inherited

claims, and on managing more integrity and efficiency.

A couple of these, I think, are particularly important. It is important, I think, as the babyboom generation comes of age and has its own children, to recognize the importance of investing in our future.

Let me quote what the President said in his submission on page 3:

With an eye toward future growth and expansion of the human frontier, the budget's chief emphasis is on investment in the future. It proposes a capital-gains incentive for long-term private investment and new incentives for family savings, record high amounts for research and development, space, education and Head Start, a major investment in civil aviation, and a large increase in spending to attack the scourge of drugs. At the same time, the budget maintains a strong national defense more reflecting the dramatic changes in the world's political situation that are taking place, and it fulfills responsibilities to protect the environment and preserve America's cultural heritage.

In other words, the first step in shaping this new budget and in looking at how to spend $1,233,000,000,000 is to look at the future, to ask ourselves how do we have to invest in the 1990's so that America's 21st century can truly be successful and can truly have opportunities for everyone.

The second step listed here is equally important. It is called by the President advancing States as laboratories.

Let me quote again:

The budget recognizes the emergency of new ideas and initiatives originating at the State and local level. The Federal Government will foster such innovation and experimentation in numerous fields from transportation to health, through waivers of certain rules and regulations, and through demonstration grants.

□ 1410

I think it is very very important to recognize that we are at a major turning point in American history. For a very long period, in some ways going all the way back to the progressive movement at the turn of the century, certainly accelerated by the New Deal, and climaxed by the Great Majority and Lyndon Johnson, the United States has gone through a period where ideas were seen as originating in Washington.

More and more the ideas was you went to Harvard or Stanford or somewhere, you got the right kind of advanced degree, and ended up in Washington, whether as Felix Frankfurter's associate or some other forum, and here in Washington you became part of a brain trust, and then you developed the big ideas that would change America.

What we have learned since 1965 is that that system simply did not work. That is, the bureaucratic welfare state became more and more centralized in Washington, it had more and more red tape, it became harder and harder to develop answers and to get those answers passed, and in a very real sense, bureaucracy and red tape drove out common sense and innovation.

What the President is recognizing in his section on advancing States as laboratories is that State and local government may be more innovative, may be more flexible, may be more capable of applying common sense in the 1990's than is the Federal Government. Maybe the way to invent America's 21st century is to give waivers from Federal regulation, to give opportunities for State, county and city governments to engage in the kind of experiments, for local school boards to engage in the kind of experiments, that allow us to invent the future. And in fact it is everyday practical common-sense Americans who are more likely to create a positive future than intellectuals working inside the city of Washington.

I think in that sense advancing State and local governments as laboratories is a very important new innovation, and it is one which will come to dominate much of the debate of 1990 in the U.S. Congress. You are going to be hearing us talking over and over again about how can we invest in our future and how can we develop the opportunities for State and local governments to be laboratories that apply common sense focused on opportunities to develop new approaches that will work for America in the 1990's.

The third area I want to mention briefly is managing for integrity and efficiency. I want to quote the President again:

The budget contains suggestions for reforms in the way Congress deals with the budget. It provides more resources and suggests improved methods for managing the vast Federal enterprise better. It identifies low-return domestic discretionary programs where a smaller investment of budgetary resources is warranted.

In other words, when you have a $1,233,000,000,000 government, maybe you ought to be able to manage it for both integrity and efficiency, and maybe focusing on how we manage the Federal Government will in fact return a great deal to the American people.

Now, there are a number of steps in this budget, but I want to start by making a general point to my colleagues and to the American people. There are 300 pages just in the introduction of the budget. If we then go back and look at the appendices, all of the details which are included in this volume on the budget, we will discover that the budget in its fullest scale is a very very big document indeed. It runs to an additional 1,269 pages of appendices, or a 1,569-page book.

I was fascinated to read in the morning paper about some of our liberal Democratic friends who have already dismissed the budget. I would challenge them, I think this is a budget worth looking at in detail. I think this is a budget that President Bush has sent up which really does give us a range of things to think about and to work on.

Just to take a couple of specific examples, it has a hope and enterprise zone section which is very very important. Let me cite from page 186 of the Budget Director's introduction on hope and enterprise zones.

The problems of economically distressed areas will be alleviated, some by the job creating effects of continued economic growth. The problems will be mitigated also by the President's anti-drug abuse stategy. But more needs to be done to bring hope and opportunity to severely distressed areas. Thus, the President is reproposing his initiative to stimulate growth through the creation of special incentives for investment and job creation in enterprise zones, a proposal on which the Congress has failed to act. He is introducing legislation to advance Project Hope, home ownership and opportunity for people everywhere.

Let me note, by the way, that again and again as you go through the budget you find the phrase, "a proposal on which the Congress has failed to act."

I think one of the obligations our liberal Democrats who are talking about the budget have to face up to is that on many many occasions the President has sent up very fine proposals, but nothing has been done about them at this stage. As we talk about opportunities for the nineties and new solutions for the nineties, one of the things we must confront is that in fact the Congress has not always done its job.

Let me suggest as an example looking at something which is of grave concern to every American, which is drugs, the problem of how do we deal with drugs.

That section of the budget begins by quoting from President Bush's September 5 speech, when President Bush said:

The war on drugs will be hard won, neighborhood by neighborhood, block by block, child by child. If we fight this war as a divided Nation, then the war is lost. But if we face this evil as a Nation undivided, our children will have a brighter future.

The President is sending up a proposal to increase spending on Federal drug programs in terms of outlays from $6.9 billion in fighting the war on drugs last year, to $9.7 billion in fiscal year 1991, an increase in the war on drugs of 41 percent.

President Bush proposes to spend it 3 ways. First, by attacking the drug market at the source and on the street; second, by treating the drug users, supporting those in help of need; and third, by preventing drug use, through school, the workplace, and community drug prevention.

Yet we in the Congress, before we begin complaining about it, need to

confront the fact that Congress has not passed the President's proposals from last year. That in June 1989 President Bush sent up a proposed drug and violent crime bill which has still not been passed; that the President has sent up some quite specific and strong proposals to help make it tougher on criminals and tougher on drug dealers, which still have not passed; and that we in the Congress have an obligation to help deal with the problem of drugs by passing the legislation on the war on drugs which the President asked for some 7 months ago.

While we may complain about Mr. Bennett, the drug czar, we may complain about President Bush, the fact is that it is the Congress which 7 months later has still not passed the necessary legislation.

Let me turn to another topic of extraordinary importance to America, education, a topic which I believe is as important as the war on drugs.

The fact is the President is calling for some very substantial additional help in the area of education. The President recognizes that we face a real problem. Let me quote from the section on strengthening science and technology education:

At a time when the number of American students pursuing advanced science and engineering education is declining, the science and engineering work force is becoming more critical to the strength of the overall economy. This is a disturbing trend. Many jobs created in the future will require people who are well versed in mathematics and science and who have greater facility with higher order reasoning than most high school and college graduates now have.

The President goes on to point out in his budget proposal that we should be particularly concerned for black and Hispanic students who do not get enough math and science degrees.

They point out:

It is these groups that are now the most under-represented in the science and engineering work force. In 1988 only 231 black and Hispanic Americans earned doctorates in science or engineering fields, excluding psychology or the social sciences. Together black and Hispanic American Hispanics constitute 20 percent of the Nation's population, but only 4 percent of employed scientists and engineers.

The administration goes on to propose dramatic increases in funding for science, mathematics and engineering, to help all Americans improve, but in particular to help Americans who come from poor families.

They propose a 30-percent increase in the National Science Foundation budget for science, math and engineering; a 69-percent increase in the Education Department's budget; a 21-percent increase in the National Aeronautics and Space Administration Program; a 47-percent increase in the Department of Energy's education budget; and a 22-percent increase in the National Institutes of Health budget.

The goal of all this is to increase our ability to reach out to younger Americans, to convince them that it is necessary for some Americans to work hard, to study hard, to learn math and science and engineering, if America is going to be competitive in the world market.

I would just point out for those of my liberal friends who care about compassion, who care about education, who care about helping people, when you have an increase of $222 million in science, math and engineering, and education, that is a 26-percent increase, that is something that one has to focus on.

But let me turn to another area of considerable concern.

□ 1420

On page 104, where we talk about literacy: "$239 million is proposed for adult education programs of the Department of Education, an increase of more than 25 percent over what Congress provided in 1990." To summarize at a different point, the education budget overall is "the largest education budget ever proposed." Yet the fact is that we could do more.

The President proposed a merit school, a magnet-school-of-excellence program, when he submitted in April 1989, almost a year ago, 10 months ago, when the President transmitted a bill, the Educational Excellence Act, April 5, 1989:

This bill would give incentives to schools to improve educational achievement, expand the use of magnet schools, reward excellent teachers and students, promote the hiring of persons with proven subject matter knowledge and management abilities to be teachers and principals, increase the endowment of funds of the Nation's Historically Black Colleges and Universities, and provide special funding for the school districts with the worst drug abuse problems. Congress did not complete action on the bill. Appropriations were provided for 1990 for the two largest programs, Merit Schools and Magnet Schools of Excellence, contingent upon passage of the authorizing legislation.

Once again we have an area where President Bush is trying to be systematic and helpful, is trying to reach out and be supportive, providing a caring and humanitarian answer to a true need, a real need, the need to strengthen education, and the Congress failed to pass his proposal 10 months ago.

In addition, Head Start, widely considered the most successful of the preschool programs, of the efforts to help poor children in particular, a program that I am proud to say my older daughter participated in when I was a graduate school student in New Orleans in the 1950's, the President proposes a substantial increase in the Head Start Program. He proposes a 36-percent increase for Head Start to enable it to enroll up to 180,000 more 4-year-olds who come from backgrounds of lower incomes. That is a budget increase of $500 million in budget authority, to a total of $1,886,000,000.

Now in developing a caring and humanitarian program, virtually all of us agree that having a Head Start Program that is strong and viable is an important step in the right direction. Yet there is more to Government than simply spending money.

There is also a requirement to make sure that your money is spent intelligently and that in fact if we loan your money out we get it back.

Yet consider the requirement for real change in the area of collecting debt from those who borrowed from the Government.

On page 284 they point out the following:

Delinquent debt owed the Department of Agriculture, Education, Housing and Urban Development, and Veterans' Affairs and the Small Business Administration and other agencies, is projected to increase from $32 billion in 1988 to an estimated $40 billion in 1989.

Now let me suggest that when you have $40 billion in outstanding delinquent debt, that is $40 billion that ought to go to help other people. That is $40 billion that ought to be loaned to small business; that is $40 billion that ought to be available for housing; that is $40 billion that ought to be available for farmers; that is $40 billion that ought to be available for our veterans; and it is $40 billion that ought to be available for students. We have an obligation to strengthen substantially our commitment to debt collection, to say, in effect, that "If you borrow from the Federal Government, that is from every American, you have an obligation to pay back to every American."

But let me make a deeper point and the real reason I wanted to take a few minutes today to talk about American opportunities and the American opportunities workshop on May 19 and why I believe the budget is worth looking at.

First of all, this is a serious budget that has many ideas worth looking at.

The Bush administration and Budget Director Darman have worked very hard on item after item. I would suggest to all of my colleagues that before they shrug it off, particularly my liberal Democratic friends who looked eagerly for a tax increase and could not find one, before they assume automatically that this budget is not worth looking at, that they at least look through the first 300 pages, that they look through the substantial increases in the environment, an area where in fact we have seen the Government under President Bush take a much more active role. The budget

provides over $2 billion in new spending to protect the environment.

I would suggest my friends look at page 119—that is, they look at the substantial increase, again and again, in areas including programs such as reforestation, protecting America's wetlands with an $88 million increase, an effort to increase the Environmental Protection Agency's operating budget; item after item where President Bush is proposing substantial increases in order to help the environment.

If they will look, my friends in the Congress will look again and again, they will find a variety of areas where the Bush administration is proposing serious, intelligent, well-thought-out increases.

There are some areas that we are going to argue over. There are some areas where I frankly would not necessarily agree. But I think on balance this is an intelligent and a serious effort.

But it also puts into highlight the two points I started with: First, if we have a $1.233 trillion budget, an enormous amount of money, an amount, as pointed out here by Director Darman, equal to the entire economy of West Germany, then maybe the challenge to this generation of political leaders in the 1990's is not to find a way to raise taxes and to have even more money, but to find a way to rethink bureaucracy, to rethink red tape, to rethink programs that have failed.

When we see, as we did in the morning paper, a counselor in the District of Columbia drug program who has a drug overdose, which is certainly not what any of us thought we were paying our money to counselors for, when we see the scale of decay in the New York City schools, when we see the way and watch the problems of bureaucracy in virtually every big city in America, when we see the way in which health care is increasingly dominated by red tape and bureaucrats rather than by doctors and innovation; I think it is clear to almost all of us that we need new solutions rather than new money. I think that $1.233 trillion spent intelligently and spent with a sound sense of priorities is probably enough money for the American Government to enter the 1990's with.

But second, again and again, if you look at the themes of the President and the themes of Budget Director Darman and you look at this concept of focusing on what I think are the three most important, I think, from the standpoint of developing new solutions in the 1990's: investing in our future; advancing State and local Government as laboratories; and managing for integrity and efficiency, I think there is a lot of meat in that 300-page introduction and the 1,200-page appendix.

I think there is a beginning of a real dialogue. I think maybe the dividing line in the 1990's is going to be between those on the left who are going to argue that the bureaucratic welfare state will work, that the unionized work rules will work, that the red tape will work, that the values of the left will work, that the Great Society was the right direction, we just could never spend enough and that $1.233 trillion is not enough "but if only we could raise taxes $100 billion or $200 billion or whatever the magic number is, then we could make the bureaucratic welfare state work."

We are going to argue, however, that that is not correct, that in fact it is the core design, it is the basic structure of the bureaucratic welfare state that is not working; that we need new approaches, new innovations, we need to apply common sense, we need to cut through the red tape, we should be willing to free up State and local Government, cities, counties, school boards, and allow the kind of experimentation, the kind of innovation which has made America what it is.

When we have the American opportunities workshop on May 19, we are going to be developing a series of proposals which we believe are going to allow people to see how they could go to their local Government, they could go to their local community, and they could develop a better America, a more prosperous America, a more successful America within the scale of budget we now have; that the problem is not the budget, the problem is not the amount of money, that the problem is the way we have been trying to solve our problems and the objective reality that the bureaucratic welfare state in its current form will not work and that instead we have to apply common sense focused on new opportunities in order to make the system work.

UPDATE ON 1985 FARM BILL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas [Mr. DE LA GARZA] is recognized for 60 minutes.

Mr. DE LA GARZA. Mr. Speaker, we take this time today to visit with our colleagues as to what the state of agriculture is today. Where we are. Where we have come from. And to provide Congress with an update, particularly about the 1985 farm bill, telling the public why farm programs are needed and how agriculture is the foundation of our national economy. Seventeen percent of the total GNP is from agriculture. It is our largest employer. Twenty-one million people work in all segments of agriculture. Farming itself employs over 2 million workers, more than the combined workforce of transportation, steel, and the automobile industries. Without a healthy agriculture sector, our economy suffers.

What we hope to do today is to ask the chairmen and ranking members of the different subcommittees to give Members a report from their perspective as subcommittee chairmen, and also the issues under the jurisdiction of that subcommittee.

Mr. Speaker, I yield to the chairman of the Subcommittee on Domestic Marketing, Consumer Relations, and Nutrition, the gentleman from Georgia [Mr. HATCHER].

Mr. HATCHER. Mr. Speaker, the Subcommittee on Domestic Marketing, Consumer Relations, and Nutrition has jurisdiction over several of the Federal Nutrition programs, to include the Food Stamp Program, the Temporary Emergency Food Assistance Program, the Commodity Supplemental Food Program, and the provision of emergency commodities after natural disasters such as Hurricane Hugo and the California earthquake. The subcommittee also has jurisdiction over marketing orders, research and promotion orders, and domestic marketing generally for the fruit and vegetable industry.

During the first session of this Congress, the Agriculture Committee heard testimony that 8 million more Americans were poor in 1987 than in 1978. Not only are there more poor families now, but the poor have grown more poor in recent years. The amount by which the income of the average poor family falls below the poverty line was greater in 1987 than in any year since 1962. The subcommittee has reviewed the Federal nutrition programs, to learn how they might be made more effective in combatting hunger.

The Food Stamp Program is the premier nutrition program in the Nation, and our most effective weapon in the fight against hunger. In 1977, 13 years after enactment of the 1965 Food Stamp Act, the act was totally rewritten. It is now 13 years since enactment of the Food Stamp Program Act of 1977, and it is time to reauthorize the program. Someone recently suggested that it must be time, therefore, to rewrite the 1977 act. I don't think so. Not because the task would be formidable, but because there is no need to restructure the Food Stamp Program. It is a program that, over time, has developed into a nationwide benefits delivery system that works well to help feed those in need. The Food Stamp Program is in the finest American tradition of reaching out to help those who are down and out. We must assure that the program reaches the 34 percent of the eligible population that does not currently receive food stamps. We must assure that participating families are well served by the Food Stamp Program. And we must assure that administrative burdens don't so bog down the system that

caseworkers cannot adequately do their job of helping their clients. Yet, reports indicate that only 66 percent of those eligible for food stamps are receiving them. At the same time, program administrators tell us that they struggle with the administrative complexity of the program. As we move to reauthorize this vital program in the 1990 farm bill, we hope to increase its effectiveness and ease its administration.

We have heard in the last year that food stamps are being used illegally to purchase such items as crack cocaine. These are very disturbing reports. Such abuse expands access to illegal drugs, wastes taxpayers' money, discredits the Food Stamp Program, and ultimately hurts food stamp beneficiaries. During the last several years significant strides have been made in the program generally to reduce the level of fraud and abuse. We must firmly meet this newest threat to the program.

About 8 percent of the Federal expenditure for domestic food programs is in the form of commodity donations. In 1989, that expenditure amounted to approximately $1.5 billion. Most of the commodities donated to domestic food programs are acquired by the Federal Government under the agricultural surplus removal and price support programs. Some commodities are purchased. These commodity donation programs fulfill two purposes. They help to feed the hungry, and they help maintain stable farm prices. In the early 1980's, with expenditures for Federal assistance programs down and inventories of Government-held commodities up, donations of agricultural commodities increased. During the last several years, we have been faced with dwindling supplies of excess commodities. Our challenge is to maintain these donation programs, upon which many poor people depend, while recognizing that the availability of high levels of commodities cannot be guaranteed. The subcommittee is reviewing these programs to determine the appropriate role of the agricultural commodities distribution programs in the total effort to meet the food needs of the poor and disadvantaged of this country.

The subcommittee had studied hunger in rural America, and learned that in some rural areas, 30 to 40 percent of the people live in poverty. People seem to view poverty and hunger as an urban problem, a problem of the inner cities. But one out of every four children in rural America is poor. And indications are that poverty in rural America is increasing. There are almost 10 million people now living in poverty in rural America. It is especially difficult for the rural poor to obtain enough food, and nutritious food. Great distances hamper access to sources of nutritious foods and make it difficult for people to take advantage of programs designed to help them eat better. We are hopeful that we can modify the Federal nutrition programs to ensure that they are responsive to the unique needs of poor people in rural communities.

The subcommittee is also considering legislation to establish commodity research and promotion programs for mushrooms, limes, pecans, and potatoes. These programs are designed to allow farmers to fund and operate coordinated market and product development efforts for their individual commodities. This is a self-help approach that has become increasingly necessary as the need for these commodities to stay competitive intensifies. Successful programs have been put in place under Federal legislation for cotton, milk, beef, pork, eggs, and other commodities. These programs have been quite successful and I look forward to implementing a plan for these other producer groups.

Mr. DE LA GARZA. Mr. Speaker, I thank the gentleman from Georgia [Mr. HATCHER] for his remarks.

Let me say that the Food Stamp, Nutrition and School Lunch programs, and Meals for the Elderly, are important and all are under the jurisdiction of the Department of Agriculture.

Let me address one issue. Somehow, I daresay for no other reason than lack of information, people speak about the cost of agricultural programs and how much we spend on agriculture. I must say, this is sensationalized in the major media by people with inadequate information. If a person were just to do away with the entire Department of Agriculture, he would reduce the Federal budget by under 4 percent. This, my friends, is important to note.

We erase the word "agriculture," and we would reduce the budget by less than 4 percent. The farm support programs that they say we pay the farmers not to farm is less than 1 percent of the $1.23 trillion budget. Less than 1 percent of the trillion dollarplus budget goes to support farm price support programs.

Let me show Members what I mean. The red markings on this chart are the $1.23 trillion budget. If we look at the black on this chart, that is what we spend on support for American agriculture. That small black line we see on the chart is what we spend on support. Yet, we are the best-fed people in the world.

The average farm family produces food for around 100 people, and the cost of food is less of the disposable income per family than that of any other major industrialized country in the world. This is what we do for that tiny, small black portion that we could not even see on the chart.

Mr. Speaker, I yield to the distinguished ranking member of the Committee on Agriculture, the gentleman from Illinois [Mr. MADIGAN].

Mr. MADIGAN. Mr. Speaker, I want to thank my chairman, the gentleman from Texas, for providing this opportunity to join my colleagues from the Agriculture Committee in reporting to the House on the state of the American farmer and Federal farm policy. This is the year that the House will be asked to reauthorize the basic farm programs, so it is appropriate to bring our colleagues up to date.

Had we made this report in 1985, the year of the last farm bill reauthorization, we would have had a grim story to tell. In 1985 most of the economy had recovered from the recession of the early eighties, but agriculture was still in the grip of the worst farm recession since the Great Depression. The value of farmland had dropped as much as 50 percent; huge production surpluses were depressing prices; hundreds of thousands of farmers were unable to service their debt; and international markets were rapidly being lost to foreign competition. In sum, farmers were facing catastrophe 5 years ago.

It was in that environment that the Agriculture Committee sat down to create the Food Security Act of 1985. It was a contentious debate, encompassing many months of intense negotiation among the members of the committee, between the House and Senate and ultimately with the administration. Finally, on December 22, the President signed a 5-year farm bill reauthorization into law.

The product of all those months of effort was a market-oriented program that aimed at recovering our lost international markets. At the same time the act protected farmers' income while they struggled to stabilize a badly damaged agricultural economy. Accomplishing those multiple tasks was not without cost. The first full year of the program Federal expenditures rose to $26 billion.

The good news is that the Food Security Act of 1985 worked. Farmland values have begun a steady recovery; surpluses are down; farmers have enjoyed 3 years of record farm income; farm indebtedness has been sharply reduced; and agricultural exports have risen steadily over the last 5 years.

As planned in the act, the cost of farm programs has steadily fallen to the point that 1991 expenditures are projected to be half the level of 1986.

As we begin work on the 1990 farm bill, the agricultural economy is overall one of the healthiest sectors of the national economy. Farmers are also making a significant contribution to the Nation in world trade, selling over $10 billion more to foreign countries than we import.

Our task this year is to craft legislation that will continue to strengthen

one of our greatest national assets, a highly productive farm sector. We will need to continue our market-oriented approach to farm policy; it has worked well and will continue to do so. We have controlled costs, and in this era budget restraint that will also be one of our aims.

In the international trade arena, we have aggressively used targeted export enhancement programs to offset the trade subsidies used by competitors and recaptured many of our lost markets. This aggressive program has been so successful that we have been able to make agricultural trade a centerpiece of the Uruguay Round of the GATT negotiations. Those trade talks are still underway, and until we reach an equitable international agricultural trade agreement, we must continue to insure that our farmers are not forced to compete against foreign governments for international markets.

There are areas of the 1985 act that will need to be adjusted to meet the challenges of the nineties, and the Agriculture Committee will be addressing those changes. Overall, however, a carefully balanced program of price supports and market orientation has proven itself effective and economical over the past 5 years. It will serve as a reliable guide for the future.

□ 1440

Mr. DE LA GARZA. Mr. Speaker, I thank the gentleman for his contribution.

Mr. Speaker, yesterday we were in Fayetteville, NC, to hold a committee hearing and to gather input from the agribusiness sector and from everyone in any way concerned about or related with or involved in agriculture. We were there as guests of the distinguished gentleman from North Carolina [Mr. ROSE], chairman of the Subcommittee on Tobacco and Peanuts.

Mr. Speaker, I yield to the gentleman from North Carolina.

Mr. ROSE. Mr. Speaker, I thank the distinguished committee chairman for yielding.

It was a great pleasure to have the gentleman in my district yesterday. I am happy to report that so far as my Subcommittee on Tobacco and Peanuts is concerned, we look forward with great expectation to the 1990 farm bill and plan to ask for a peanut program in the 1990 farm bill that is very similar to what was in the 1985 farm bill.

Tobacco legislation will not be necessary because tobacco is a permanently approved price support program. We operate the tobacco program at no net cost to the taxpayer. We operate the peanut program at practically no cost to the taxpayer by sharing an arrangement between the various peanut growing sectors of the country.

So we are very upbeat about the 1990 farm bill so far as tobacco and peanuts are concerned.

Yesterday in Fayetteville, Mr. Speaker, along with the chairman of our committee, we heard many, many witnesses imploring us not to cut farm income. People told us yesterday that they were concerned that farm income was too low already, that we could not afford to take any more serious cuts, and that the Committee on Agriculture should stand behind the producing American farmers and give him and her all the support we can and to keep farm income as close to current levels as possible or to increase them if we possibly could.

Mr. Speaker, I want to join with the ranking member of the full committee in thanking the chairman of the committee for calling this special order to talk about the state of agriculture in 1990. We will hear about the State of the Nation later this week from our President, but we are concerned about the state of agriculture. I wish the gentleman had brought his graph here today, the one that shows just how little the American taxpayer has to pay for what taxpayers get from agriculture. We have been picked on enough in the budget.

But this committee is upbeat. It is bipartisan in its support of a strong agriculture policy, and under the gentleman's leadership we know that the 1990 farm bill will be a strong piece of legislation. We look forward to working out the details with the chairman of the committee as we go forward this year.

Mr. DE LA GARZA. Mr. Speaker, I thank the gentleman from North Carolina.

Mr. Speaker, let me say to the Members that this is the graph that the gentleman is talking about, That part in red is the trillion-dollar budget, and the little black line is what we get for agriculture. We can look at this and see everything that we get back.

Mr. Speaker, my colleague, the chairman of the Subcommittee on Cotton, Rice, and Sugar, and his ranking member are here, and I yield first to the chairman of that subcommittee, and then I will be happy to yield to his ranking member so that we may get a report from that subcommittee.

Mr. HUCKABY. Mr. Speaker, I thank the chairman of the committee for yielding.

Mr. Speaker, I do want to commend the chairman of the committee for taking this time to give us an opportunity to express not only where we have been but where we are going as far as the future of agriculture is concerned. If I might, I will address my remarks specifically to the areas of cotton, rice, and sugar, the subject matter of the subcommittee which I have had the honor of chairing now for some 7 years as a member of the Committee on Agriculture.

First, let us talk about sugar. Sugar is probably one of the most politically volatile of any commodity that we discuss here on the floor of the U.S. Congress. Let us look at the sugar program. We have had virtually the same sugar program since 1981. As a result of that, we have had stable supplies of sugar. Sugar to the consumer is cheaper in America than in virtually any capital. It has truly been a good program. Our neighbors to the south, our Caribbean nation neighbors, have supported our sugar program in the past, and I am confident that they will continue to support our sugar program as we import significant amounts of sugar from them.

On the subject of cotton and rice, back in 1985 we proposed and passed innovative solutions to the significant problem that we were having then of very large surpluses, large surpluses of both cotton and rice. Basically, the problem was that we were going to sell these surpluses. We were going to the marketplace, and if need be, we said that the Government would underwrite the deficit so that farmers would get a fair return.

Mr. Speaker, as the chairman of our committee knows very well, these programs for both of these commodities, cotton and rice, under the marketing loans, worked amazingly well, and within 2 years we saw a turnaround in both of these commodities. Hence, for the last 3 years of this 1985 farm bill, both of these segments of agriculture have been prosperous, and they have been sound.

So, Mr. Speaker, let me state our intention as we move to the markup of the 1990 farm bill. First, let me point out that the gentleman from Minnesota [Mr. STANGELAND], and I and others have conducted hearings throughout the United States. We have held hearings in the Boothill of Missouri, in the high plains of west Texas, in the Lousiana Delta, and in Colorado.

□ 1450

This next week, Mr. Speaker, we will be going to Florida and hearing our final hearing on sugar-cane, and the consensus over where we have gone is that we have a good farm program. It is not broke, so we do not have to fix it. Let us just rather make some fine-tuning in some areas that are obvious, where we can learn what has happened in the last few years in the farm bill, where we can make some changes. So, it would be our intention to take this approach.

Let me also point out that we have heard many farmers' requests. We need some flexibility. We have heard the administration say, "We need the ability to respond to market signals," and hence it is our intention, the gen-

tleman from Minnesota, myself, and others, to introduce legislation that will give our farmers ability to respond somewhat to market force signals.

In addition, Mr. Speaker, we think we also should be able to go back and update our yields. Areas such as costs and offsetting compliance need to shortly be reexamined, and also the ability to shift some of our base from one crop to another when there is clearly a significant demand in it.

So, this will be legislation that we also hope to incorporate into the farm bill to be the benefit of all of our farmers, to give them ability to respond and switch their crops somewhat and yet preserve and protect the integrity of our existing basis and yield system which I think has served us very well.

In conclusion, Mr. Speaker, let me say that under the leadership of the gentleman from Texas [Mr. DE LA GARZA] agriculture turned around as a result of the 1985 farm legislation, and I am confident that the legislation that we pass this year will see that agriculture continues to grow and prosper, not only to provide food and fiber to Americans, but throughout the world.

Mr. DE LA GARZA. Mr. Speaker, I thank the gentleman from Louisiana [Mr. HUCKABY], and now I yield to my distinguished colleague from Minnesota [Mr. STANGELAND].

Mr. STANGELAND. Mr. Speaker, I would like to take this opportunity to thank the gentleman from Texas [Mr. DE LA GARZA] for holding this special order on the state of agriculture today, what is coming up in the farm bill. I also thank him for his leadership in crafting that 1985 farm bill.

Mr. Speaker, as the gentleman from Illinois [Mr. MADIGAN], the senior Republican on the Committee on Agriculture, stated, in 1985 agriculture was at one of its lowest points in our history. Farmers were having very, very difficult problems financially, and that 1985 farm bill worked.

We are, Mr. Speaker, as the gentleman from Louisiana [Mr. HUCKABY] stated, on a road to recovery, but let me say that we have not recovered completely, and much is going to hinge on the crafting of this 1990 farm bill under the leadership of the gentleman from Texas [Mr. DE LA GARZA]. I am sure our chairman and, I think, all the members of the Committee on Agriculture in the House recognize that.

Last year was a very high year in farm income, but not all farmers participated and shared in that income. The conditions in my area are still very difficult. Farmers are having difficulty meeting their financial obligations partly because of a third year of drought in a row, and the drought assistance package which the gentleman from Texas [Mr. DE LA GARZA] gave such great leadership to in the last year of the Congress was of great assistance.

However, Mr. Speaker, we have had another drought this year, and the drought bill this year may not pick up all those who are falling through the cracks.

We also recognize, and I think our farmers recognize, that we have to be budget responsive. We, I believe as an Agriculture Committee, realize that declining target prices are going to mean declining farm income, and yet with the budget constraints that we have it is going to be difficult for us to craft a bill that does not bring down the cost of the farm program.

As my colleagues know, I think it is unfortunate that while we have cut the cost of the farm program in half since 1986, we get little, in fact we get no, credit from the budget side for those substantial reductions in cost that have already taken place, and we have to cut further.

Mr. Speaker, as the gentleman from Louisiana [Mr. HUCKABY] has said, we have held extensive hearings on cotton, rice, and sugar. We will continue to hold hearings. The cotton and rice portions are probably fairly easy to work out, not extremely egregious, not extremely difficult. But the sugar question hinges a great deal on what the GATT says, and in all of our deliberations the gentleman from Texas [Mr. DE LA GARZA] has stated so succinctly time and time again that we are not going to write an American farm bill at the GATT. But we are going to have to write an American farm bill that adheres to the trading policies in world trade that are established at the GATT. And that again makes it difficult.

As my colleagues know, we all kind of hope that something positive will come out of this Uruguayan round, which is the agricultural round of the GATT, but none of us have great hopes or expectations that we will see other competing nations reduce their level of subsidization, both production and export, and allow our farmers to compete on a level, fair playing field. If that is to be the case, then in this 1990 farm bill I think we have to craft a bill that enables our farmers and our agriculture to prosper and survive.

There is a great deal of emphasis right now on rural development. The greatest rural development we can pass in this Congress will be a good solid farm bill that enhances the farm economy and encourages farmers to grow and expand because, when farmers have a dollar, they spend that dollar, and that is beneficial to rural development.

So I just want to say, Mr. Speaker, that I appreciate the leadership of the gentleman from Texas [Mr. DE LA GARZA]. It has been sound solid leadership on behalf of American agriculture, and I look forward to working with him, with the various chairmen of the subcommittees and full committee in crafting this 1990 farm bill.

Mr. DE LA GARZA. Mr. Speaker, I thank the gentleman from Minnesota [Mr. STANGELAND], my distinguished colleague, for his interest and cooperation throughout the years.

We have the chairman of the Subcommittee on Conservation, Credit, and Rural Development, the gentleman from Oklahoma [Mr. ENGLISH].

Mr. ENGLISH. Mr. Speaker, in many ways the decade of the 1980's is very unusual, and I, too, want to commend the gentleman from Texas [Mr. DE LA GARZA] for calling this special order today so that we can not only look back and reflect, but also look ahead to the 1990 farm bill and what might be done to improve the overall lot of agriculture.

The 1980's though were really marked, I think, without question by an agriculture depression as far as many of our commodities are concerned. It made it extremely difficult, not only from the standpoint of the farm bill and our farmers, but also it was marked, in addition to that, by a drought. Several disasters hit agriculture throughout the late 1980's, and that certainly exacerbated the credit problems that many farmers had.

As we moved through the 1980's and the difficulties of that period, farmers did accumulate a great deal of debt, and in 1987 with the Agriculture Credit Act it was the aim of the Committee on Agriculture to not only protect the taxpayer, but also the American family farmer. In a provision known as borrowers' rights was included one which basically said that restructuring should be done if it was cheaper for the taxpayer as well as being in the best interests of the farmers. There is no question that this particular provision has saved the American taxpayer millions and millions of dollars, and it also has resulted in many of our family farmers remaining on the farm that would not otherwise be there.

We also, however, have found, much to our dismay, that some of the provisions, as they were carried out, were not carried out with the intent that I think most Members of the Committee on Agriculture had, and those will certainly be corrected in the coming days.

We also hear, Mr. Speaker, a good deal about the environment, and agriculture has a big stake in the environment. The American family farmer who lives on the farm, certainly his family lives there. He lives and works there, and we want to make certain that the environment in which he lives and works and raises his family is safe, as well as those people in rural communities and urban communities. It will be a focal point this year, in

1990, with those of us in agriculture in making certain that that environment does remain safe, and we will focus on that a great deal. We will take that factual information that is available to us, and we will make certain that any adjustments and changes that might be necessary in agriculture practices are, in fact, carried out.

However, Mr. Speaker, I also want to issue a word of caution because I think that we have also got to keep in mind that the farm program is a voluntary program. It depends heavily upon the participation of our farmers, so we have got to make certain that whatever program we come forth with in fact makes it possible and in fact encourages our family farmers to participate in the program. That is what will in fact give us great improvements in the environment, and that is what will make it possible for us to have a better environment overall.

□ 1500

To do otherwise could drive farmers out of the farm program, in which case there would be I think without question great damage as far as our overall environment is concerned.

The 1985 farm bill carried with it some great environmental provisions. We had the Conservation Reserve Program that took a great deal of land that was marginal, highly erodable land, and took it out of production. Some 40 million acres will have been bid out, I say to the chairman, by the end of this year. Certainly that is 40 million of the most fragile lands that we have in this country, lands that can be tied down, lands that can be built up, lands that will not be eroded by the wind and by water, so that land is protected.

Also, each of our farmers must file with the Department of Agriculture, the ASCS, their plans for improving the conservation practices on their land.

So this is what has led the 1985 farm bill, the conservation provisions, to be touted by many as the finest piece of environmental legislation affecting our lands that we have had in this country. I think we can lay that claim.

Other provisions, such as sod buster and swamp buster, again build and improve on our overall environment.

There are some adjustments that will likely be made in the 1990 farm bill.

Some have charged that there have been some arbitrary and unfair rulings made. We will look into that. Some have said that the enforcement actions have not been as strong as they should be, and we will look very carefully at that.

Let me also say very quickly to the committee chairman, on crop insurance, the President's budget came forth, or yesterday it did, which zeroed out the crop insurance program. Ten years ago we came forth with crop insurance program that replaced the disaster program. In practice, it has not. We will do our best in the 1990 farm bill to completely overhaul the crop insurance program and give assurances, not only to the administration and our urban colleagues, but also to our rural colleagues and farmers that we will revamp the crop insurance program. We will make sure it works. In fact, we will come forth with a program that I think will finally give the assurance that it is what we will rely on, and not the disaster program.

The bottom line is that over the past decade we have seen 5 million people who have left our rural communities and moved to urban areas. For the most part, that was not by choice. They were forced into urban areas. We will be coming forth in 1990 with a rural development bill, and together with our colleagues in the other body will fashion a piece of legislation that will give greater opportunities, greater hope, and a much brighter future to people living in our rural communities, so that the people of this country will have a choice as to where they live, whether they live in rural areas or urban areas.

The bottom line, I say to the committee chairman, is that I think rural America can look forward to a brighter future. American agriculture for the first time in a number of years I think can certainly feel optimistic. I think building on what we started in the 1985 farm bill, I think that we can put together a 1990 farm bill that is going to be a great one and one that gives great promise to American family farmers, as well as to our urban colleagues, to fulfill that promise of providing an abundance of food and fiber to the American people at reasonable prices.

Again, I want to join with others in attributing much of the success we have had to our chairman, the gentleman from Texas [Mr. DE LA GARZA].

Mr. DE LA GARZA. Mr. Speaker, I thank my colleague for his generous words and commend him for his contribution to the overall work of our committee.

Mr. Speaker, at this time I yield to the distinguished chairman of the Subcommittee on Livestock, Dairy, and Poultry, the gentleman from Texas [Mr. STENHOLM].

Mr. STENHOLM. Mr. Speaker, I thank my chairman for yielding and I thank him for taking this time today. I appreciate the opportunity to participate and talk a little bit about the livestock, dairy, poultry, and honeybee parts of the farm bill.

I can say that the state of the livestock industry and the dairy industry in the country is indeed good today. As typical farmers, we are cautiously optimistic and that the things that are working today, the movement toward market orientation in the dairy policy that we started in the 1985 farm bill is in fact working. The gentleman from Wisconsin [Mr. GUNDERSON] and I have just finished six field hearings around the country in which that was the basis of the testimony that we heard, cautious optimism, a little fine tuning, a little concern about how we can continue to move in a market-oriented direction in a world that is not as market oriented as we are here in the United States. That is a challenge that a lot of people out there in the real world outside the beltway sometimes have difficulty understanding. In fact, some of our colleagues right here in this body apparently have difficulty understanding the importance of farm legislation and why we have it.

I say to our distinguished chairman that he was recently derided in a story in the Washington Post in which the gentleman said, "Let's forget all the facts and listen to the truth."

In this same article that I have read with great interest, I have noted at least eight errors in facts, if not in the truth. For example, this particular writer said that the farm program in the 5 years of the 1985 farm bill has cost $135 billion. That is not according to the CBO and the OMB. The cost is $85 billion.

Now, that may not be a lot of money to various writers and some of our colleagues, but $40 billion is a lot of money.

Now, is $85 billion too much to spend on farm programs? Yes. Certainly from the standpoint of the Agriculture Committee and the direction that all American agriculture would like to see us go, you bet. We would rather get that money from the marketplace, no question about that. That is what the 1985 farm bill was designed to do.

It was also designed to reduce expenditures, and in the case of the dairy program, one that will occupy a lot of time when we get to the floor. I am happy to report that the cost has been reduced from $2.2 billion down to $600 million this year, and it is our intent to keep it in that vicinity.

Another area, I would just briefly refer to the area of pork, and why we have to have farm programs, for those who do not understand why. This is in the area of pork, not a subsidized product. The American pork industry pretty well lives by the market, but here is the market they have to compete with, because we are interested in selling pork to Japan. On January 24 of this month, Denmark just announced increases in their restitutions, which is another word for subsidies, on loins, butts, tenderloins, and hams, from 6.2 United States cents to 18 cents.

Now, it is pretty difficult for an American pork producer to be here

working in a competitive market trying to sell into a market in which our competitors are able to take government funds and subsidize 18 cents a pound on something that costs us 43 cents a pound to produce here in the United States.

Let me conclude by saying just this. As we look at the state of agriculture, let us not forget for a moment that America is blessed with a food production system that is providing the American people and a lot of the rest of the world the most abundant quantity, the best quality, the safest food supply, despite what you hear a few dissident voices talking about, no one else comes close to providing the safe food supply that we do at the lowest possible cost, as evidenced by anybody who is doing it any better. No one comes within 1½ percent of the GNP to what America is able to do with our agricultural policy and with our American farmers and ranchers in the production of this food.

So let us not forget that as we begin the debate and let us not slip into little titles that get you a lot of ink, comparing Moscow on the Mississippi. How anyone could compare American agriculture with the Soviet system, as we watch the miracle that is happening in Eastern Europe right now and the collapse of communism, I happen to believe that the major, if not the only reason for its collapse, is the inability of the communistic system to feed its people. In America, we have just the opposite. We have the ability to feed all the American people and we have the tools to do it. If there is anyone hungry in America, it is because the distribution system is not working, and we on the House Agriculture Committee are going to be just as interested in seeing that distribution fixed as we are in seeing that we can look back 5 years from now and say the 1990 farm bill has not been perfect. I do not claim the 1985 farm bill is perfect, but it has moved us in the direction that we need to go. It has moved us in a market-oriented direction and it is now reducing the cost to the taxpayer, and that is something we need to keep in mind as we enter into our very difficult budget dilemma.

Mr. Speaker, I thank the gentleman for yielding.

Mr. DE LA GARZA. Mr. Speaker, the gentleman mentioned a figure of the cost of the dairy program to the taxpayer. What was that figure?

Mr. STENHOLM. For this fiscal year, the current estimate is $600 million. For the 5 years of the program, it is a total of $6 billion for the 5 years, not $5 billion a year as someone who derided the chairman as kind of saying that we do not always have our facts together, or the chairman does not, but the truth of the matter is that it is $600 million this year.

Mr. DE LA GARZA. I have some figures here. For example, aid to El Salvador, in the past 4 years we have given them $1.8 billion. That would run the cost of the dairy program now for what—4 years?

Mr. STENHOLM. Three years.

Mr. DE LA GARZA. Three years.

Mr. STENHOLM. Mr. Speaker, if the gentleman will yield further, I would say that from a financially fiscal standpoint, I have no one, I say to the chairman, no one coming to my office today talking about lowering the price of dairy products, making it more competitive, or making it do anything.

□ 1510

What the people are telling me now is the consumers are a little concerned as to whether we are going to have adequate supplies, and the manufacturers are concerned about the price that is having to be paid in the market system. That is a welcome difference from what it was 4 years ago when we were debating the 1985 farm bill.

It has been said that, "It ain't people's ignorance that bothers me so much as it is them knowing so much that ain't so, that's the problem."

Regrettably, the average person today knows very little about agriculture * * * how food is grown, processed, and marketed. Many have probably never met a farmer in person. Unfortunately, so many well-fed and clothed consumers take the American farmer and the food and fiber he produces for granted, without realizing that we in America have the safest, least expensive, best quality, and largest food supply the world has ever known.

Well, in real life—outside the beltway—I am a farmer. My home is in Ericksdahl, TX; the center of our community is a church; and some of the finest, most honest, hard-working people in the world live and work there.

They, like me, are slowly developing a cranky kind of feeling toward those well-meaning, but misguided people, who insist on sharing their ignorance with the American public surrounding production agriculture.

First, let me make it clear that the Food Security Act of 1985 has not solved all the problems confronting food and agricultural policy. However, I think most could agree that it has pointed us in the right direction and noticeable improvements have been achieved. I am hopeful that the 1990 legislation will continue moving agriculture in a market-oriented direction which the 1985 farm bill set in motion. I like to compare the 1990 farm bill to a Rubik's Cube. The front side says, "1990 farm bill"; on the back side is a dollar sign, representing current U.S. budget restraints; on one diagonal side, we have the environment; on the other, we have the General Agreement on Tariffs and Trade [GATT] negotiations; the top of the cube represents the consumer, who has the final say; and on the bottom, we have the producer, who represents the foundation of our food supply. Once this thing is mixed up, it's very difficult to get it all lined up again—each distinct side in its proper place—fitting together in order to complete the puzzle.

The challenge to the Congress is to fashion a bill which addresses our traditional farm policy concerns, in addition to the relatively new emphasis on food safety, animal welfare, water quality, and other environmental issues. This legislation should also function as a viable, workable policy within the current trade negotiations, while fitting within current budget constraints. These are complex issues, the resolution of which will be neither swift nor simple.

One of the most significant and necessary changes that should be addressed in the 1990 legislation is the quest of restoring flexibility in our agricultural enterprises. The current rigidity of the 1985 Food Security Act does not allow producers enough opportunity to respond to market signals.

During the deliberations surrounding the upcoming 1990 bill, environmental concerns such as food safety, water quality, and animal welfare, will be addressed in some fashion. We must ensure that decisions will be based on scientific facts and not Hollywood hype based on emotional scare tactics.

Regarding animal welfare, it is apparent that current laws are not discouraging acts of violence against meat processors, livestock auctions, biomedical researchers, farmers, and ranchers. Criminal terrorist activities will continue unless the full power of the legal system is used to stop them.

Certainly, improvements in current programs such as our Federal Crop Insurance Program and Farmers Home Administration programs need to be addressed.

There is no question that these issues can be addressed with fewer Federal dollars to utilize as Congress attempts to reduce the Federal budget deficit as mandated by Gramm-Rudman. The challenge in 1990 will be to strike a reasoned balance between competing interests and legitimate goals.

As we approach this 1990 farm bill, instant experts will surface, mostly self-acclaimed, who are very articulate when it comes to exaggerating, or in some cases oversimplifying agricultural policy. They will lead us to believe, for example, that the Government and consumers have spent $260 billion on farm subsidies since 1980. The fact is, only a fraction of that amount is used for commodity support prices. The larger figure that is so often quoted includes funding for our school lunch program, food stamp program, our Temporary Food Assistance program, Special Supplemental Food Assistance Program for Women, Infants and Children; it includes funding for conservation, the Forest Service, foreign assistance, rural development, and agricultural research, to name a few. The fact is that Federal price supports for the American farmer make up a relatively small percentage of the total agriculture budget.

The fact is that our farmers and ranchers compete in an international marketplace where foreign governments are in partnership with their exporting companies and exporting traders. Under our Constitution, U.S. farmers cannot operate under such arrangements to compete overseas.

When given a chance to compete with other producing nations on an equal basis, U.S. farmers can hold their own and then some. But as long as Federal farm, fiscal, and monetary policies in foreign countries tend to push up the prices of American commodities, and producers elsewhere are allowed to get away with subsidizing their exports, U.S. agriculture will invariably suffer. It is therefore imperative that our Government provide some form of price support if we are to continue to enjoy the luxury of having the safest, least expensive, best quality, and largest food supply found anywhere in the world or in history. It is not that way by accident.

We realize that even though American farmers make up less than 3 percent of the total population, our food production system remains a major force in the U.S. economy. Its scope and importance extends far beyond the 2 million in production agriculture. Broadly speaking, about one job out of five in the United States is somehow farm/food-related. One farmer today supplies agricultural products to meet the needs of about 93 people here and abroad.

If we take advantage of our present opportunities, we can ensure that American agriculture enters the 21st century as a growth industry, capable of standing on its own, maximizing the output of our gifted Nation's resources.

The challenge facing agriculture today is the need to educate Congress and the consuming public about the needs and realities of modern production agriculture, so that the opportunities and the challenges can be met. The time is now—the challenge is ours.

Our success will mean another 214 years of unparalleled accomplishments; our failure will mean having to explain our lackluster efforts to our grandkids.

Mr. DE LA GARZA. Mr. Speaker, I thank the gentleman for his contribution.

Mr. Speaker, I yield to our distinguished colleague, the gentleman from Wisconsin [Mr. GUNDERSON].

Mr. GUNDERSON. Mr. Speaker, I thank the gentleman, the chairman, for yielding and thank him for giving me the opportunity to participate with him in this discussion about the success, frankly, of the 1985 farm bill and what it has presented to American agriculture, what it has meant to the American consumer, what it has meant to the American taxpayer, as a result, what it has meant to the worldwide consumer who has been able to benefit from the surplus of bountiful food we produce today.

Let me follow up on the discussion the two gentlemen had. The truth is that if someone would take the foreign aid bill we spend in this country that we spend on an annual basis and split it in half that would still be more money than we spend on support for all American food and agriculture. I do not think it is too much to ask that we spend half of what we do on foreign aid to guarantee the American consumer adequate food, safe food at a reasonable price, and adequate supply.

If we talk about the success of the 1985 farm bill, the gentleman, our chairman, deserves a great, great credit for enduring the difficulties we faced back in 1985, the difficulties on the farm, the difficulties here in Congress, with the budget, with the cost of the programs, with the controversy over where we were going to take all of that.

Let us just take a look at some of the statistics, and if the statistics tell the story, then let us focus on the statistics for a couple of minutes. The fact is that from 1985 until 1990, we have increased consumption of milk in this country by 7.4 billion pounds or 7.4 percent. From 1980 until 1989, the entire span of the gentleman's chairmanship, we have increased consumption of milk by 19 billion pounds or 19 percent. At the same time we have increased that consumption by the American consumer, not the Government, but the American consumer in the private, free market.

The fact is the farmer has benefited because the price based on the MW series, the base price for milk, not the support price, the market price for milk in this country in 1985 was $11.50. The most current MW is $14.93. That is a $3.43 increase, and that is without the overorder premiums that many farmers have, that is without the differentials, the class 1 premiums and all of those things which are part of the whole marketing-order system. What this is is no farmer in the country is, in essence, getting less than that price that is the base price, and it goes up, so we have increased the amount of income for the farmer. At the same time, we have increased consumption for the consumer. At the same time, we have decreased Government purchases and the cost of the dairy program.

In 1985 the Federal Government purchased 15.2 billion pounds of milk equivalent for a cost of $2.4 billion. We have reduced that four times. Today we purchase only 8 billion pounds. The cost is only $670 million. The cost of the dairy program has been decreased 400 percent during the life of the 1985 farm bill.

As the chairman knows, with those charts that are now becoming famous and that the gentleman began this presentation with, the fact is that in 1985 the cost of the Commodity Credit Corporation was 2.6 percent of the Federal budget. Today it is 1 percent or, I think it is even down below 1 percent, so clearly the House Agriculture Committee, clearly America's farmers have more than made their contribution to the whole program of deficit reduction.

The fact is, however, while all of this is happening we in dairy can proudly tell everyone that we have kept the increase for the consumer price of milk way behind the general consumer index in this country. The general consumer index was 19 percent since 1985. For the dairy price of milk on the market or the store shelf, it has only been 13 percent. Why now has this happened? It has happened for a lot of reasons. No. 1, we have had an aggressive dairy promotion program started in our 1981 farm bill, reaffirmed and strengthened in the 1985 farm bill, and in addition to that, we have had a market-oriented dairy bill where we have sent the word to the farmer, we have sent the word to the processor, "do not produce for the Government. Produce for the market at home and abroad." As a result of that, what has happened, we have not only increased consumption here by that 7 billion pounds since 1985, equally significant, in 1985 when we wrote that farm bill, no one even talked about dairying in the United States participating in the world market. Today we control the world market for nonfat dry milk. Today we are selling not only wheat in a long-term agreement to the Soviet Union, we have sold 50,000 metric tons of butter to the Soviet Union. We have sold butter to France, and we have a number of discussions with other countries and potentials in that regard in Mexico and others to be classic examples.

In addition to that, we have seen increased management, increased efficiency on the farm, increased production per cow.

The fact is that in the decade of the 1980's, we have had a 15-percent increase in output per cow as the farmer did better management, better feeding, better breeding. As a result, he was able to control his costs, increase his output, make dairy much more of a market-oriented competitive program, and as a part of that, the dairy industry, to their credit, has responded by developing a whole wide array of new dairy products for the American consumer.

Just last night returning to Washington, I found another one of those new dairy products on the plane that I never had seen before. This one is an almost cholesterol-free butter spread that I had not seen before, and so more and more we see this industry responding to the changing diet, responding to the consumers' needs. Yes, there are going to be some challenges in the 1990 farm bill, price stability, preparing America's farmers for a world market for dairy, dealing with high technology, et cetera.

At no time in the history of this country have we written, at no time have we begun writing, a farm bill with the dairy industry in a stronger economic position than it is today. The reason for that is, frankly, the leadership of the gentleman, the chairman, and the committee's commitment to a strong market-oriented

futuristic dairy title that has allowed us over this 5-year period to solve our problems and be where we are today.

Mr. Chairman, hats off, and I look forward to working with the chairman on this important document.

Mr. Speaker, I am pleased to have this opportunity to talk about the status of American agriculture since the 1985 Food Security Act, but more importantly to enlighten those viewing this afternoon about the bright future for U.S. agriculture, in particular the U.S. dairy farmer.

U.S. dairy farmers are receiving record high prices for their milk, while consumers are still receiving a bargain for their dollar. The Minnesota-Wisconsin price series, which is the guide for determining prices for dairy products, is at an all-time high $14.93. In 1985, the M–W averaged less than $11.50. I know for Wisconsin 34,000 dairy farmers, they are sharing in record high income.

One of the most positive aspects of our dairy industry and dairy program is the continued increase in consumption of dairy products. Since 1985, commercial disappearances of dairy products has increased 7.4 billion pounds, up 7.4 percent. Since 1980, consumption has increased 19 billion pounds, up 19 percent.

Critics like to bemoan the dairy program because of the record high surpluses and Government outlays experienced in the mid-1980's. To those critics, let me say those days are gone and will hopefully stay behind us.

Dairy farmers have reduced surpluses from 13.2 billion pounds in 1985, costing $2.41 billion, to 8 billion pounds, costing $670 million. Of the current Government purchases, all of this is butter—no surplus cheese of nonfat dry milk has been purchased for well over a year-and-a-half. Increased demand has been particularly strong in cheese and lowfat dairy products.

This tells me, and tells our dairy farmers, that we are finally riding in a market-driven market and they need to adjust production and marketing to better meet consumers demands. We have lived up to one of the goals of the 1985 farm bill—to reduce Government costs and amount of purchases. I intend on keeping that goal in the 1990 farm bill.

In addition to the drastic reduction in total costs, the dairy program's share of Commodity Credit Corporation outlays has fallen by one-third. For this we should thank our dairy farmers for their contributions to reducing agricultural spending. These reductions have helped cut the cost of agricultural stabilization programs from 2.68 percent of the total Federal budget in fiscal year 1986 to over 1 percent of total Federal spending today.

I believe our dairy farmers continue to give consumers a solid buy for their dollar. Improved farm efficiency has allowed dairy farmers to remain in business, despite higher input costs. While it cost farmers on average $11 to produce 100 pounds of milk in 1985, they are now producing 100 pounds of milk for just over $12.

Despite current price hikes in dairy prices, the price consumers pay for dairy products have risen at a slower rate than the rest of the food industry. Since 1985, the Consumer Price Index for all food has increased 19 percent, while the index for dairy products has increased 13 percent.

And retail prices for milk have remained steady through the last 5 years, with a modest increase in the last year from tight supplies caused by 2 years of drought.

It's very easy for critics to complain about how our dairy farmers have been living high off the consumer—that is just not true. In 1985, farmers received 45 percent of the consumer's dollar. In 1989, farmers only received 35 percent, despite their continued production efficiency.

The domestic market growth the dairy industry has experienced in recent years can be attributed to three main factors:

First, an effective dairy promotion program, a promotional campaign our dairy farmers support and pay for to strengthen their position in the marketplace;

Second, relative declines in retail prices, which have led dairy products to become one of the best buys for American consumers among all competing products;

Third, strong growth in consumer's disposable incomes since the ending of the severe recession in this decade.

When I talk about the gains our dairy farmers and the dairy industry have made in the last 5 years, I begin to beam when I look at the new position we have on the world market. No one back in 1985 dreamed the U.S. dairy industry would be a player in the world dairy market. But over the last 2 years, our year have been opened to a whole new market—the world market—for our dairy products.

At one point, within the last year, the United States actually controlled the world market for nonfat dry milk. And since 1985, the United States has gained considerable ground on the world cheese market. I remind my dairy farmers and the industry of the view the New Zealand Dairy Board has on the future of the U.S. industry:

In the next decade, they predict the United States will control the world dairy market, not just participate in certain areas, but actually be major exporters. Of course, this takes into account the elimination of those export subsidies some countries like to throw on their commodities to make their farmers and production practices competitive. Eliminate those barriers and subsidies, and the American dairy industry will be able to compete with anyone for the production, manufacturing, and marketing of our dairy products.

I'm excited about the future because the dairy industry has made great gains in the last 5 years. I'm excited because I see young, new dairy farmers entering the field with the management knowledge and energy to be successful in this competitive business.

I'm excited because I see the established dairy farmer continue to adopt new forms of production technology to make them more efficient. I'm excited because I see our manufacturing and marketing arena tailoring milk products to individual consumer demands and health requirements. I'm excited because I see 1.5 billion more people our farmers will have to produce for in the next 10 years.

We in the dairy industry have learned some great lessons over the last 5 years. Those lessons we have learned have placed us in a better position to produce for the market and not for the Government. To provide a safe and reliable supply of products to consumers. To learn to compete in a world market.

It is with this great enthusiasm from the growth the dairy field has made in the last 5 years, that we can develop policies that can ensure our dairy farmers of the highest standard of living, our consumers with a wide selection of products in the dairy case, and the world with the best supply of dairy products.

Mr. DE LA GARZA. I thank the gentleman, my distinguished colleague, and I thank him for his contribution in the effort that we all shared. We always look forward to working with him.

Mr. Speaker, I yield to the gentleman from Missouri [Mr. VOLKMER], our distinguished chairman of the Forests, Family Farms, and Energy Subcommittee.

Mr. VOLKMER. I thank the chairman.

Mr. Speaker, I, too, wish to join with the other Members who have spoken earlier in congratulating the chairman for bringing us to the floor at this time for this special order. I also want to congratulate him for showing the leadership not only that he showed in 1981 and 1985 but, most important, the leadership now as the administration and our Secretary of Agriculture are delaying in providing us with input as to what should be in the 1990 farm bill, and the gentleman's efforts to make sure that we are writing in the future a 1990 farm bill for the future 4 to 5 years, and that agriculture, as a result, will benefit and will benefit from his leadership and his efforts as agriculture has benefited in the last several years from those same efforts.

As the chairman of the Forestry Subcommittee, in the past we have not had a title within the farm bill. However, there is a good chance that this year we will develop legislation that we would like to include in the 1990 farm bill for our forests.

As the Members know, there are more efforts every day on such things as global warming and, in fact, what have our national forests, what have our private forests and our State forests as an impact on that global warming, and how can we help turn it around in our efforts.

One of the ways in which the gentleman has shown in legislation that he has discussed in this regard is providing more trees, and for each tree that is out there, that tree absorbs carbon monoxide, and it emits oxygen.

□ 1520

I am sure that we will be able in the future to see that farmers and forestry are able to provide additional revenues for themselves, that we can come up with programs that will help our farmers who are in the forestry and wood

products business to provide for better incomes, and also to provide for an impact on the question of global warming.

Again I too wish to join with those in congratulating the gentleman from Texas [Mr. DE LA GARZA], and I look forward to working with him and other members of the committee to assure that we have a stronger agriculture in this country, and that our farmers who now, as the gentleman from Texas said earlier, and I would just like to reiterate because I think it is important, that those who are consumers in this country realize where they are getting, as said earlier, the milk. They must realize that chocolate milk does not come from a carton in the grocery store, and neither does the white milk nor the cottage cheese nor the butter. Nor does that steak that we get in a restaurant just come from that restaurant. It comes from those farmers out there.

We have to realize that only about 2½ percent of the population of this country are producing all of this great food, these fresh fruits and vegetables and meats and milk and other products, the bread that we eat, the cakes and cookies and everything else that we have in abundance in this country, and, as the gentleman from Texas said earlier, at less cost than any place else in the world.

Less amount per capita income is spent on food in this country than any other place in the world. One can go to any other country and the percentage of per capita income is going to be in some places up to 35 percent of yearly income going for food.

In this country we have gotten it down to about 13 or 14 percent. It used to be 19 and 20 percent. That is what your farmers and those in agriculture have done for the American people.

I think we need to commend those farmers for the great work they have done. Yet this is the most wholesome food, the greatest variety of food.

I feel that the small amount that taxpayers have to pay, maybe 1 or less than 1 percent of the total budget, is a small amount to pay to make sure that we continue to have an adequate food supply.

The $600 million that we spend on dairy assures that our children in the schools every day can have some milk. It assures that every time they have breakfast they can have some milk. Whether one is rich or poor, at lunch or any other time, it ensures that we can have these food items, that we do not have to worry about whether we are going to run out.

If we did not have a dairy program, Mr. Speaker, as you know, there would be days when one would not be able to get milk on that shelf. There would be days that maybe the price of milk would go up to $5 a gallon. Next week one might not find it there. But there is not a day today that one cannot go into the grocery store anywhere in this United States and get the cut of meat that one wants or the type of milk that one wants or the vegetables or bread or whatever that you have. There are not many places in this world that can say that.

Mr. Speaker, I want to congratulate the gentleman from Texas [Mr. DE LA GARZA] on a job well done and look forward to working with him on the 1990 farm bill.

Mr. DE LA GARZA. Mr. Speaker, I thank the distinguished gentleman from Missouri [Mr. VOLKMER]. All of us look forward to working with him as he leads his subcommittee and we deliberate on the 1990 farm bill.

Mr. Speaker, at this time I yield to the distinguished gentleman from Kansas [Mr. GLICKMAN], the chairman of the Subcommittee on Wheat, Soybeans, and Feed Grains.

Mr. GLICKMAN. Mr. Speaker, I thank the gentleman for yielding. I thank the chairman of the whole Committee on Agriculture for calling this special order. I want to pay him special tribute for his advocacy of agriculture and rural issues in this country. No Member of Congress has done more to alert the American people, both urban and rural Americans, about the needs and hopes and aspirations of folks in rural America than the gentleman from Texas [Mr. DE LA GARZA]. His charts showing the amount of money spent on agriculture as compared with the entire budget, in showing what a small percentage of our dollars are actually spent on agricultural programs, are renowned in a variety of circles in this country as he has shown how little we invest in agriculture compared with the dividend we receive from the producers of food and fiber.

The items that my subcommittee has jurisdiction on, wheat, corn, other feed grains, and soybeans, are among the biggest crops in this country in terms of value.

When we entered the beginning of this 5-year farm bill we had tremendous problems in agriculture. Some of those still exist, particularly in the high plains in western Kansas, Oklahoma, and Texas. Problems in agriculture, of course, remain in many parts of this country.

We lost tens of thousands of farmers to low prices. There was an epidemic of low prices, agricultural foreclosures and farm dislocations during the first 4 or 5 years of this decade.

The 1985 farm bill was not perfect and some of us had problems with it. In fact, I even voted against the bill because I was worried what it might do to the budgetary problems of this country.

Still that 1985 farm bill did provide a safety net for wheat farmers and for corn farmers. Had it not been for that bill, lots of additional folks would have gone under. The purpose of the bill was a safety net. It provided that function.

It is my hope that if we go forward into the 1990 farm bill, we will recognize that we need to continue that safety net. We need to resist efforts to dramatically reduce the impact of that safety net, so that farmers, particularly younger farmers getting into agriculture for the first time, can stay in business and can be productive contributors to this nation's economic strength.

Mr. Speaker, I think that will happen because I sense that there is a bipartisan feeling, Republicans and Democrats in this body, who want to see American agriculture sustain itself, who are not willing to unilaterally disarm to our competitors overseas until such time as we see that they in fact want to lay down some of their more difficult positions in trade.

So it is my hope that we will produce a 1985 farm bill that does not reduce target prices and that in fact continues this safety net that we have produced for so long.

In addition it is my hope that we will continue the export enhancement program which has done so much to enable our producers to be competitive in the world, particularly in the areas of the grains and soybeans.

This export enhancement program has allowed us to compete with the Europeans in providing sales of these products to the Soviet Union, to third world nations, and in fact to countries all over the world. Without that program there is no doubt that we would have not made a lot of sales that we in fact did make.

I would point out, however, that we have found that there have been some problems in the administration of that program, particularly during the last couple years of the previous administration. It is my hope that Secretary Yeutter and those other folks who are running the department now have reconciled themselves to some changes which are necessary to restore confidence that that program is working, that there are no preferential deals to perhaps some of the large international grain companies, and that honesty prevails in the operation of the export enhancement program.

I think that is happening. I have confidence now that under Secretary Yeutter and some of the folks within the administration are doing their best to make sure that that program is an effective program.

The final thing I would talk about is not specifically inside the jurisdiction of my subcommittee. It relates, however, to the Food Stamp Program.

The Food Stamp Program has probably done more than any other Federal program to ensure that we do not

have stavation and hunger in America. That Food Stamp Program has been within the jurisdiction of the Committee on Agriculture for years and years. Reauthorization of that program will occur within the existing farm bill.

It is not ironic, it is actually very natural that we should combine programs for the producers of food along with programs for the hungriest in America in the same piece of legislation.

Through the leadership of the chairman of the Committee on Agriculture, the gentleman from Texas [Mr. DE LA GARZA], and our former chairman of the subcommittee, the gentleman from California [Mr. PANETTA], now chairman of the Committee on the Budget, the gentleman from Georgia [Mr. HATCHER], and others, we will make sure that that Food Stamp Program serves the neediest of Americans in this period when a lot of folks go to bed every night without having a full stomach.

Mr. Chairman, I think that we have done a good job during the last 5 years with agriculture. I think that Members have great challenges in front of us to make sure that the producers of food and fiber remain strong, and that our nutrition and hunger programs also remain adequately authorized and funded.

I feel the folks of this country can be assured that we will in fact continue to do our best to serve American agriculture as well as we have done in the past.

□ 1330

FURTHER UPDATE ON 1985 FARM BILL

The SPEAKER pro tempore (Mr. MCNULTY). Under a previous order of the House the gentleman from Kansas [Mr. GLICKMAN] is recognized for 60 minutes.

Mr. GLICKMAN. Mr. Speaker, I would just take a couple of minutes to finish. My colleagues from Texas want some time as well.

Mr. Speaker, we have a lot of challenges in this farm bill, we have the environmental challenge, we have the export challenge, we have the trade challenge and we also have the challenge of making sure that we keep young folks in rural America. We have the rural development challenge.

All of those challenges will not be met if people cannot make a living farming and ranching. That is our goal in this bill, to make sure that we provide a program to insure that people can economically survive in the production of food and fiber.

My hope and my feeling and my confidence is that that in fact will happen.

Mr. Speaker, I yield to the gentleman from Louisiana [Mr. HUCKABY].

Mr. HUCKABY. I thank the gentleman for yielding.

Mr. Speaker, I wanted to rise and commend the gentleman from Kansas for bringing up the subject of food stamps. As he pointed out, it has been under jurisdiction of the Committee on Agriculture and will be incorporated again in the 1990 farm bill as existing authority expires.

For many years this has been a bipartisan effort, an effort that virtually everyone agrees on, that it is the right thing to do. I am sure that will be the case again this year.

I want to commend the gentleman for that also.

I also want to say that the gentleman from Kansas and I have sat side by side now going into our 14th year on the Committee on Agriculture. We have seen good times and bad times. So while today things are much better than they have been in the past in large part as a result of the 1985 farm bill, it behooves us to do what we can to provide the Government umbrella here to see that American agriculture continues to grow and prosper.

The real wealth of America is what we produce on our farms and in our factories. It certainly behooves us on the Committee on Agriculture to give it the last effort, the last mile to see if we can maximize this legislation to maximize the benefit to the American farmer. I thank the gentleman once again.

Mr. GLICKMAN. Mr. Speaker, I yield to the gentleman from Texas [Mr. STENHOLM].

Mr. STENHOLM. I thank the gentleman from Kansas for yielding to me. I just want to amplify a couple of points that the gentleman has made in a previous special order, mainly concerning the profitability side of the question.

You know, when you look at what happened to American agriculture in the 1980's, when you look at the facts to see that assets and liabilities have changed as dramatically, that we have actually wrung $200 billion of assets out of the American production factory on the farm and you have seen this—people have seen this played out on their nightly television screens, in which they have seen the real tears associated with the individual farm families who have borrowed more than they could pay back and that the market price and even the farm program that some decried as costing too much, has not been able to totally satisfy, nor should it, quite frankly. So when you look today and at 1989, the return on equity of the American farm, which is why I say the 1985 act has worked but it has got to work better in the 1990's because most businesses do not survive indefinitely with the return on equity of less than 8 percent year in and year out. Most businesses that I see, as I look at the Fortune 500 and others, have much greater return on equity if they want to continue to have investors making investments in their businesses.

In the case of American agriculture, the facts, now, which some folks decried the facts, and they have got their own—for example, one recent writer said that the Congress and the farm bill add $10 billion to the cost of food, an additional $20 billion a year to the cost of the farm program. That is $30 billion, which I have to assume that if we did not do that, if we took this writer's opinion and eliminated it, then net farm income would go down by $30 billion because that money went directly into the farmer's pocket first.

So if you take $30 billion off of the net income last year, you find the return on equity, which would be something like 2 percent.

Now, any business man or woman out there listening in or looking at or reading this debate after we begin the debate on the farm bill, will understand that is nowhere near the kind of return on equity that you are going to have to have in order to sustain this modern economic miracle called American agriculture. That is something that we have to work on and that we will be working on in the 1990 farm bill.

The second point that I want to make briefly, which was touched on, is in the area of food safety. The environmental title of this year's farm bill is going to be very, very strong. We would like to see it done separately early on. The chairman has a very good game plan of moving ahead and moving quickly. It is something that I certainly agree with him on, that we move quickly and that we deal with environmental concerns, deal with them very forcefully and very positively, because the first casualty in an environmental problem on the farm is the farmer and his family. Why people do not realize that, why they do not realize that this new term called LISA, which stands for "low-input sustainable agriculture," something farmers have been practicing for the last 10 years; and the only survivors have been practicing that because you do not put any more input into your production than you are going to get return from it. It is just a matter of economic sense.

But the basic point I want to make here, and we want to say it over and over now because there are a few dissident voices out there who manage to make the evening news or manage to get quoted in the Washington Post or the Wall Street Journal, in which they say unequivocally that we have the most dangerous food supply that the world has ever known.

The facts do not bear this out. Somehow, some way, our challenge on

the House committee this year is very forcefully and very strongly to write an environmental title that will help the American people understand that scientifically based we do have the safest food supply the world has ever known and that we are dedicated to making it even safer.

Modern technology is just mind-boggling to me. The machines that we have today that can test the food that we eat before we eat it are telling us that there are things in it that we did not know were there yesterday, most of which occur naturally, that are God-made, a few of which are man-made.

There is going to be a terrific trade-off that we have to look at. Certainly we want nothing in our food supply that is unsafe. But we are going to have to utilize a little common sense in this debate also.

I guess our urging is going to be that we use the best scientific minds to improve on this food safety system that we have, which is the best. Those who challenge it very seldom have any facts on their side. It is always incumbent on the agricultural scientific community to in fact prove beyond a shadow of a doubt.

We are going to do that, but somehow, some way we have got to get a little better understanding. That is going to be another one of our tasks in writing this farm bill.

The last point that I want to make is in the area of animal welfare. Show me a farmer or a rancher that abuses animals, and I will show you a broke farmer. Unfortunately, every once in a while I can show you a broke farmer. I can show you one which has abused their animals.

Every once in a while we get an individual, we had one recently in Olney, TX, not too long ago who locked up horses in the barn, did not feed them for a month. Their neighbors almost took care of that problem with a rope and a tree.

The bottom line, though, is that modern animal agriculture does treat its animals in a humane way, or you lose money.

Now we will have differences of opinion, and there are well-meaning folks out there in the real world outside the beltway who believe that animal agriculture should be exterminated, that there is no room whatsoever for beef production, for poultry production, for fish production, for anything alive to be eaten for any purpose, and they believe that sincerely. There are a few that do that. I respect their beliefs on that.

But I also believe the overwhelming majority of the American people do believe that a good steak every now and then and some good chicken and some good lamb and some good pork and a good piece of fish every now and then is good for a balanced diet. We have to caution a lot of folks, though, in the area of animal welfare, we now have a group of folks who believe that that is not what America needs to be having.

□ 1540

They are also attacking in the research area.

They are taking a good, hard look at the utilization of animals in research. We will have a real political battle. I hope it will be fought right here in this body. I hope it will not be fought by innuendo and fear and by some of the terroristic attacks that are occurring, of some of our best scientists in this country today, in which individual careers are being ruined because of individuals who have a different agenda, and are afraid to come here to this body and to debate, and are using some other tactics that really and truly are about as un-American as they can be.

I bring this up at this time because in writing the farm bill, since animal welfare comes under my subcommittee, we are going to be taking a good, hard look, listening to every individual viewpoint, and putting together the part of the environmental title that will continue to help the animal agriculture be able to provide for American citizens what we are able to do today: A good, safe, wholesome food supply.

Mr. GLICKMAN. Mr. Speaker, I got very hungry listening to the gentleman speaking. We may have to end the special order so I can get something to eat. I want to thank the gentleman for his comments about using good sense in the whole food safety issue, and doing so, at the same time protecting the quality of people's food. It can be done, and still use good common sense as well, if the underlying issue is good common sense. I think if we follow that line of reasoning we will be OK.

Mr. Speaker, I yield to the gentleman from Kansas [Mr. ROBERTS].

Mr. ROBERTS. Mr. Speaker, I thank my friend, the gentleman from Kansas [Mr. GLICKMAN] for yielding to me. I associate myself with the remarks made by our chairman. I want to thank the chairman for holding this special order to really go over the positive effects of the 1985 Farm Act.

I am sure that no farm bill that has passed is going to be popular to the extent that everyone thinks it is the best bill possible. I think this is a needed exercise, more especially with some of the articles that have been written in the local press here in the Washington area.

I would just say that the consumer in the United States today pays perhaps 13 or 14 cents out of their disposable income dollar to the food and fiber they need, the market basket of food. That really frees up 85 cents out of that disposable income dollar to pay for other things. If the consumer ever really had to pay the full cost of production, I can assure Members we would hear screams of anguish from some of our urban colleagues.

I wanted to touch on the food safety issue. As the gentleman knows, we have spoken of this before the State Board of Agriculture in Kansas, and in the subcommittees upon which we serve. We have a whole generation of folks out there who are more concerned, or a least equally concerned over the problem of food safety as opposed to price and convenience. I want to point up what a real step forward the bill on food safety that we have introduced in the Committee on Agriculture, and what that bill really means. We have a food safety bill. It will speed up the process by which the EPA gets the "bad actors" out of the marketplace. I am talking about the pesticides, insecticides, fungicides, rodenticides.

I want to commend the chairman, and I want to commend the gentleman from Illinois [Mr. MADIGAN], as well as other members on the committee; 43 of the 44 members of the House Committee on Agriculture have sponsored what I think is a very comprehensive food safety reform package. It indicates to Members that production agriculture, more specifically the House Committee on Agriculture, under the leadership of the chairman, is stepping up to the various environmental issues that we will face. It is our responsibility. After all, it is our water, our land, our families, our wherewithal, and I think we will do a good job.

The 1985 act is not perfect by any means. We need some shop mechanics work in regard to that. I have just been receiving calls from the press asking what I think of the President's proposed budget, the additional cut of $1.7 billion. Let me just say that all through this I have served with the gentleman from Kansas, and our chairman, the gentleman from Texas on the Budget Task Force, and in each and every case we have done our job. We will continue to do our job in regards to budget exposure.

Therefore, let Members do the shop mechanics work we need to do on the 1985 farm bill. We will achieve some flexibility in regards to the acreage-based situation so that the individual farmer stockman will make the planning decisions as opposed to the USDA, or the House and Senate Committee on Agriculture. There are other provisions as well, but this current bill is working well.

We avoided a national tragedy, and yes, it was costly to some extent. I understand that. However, we avoided a national tragedy, and a return to the Depression years when we went through these very tough times in this

past decade. Part of that, obviously, is due to the 1985 act. Therefore, I commend the chairman for his leadership in this regard. I would urge my colleagues in the full House to give Members their undivided attention as we go through the various sections of the 1990 Farm Act.

I thank the gentleman from Kansas and my friends for obtaining this hour for this discussion.

Mr. GLICKMAN. Mr. Speaker, I thank my colleague, the gentleman from Kansas [Mr. ROBERTS].

I would make a couple of comments before I yield to the chairman of the full committee for his final remarks.

Most Members who have been down here talking about this bill, come from rural or smalltown areas. Most Members do not come from the urban areas of America. That is because most people on the Committee on Agriculture come from areas where there is a great deal of production of food and fiber and livestock, and it is no secret that the urban areas of America are not the heartland of that kind of production.

However, this is really more than just a farm bill that we have been operating under and that we will be writing for the next 5 years. This is the bill that provides the food security for America. If there is anything that maintains this country as a world economic leader, it is the ability to sustain that security of production of food. This Nation has never had to go to war to secure a food supply. We are not like the folks in the Pacific Rim or in Central Europe or Eastern Europe or in Africa and South America where much of their unrest is because they do not have an adequate food supply. We have that in this country. To a large extent it is because God has blessed this land in a perfect geographical and demographic location so we can produce about anything we want to, and also because we have done a pretty good commonsense job of administering the soil, both the farmer as well as the Government, over the last 50 years. Therefore, really we will be writing a food bill, a bill to sustain food security of America.

All 240 million Americans, whether we live in New York City or Chicago or Los Angeles or Wichita or Laredo or Miami or the middle of a farm community in Montana or Nebraska or Colorado, the point is that a farm bill is more than just a bill to do with farms. It is a bill to help production of food so that America remains strong. All Americans want abundant food. They want safe food. They want high quality food. They want a food at reasonable cost. We provide that in this country. All Americans want an environmentally sensitive agriculture, all Americans, both in the city and rural area. We will try to do this in this particular farm bill.

We want a farm bill that has an administration of programs as simple as possible, and at the same time, free from poor or sloppy administration. Sometimes we have not been perfect in those areas. Sometimes the administration of these farm bills has not been as good and careful as it should have been. Sometimes there is an overly bureaucratic way of doing things. We will try to deal with that in this particular farm bill as well, because we know that that is fair, not only to the farmers that have to deal day-to-day with the implementation, but also to all taxpayers of this country who want to make sure that their tax dollars are being spent fairly, honestly, and demanding that farm bill payments are treated the same way as housing payments, or defense payments, and that is fairly and honestly.

I think that we will provide these assurances in this year's farm bill, and in doing that, not only continue to provide America with what we need in terms of the future of safe and abundant food supply, but also provide the assurance of our colleagues from urban and rural areas, south, east, west, liberal, conservative, that we do, in fact, have a sensible farm policy, one that they can support as well.

Finally, I mention two quick things. One has to do with the budget issues. There is no question we are under the gun on the budget. The administration has come in with a budget proposal that cuts farm programs anywhere between a billion and a half and 2 billion dollars. We will do our best to cope with that. However, as one Member from the wheat-producing area of Kansas, I want my folks to know that my first priority in writing this farm bill is not with what the budget says, but what is best for the producers of food and fiber. Then we will take that and try to make that consistent with what is feasible within our budget, rather than what I think sometimes too many administrations want to do, which is just to absolutely put farm policy within the straitjacket of the budget, without first determining what is best for agriculture.

A final subpoint I would make has to do with the issue of soybeans.

□ 1550

Soybeans are the second largest cash crop in this country next to corn. Soybeans have not operated within the confines of the farm program as corn has and as the other feed grains, cotton, rice, and some of the other parts of the program have. It may be that now is the time to put soybeans into the program in some capacity so farmers can make intelligent decisions about whether to produce soybeans or corn or wheat or cotton or rice and giving those crops similar treatment rather than doing what we do now, as we kind of shunt soybeans outside the program. That makes intelligent planning decisions very difficult indeed.

So I hope that folks who are interested in an abundant production of soybeans will help us as we write this part of the farm bill in this session of Congress.

Mr. Speaker, during what time I have left, let me yield now to the chairman of our committee, the gentleman from Texas [Mr. DE LA GARZA].

Mr. DE LA GARZA. Mr. Speaker, I thank my colleague for yielding.

Just briefly, to conclude this presentation by our colleagues today, let me remind the Members of where we came from since the mid-1980's. At that time we were losing our export markets, grain and dairy surpluses were mounting, taxpayers' costs were growing, prices for farmland had collapsed and farm debt was forcing thousands out of farming.

The 1985 farm bill laid the groundwork for improvement. There are a lot of other things that impact on how agriculture survives, but farm legislation is a major factor. We are now more competitive in pricing for export markets, we are more aggressive in export programs, we have better management and supply controls, and we provide income protection to farmers.

Legislation is the art of the possible, and the 1985 act was what was possible at that date, at that hour and that minute.

I might just compare this to what happened Sunday when everyone watched the Super Bowl. Each coach came with a game plan. Well, one coach's game plan worked and the other one's did not. The fact is, though, that they update their game plans up to the very minute. They use computers, and they scout the other teams and watch films. They do a lot of preparation.

A farm bill is a game plan for 5 years, and it is done without a crystal ball. We gaze into the future and feel the sensitivity of what we need. So now we find that taxpayers' costs are down. We had a record high of $26 billion in 1986, and CBO projects for fiscal 1990 $7.6 billion.

On the subject of direct payments to farmers, I have this very interesting statistic. Some who have inadequate information have criticized the payments in 1987 to farmers under the farm support programs. But they averaged then $18,000 per farmer, and now they are down to $14,000 per farmer, even though we have a total limitation payment of $50,000. This is the average.

The export value has rebounded. It was only $26 billion in 1985. We bounced back to $40 billion in 1989.

Our share of the world market is up. In 1985–86, on wheat we had 26 per-

cent, and coarse grains 39 percent, rice 15 percent, and on cotton 10 percent of the total markets.

In 1988-89, rice has 21 percent, coarse grains is up to 52 percent, and wheat is up to 37 percent.

Our commodity stocks are at manageable levels. Income protection and strong prices have helped reduce farm debt. The net cash income of farmers is up. It was $46.7 billion in 1985 and $53 billion in 1989.

Net farm income set records in 1989. That is production production value plus Government payments, and then including all crops. It was $32.4 billion in 1985 and $48 billion in 1989, which is a record.

Farm foreclosures are down. Only three agricultural banks failed in the first 3 months of 1989. This is the lowest quarterly figure we had in 5 years.

The best estimate is that between 200,000 and 300,000 farmers left farming for financial reasons between 1980 and 1988. The farm exit rate was 5 to 6 percent per year in the mid-1980's, and now it is between 3 and 4 percent. This we have done with assistance from the Federal Government. So we expect a stronger farming economy in 1990.

Now, the budget has been mentioned before. I think it is unfair that when we are less than 4 percent of the budget, the President's proposed budget imposes 18 percent of the cuts on us. I think that is unfair.

We have spoken about international trade and the environment. Agriculture faces major challenges, soil erosion, loss of wetlands, pesticides, livestock waste runoff, and ground water contamination. We have addressed those issues, but no one gives us credit for it. We have the Conservation Reserve Program, Swampbuster, Sodbuster, and the Conservation Compliance. At the hearing in Fayetteville, NC, yesterday I mentioned this as a major accomplishment. Everyone says that the farmers are polluting the ground water. But every time they build a complex in the suburb of a city, a shopping center, and they build acres and acres of parking lots, that helps to pollute the ground water.

I am not pointing the finger at industrial complexes, but it is true that every industrial complex and every nonfarming building development takes space from the land, forces water to run off somewhere, and likewise causes the pollution that we must address.

The farmers' livelihood depends on the environment. This is something that few people understand. The farmer is out of business if he does not have good soil, good water, and clean air. So he is the one who has a number one interest in the environment, because he is out of business otherwise.

The public wants a cleaner environment and safer foods. Well, that is the farmer's business. The farmer is at the mercy of the consumer. He does not press his product on the consumer. If the consumer does not buy his product, he is out of business. So the consumer basically sets the ground rules for what the farmer produces.

The price of transportation tells us how much we are going to pay for an airplane ticket, for a bus ticket, or for a train ride. Those who sell automobiles tell us how much the automobile is going to cost. Those who sell refrigerators tell us the cost of that item. We go to the dry goods store, and they tell us the price. Everywhere we go, they tell us what the price is of that item. But the farmer has to sit at home and see what the market is going to pay, what the farmers' market in his local area is going to pay. He does not know, unless he has contracted, what he is going to get for that commodity.

Yet we have the best farmers in the world, and we are the best fed people in the world. That is not to say there is not hunger in America, but it has never been the fault of the farmer. It means that something went wrong—they did not have a job, there has been a disaster, or they are the homeless. There are those who are unfortunate enough not to have daily sustenance. But it has never been the fault of the farmer. Something else went wrong. We are going to continue to work on that.

I must mention that we did not address the issue of agricultural research, which is so important. Actually it begins with research, and then it goes to development, then to extension, and then it goes to the farmer and finally to the consumer.

I might point out that over the past 20 years I have known a friend of mine who had yields one of 30 bushels of corn to the acre, and now he has almost 140 bushels to the acre. This is the same farmer and the same farmland. With the tools we have given him, the research, the hybrids, the pesticides, and the fungicides, the farmer has been able to do this. This has accrued to the benefit of our country and to the benefit of the world. We will continue doing this. We have the safest food in the world bar none, and we will continue seeing that we have the safest food.

□ 1600

Finally let me talk about the challenge for the rest of the 1990's and into the 21st century. The United Nations Population Fund predicts world population will likely double over the next 35 years; 5.2 billion in 1989, 10 billion by 2025. The world is going to look to us because we have the fertile soils and climate, we have the capability, we have the technology, and we have the desire to produce. This is what is so very important.

Finally let me say just one more thing. Who is the farmer? What is he all about? Why do we want to give him a helping hand? For everything that he does, Mr Speaker and my colleagues, the main thing is: Who is a farmer?

There is an old Spanish saying in my area of Texas: "If you go on the land, and you don't feel the vibrations, forget it. It's not going to grow for you. You're not a farmer."

Mr. Speaker, that is what it is all about, and this is what I would like my colleagues to know. The farmer is not someone out there wanting money from the Government. He is not someone out there wanting to be a sensation or a hero. He is just someone out there that God gave that inherent feeling, that vibration, so when he steps upon the land to make things grow, they feed all of God's children.

Mr. Speaker, that is what a farmer is all about, and that is what this discussion today is all about.

Mr. GLICKMAN. Mr. Speaker, I thank the gentleman from Texas [Mr. DE LA GARZA] for having this discussion today. I think it will be useful as we think about the reasons why we are here and what we intend to do to make the producers of food and fiber strong in the next decade and make the consumers of food and fiber strong in the next decade and realize that the two have to work together in order to continue to have a strong agriculture in America.

So, Mr. Speaker, I thank my colleague, the gentleman from Texas [Mr. DE LA GARZA], the chairman, for raising this special order.

INVESTIGATION FINDS CONTRAS KILLED NUNS IN NICARAGUA

The SPEAKER pro tempore (Mr. MCNULTY). Under a previous order of the House, the gentleman from Wisconsin [Mr. KLECZKA] is recognized for 60 minutes.

Mr. KLECZKA. Mr. Speaker, I would like to share with my congressional colleagues a just-released report of the independent investigation of the New Year's Day killing of two nuns in Nicaragua.

The Human Rights Group Americas Watch Committee conducted this intensive inquiry at my request and that of the House Democratic leadership and four other Wisconsin Members of Congress.

In brief, the investigation found that "Contras engaged in this indiscriminate attack on a civilian vehicle that resulted in the death of two nuns and the serious wounding of a nun and a bishop."

I hope Members will read this thorough accounting of the New Year's Day murders and then work toward preventing a similar tragedy from recurring in the future.

THE NEW YEAR'S DAY KILLINGS OF THE NUNS IN NICARAGUA: A REPORT ON AN INVESTIGATION

(By the Americas Watch Committee)

THE AMERICAS WATCH COMMITTEE

The Americas Watch Committee was established in 1981 to monitor and promote observance of free expression and other internationally recognized human rights in Central America, South America and the Caribbean. The Chairman of Americas Watch is Adrian W. DeWind; Vice Chairmen, Peter Bell and Stephen Kass; Executive Director, Juan E. Mendez; Research Director, Anne Manuel; Counsel, Jemera Rone; Santiago Representative, Cynthia Brown; Research Associate, Mary Jane Camejo; International Human Rights Intern, J. Eugenio Ahumada; Associates, Beryl Jacobs and Clifford C. Rohde.

Americas Watch is one of the five Watch Committees comprising Human Rights Watch.

ACKNOWLEDGMENTS

This report was written by Jemera Rone, Counsel to Americas Watch, and is based on Ms. Rone's research in Nicaragua, including at the site of the ambush.

Americas Watch conducted this investigation as part of our continuing effort to monitor human rights in Nicaragua, including violations of the laws of war by both sides. During the past eight years, Americas Watch has conducted close to forty investigative missions to Nicaragua and has published more than fifteen reports on that country. Ms. Rone has participated in a large number of those missions and is the author or co-author of many of our reports on Nicaragua.

I. SUMMARY

On January 1, 1990 at 6:30 p.m. a white Toyota pickup carrying three Catholic nuns and a bishop was ambushed at Ojo de Agua on the highway between Siuna and Rosita in central Nicaragua, killing two of the nuns and seriously injuring the other two passengers.

Between January 10 and 14, 1990, Americas Watch investigated the killings at the scene of the ambush and spoke to residents, local authorities, and witnesses to the crime. The two young men, Jaime Aráuz López, 20, and Ronal Dolores Mairena Sobalbarro, 16, residents of Ojo de Agua who saw the contras at the ambush site at the time of the ambush were interviewed extensively.

It is our conclusion, based on this investigation, that those responsible were a unit of the rebel Resistencia Nicaragüense, or contras,[1] firing indiscriminately at the vehicle without warning to stop but also without knowledge that the vehicle belonged to the church.

II. BACKGROUND

A. Our investigation

We interviewed the two direct witnesses for several hours, first when they knew we were preparing to visit the site of the ambush, and then upon returning from the site. We find them credible witnesses. Their story is internally consistent. They do not appear to be rehearsed or pressured.

Members of the community interviewed by Americas Watch all knew the young men and uniformly stated that they are hard-working, have not been in any trouble, are not involved with either side (the government or the contras), and have the reputation of being honest. Neither has more than a grade-school education but they were both logical and straight-forward in their answers to questions. The Mairena family has lived in Ojo de Agua for nine years and the Aráuz family in Coperna Abajo for 10 years. Neither family has taken sides in the conflict, according to residents and officials, which was our impression as well.

We arrived in the Siuna-Ojo de Agua area on January 10 and stayed there until January 14. We interviewed people in Ojo de Agua on three separate days, some of them more than once, and others connected with the case, including military [2] and state security [3] authorities. All the interviews were private.

B. Prior contra abuses, ambushes, kidnappings, and killings in the area

Over the years, Americas Watch has documented many cases of indiscriminate attacks by the contras on cooperatives as well as on vehicles traveling country roads. The ambush of military and government vehicles has been a frequent tactic of the contras, with civilian casualties occurring when, as has often happened, no care is taken to assure that the target is indeed military.

1. Ambushes on the highway, deaths

Ojo de Agua is about 31 kilometers east of Siuna and midway between Siuna and Rosita; it takes about an hour to reach Ojo de Agua from Siuna due to the condition of the bridges. This road is the only one east from Siuna to Rosita (two hours) and from there to Puerto Cabezas on the Atlantic Coast (another four hours).

The last contra ambush on the Siuna-Rosita highway prior to the attack on the nuns was an attack on a military vehicle on August 29, 1989. It occurred midway between Ojo de Agua and Siuna. The victims were an EPS First Lieutenant, Rodolfo Vallecillo Martinez, and a prosecutor from the office of the military prosecutor (Auditoria Militar), Héctor Chow Rodriquez, who at the time of the ambush was taking Lieutenant Vallecillo into Puerto Cabezas in connection with the investigation of a case of human rights abuse by the officer (See below.).[4] Two others in the military vehicle were wounded and the car was burned.

The following accounts of other contra ambushes on the Siuna-Rosita two-hour stretch of road came from the military and have not all been independently verified by Americas Watch:

In April 1989, a civilian Robur microbus was shot up, and one wounded, near Lukú (between Ojo de Agua and Siuna);

On July 19, 1989, around El Empalme, between Ojo de Agua and Rosita, a contra ambush of a military vehicle killed four MINT agents and wounded six;

On May 1, 1987, a Ministry of Construction (MICON) truck was ambushed, killing one civilian and wounding another, five kilometers east of Baká, a hill near Ojo de Agua;

In 1986, in El Tesoro, east of Ojo de Agua, a MICON truck was ambushed, killing two civilian employees;

On May 7, 1985, in Lukú, an ambush of a military vehicle claimed the lives of 11 MINT and EPS soldiers, including Subcomandante Evaristo Vásquez, and wounded seven others;

In 1985, in San Antonio between Ojo de Agua and Rosita, three civilians were killed in an ambush;

In 1985, Juana Aguinaga, riding in a military vehicle, was killed and two police wounded in an ambush at Baká occurring during the day. Several residents of Ojo de Agua interviewed by Americas Watch mentioned the ambush that killed Juana, a civilian hitching a ride, although they could not agree on the year;

In 1984, an ambush on a military vehicle at Baká wounded two soldiers.

Residents of Ojo de Agua and Siuna told Americas Watch that in earlier years the highway from Siuna to Rosita was dangerous day and night because of contra ambushes. They could not recall each of the ambushes but they assured us that there were very many and that Baká was the site of several.

2. Executions

Three men associated with the Commission for Peace (created after the government-contra agreements at Sapoá in March 1988) were kidnapped on August 25, 1988, by the contras and disappeared, according to several reliable sources. Eduardo Hernández Ramos had been kidnapped before the contras and escaped. After the escape, he publicly denounced the contras. His family was at home in Mongallo (west of Ojo de Agua) when contras, led by a man recognized as "Jalisco," came to capture him the second time. Marcelino González and Faustino Reyes were captured by the same contra contingent on the road. All were accused of collaborating with the government. Unconfirmed reports are that Hernández and González were executed in the mountains.

3. Kidnappings

According to a partial list of kidnap victims assembled by independent observers in Siuna, there have been some 148 contra kidnappings in the area since 1982. In some of these cases, the victims may have decided to join the contra forces voluntarily. Of the 148, 21 were kidnapped in the 1988–89 period, and another two were taken and are believed dead (See above.).

C. Prior Sandinista abuses

The worst Sandinista abuse in this area in the past two year, and one of the worst abuses we learned of by either side during recent years, was a killing of six captured *correos* (*contra* collaborators) in the area of Umbla, two days south of Siuna in the mountains, on August 20, 1988.[5] Several were killed by machete blows and one was beheaded.

These six men and one who survived were captured by a patrol of eight "compas," as people call the military or MINT troops; it is believed that these were from the MINT. One of the eight soldiers, Merenciano López Hernández, a former contra who had turned himself in (a desalzado, literally one who has laid down his arms) was recognized by the survivor.

The survivor, Ascensión Díaz Méndez, brother of two of the slain men, made a statement to the MINT in December 1988, which we read. After capture, all the men were accused of being armed correos; Mariano finally admitted the charge and said he

[1] Contra is short for contrarrevolucionarios, or counterrevolutionaries, so called because they oppose the Sandinista revolution.

[2] Ejército Popular Sandinista, EPS.

[3] The Sandinista police and the state security police (Dirección General de Seguridad de Estado, DGSE) are under the jurisdiction of the Ministry of the Interior (Ministerio del Interior, MINT).

[4] See Americas Watch, "The Killings in Northern Nicaragua," November 1989 at 48.

[5] The men were Pánfilo and Eliodoro Díaz Méndez (brothers), Juan José Granados López, Mariano Granados López, Justo López Campos, and Santiago Grandaos Real.

would take the compas to recover arms. Jose tried to run for it and was shot. Mariano then also tried to escape, but was grabbed and struck many times with a machete. Santiago was then shot, and had his head cut off with a machete. Justo, pleading for his life, on his knees, was killed with a machete, as was Eliodoro. Ascensión, the lone survivor, was given five blows to the back of the head and shoulders with a machete. The compas then shot the body of Mariano. Ascensión, who had not lost consciousness, saw them shoot his other brother Pánfilo.

After the compas left, Ascensión, whose hands were still tied, managed to make part of his way home; his mother encountered him on the path.

We spoke to an independent source who interviewed Ascensión, saw his wounds, and talked to others in the community. They were too afraid, however, to retrieve and bury the bodies, having seen Ascensión's condition when he staggered in, and having heard his tale of horror.

Although the case was reported to the government, including the MINT, the Auditoriá Militar and the government human rights commission,[6] none of the attackers was ever located nor could the unit be identified and no one was tried or punished for this gross violation of human rights.

In 1989 there were two reported cases of human rights violations by the EPS in this area. One occurred in Kurrin, southwest of Siuna. We learned of the case shortly after it occurred in July 1989, before it had been established who was responsible. An elderly couple, Angel Gonzalez and Elsa Polanco, were killed in their remote farmhouse, their bodies and house riddled with bullets.

The person under investigation for this crime was First Lieutenant Vallecillo, killed in a contra ambush on the Siuna-Rosita highway on August 29, 1989 (See above.). Allegedy while drunk, he had ordered a patrol headed by a former contra (desalzado) who was an enemy of this couple (or of their sons in the contras) to investigate the couple for possible collaboration.[7]

The man allegedly responsible for pulling the trigger in the case was said to have escaped from jail in Siuna after one month's incarceration. Others involved in the case are reportedly still in jail.

On April 4, 1989, Pedro Amador Rodriguez, 20, and his brother Justino, 18, were captured separately at their home in Caño Seco, some two hours south of the highway, by soldiers from the Yaoya outpost between Siuna and Ojo de Agua. The two were taken further into the mountains, to Bocana del Caño de Tres and Coperna, where they admitted that they had been collaborating with the contras. They were shot and buried there.

Lieutenant Lucas Suárez was arrested (apparently some of his men talked) and admitted killing these "enemies of the people." The bodies were located. Lieutenant Suárez was jailed in Siuna, but since he suffers from tuberculosis he may not be in confinement at this time.

[6] Comisión Nacional por la Promoción y Proteccion de Derechos Hu manos, CNPPDH. The commission office in Managua, however, told us that they had no record of the case but would look into it.

[7] When we asked the DGSE and army in Siuna about it, they said they were under the impression that Vallecillo was being investigated for reckless endangerment for shooting off his gun in a cooperative. They noted that he had family problems and had started drinking.

These abuses are consistent with the pattern of summary executions by military and MINT officials of alleged contra collaborators in remote areas that occurred in 1988-89, as we described in our November 1989 report, "The Killings in Northern Nicaragua." These very serious violations of human rights by government forces do not include ambushes of vehicles, however. Americas Watch has not encountered any case of such an ambush by government forces in Nicaragua during the eight years we have been investigating abuses of human rights.

D. The setting

The site of the ambush in Ojo de Agua is 31.6 kilometers from Siuna, driving east toward Rosita on a winding, two-lane dirt road, criss-crossed by several rivers with bridges in various states of disrepair. It is an area of low hills and modest to extremely poor farmhouses scattered along the highway. Forest and heavy underbrush are interspersed with cleared rolling pasture lands. Other farms are located in areas remote from the road and inaccessible by vehicle.

1. Coperna

The largest community prior to reaching Ojo de Agua is Coperna, which is a collection of wooden houses and buildings comprising a cooperative and a military outpost. The cooperative and military base have been there for about four years, and there was no major friction between Ojo de Agua and the Coperna complex, according to residents of Ojo de Agua.

Coperna has not been attacked by the contras. Military patrols operate from Coperna, which is about five kilometers to the west of the ambush site, or about 10 minutes by car and 30 minutes to one hour on foot. Residents of Ojo de Agua said that soldiers pass occasionally on patrol on the road. On January 1, 1990, no one interviewed by Americas Watch noticed any EPS patrols in the area of Ojo de Agua.

2. Military outpost at Baka Hill, Ojo de Agua

On January 1, 1990, the military posts in and near Ojo de Agua, according to its residents, were the military base at Coperna and a small post of seven soldiers almost two kilometers east of the ambush site, which had been there since December 24, 1989. This position was on a small hill facing east toward Baka Hill and its function was to guard that hill, a site of prior contra ambushes and activity. The Baka position did not face west toward the ambush site and the ambush site was not visible from the position, even when climbing to the top of the small hill, because the forest obscured the view.

The position was set up literally in the backyard of Alejandro Mairena Cruz, 45, the father of Ronal Mairena, one of the witnesses to the contra attack on January 1.

The plastic tents of the soldiers, on the side of a small rise about 20 meters from the inhabited house, were clearly visible from that house as well as from the road, since no foliage blocked the view.

Residents interviewed said that the soldiers, who were in plain view of the road, did not have radios, grenades, grenade or rocket launchers, and were armed only with AKAs, Soviet-style automatic rifles. Their job was to watch the mountain, and they did not move from the spot, except to bathe in the river, according to residents of the area. They were not seen patrolling.

Celebrations of the Word (Catholic services without a priest) were held at the Mairena house and many families from the community, attending the celebrations on the Sundays of December 24 and 31, saw the soldiers sitting at their post near the house.

3. Contra presence

Americas Watch was told by Captain Miguel Miranda, head of the EPS in Siuna, by Captain Otilio Duarte, head of State Security in Siuna, and by the commander of the EPS base in Coperna, First Lieutenant Alfredo Zamora, that in late December they received information that the contras were moving toward the highway from a base to the south.

Contra presence in this area has substantially decreased from a high level of activity in the mid-1980s, civilian and military alike agreed. First Lieutenant Zamora said that during 1989 the contras had not attacked any cooperative in this sector. According to him, they had kidnapped 17 peasants in June 1989 from nearby Oro Fino; of these, some eight, including women, stayed willingly with the contras.

The March 1988 Sopoa agreements and the cease-fire put in place at that time produced a sharp decrease in contra activity, although it had been declining since a high in 1985. In later 1989, however, the contras were infiltrating back into Nicaragua from their bases in Honduras.[8] Currently contra and U.S. sources claim that, including the recently reinfiltrated contras, there are around 5,500[9] contras inside Nicaragua, an increase over late 1988. The army believes that the contras have a large social base in Mongallo, between Siuna and Ojo de Agua, so they have stationed soldiers there frequently. (The father of the contra accused of leading the ambush lives in Mongallo; he complained of the military surveillance of his farm. See below.) First Lieutenant Zamora said that the contras do not have much of a social base in Ojo de Agua.

The army believes that the contras tend to step up attacks during the Christmas period, so it takes precautions at this time. According to officers interviewed by Americas Watch, the military has not engaged in any operations against the contras since the 1988 Sapoá accords and cease-fire which was lifted on November 1, 1989; they took pains to say this was a unilateral cease-fire by the government, never respected by the contras. Even now, the military is under orders not to undertake operations, with the exception of the patrol they sent out to track down the contras who ambushed the nuns. They regard patrolling the road as maintaining vigilance, not a military operation.

The authorities received information that a contra by the name of Evaristo Aguinaga (nom de guerre "Rubén") and his brother Juan had left their base near Susún, about two days south of Siuna in the mountains, with their group of contras on or about December 25. According to the officials interviewed by Americas Watch, Rubén and Juan went to visit their father in Mongallo for Christmas.

[8] State Department spokesman Richard Boucher stated on November 2, 1989, that about 2,000 contras had re-entered Nicaragua since early October 1989. John M. Goshko, "Contra Infiltration Confirmed," The Washington Post, November 3, 1989.

[9] Christopher Marquis, "Contras report casualties in renewed battles," The Miami Herald, November 2, 1989; John M. Goshko, "Contra Infiltration . . ."; "Honduras OK's letting contras cross border," The Miami Herald, November 5, 1989.

The authorities are vitally interested in Rubén's whereabouts, in part because they have been trying to convince his family to persuade Rubén to lay down his arms.

Having received this information about contra movements, the army sent out extra units to be stationed at spots of known contra activity on the road. One was at the Baká Hill (See above.).

When the Baká unit came to camp on property owned by Ronal's father, the commander, a soldier from Coperna known by the name of Denis, told Mr. Mairena that they were there to await contra activity.

The residents of Ojo de Agua did not notice any contra presence during this period.

The army later received information that the contras returned to their base, arriving on January 5.

Americas Watch received hearsay information that various peasants who live in the mountains further south of Ojo de Agua said that the contras had passed through going north before the ambush and going south after the ambush. These peasants were not accessible to us and we were not able to verify this information. As always, such facts take time to establish in Nicaragua but we expect that within a month or so the information will be clear.

III. THE AMBUSH

A. The kidnapping of two boys

1. Going fishing

The afternoon of January 1, Jaime Aráuz and Ronal Mairena decided to go fishing at the Coperna River. The fishing spot was located on the path from Ronal's house on the highway at Ojo de Agua to Jaime's farm, an hour and a half walk south in Coperna Abajo.

The boys asked a friend to go with them. The friend told Americas Watch that he did not have a horse, and the two were going on one horse. Also, the friend had served two years in the army as a conscript, so he declined the invitation; he had a feeling that the contras might be around. Though no one had seen contras, a military post was placed at the Mairene house to watch the Baká Hill for contras. The contras are harder on young men who have served in the EPS than on those who have not, and neither Jaime nor Ronal had served in the army. Jaime's family told Americas Watch that their son had a medical exemption for a nervous condition related to his slight stammer, and Ronal has just turned 16.)

2. The contras eat a cow on the Aráuz farm

That same morning, a group of contras passed through Jaime's family's farm and killed and ate a 200-pound cow, leaving behind several camp fires and the skin and some bones of the cow. Jaime's brother Felipe Aráuz found the remains a few days later, and a few days after that his father also saw the remains, which were about a 45 minute walk from the Aráuz farmhouse. They both believed that it was the contras who ate the cow because of the boot prints left behind which Felipe, who had been drafted and served two years in the army (1985–87), recognized.

No one seems to have seen either the EPS or the contras pass through the farm that day, or at any time during this period. A worker on the farm saw them pass through eight months before, however, and in earlier years they had traversed the farm on a number of occasions. It was much rarer to see EPS patrols on the farm.

3. The kidnapping

On the highway, the two boys left the horse they were riding in a pasture and proceeded on foot. They did not go to Jaime's family's farmhouse, but went directly to fish, and intended to return that evening, they told Ronal's father and their friend. The area south of Ojo de Agua to the Aráuz farm is not populated, several farmers told Americas Watch. (Some of the land is not suitable for farming, one added.) Two farms there were abandoned several years ago. The Aráuz farm is the first inhabited farm, walking an hour and a half south from Ojo de Agua.

The boys left Ojo de Agua about noon on January 1 and by 2 p.m. were at the fishing spot. They had barely started to fish, beginning to pull very small fish out of the stream, when the contras appeared. Ronal, catching sight of them, removed his wrist watch and slipped it in his pocket for safekeeping.

Both had seen the contras before on various occasions, as is typical in the case of boys living in the countryside in Nicaragua. The contras previously had a strong presence in the area, passing through Ronal's farm in Ojo de Agua (near Baká Hill) and other places on the highway many times before 1985. Jaime's farm was in an area where the contras also passed frequently in prior years. More recently, Jaime's family had been required to evacuate the farm in December 1988 by the EPS for "reasons of security," presumably because the contras were in the area. The family was permitted to move their cattle to a relative's farm near Siuma, and finally allowed to move home in June 1989.

Jaime had been kidnapped on at least one prior occasion by the contras. In December 1987, the contras conducted a major offensive in the "Mines" area of Nicaragua, attacking the three gold mining towns of Siuna, Rosita, and Bonanza. They occupied Siuna for almost a day and took over a nearby military base. Jaime and a brother who were then at a family farm near the base were pressed into service by the contras to carry captured munitions. The brother was slightly injured and could not proceed but Jaime was kept by the contras until he got away late that evening.

Both boys were also familiar with the EPS and the uniforms its soldiers wear. They also knew by sight many of the soldiers at Coperna because Coperna is a local center of various activities, including baseball games, and they had played baseball on teams opposing the cooperative team which included soldiers. In addition, the soldiers patrolled the highway and stood guard at various posts, including the one recently set up at Ronal's house.

The boys recognized that the armed men approaching them were contras, based on their uniforms; these are better quality uniforms than the EPS wear. Some had "jungle" boots, of rubber at the bottom and waterproof cloth on the top; others wore rubber boots. They wore camouflage uniforms and olive green uniforms similar to those they had seen the contras wear in the past and backpacks like those worn by the contras; they had large pockets on the side of their pants, which the EPS uniforms do not have. One had a patch on his uniform, which both boys noted, with a yellow eagle and black letters.

A few contras approached the boys. They asked if they were in the EPS or had done any military service, to which the boys replied in the negative. They did not ask for documents or search them. They told the boys they had to come with them, and did not give any explanations.

The boys estimated that there were about 60 to 70 contras in this group, though they did not see them all in one place. They saw no other civilians with them.

The boys saw that the contras were armed with AKAs, one RPG 7 (rocket-propelled grenade launcher), and one M–79 grenade launcher (popularly called a mono, or monkey). One contra carried a FAL, a heavier and smaller automatic rifle. The boys said that they recognized the weapons because they had often seen EPS soldiers and contras with weapons; indeed, the countryside is heavily militarized. Jaime, on request, was able to draw convincing sketches of the various weapons.

Later in the day, at the time of the ambush, they overheard one contra ask another about the whereabouts of the mine, and saw the second contra, who said "here it is," come forward with a green metal box which they assumed was a mine, which they had not previously seen.

4. Evaristo Aguinaga, or Rubén

The contra who carried a FAL was recognized by Jaime. He was Evaristo Aguinaga, age 35–40, whose nom de querre is Rubén Jaime (according to him and his family, interviewed separately by Americas Watch) had seen this man years earlier at community gatherings before he joined the contras in 1982. The Aguinaga family was from Esquipulas, Matagalpa, and moved 14 years ago to Mongallo, a community on the highway between Ojo de Agua and Siuna. At the time, Jaime now 20, was much younger, so apparently Rubéns did not recognize the boy.

Jaime described Rubén as being blond (a term used in Nicaragua to refer to blond to brown hair), with a blond beard and light eyes; others separately gave that description to us, one adding that Rubén's eyes are what is called gato (cat), or green.

Americas Watch also interviewed Rubén's father, Secundino Aguinaga Blandón, over 66, in his farmhouse in Mongallo, visible from the road. This family of five brothers and five sisters was well known in the farming community, where some of them still live; Rubén and another brother, Juan, joined the contras in 1982 because the family was being persecuted by the Sandinistas and those who envied them, the father told us. It was widely known that these two men, and their brother in law Gregorio Trujillo, had joined the contras, and their family did not deny this. Trujillo's wife (or widow) was present during Americas Watch's interview with her father-in-law, Mr. Aguinaga.

The father said that Rubén came to visit him in March 1989 and discussed the possibility of surrendering but concluded that his brother, still in Honduras, and his troops would suffer if he left the contras.

His son last visited him three months ago, he said. Mr. Aguinaga complained that the MINT had taken him to Puerto Cabezas after the ambush on the church vehicle and asked him for a declaration. He was not physically abused but the ride on the rough road was hard on a man of his age. He complained of prior surveillance of his farm and roundly denounced the Sandinistas for a series of acts of persecution of his family, some dating back several years. He said that such persecution was the reason hundreds and thousands of men had joined the contras.

5. Identification of contra troops

When we asked the boys who were kidnapped how they knew their abductors were contras and not compas, or EPS soldiers, the boys cited several factors, randomly, aside from the uniforms, backpacks and boots (See above.). They said that the men did not talk much on the trail, and they asked different questions from the military (or DGSE) authorities who stop civilians; the government "investigates" or questions more. The boys said that the attitude of the contra troops was more "machista," or aggressive. The leader of the group was referred to as "comandante," and they knew that the only comandantes of the EPS were in Managua, not in the muddy paths of central Nicaragua. The armed men referred to each other as "comandos," a term used by the contras but not the army.

We wondered why the boys were taken by the contras. The boys said that they were not used as guides, but were taken along in the middle of the contra column that was moving toward the highway. They overheard some contras, who referred to each other as "commandos," say that they were going to conduct an ambush, although they did not hear who was to be ambushed.

After several interviews, the boys conceded that they were asked by the contras where they lived, and then were asked about the location of Sandinista troops in the area. They did not recall the answers they gave. We surmise that the boys were taken by the contra troops to ensure that the presence of the contras was not detected before the ambush as well as to provide information to the contras about the terrain and the current presence of Sandinista army units along the highway.

It is reasonable to assume that the boys would have informed them of the soldiers near the Baka Hill, if only to steer them in another direction and avoid cross-fire casualties to Ronal's family if the contras were to stumble upon the seven-soldier post. This would also avoid subsequent reprisals if the contras discovered the boys were lying. (If the contras decided to attack the seven-man post, however, the family would be in danger as well.)

The contras moved slowly northward toward the highway, at first on the path and then, abandoning the path that leads to Ronal's house, through the forest and underbrush. The boys recognized the area because they had passed through and worked there. The contras stopped along the way to rest.

It was raining as they advanced toward the highway.

While the rest of the troops stayed back, the two boys were sent ahead to the highway with a contingent of about 10–15 contras, including one assigned to guard them. The boys and the guard stopped in thick underbrush which blocked their view of the highway, though they calculated that they were about 50 meters south of it, near a fence of three strands of barbed wire that separates the pasture of the Torres family from the underbrush. They knew exactly where they were. Having stood in the same underbrush, we can affirm that the highway is not visible from that spot.

The boys say they do not know why they were taken to within 50 meters of the ambush with the ambush contingent while other contra troops remained behind. We surmise that the boys were taken almost to the site of the ambush to make sure that they were not directing the contras to a spot where the EPS was stationed. (The MINT said flatly that the boys were used as guides.)

When they arrived at the highway it was about 6 p.m., and dark. The boys calculate that they were at the spot for about an hour, sitting and standing, before the sole vehicle passed by and was attacked.

By the time of the ambush it was night. When we were in that area several days in a row, we noted that the sun set rapidly starting at 5:30; by 6:00 it was dark, although patches of the sky were still a little light; and by 6:30, it was as dark as it was going to get for the rest of the night.

B. The church vehicle and the permission given

Two carloads of Catholic priests and nuns set out from Managua on the morning of January 1 by land to attend a meeting in Puerto Cabezas of those working with the church on the Atlantic Coast. In one vehicle was United States born Bishop Salvador Schlafer, of the Capuchin order, the Catholic Bishop of the Atlantic Coast region, where he has served the Miskito community for many years, and others.

In the second vehicle, later ambushed, were Msgr. Paul Schmitz, also a Capuchin, a U.S. citizen and Auxiliary Bishop of Bluefields, and three nuns from the order of St. Agnes. Two of the nuns, Teresa de Jesus Rosales Dickson, 24, who died in the ambush, and Francisca Colomer Kramer, 24, were Nicaraguan Miskitos; and the third, Maureen Courtney, 45, who also died in the attack, was a U.S. citizen who had served the Miskito community on the Atlantic Coast for many years.

Sister Maureen lived and worked in Waspan, on the Coco River, at least a four hour drive north from Puerto Cabezas; Bishop Schmidt lived in Bluefields, only accessible from Puerto Cabezas by plane or sea; Sister Teresa and Sister Francisca lived in Puerto Cabezas.

Sister Maureen was driving and Bishop Schmitz was in the front seat. Sister Francisca was in the back seat behind Sister Maureen and Sister Teresa sat behind Bishop Schmitz.

This car parted company with that of Bishop Schlaefer while fording the Wani or Prinzapolka river a short distance before entering Siuna. The Sisters had a residence in Rosita, two hours drive from Siuna, and hoped to spend the night there and continue on to Puerto Cabezas, at least another four hour drive, the next day. Bishop Schlaefer, interviewed by Americas Watch in Siuna, said that, perhaps because he was older, he was content to stay in Siuna and not chance the drive at night, but arrive a little later the next day in Puerto Cabezas. The drive from Managua, where they had started that morning, to Siuna takes eight hours under the best conditions and without stopping to eat.

Sister Maureen wanted to continue on to Rosita, however, that same night. The Washington Post reported an interview with Bishop Schmitz:

"We were supposed to stay overnight in Siuna, but Sister Maureen insisted in going to Rosita, where she had some sisters of the congregation with whom she wanted to share gifts and letters," Schmitz said. "It was imprudent of us to continue; it has generally been a dangerous area."

"Schmitz said that although the area is known to be dangerous, "lately there has not been much combat." [10] The survivors [11] told others in their congregations that Sister Maureen pressed the authorities to give the car the necessary permission to leave Siuna. The army still maintains control of vehicles leaving Siuna, day and night. Whether traveling west to Matagalpa and Managua or east to Rosita and Puerto Cabezas, a vehicle must obtain written permission from the military, who note down the car registration and the driver's license. The process does not take long.

The procedure has been not to grant permits to leave before 8 a.m. (in years of heavy contra activity, most ambushes on these roads took place in the early morning) nor after 5 p.m. The time on the permission slip, according to Bishop Schlaefer, was 5:15 p.m.

We asked the head of State Security in Siuna, Capt. Otilio Duarte, why the car had been permitted to leave Siuna after 5 p.m., contrary to the rules and with knowledge that the contras were in the area. He said that the church and its workers enjoy a certain autonomy and that police and army do not put the same restrictions on them as they do on other civilians because of the humanitarian nature of the church's work. Soldiers and the police are under orders to cooperate with the church and not place obstacles in its way.

Relations between the Miskitos and the Sandinista government, police and army have ranged from very bad to less bad since 1980. The nadir came in early 1982 when the Miskito communities on the Coco River, following insurgent Indian attacks, were forcibly evacuated by the Sandinista army and had their communities and homes burned to the ground by the army to assure that the evacuees did not return. Sandinista soldiers committed a number of "disappearances" and summary executions during this period (See previous Americas Watch reports on Nicaragua.).

Thousands of Miskitos fled across the river to Honduras in 1982 while thousands more were relocated in centers built a long distance from their homes. (The Miskitos claim that all of that area, including Tasba Pri, is their traditional land.) The religious orders that served the Miskito community identified with its suffering and their relations with the government worsened as well, although there were exceptions to this. Even now, although the Miskitos and the religious workers ministering to them were permitted to return to their places of origin on the Coco River beginning in 1985, relations with the Sandinistas range from guarded to suspicious to hostile.

Nevertheless, the churches are a force to be reckoned with in Nicaragua, and have successfully asserted their right to less government interference than other institutions.

The ambushed vehicle was not known in the area because it was newly purchased and this was its maiden voyage in this area. It was a white Toyota pickup, with front and back seats (doble cabina). Some of the residents of Ojo de Agua who saw the

[10] Ricardo Castillo, "Injured Bishop Fails to Identify Attackers," *The Washington Post*, January 4, 1990.

[11] Americas Watch was not able to interview either of the survivors. Bishop Paul Schmitz and sister Francisca Colomer, who were hospitalized in Managua, were evacuated to the U.S. for medical treatment. As of January 23, we were told that they did not wish to give further interviews for reasons of health and security.

pickup the morning after the attack commented to Americas Watch that it was just like some of those used by the DGSE; the DGSE also said that they and some FSLN [12] officials have similar Toyotas.

Hearsay evidence received after the attack includes a report that the contras were targeting Abelardo Rivas, an FSLN leader from Rosita who frequently traveled on that road.

The Toyota was not conspicuously marked as a church or neutral vehicle. It apparently had red crucifixes taped to the front doors, about eight inches high, but these would not have been visible at a distance at night. Secundino Aguinaga Blandón, the father of the contra who allegedly perpetrated the attack, commented to us that church cars used to have big flags in front that clearly indicated that they were not government vehicles.

Bishop Schlaefer remarked to The New York Times that: "the attack could have been avoided if the church workers had not tried to travel at night in an area of known contra activity, and if their recently purchased pickup truck had been familiar to contra units operating in the area." [13]

Bishop Schlaefer told Americas Watch several days later that the peasants living along the road of the attack had reported seeing no contras in the area for some time.

The pickup, with Sister Maureen driving, left Siuna and, according to the officer in charge of the base at Coperna, First Lieutenant Luis Alfredo Zamora, passed through the Coperna checkpoint at about 6:20 p.m., dropping off their written permission slip with the soldier in charge of the checkpoint. They were not stopped and did not talk with any officer.

C. The scene in Ojo de Agua

In Ojo de Agua during the afternoon of January 1 the Torres family and neighbors had been conducting a celebration in honor of the Virgin (purisima) in the Torres house on the south side of the highway facing the Gutiérrez house on the north side, both near to and quite visible from the highway.

There is a stretch of straight road starting a few hundred meters west of the Gutiérrez house and continuing a few hundred meters east. At night, a car with headlights on can be seen approaching from a distance.

The Gutiérrez and Torres houses are, by rough measurement, about 450 meters west of the place on the north side of the highway where the car came to rest after the attack, and where two crosses have since been placed to commemorate the deaths. Local residents say that the houses are about 300 meters from the site of the attack itself.

When Americas Watch visited Ojo de Agua, the place from which the ambush was conducted was clean pasture land and the shoulder of the highway (between the pasture fence and the highway) was clean as well. Ronal told us, however, that when he passed by the site (before being kidnapped) on December 31 he noticed that the pasture land was "dirty," which he described as having weeds in some places up to the knees, and that the underbrush on the shoulder of the highway was uneven and, in some spots, as high as a man. The pasture land was still "dirty" when they arrived on the night of the ambush.

About 100 meters east of the crosses, on the south side of the highway, is the north east corner of the pasture land belonging to the Torres farm and the beginning of thick underbrush. A fence running south to north divides the Torres pasture land from this underbrush and joins at right angles the fence running west to east that separates the pasture land from the road at this 100 meter mark east of the crosses.

On the north side of the highway some 100 meters east of the crosses is a house whose thatched roof is just visible from the highway; the front of the house is otherwise obscured by undergrowth. We were told by a number of residents that no one lived in that house at the time of the ambush nor at the time of our visit.

Another 200 meters away, or 300 meters east of the crosses, on the north side of the road is a clearing and an inhabited house. About 50 meters further east is yet another house, that of the López family. The road starts to curve again. There are three other inhabited houses and other uninhabited houses on the north side of the road before coming to the house of Ronal Mairena, which is 1.7 kilometers from the site of the ambush, near kilometer 371 on the highway.

This was New Year's Day, a day of celebration, rest and not much work. The men in the Torres family had moved some cows from one pasture to the other earlier in the afternoon and other farmers had run errands, but there was more festivity and relaxation than farming activity.

No one in the community reported seeing any contras that day. They had not seen any contras for a long time, they said. Nor did they see contras in the days that followed. They could not remember if any Sandinista patrols passed along the highway that day; several said they did not, although they patrolled the road on various days from the base in Coperna.

There had been no armed robberies by common criminals along the road, either.

According to Ronal's father, the seven soldiers at the post by his house were there all day, as usual; nor did anyone else along the road report seeing them move. They were not drunk that day, we were told. They had not caused any problems in the short time they had been posted there. These soldiers were all draftees, with one low-level commanding officer.

It was raining heavily enough for two cousins on a single horse (we will call them the Eugenios [14]) to stop at the Gutiérrez house to get out of the rain. They were riding from Coperna back home, near Ronal's house, returning from an errand. They stayed at the Gutiérrez house about one half hour. When the rain let up, a few minutes before 6:30 p.m., they got back on the horse and continued eastward, passing by the ambush site but seeing nothing. The 18 year old cousin, sitting in front, had already served two years in the military, having been drafted at age 16; the younger cousin was only 13.

Less than 200 meters to the east of the ambush site they crossed paths with Carlos (not his real name), who was heading from east to west on the highway, on foot. He was drunk, and was heading toward his home near Coperna. Several persons commented that he was frequently a little drunk, as he was on the afternoon that we interviewed him. He continued on eastward, to the ambush site, and noted that a vehicle heading toward him stopped at the Gutiérrez house without turning off its motor or lights, illuminating his path. It then passed him. He noticed no one in hiding. The ambush occurred after he had passed the site and while he had his back to it. He estimated he was 150 meters from the Gutiérrez house when the attack occurred. When interviewed by Americas Watch, he kept commenting on his great fortune in not having stopped to talk longer to the Eugenio cousins.

At about the same time, and since the rain had let up, Angela Torres, carrying a six month old baby and holding a three year old child by the hand, came out of the Torres house (where she had been celebrating the purisima with her family and the Gutiérrez neighbors) and walked to the highway. Standing opposite the Gutiérrez house, she saw a vehicle approach from the west, Siuna.

The vehicle stopped. Inside, Angela thought, was a nun she knew, Sister Sandra Price. Sister Sandra, a U.S. citizen, and Sister Juanita, a Nicaraguan, work together and are well known in the Siuna area. Sisters Maureen, Teresa and Francisca, who were actually in the vehicle that Angela saw, did not work in the Siuna area.

A man sitting in the front seat asked her if she wanted a ride. Since she was going home, in the opposite direction, she declined. The car then pulled away. No one got out and the motor was not turned off, although the car had come to a full stop. The residents heard no other vehicle on the road that night, before or after the ambush.

In the underbrush more than 500 meters away, the kidnapped boys could hear a car but could only see the reflection of lights in the night; they could not see the road. They did not realize that the vehicle stopped.

D. The ambush

Down the road, about 100 meters from where they saw Mario and 300 meters from the ambush site, in front of the first inhabited house to the east of the site, the older Eugenio cousin asked the younger to see what time it was; there was a half moon and enough light by which to read a watch. The cousins also noted the lights of a vehicle that stopped at the Gutiérrez house behind them.

The fact that the vehicle was approaching on a straight road with its lights on at night and was not going fast (since it had just stopped for a minute) gave the attackers time to take good aim. The vehicle was hit by an explosive directly in the front windshield, and bullets hit their target as well.

Before the younger Eugenio cousin could read the watch, they heard two loud explosions. They turned toward the noise and saw the flame of an RPG-7, according to the former draftee. He thought that it landed on the road. The older boy immediately put the horse into a gallop, to get away from the action, and they heard nothing but the horse's hooves. Several neighbors heard them gallop past just after the explosions.

Angela, with the two children on the highway, heard the explosions and dashed back inside the Torres house, in her haste dropping her umbrella in the front yard. She says she saw nothing and "suffers from nerves."

Carlos, who had his back to the ambush, saw nothing but heard two explosions and some bursts of gunfire. He dashed into the Torres house, arriving shortly after Angela.

[12] Frente Sandinista de Liberación Nacional, the governing party.

[13] Mark A. Uhlig, "Top Contras Deny Killing Nuns, but Clergy Differs," The New York Times, January 4, 1990.

[14] In the case of witnesses whose names were not already public when we discovered them and who had not been interviewed by others, Americas Watch decided not to publish their real names.

The people in the community said that they heard two detonations and about three bursts of fire. Many said that the detonations were of RPG-7s, and some said they had heard these explosions before and recognized them. The New York Times reported:

"Bishop Schmitz, interviewed on a stretcher in the evacuation plane, said he and the three church women were about halfway from Siuna to La Rosita when their white Toyota pickup truck was hit on its hood by a rocket-propelled grenade. Bishop Schmitz, who was in the front passenger seat, said the attackers then fired on the four church people for three to five minutes with automatic assault rifles.

"'We couldn't see anything before we were hit,' said Bishop Schmitz . . . who had a badly broken arm and suffered a serious loss of blood, and was trapped in the truck after the attack. 'Everything just exploded.'

"Bishop Schmitz said he and the surviving nun yelled that they were religious workers and the firing stopped. The survivors were then found about an hour later by a Sandinista army patrol and they were taken to a farmhouse for the night before being evacuated by helicopter and then plane today." [15]

The passengers in the car could not identify the assailants and no one approached the car, according to the survivors, until a Sandinista army patrol arrived an hour later.

1. The injuries

Dr. Kester Barquero, one of the two attending doctors at the hospital in Siuna where the wounded and dead were brought the following day, told us that Sister Maureen was dead on arrival; they estimated that she died instantaneously. She received what appeared to be a direct hit that took off the left side of her face and head. She also had a bullet in the tricep of the upper right arm and shrapnel in the upper left thigh.

The doctor stated that, in their considerable experience with wounds and deaths caused by high velocity weapons, she was not hit by an RPG-7 because this antitank weapon would have removed her entire head, and caused considerable damage to the inside of the car and the rest of the occupants. Instead, he thinks she was hit with a weapon of the strength of an M-79, a grenade launcher (because of the shrapnel wounds) less powerful than an RPG-7.

Sister Teresa died as the result of a bullet that struck her lower left back near the waist and damaged her intestines and destroyed her liver. The doctors guessed that she may have lingered for an hour or two.

Bishop Schmitz was wounded in the left arm by shrapnel, causing multiple fractures. The Capuchins in Nicaragua noted that the U.S. doctors who subsequently examined him said the Siuna hospital did a good job of setting his arm. After he was taken to the U.S., however, it was discovered that he had also sustained nerve damage, requiring further surgery.

Sister Francisca received a lot of shrapnel in the face, neck, chest and arms. She had second degree burns. After being examined further in the U.S., it was discovered that she had shrapnel in the eye as well, requiring an operation to remove the shrapnel.

2. Damage to the car; ballistics

The car, which was in Siuna at the church when we saw it and had been inspected and washed by the police before being returned to the church, had indeed been hit in the center of the hood just in front of the windshield, causing damage to the outside of the hood, slight damage to the motor, and damage to the dashboard (pieces of the dashboard were found at the scene) where the radio and other instruments were. The damage to the hood could have been shrapnel.

It appears that no laboratory tests have been conducted on the physical evidence. We cannot say what high velocity explosive device hit the windshield and scattered shrapnel. Although the medical evidence suggests an M-79, no shell from that weapon was found at the scene. (The M-79 shell must be manually removed to load another grenade.)

An RPG was undoubtedly fired, according to those who heard the familiar explosion and saw its trail of flame (unlike the M-79), but it may not have hit the Toyota. (A burned area at the shoulder of the road suggested to one former draftee resident of the area interviewed by Americas Watch that it was caused by an RPG.) An RPG-2 or RPG-7 is fired while resting on the shoulder, but can only be fired standing or kneeling and never from a prone position, according to former draftees and the military, because it emits injurious gases from the back of the grenade launcher.

There was damage to the interior of the car on the divider between the driver's door and the door to the passenger who sits behind the driver, which would indicate that whatever hit that part of the car also hit the left side of the driver's head. The windshield was missing (and pieces of windshield glass were found at the scene) but the other windows were intact. Aside from these areas, the interior of the vehicle was not greatly damaged.

There were various bullet holes in the car but it was not peppered with shrapnel or bullet holes. One bullet entered the right side of the pickup bed and entered the back of the passenger back seat; this may have been the bullet that killed Sister Teresa.

The Toyota traveled a distance and came to a stop on the north side of the road. The two boys on horseback, before they galloped away, thought they saw that the lights of the vehicle were off.

There was a hole on the south shoulder of the road, several meters behind the resting place of the Toyota, which when measured on January 3 was five inches deep and 15 inches across. Several persons interviewed by Americas Watch speculated that it was made by a mine, although there was no damage from a mine to the vehicle. The chauffeur for Bishop Schlaefer recovered a detonator at the site on January 2 when he came to repair and move the Toyota back to Siuna, and the device was turned over to the army.

DGSE and Army officials speculated that the person operating the mine nervously squeezed the detonator right after the RPG was fired, without waiting for the vehicle to come within range. Another person interviewed by Americas Watch speculated that the mine was not correctly placed and threw shrapnel at a tree on the side of the highway not far from where the attackers were crouching.

Two explosions, one right after the other, were heard: an RPG emits a "boom" when fired and another when it explodes on impact with the target; and M-79 only emits a "boom" when it explodes on the target.

E. Immediately after the ambush

1. Immediate contact with the Baká post

Ronal's father, Alejandro Mairena, said that when he heard the explosions and bursts of fire he was at home with his wife and children. Ronal had not come back from fishing.

He was frightened by the explosions and went out to ask the soldiers camped nearby on his property what was happening. They said it was nothing, that the base in Coperna had said that they were going to have a drill (alarma). When Americas Watch interviewed Alejandro Mairena, he had still not talked to his son Ronal since before the kidnapping and ambush. By the time we talked to him, however, he was aware, as was everyone in the community, that his son had given statements to the press saying that he had been kidnapped.

Alejandro told us he did not see the soldiers leave their post during the day of January 1 or that night; the dogs bark when the soldiers pass by, but they did not bark that night before the attack. After the explosions, they barked a little, then were silent. Others along the road said that they did not hear or notice the soldiers move from that post that night and the dogs did not bark at anyone passing on the road.

The next day, several people told us, the soldiers expressed surprise to them that there had been an ambush. Alejandro said that Denis (the commander of the unit on the farm) told him at 8 a.m. that what they thought was an alarm was actually an ambush that wounded a nun and killed two. They did not learn of the ambush until that morning.

2. The two kidnapped boys escape

When the explosions and shooting started, the contra who was guarding the two boys in the underbrush told them not to move or he would kill them. Then, to get a better view of the action on the road, he moved away from them, on the pasture side of the fence, and toward the ambush.

Jaime, who was standing in the underbrush, where they had been sitting and standing for a half hour until the ambush occurred, came up to his friend Ronal and quietly touched him on the hand, motioning him to escape. They ducked through the underbrush and crossed the highway perhaps 200 meters east of the attack site, avoiding the farm houses. They noticed the vehicle's lights were still on, and thought they heard cries for help but could not tell if it was from a man or woman. They did not stop but headed north past the vacant house with the high thatched roof, to the Baká River, where they found a hiding place for the night. The two said they did not sleep a wink being frightened, wet, and bothered by mosquitos.

We asked why they did not go to Ronal's home, which was less than two kilometers away. Separately, each said that it was too dangerous. Since there had just been explosions, the soldiers posted right next to the house might fire at them if they approached.

We asked why they did not go to other houses where there were no military posts. They said that they were afraid that the contras might come to the houses and find them there. So they hid near the river until it was light, thinking that each armadillo that rustled was a contra.

[15] Mark A. Uhlig, "2 Nuns, One From U.S., Are Slain in Raid Tied to Nicaraguan Rebels," The New York Times, January 3, 1990.

3. The Coperna base sends out an exploratory party

First Lieutenant Zamora of the base in Coperna said that the soldiers there also heard two explosions at 6:30 p.m. They believed that the explosions were from an RPG-2 or RPG-7, different models of the same rocket-propelled grenade launcher. He ordered that an exploratory patrol be sent out, seven men on foot. He told Americas Watch that the post at Coperna did not have any vehicles. The EPS captain in charge of the military base at Siuna, Capt. Miguel Miranda, also mentioned that the post at Coperna did not have any vehicles.[16]

Although First Lieutenant Zamora declined to say how many soldiers were under his command at this post, some residents of Ojo de Agua estimated that there were 200, including militia and reservists from the cooperative as well as draftees and regular soldiers. The lieutenant said that they sent out three patrols daily on the road, in the morning. There had been ten ambushes on this road by the contras, he said, the most recent in August 1989 in Mongallo killing First Lieutenant Vallecillo (See above.). The army also had a post on Baká Hill, whose job was to guard the hill and assist exploratory parties, he said.

Lieutenant Zamora said that it was about six to seven kilometers to Ojo de Agua, which took about an hour to walk. The exploratory party arrived at about 7:35–40 p.m., and found the Toyota on the side of the road. They asked if there were any wounded and Sister Francisca answered, "Help." The doors to the Toyota were closed but not locked and the front window was broken; the lights were still on.

Two of the nuns inside the pickup were dead when the exploratory party arrived. One died from a direct hit from an RPG-2, he said.

The party then sent two men back to notify the lieutenant of their findings.

The lieutenant said that the base did not have radios, and could not send any with the exploratory party. Residents said that they had seen an antenna and some radios in Coperna, however. The army captain in Siuna told Americas Watch that they used to have a radio in Coperna but that it had not been working, so the Coperna base was not in radio contact with Siuna, less than an hour away by vehicle.

4. The army party led by the lieutenant arrives at the scene later that night and enlists civilians to move the wounded and dead to a nearby farmhouse

The lieutenant set off on foot with a party of 15, including a medic from the cooperative to give first aid.

The lieutenant and his party arrived before 11 p.m. The lieutenant saw that the Bishop's arm was bleeding and that the surviving nun was bleeding in the face. They tried to stop the bleeding and put the two survivors on a mat. The lieutenant, who saw that only the rear tire of the vehicle was flat and that the lights were still on, tried to move the car but it would not move out of neutral.

The soldiers then went to the nearest farm houses, belonging to the Gutiérrez and Torres families, some 300 meters west on the road, heralded by barking dogs. They asked for help in moving the wounded and dead. The residents of these houses recognized them as soldiers from Coperna, not from the little Baká post.

The residents said they did not move out of the houses until the soldiers knocked on their doors. Some of those in both houses had caught sight of the stopped Toyota; Angela had even talked to persons she thought were clergy in the Toyota, and both houses were aware that those in the vehicle included Nicaraguans and foreigners. In both houses they speculated that the explosions they heard could have hit the vehicle. Nevertheless, they did not move from their houses until the army asked them to.

There is no electricity in this community. People in these two houses were nevertheless awake, no doubt apprehensive, when the army arrived at about 11 p.m. They did not have a watch but at the Gutiérrez house asked the soldiers the time.

The lieutenant and those at the Torres house said that there was a prayer meeting (rezo) in progress when the soldiers arrived. The soldiers asked if the residents in the houses nearby had seen the contras, but the residents said they had not.

People came out of their houses and with the soldiers moved the two wounded and two dead, together with the luggage they had in the back of the Toyota, into the Gutiérrez house, where the several sisters and mother, plus others, cared for the wounded. Sister Francisca walked, with assistance, from the car. Bishop Schmitz was brought on a cot, although he could talk and gave the name of Bishop Schlaefer and a phone number where he could be contacted, as well as the names of the nuns and where they were from and other information. He told the peasants that they had not seen their attackers.

The soldiers finished moving the occupants of the vehicle and their belongings about midnight or 1 a.m. and left a contingent to guard the house, to make sure nothing else happened, the lieutenant told Americans Watch. The rest of the unit returned to the base at Coperna.

The farmers' families then cared for the wounded and commenced a wake (vela) for the dead.

F. The day after the ambush

1. The boys arrive at the Gutiérrez house

The boys who had been kidnapped decided to go to the Gutiérrez house, south of their hiding place and between them and the highway. They were friends with Hipólito Gutiérrez Gonzálas (Polo), 48, the head of the household.

They arrived about 6 or 7 a.m., after it was light. When they got to the house, the wounded and dead were still there. They were informed of the ambush and the dead and wounded.

Both boys told Americas Watch that they had a conversation at that time with Gutiérrez and Luis Felipe Aráuz López, 23, the brother of Jaime. Felipe had helped move the wounded the night before (he was in the Torres house when the soldiers arrived), and then spent the night in the Gutiérrez house helping to care for the wounded.

The boys say that they told Gutiérrez and Felipe that they had been kidnapped by the contras. They had already realized that they had to go to report the kidnapping to the base at Coperna (especially since Jaime had been questioned by State security after the contras had kidnapped him during the attack on Siuna in 1987) and seeing the dead and wounded only made the need to clear themselves with the authorities plainer. They said that both men also told them they should report the kidnapping.

When asked directly about this conversation by the government human rights investigating commission in the following week, Gutiérrez said that he did not have a conversation with the boys about the kidnapping at that time but only later in the day, after they had returned from reporting to the base in Coperna. When we talked to Gutiérrez and other members of his family, they said that the boys did not say they had been kidnapped until after returning from Coperna.

When Felipe was interviewed by the first of many investigatory groups to arrive in the area, Witness for Peace, on January 3, the day after the conversation with his brother, he told them that he had indeed talked to the boys before they went to the base at Coperna and had advised them to do so to avoid getting into trouble with the authorities. If they did not report and it was later found out, they would be accused of being collaborators with the contras.

When we talked to Felipe, however, a week or more later, he denied that he had this conversation with the boys. He said that he had talked to them after they came back from the base at Coperna, and reported that they had been kidnapped.

People in the Gutiérrez house noticed that the boys were all dirty when they came in about 6 or 7 a.m., and they were surprised at the boys' appearance. The boys left for Coperna after staying only a short time at the Gutiérrez house, and did not go to the house of Ronal's father, which is in the opposite direction. (Jaime's father was in Siuna, where he had been for many days; he did not return to his farm or Ojo de Agua until a week or more after the events.)

When asked why they had not reported to the soldiers posted at Ronal's house near Baká Hill, both boys replied that the soldiers were not the authorities, just draftees, and that those in charge were in Coperna.

2. Reporting to Coperna

The boys, frightened by the sight of the dead in the Gutiérrez house, set off right away for Coperna, which took them about an hour walking. They reported to First Lieutenant Alfredo Zamora that they had been kidnapped by the contras. When we asked Lieutenant Zamora if he believed them, he said he did because they came voluntarily; they were not brought in by anyone. Why should they come in with a story like this if it were not true? Also, they looked like they had been in the forest because their clothes were dirty and their arms were scratched, and it appeared that they had little or no sleep. He took the necessary military information from them about the contras and sent the boys home.

At about 6 a.m., when it was light, he had already sent out another exploratory group to try to track the contras and find out how many there were. The exploratory group followed signs that indicated the contras returned south on the same path that they had taken in to Ojo de Agua. The army patrol did not track directly on the path, however, for fear of antipersonnel land mines. They had not attempted to pursue the contras the night before for fear of an ambush.

The patrol found signs at the site of the ambush that in addition to the 10 or 15 men at the highway, there had been perhaps 55 some 500 meters south of the highway. The army theorized that this was a defensive position; if the contras on the highway re-

[16] Residents told Americas Watch that they have seen two Guas (military jeeps) at Coperna. Even if the Coperna base had jeeps, the soldiers would not have approached the ambush site in them, for obvious security reasons.

ceived return fire from the vehicle they could drop back to the defensive line and any Sandinista pursuers could be stopped there.

An army patrol sent to track the contras found a plastic tube used to protect the charging device of an RPG-7 about 15 kilometers south of the ambush site, where the contras had passed. They believe it belonged to the contras because the EPS does not use a plastic tube for their RPG-7s.

3. The dead and wounded are brought in to Siuna

At about 7:30 or 8 a.m., a Toyota Land Cruiser driving from Siuna to Rosita was stopped in front of the Gutiérrez house and enlisted by the soldiers outside to carry the wounded nun and the two bodies back to Siuna. A Kama 3, a large flat-bed truck, coming from Rosita was stopped and took the Bishop to the hospital at Siuna. Some soldiers were with them. Bishop Schlaefer, leaving Siuna for Puerto Cabezas, encountered them on the road and turned back with them to Siuna.

The wounded and dead arrived at the Siuna hospital at 9 a.m. and were there until two military helicopters arrived to carry them to Puerto Cabezas, about four hours later, according to those at the hospital.

4. State Security locates the kidnapped boys

The boys returned from Coperna at about 10 a.m., hitching a ride in a miltitary vehicle (patineta) going from Coperna to Ojo de Agua, and stopped to rest at the Gutiérrez house, where the residents remember them saying then that they had been kidnapped by the contras.

The military and State Security at Siuna did not learn of the ambush until the trucks with the wounded and dead arrived in Siuna on the morning of January 2. They sent out military and state security officials and passed through Coperna in four "Guases" (military jeeps), according to the lieutenant.

Americas Watch talked to one state security official who arrived on the scene from Siuna at about 11 a.m. He was known in the area because he had been based in Coperna before being transferred to Siuna. He was inspecting the site when an exdraftee from the community approached him and told him that there were two boys who had been kidnapped by the contras, he told us. That young man later confirmed the conversation, saying that one gets in trouble if one does not notify the authorities of such things.

The state security official sent for the two boys and took them directly back to Siuna in a military vehicle for the purpose of further investigation and so they could give written declarations. The boys did not have the chance to talk to Ronal's family or anyone else, but many saw them leaving with the military. They did not return, and their families were not notified what was happening with them until much later.

This created the impression in the community, which was still the case when Americas Watch arrived more than a week later, that they had been detained.

The two boys did not stay in Siuna. They were interrogated there by the MINT and gave a written statement; then they were taken to Puerto Cabezas the same afternoon, January 2, in the same helicopter that carried the dead bodies, they told Americas Watch. In Puerto Cabezas the survivors were interviewed by the press and the boys were interrogated by more army and MINT officials.

Ronal's mother went to State Security in Siuna the next day, January 3, and was told that they were not detained and that they would be back soon. But as each day that they were told the boys were going to return passed without the boys' presence, the residents of the area began to get more and more worried.

We understand that the authorities also conducted an investigation in the area, going from house to house asking people if they had seen the contras; one person told Americas Watch the authorities blamed the nuns' deaths on the residents of the community because they had not reported anything. People began to be more and more afraid of the implications and, with each investigatory delegation that arrived, knew less and less, for self-protective reasons. We guessed that they feared that if they said they had seen the contras or appeared to know too much about anything, they would be detained, as they thought had happened to Ronal and Jaime.

VI. CONCLUSION

A. Could the Sandinistas have committed the crime?

The proposition that the Sandinistas committed the crime rests on several hypotheses: that the Sandinistas were in the area and the contras were not; that the witnesses are false; and that the Sandinistas are extremely devious, and they either created an incident to blame on the contras or are covering up for their own troop's error.

There appears to be no likelihood that this was a robbery; the vehicle and its passengers were not robbed and no attempt was made to force them to stop before attacking with a grenade launcher. It also appears that the attack was not the result of a negligent shooting off of weapons, because the direct hit on the windshield of the car was followed by bursts of gunfire as the pickup passed the attack point.

For the Sandinistas to have conducted this ambush, they would have had to have a patrol out in the south of the highway area that was in position prior to the time of the attack. We do not believe that the Baká patrol conducted the attack because they were seen immediately after the ambush, in their usual position. They did not patrol as a custom, did not have radio communications equipment and were not armed with anything more than AKAs, according to local residents.

No one saw or heard Sandinistas pass from their other position in the area, Coperna, on the road before the attack. Even if the army in Siuna planned an attack on the nuns, there was not enough time between the departure of the car from Siuna (which only passed through Siuna from Managua) and the time of the attack to plan and execute such an operation, even assuming there was radio communication from Siuna and Coperna, which the army says there was not. The slowness of their response the next day indeed suggests that there was no communication between Siuna and Coperna.

There is no evidence at this time to suggest that there was another Sandinista unit on patrol in the area. Just as the farmers—other than the two boys who reported they were kidnapped—said they saw no contras, they also saw no Sandinistas that day, with the exception of the soldiers of the Baká post, who stayed put.

It is, of course, impossible to rule out totally the possibility that there was a Sandinista unit on patrol in that area, if only because the evidence from the farmers who live several hours south of the highway and on the path the attacking force took, was not available and will not be available for a few weeks, at least. As far as the evidence now available indicates, however, there was no Sandinista patrol.

The Sandinistas do not "control" the area. If they did, and if they could, the war would have been over long ago. There is virtually no way for anyone to control fully these vast uninhabited mountainous and heavily forested stretches of the interior. Nor do we think it is significant that they gave permission to the religious vehicle to leave shortly after 5 pm. They may have been negligent in allowing anyone to be on that road after dark, but that does not mean that they conducted the attack.

If one believes that there was a Sandinista patrol in place, there is no explanation for why they would attack a vehicle similar to those used by the MINT and FSLN officials. The attack occurred at night and the ambushers did not try to establish the identity of the passengers before shooting.

The case for a Sandinista attack, such as it is must rest on the assumption that they knew the vehicle was not one of their own and that they intended to attack a church vehicle. This means that this patrol that no one saw or heard would have had radio communications with a unit that knew that the vehicle was not a government vehicle. In Nicaragua the army and the MINT do not have a track record of killing priests or nuns, however testy relations with the church have been.

Such an ambush is not the usual modus operandi of Sandinista human rights abuses; in cases where killings have taken place, they have usually been targeted executions of those they believe to be contra collaborators in remote areas of the country. The attitude of governmental officials was unlike what Americas Watch has encountered in the past in cases of violations by the MINT or army. The government was extremely forthcoming and receptive to investigations in this case.

That the government is making propaganda use of this contra human rights violation is to be expected. One could scarcely expect them to refrain from using all evidence of contra misdeeds to discredit an insurgent force that wants to overthrow their government.

B. Did the contras commit the crime?

That the contras conducted the ambush rests primarily on the testimony of the kidnapped boys and secondarily on circumstantial evidence and inferences drawn from the contras' past actions.

Whether one believes that the contras were in the area rests principally on the testimony of the two witnesses. Because of the way they were handled, some have inferred that they were put up to their testimony by the MINT and army. They were removed from the community and taken to Puerto Cabezas and then to Managua to give statements to the press, visiting Senators, and human rights investigators. On previous occasions, the press has been presented with witnesses by the MINT who appear to have been coerced.

Corroboration for the statements by the witnesses that they told two people that they had been kidnapped by the contras before they reported to the base at Coperna was not forthcoming from those two people during most, but not all, of the interviews that various delegations conducted with these two people. This may cause specula-

tion that the witnesses, having presented themselves to the base, were coached on what to say.

Americas Watch interviewed the kidnapped boys extensively and we believe their testimony. They have a reputation in the community for being honest and hardworking. Neither they nor their families have been aligned with either side in the conflict. Their stories are internally consistent. They told us they had not been coerced or pressured by the MINT or army, and they did not appear to be rehearsed.

We think that the lack of corroboration may be due to the fear that people in the community have of appearing to know too much about the incident, due to investigations by the MINT and army in the community and to the many fact-finding delegations that subsequently arrived. We had the impression that if they had seen the contras they were not going to say so for fear that the MINT would blame them for not reporting the presence and thus preventing the attack. It is possible that when the focus is off the community, additional information might become available from the residents.

We think it is credible that the boys, having been kidnapped and been with the contra group that conducted an attack that they later learned resulted in two deaths, were afraid they would be blamed for the crime if they did not immediately report to the army that they were involuntarily with the contras. If they had been in the company of a Sandinista unit that conducted the attack, they would have no reason to go to the base at Coperna to report anything. If they were never kidnapped, they had no reason to go to the base at all, which they did after they saw the bodies.

Ambushes on vehicles that appear to belong to the government, and even on civilian vehicles, have been a contra method of conducting the war since the beginning of the conflict. Americas Watch has documented many incidents of contra indiscriminate attacks on civilian vehicles. There have been many vehicles ambushed on this very road in earlier years and months, the last in August 1989, some four months before this attack.

This ambushed vehicle was traveling at night, which is something that military and other government vehicles do more frequently than other vehicles. The pickup was similar to some used by MINT and FSLN officials.[17] Accordingly, the contras probably guessed they were attacking a government vehicle.

Kidnapping youths is also a contra hallmark. We have interviewed many who have escaped, either before they were taken to Honduras for military training, or after. There are countless incidents of kidnapping, many in this area.

The purpose of the kidnapping, it appears to us, was to prevent the boys from tipping anyone off about their presence and also to elicit useful military information about the location of Sandinista troops. In addition to the boys, there is evidence of contra presence from the remains of a 200 pound cow eaten by many men with contra boots in the area from which the contras advanced to the highway.

We conclude, based on the available evidence, that the contras engaged in this indiscriminate attack on a civilian vehicle that resulted in the death of two nuns and the serious wounding of a nun and a bishop. We consider it an indiscriminate attack because the evidence indicates that they made no effort to determine whether the occupants of the vehicle were civilian or military. Such indiscriminate attacks are violations of the laws of war.

[17] It should be noted that FSLN vehicles that are not engaged in military operations and are not being used to transport combatants are not legitimate military targets.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. GILLMOR) to revise and extend their remarks and include extraneous material:)

Mr. BURTON of Indiana, for 60 minutes each, today and on January 31.

(The following Members (at the request of Mr. FAUNTROY) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. KLECZKA, for 60 minutes, today.

Mr. JONTZ, for 30 minutes, on February 6.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. KLECZKA, and to include extraneous material notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $3,944.

(The following Members (at the request of Mr. GILLMOR) and to include extraneous matter:)

Mr. CLINGER.

Mr. LENT.

Mr. SMITH of New Jersey.

Mr. ROHRABACHER.

Ms. ROS-LEHTINEN.

Mr. SAXTON.

Mr. MCEWEN.

(The following Members (at the request of Mr. FAUNTROY) to revise and extend their remarks and include extraneous material:)

Mr. WALGREN.

Mr. LANTOS.

Mr. HOYER in two instances.

Mr. ROE.

Mr. BONIOR.

Mr. TORRES.

Mr. TOWNS in two instances.

Mr. RICHARDSON.

Mr. MILLER of California.

Mr. KANJORSKI.

Mr. DARDEN.

Mr. DURBIN.

Mr. CARDIN.

ADJOURNMENT

Mr. GLICKMAN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 2 minutes p.m.), under its previous order the House adjourned until tomorrow, Wednesday, January 31, 1990, at 12 noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2374. A letter from the Deputy Assistant Secretary (Logistics), Department of the Air Force, transmitting notification of the decision to convert to contractor performance the base operating support function at Niagara Falls Air Force Reserve Base, NY, pursuant to Public Law 100-463, section 8061 (102 Stat. 2270-27); to the Committee on Appropriations.

2375. A letter from the Deputy Under Secretary for Policy, Planning and Analysis, Department of Energy, transmitting notification of a delay in the submission of a report concerning climate change and energy policy; to the Committee on Appropriations.

2376. A letter from the Acting Director, Defense Security Assistance Agency, transmitting the Department of the Army's proposed letter(s) of offer and acceptance [LOA] to Egypt for defense articles (Transmittal No. 90-19), pursuant to 10 U.S.C. 118; the Committee on Armed Services.

2377. A letter from the Acting Director, Defense Security Assistance Agency, transmitting the Department of the Army's proposed letter(s) of offer and acceptance [LOA] to Israel for defense articles (Transmittal No. 90-20), pursuant to 10 U.S.C. 118; the Committee on Armed Services

2378. A letter from the Acting Deputy Inspector General, Department of Transportation, transmitting a report concerning compliance with section 846(c) of the National Defense Authorization Act for fiscal year 1989 as it applies to the U.S. Coast Guard, pursuant to Public Law 100-456, section 846(a)(c))(i) (102 Stat. 2030); to the Committee on Armed Services.

2379. A letter from the Secretary, Interstate Commerce Commission, transmitting notice that the Commission in Finance Docket No. 31494, "Intermountain Western Railroad Company—Purchase—Union Pacific Railroad Company, Boise Group Branch Lines," has extended the time period for issuing a final decision by 30 days, pursuant to 49 U.S.C. 11345(e); to the Committee on Energy and Commerce.

2380. A letter from the Acting Director, Defense Security Assistance Agency, transmitting the Department of the Army's proposed letter(s) of offer and acceptance [LOA] to Pakistan for defense articles (Transmittal No. 90-18), pursuant to 22 U.S.C. 2776(b); to the Committee on Foreign Affairs.

2381. A letter from the Acting Director, Defense Security Assistance Agency, transmitting the Department of the Army's proposed letter(s) of offer and acceptance [LOA] to Egypt for defense articles and services (Transmittal No. 90-19), pursuant to 22 U.S.C. 2776(b); to the Committee on Foreign Affairs.

2382. A letter from the Acting Director, Defense Security Assistance Agency, transmitting the Department of the Army s proposed letter(s) of offer and acceptance [LOA] to Israel for defense articles and services (Transmittal No. 90-20), pursuant

to 22 U.S.C. 2776(b); to the Committee on Foreign Affairs.

2383. A letter from the Deputy Director, Defense Security Assistance Agency, transmitting notification of the Department of the Air Force's proposed lease of defense articles to Jamaica (Transmittal No. 3-90), pursuant to 22 U.S.C. 2796(a); to the Committee on Foreign Affairs.

2384. A letter from the Director, U.S. Arms Control and Disarmament Agency, transmitting the fiscal year 1991 arms control impact statement, pursuant to 22 U.S.C. 2576(b)(2); to the Committee on Foreign Affairs.

2385. A letter from the Secretary of Education, transmitting a report of actions taken to increase competition for contracts during fiscal year 1989, pursuant to 41 U.S.C. 419; to the Committee on Government Operations.

2386. A letter from the Secretary of Veterans Affairs, transmitting a draft of proposed legislation to waive the waiting period requirement of section 210(b)(2) of title 38, United States Code, for a planned administrative reorganization involving the Loan Guaranty Division at the Togus Veterans Affairs Medical and Regional Office Center; to the Committee on Veterans' Affairs.

2387. A letter from the Comptroller General of the United States, transmitting a report on the revised fiscal year 1990 sequester (GAO/AFMO-90-49), pursuant to Public Law 101-239, section 11002; jointly, to the Committees on Government Operations and Appropriations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MOAKLEY: Committee on Rules. House Resolution 309. Resolution providing for the consideration of H.R. 2190, a bill to establish national voter registration procedures for elections for Federal office, and for other purposes (Rept. 101-396). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. HYDE:

H.R. 3907. A bill to supplement the impeachment remedy for removing Federal judges for misbehavior; to the Committee on the Judiciary.

By Mr. ASPIN:

H.R. 3908. A bill to provide for necessary closures and realignments of domestic and foreign military installations of the United States; jointly, to the Committees on Armed Services and Rules.

By Mr. GOODLING:

H.R. 3909. A bill to recognize the leadership of Hon. August F. Hawkins by strengthening the early childhood and elementary teaching profession, and for other purposes; to the Committee on Education and Labor.

By Mr. HAWKINS (for himself and Mr. GOODLING):

H.R. 3910. A bill to require the Secretary of Education to conduct a comprehensive national assessment of programs carried out with assistance under chapter 1 of title I of the Elementary and Secondary Education Act of 1965; to the Committee on Education and Labor.

By Mr. KENNEDY:

H.R. 3911. A bill to amend title 5 of the United States Code to increase the allowance for services of attendants: to the Committee on Education and Labor.

By Mrs. LLOYD (for herself, Mr. PALLONE, Mr. PRICE, and Mr. SCHUMER):

H.R. 3912. A bill to amend the National Housing Act to expand the demonstration program of insurance of home equity conversion mortgages for elderly homeowners; to the Committee on Banking, Finance and Urban Affairs.

By Mr. MURPHY:

H.R. 3913. A bill to amend title 46, United States Code, relating to the civil penalty for operating a vessel in a negligent manner; to the Committee on Merchant Marine and Fisheries.

By Ms. OAKAR:

H.R. 3914. A bill to provide for cost-of-living adjustments in 1991 under certain Government retirement programs; jointly, to the Committees on Post Office and Civil Service, Armed Services, Foreign Affairs, Intelligence (Permanent Select), and Energy and Commerce.

By Mr. OBEY (for himself and Mr. MCDERMOTT):

H.R. 3915. A bill to require each State to adopt by 1995 a plan for ensuring the provision of health insurance to all residents of the State, and for other purposes; jointly, to the Committees on Energy and Commerce and Ways and Means.

By Mr. RANGEL:

H.R. 3916. A bill to provide for an extension of the targeted jobs credit and for other purposes; to the Committee on Ways and Means.

H.R. 3917. A bill to amend the Internal Revenue Code of 1986 to make the low-income housing credit permanent; to the Committee on Ways and Means.

By Mr. DENNY SMITH (for himself, Mr. GINGRICH, Mr. HYDE, Mr. MCCOLLUM, Mr. DANNEMEYER, and Mr. SMITH of Texas):

H.R. 3918. A bill to amend title 18, United States Code, with respect to criminal law and procedure; to the Committee on the Judiciary.

By Mr. TRAFICANT (for himself and Mr. APPLEGATE):

H.R. 3919. A bill to establish the Federal Fuels Stabilization Board; to the Committee on Energy and Commerce.

By Mr. INHOFE:

H.J. Res. 465. Joint resolution to provide for the designation of chili as the official food of the United States of America; to the Committee on Post Office and Civil Service.

By Mr. STALLINGS (for himself and Mr. CRAIG):

H.J. Res. 466. Joint resolution designating July 3, 1990, as "Idaho Centennial Day"; to the Committee on Post Office and Civil Service.

By Mr. GILMAN:

H. Con. Res. 248. Concurrent resolution expressing the sense of the Congress with respect to the linkage between environment and national security; to the Committee on Foreign Affairs.

By Mr. DONNELLY (for himself, Mr. MCGRATH, Mr. MOAKLEY, Mr. ACKERMAN, Mr. MRAZEK, Mr. COYNE, Mr. DELLUMS, Mr. MOLLOHAN, and Mrs. KENNELLY):

H. Con. Res. 249. Concurrent resolution expressing the grave concern of the Congress regarding human rights violations resulting from a gross miscarriage of justice in Great Britain; to the Committee on Foreign Affairs.

By Mr. DYMALLY (for himself, Mr. FAUNTROY, Mr. DELLUMS, Mr. DONALD E. LUKEN, Mr. KOSTMAYER, Mr. OBERSTAR, and Mr. SOLARZ):

H. Con. Res. 250. Concurrent resolution condemning the deliberate and systematic human rights violations of the Government of Haiti; to the Committee on Foreign Affairs.

By Mr. LANTOS (for himself and Mr. BROOMFIELD):

H. Con. Res. 251. Concurrent resolution authorizing use of the rotunda of the Capitol for a dedication ceremony incident to the placement of a bust of Lajos Kossuth in the Capitol and authorizing the printing of a transcript of the proceedings of the ceremony; to the Committee on House Administration.

By Ms. OAKAR:

H. Con. Res. 252. Concurrent resolution expressing the policy of the Congress regarding proposals to reduce the cost-of-living adjustment for civil service retirees; to the Committee on Post Office and Civil Service.

By Mr. GONZALEZ:

H. Res. 310. Resolution providing amounts from the contingent fund of the House for expenses of investigations and studies by the Committee on Banking, Finance and Urban Affairs in the 2d session of the 101st Congress; to the Committee on House Administration.

By Mr. MOAKLEY (for himself and Mr. QUILLEN):

H. Res. 311. Resolution providing amounts for the contingent fund of the House for expenses of investigations and studies by the Committee on Rules in the 2d session of the 101st Congress; to the Committee on House Administration.

By Mr. YATRON (for himself, Mr. BEREUTER, Mr. OWENS of Utah, and Mr. SMITH of New Jersey):

H. Res. 312. Resolution urging the President to submit the Convention on the Rights of the Child to the Senate for its advice and consent to ratification; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII,

Mr. BOUCHER introduced a bill (H.R. 3920) for the relief of Fiona Lamont DuVal; which was referred to the Committee on the Judiciary.

ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 283: Mr. ERDREICH, Mr. BROWN of Colorado, and Mr. JENKINS.

H.R. 311: Mr. JAMES.

H.R. 500: Mr. HILER.

H.R. 844: Mr. ROGERS, Mr. SMITH of Vermont, Mr. CLEMENT, Mr. EDWARDS of Oklahoma, and Mr. ENGLISH.

H.R. 929: Mr. FORD of Michigan.

H.R. 931: Mr. PALLONE.

H.R. 933: Mr. NEAL of North Carolina and Mr. HOCHBRUECKNER.

H.R. 1083: Mr. MILLER of California, Mr. HAMILTON, Mr. CARDIN, Mr. GRANT, Mr. GALLEGLY, Mr. BRUCE, Mr. ROYBAL, Mr. WHITTEN, Mr. MOLLOHAN, Mr. DONALD E. LUKENS, Mr. BEVILL, Mr. MOAKLEY, Mr. KLECZKA, Mr. SMITH of Texas, and Mr. CONTE.

H.R. 1122: Mr. CONYERS, Mr. FOGLIETTA, and Mr. MFUME.

H.R. 1227: Mr. STALLINGS, Mr. RICHARDSON, Mr. MORRISON of Washington, Mr. WOLF, Mr. THOMAS of Wyoming, Mr. MCDADE, Mr. STENHOLM, Mrs. UNSOELD, Mr. TOWNS, Mr. HANCOCK, Mrs. MORELLA, Ms. ROS-LEHTINEN, Mr. WILSON, and Mr. NELSON of Florida.

H.R. 1356: Ms. OAKAR, Mr. PRICE, Mr. COSTELLO, Mr. SCHUMER, Mr. COYNE, and Mr. THOMAS A. LUKEN.

H.R. 1438: Mr. JAMES.

H.R. 1497: Mr. RIDGE.

H.R. 1530: Mr. PAYNE of New Jersey, Mr. KANJORSKI, and Mr. MACHTLEY.

H.R. 2025: Mr. DERRICK, Ms. OAKAR, Mr. LEVIN of Michigan, Mr. COSTELLO, and Mr. ENGEL.

H.R. 2076: Ms. PELOSI.

H.R. 2168: Mr. HERTEL, Mr. TRAFICANT, Mrs. LOWEY of New York, Mr. CARR, Mr. CAMPBELL of California, Mr. PARKER, Mr. WOLPE, Mr. DOWNEY, Mr. DERRICK, and Mr. SOLOMON.

H.R. 2172: Mrs. LOWEY of New York, Mr. THOMAS A. LUKEN, Ms. OAKAR, and Mr. SKAGGS.

H.R. 2174: Mr. LEACH of Iowa and Mr. SANGMEISTER.

H.R. 2187: Mrs. UNSOELD.

H.R. 2373: Mr. DE LUGO, Mr. SHAYS, Mr. TALLON, Mr. MILLER of Washington, and Mr. DEFAZIO.

H.R. 2437: Mr. JONES of Georgia, Mr. HAMMERSCHMIDT, Mr. COMBEST, and Mr. NEAL of Massachusetts.

H.R. 2500: Mr. WEISS.

H.R. 2545: Mr. MARTINEZ, Mrs. COLLINS, Mrs. BENTLEY, Mr. TOWNS, and Mr. HYDE.

H.R. 2546: Mr. MILLER of Washington.

H.R. 2551: Mr. DYMALLY.

H.R. 2664: Mr. OBEY.

H.R. 2674: Mr. SCHIFF and Mr. RIDGE.

H.R. 2700: Mr. RAVENEL and Mr. BROOMFIELD.

H.R. 2734: Mr. COURTER.

H.R. 2836: Mr. SHUMWAY and Mr. ROWLAND of Connecticut.

H.R. 2853: Mr. FORD of Michigan.

H.R. 2926: Mr. KLECZKA, Mr. SOLOMON, Ms. OAKAR, Mr. COSTELLO, Mr. KOSTMAYER, Mr. MACHTLEY, Mr. CHAPMAN, and Ms. KAPTUR.

H.R. 3050: Mr. ECKART.

H.R. 3142: Mr. VISCLOSKY and Mr. KLECZKA.

H.R. 3475: Ms. SLAUGHTER of New York.

H.R. 3581: Mr. SKELTON, Mr. HAMILTON, Mr. SWIFT, Mr. SARPALIUS, Mr. KASTENMEIER, Mr. STAGGERS, Mr. TOWNS, Mr. PAYNE of Virginia, and Mr. HATCHER.

H.R. 3603: Mr. DANNEMEYER.

H.R. 3634: Ms. KAPTUR.

H.R. 3636: Mr. PETRI.

H.R. 3684: Mr. WAXMAN.

H.R. 3686: Mr. LEWIS of California and Mr. HUNTER.

H.R. 3733: Mr. APPLEGATE, Mr. BUSTAMANTE, Mrs. COLLINS, Mr. CONYERS, Mr. DIXON, Mr. EDWARDS of California, Mr. FLAKE, Mr. FOGLIETTA, Mr. GONZALEZ, Mr. HAYES of Illinois, Mr. KILDEE, Mr. LEWIS of Georgia, Mrs. LOWEY of New York, Mr. MCDERMOTT, Mr. OWENS of New York, Mr. PANETTA, Mr. RUSSO, Mr. STOKES, Mrs. UNSOELD, Mr. WOLPE, and Mr. YATES.

H.R. 3735: Mr. OWENS of Utah and Mr. BRYANT.

H.R. 3736: Mr. JONTZ and Mr. YATES.

H.R. 3737: Mr. JONTZ and Mr. YATES.

H.R. 3740: Mrs. JOHNSON of Connecticut, Mrs. COLLINS, Mr. SHAYS, Mr. NIELSON of Utah, Mr. EVANS, and Mr. ATKINS.

H.R. 3751: Mr. CAMPBELL of Colorado, Ms. KAPTUR, Mr. MURPHY, Ms. PELOSI, and Mr. NELSON of Florida.

H.R. 3815: Mr. PETRI, Mr. JAMES, Mr. BLILEY, and Mr. INHOFE.

H.R. 3865: Mr. BATES.

H.J. Res. 82: Mr. VANDER JAGT and Mr. LEVINE of California.

H.J. Res. 160: Mr. YATES, Mr. OWENS of Utah, Mr. MCNULTY, Mr. JONTZ, and Mrs. UNSOELD.

H.J. Res. 364: Mr. BARTLETT, Mr. BROOMFIELD, Mr. CHAPMAN, Mr. COBLE, Mr. ENGLISH, Mr. GORDON, Mr. KANJORSKI, Mr. THOMAS A. LUKEN, Mr. RITTER, and Mr. SYNAR.

H.J. Res. 367: Mr. SWIFT, Mr. PARKER, Mr. HATCHER, Mr. LAUGHLIN, Mr. AKAKA, Mr. DE LA GARZA, Mrs. LOWEY of New York, Mr. BOUCHER, Mr. YATRON, Ms. ROS-LEHTINEN, Mr. CONDIT, Mrs. MARTIN of Illinois, Mr. COSTELLO, Mr. GEREN, Mr. CHAPMAN, Mr. HYDE, Mr. VISCLOSKY, Mr. SANGMEISTER, Mr. CALLAHAN, Mr. SMITH of New Hampshire, Mr. RINALDO, Mr. COURTER, Mr. SAXTON, Mr. EDWARDS of Oklahoma, Mr. SMITH of New Jersey, Mrs. BOGGS, Mr. KASICH, and Mr. RUSSO.

H.J. Res. 426: Mr. Spence, Mr. CARPER, Mr. HOCHBRUECKNER, Mr. HYDE, Mr. KOLTER, Mr. ENGEL, Mr. LAGOMARSINO, Mr. LEVIN of Michigan, Mr. KOSTMAYER, Mr. YATRON, Mr. OWENS of Utah, Mr. TALLON, Mr. JOHNSON of South Dakota, Mr. GREEN, Mr. TRAXLER, Ms. OAKAR, Mr. SMITH of Texas, Mr. SPRATT, Mr. GALLEGLY, Mr. ROWLAND of Georgia, Mr. RHODES, Mr. ANDERSON, Mr. HAMMERSCHMIDT, Mr. BOUCHER, Mr. EVANS, Mr. HATCHER, Mr. BARTLETT, Mr. CLINGER, Mr. CARR, Mr. GRANDY, Mr. BOSCO, Mr. TRAFICANT, Mr. MCMILLEN of Maryland, Mr. AKAKA, Mr. COYNE, Mr. COX, Mr. GRAY, Mr. STOKES, Mr. JONTZ, Mr. MAVROULES, Mr. PICKETT, Mr. MCDADE, Ms. SLAUGHTER of New York, Mr. LEHMAN of Florida, Mr. WALSH, Mr. PALLONE, Mr. WOLF, Mr. BROWN of California, Mrs. BENTLEY, Mr. BORSKI, Mr. COUGHLIN, Mr. DAVIS, Mr. FAWELL, Mr. FLIPPO, Ms. KAPTUR, Mr. FOGLIETTA, Mr. SAWYER, Mr. DE LUGO, Mr. MCDERMOTT, Mr. CROCKETT, Mrs. KENNELLY, Mr. LANTOS, Mr. MADIGAN, Mr. MARTIN of New York, Mr. OWENS of New York, Mr. PURSELL, Mr. RAVENEL, Mr. COURTER, Mr. RITTER, Mr. ROBINSON, Mrs. ROUKEMA, Mrs. SAIKI, Mr. SCHUETTE, Mr. DENNY SMITH, Mr. RINALDO, Mrs. VUCANOVICH, Mr. SOLOMON, Mr. TAUKE, Mr. TAUZIN, Mr. HUTTO, Mr. LEWIS of Florida, Mr. GILMAN, Mr. SHARP, Mr. JACOBS, Mr. BENNETT, Mr. HAMILTON, Mr. IRELAND, Mrs. MARTIN of Illinois, Mrs. MORELLA, Mr. WALGREN, Mr. WILSON, Mr. NATCHER, Mr. MCHUGH, Mr. MCCRERY, Mr. FRANK, and Mr. HOYER.

H. Con. Res. 162: Mr. THOMAS of Wyoming and Mr. ESPY.

H. Con. Res. 202: Mr. DONALD E. LUKENS.

DELETIONS OF SPONSORS FROM PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, sponsors were deleted from public bills and resolutions as follows:

H. Con. Res. 147: Mr. VENTO.

SENATE—*Tuesday, January 30, 1990*

(Legislative day of Tuesday, January 23, 1990)

The Senate met at 9:30 a.m., on the expiration of the recess, and was called to order by the President pro tempore [Mr. BYRD].

PRAYER

The Chaplain, the Reverend Richard C. Halverson, D.D., offered the following prayer:

Let us pray:

*Commit thy way unto the Lord; trust also in him; and he shall bring it to pass. * * * The steps of a good man are ordered by the Lord: and he delighteth in his way.*—Psalms 37:5, 23.

Eternal God, Lord of the macrocosm and the microcosm, who knoweth both the infinite and the infinitesimal, the future as well as the past and all in between, for whom a sparrow does not fall to the ground but Thou knowest it, thank Thee for the Psalmist's guarantee that when we entrust ourselves to Thee, Thou dost guide us, step by step, inerrantly. Grant to each who labors in this large Senate family the awareness of Your unconditional love, Your assurance of perfect guidance, that though we know not what the future holds, we know Him who holds the future. Lead us in our family lives, our personal lives and our professional way.

In Jesus' name, the way, the truth, and the life. Amen.

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. The majority leader is recognized.

JOURNAL

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Journal of the proceedings be approved to date.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SCHEDULE

Mr. MITCHELL. Mr. President, this morning following the time for the two leaders there will be a period for morning business until 10 a.m., with Senators permitted to speak therein for up to 5 minutes each.

The Senate will resume debate on the clean air bill at 10 a.m. with a Chafee amendment relating to the phaseout of methyl chloroform as the pending amendment.

From 12:30 to 2:15 p.m., the Senate will recess for the party conferences. At 2:15, the Senate will resume consideration of the clean air bill.

As a reminder to Senators, there is a rollcall vote scheduled for 5 p.m. today on the State Department authorization bill and Senators should be aware of the possibility of a vote on the clean air bill occurring prior to 5 p.m. and of votes beginning to occur now this week on a regular basis on the clean air bill.

RESERVATION OF LEADER TIME

Mr. MITCHELL. Mr. President, I reserve the remainder of my leader time, and I reserve all of the leader time of the distinguished Republican leader.

The PRESIDENT pro tempore. Without objection, the unused portions of the two leaders' time are reserved.

MORNING BUSINESS

The PRESIDENT pro tempore. Under the order, the Senate will now proceed to the transaction of morning business until the hour of 10 o'clock a.m. with Senators permitted to speak therein for not to exceed 5 minutes each.

The Senator from Maine [Mr. COHEN], is recognized for not to exceed 5 minutes.

(The remarks of Mr. COHEN pertaining to the introduction of S. 2032 are located in today's RECORD under "Statements on Introduced Bills and Joint Resolutions.")

The PRESIDENT pro tempore. The Senator from Maryland [Ms. MIKULSKI] is recognized for not to exceed 5 minutes.

(The remarks of Ms. MIKULSKI pertaining to the introduction of S. 2033 are located in today's RECORD under "Statements on Introduced Bills and Joint Resolutions.")

Ms. MIKULSKI. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The absence of a quorum has been noted. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAUCUS. Mr. President, I ask unanimous consent that further proceedings under the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

IN REMEMBRANCE OF PATRICK POUZAR

Mr. GORE. Mr. President, 3 weeks ago, Tennessee lost one of its favorite sons. Mr. Patrick Pouzar, a resident of Nashville and a senior investigator with the Food and Drug Administration, died while traveling in the Republic of Chile. Several days earlier, Mr. Pouzar and another FDA official were dispatched to Chile at the request of the Chilean Government to verify preventative measures taken in the wake of last year's fruit tampering incident.

The Chilean Ambassador last November invited representatives from the FDA to visit his country on a followup mission. On January 5, Mr. Pouzar and Mr. Jack Harty, the Director of the FDA's international affairs staff, departed this country for Chile. Five days later, the single-engine plane carrying them and two Chilean officials was reported missing. Following an intensive search effort, the wreckage was located. Tragically, all four men and the pilot were killed.

Mr. President, throughout my congressional career, I have taken a special interest in the workings of the FDA. For more than a century, the FDA has stood for solid protection of our food supply and medicines. From the Pure Food and Drugs Act of 1906 to the Infant Formula Act of 1980, Congress has always turned to the FDA to ensure and enhance the public health. Its jurisdiction includes vital areas of public health, ranging from approval of drugs and food additives to inspection of medical devices and consumer complaints. Through the years, the agency has developed a worldwide reputation for professionalism and expertise.

The loss of these two distinguished men is deeply felt, not only by their families and colleagues at FDA, but also by all Americans whom they served with pride and honor. Our hearts and our prayers go out to their loved ones.

TERRY ANDERSON

Mr. MOYNIHAN. Mr. President, I rise to inform my colleagues that today marks the 1,781st day that Terry Anderson has been held in captivity in Beirut.

THE UNITED STATES-ISRAELI STRATEGIC RELATIONSHIP: WHY IT ENDURES

Mr. EXON. Mr. President, underlying American foreign policy since the end of World War II has been a desire for peace and stability throughout the world. Achieving this has been difficult but the recent welcome events in Europe demonstrate that our postwar policy of containing Soviet military power and political influence has bought time for communism to collapse of its own weight.

Sadly, not all parts of the globe are experiencing the rise of democracy and a decline in military tensions. One of the most historic hot spots, the Middle East, remains potentially explosive. Tensions between Israel and her Arab neighbors remain great. Terrorism continues unabated. The senseless Lebanese civil war drags on. American and other hostages remain helplessly imprisoned by various Arab lawless bands. Radical governments continue to acquire sophisticated weapons and the potential for war in that area remains great.

Clearly, the picture in the Middle East is one of continued instability with a high risk for violence.

The most serious new military threat with long-range implications for nuclear instability is the recent successful launch of an Iraqi satellite. The rocket employed as a launch vehicle clearly establishes their capability to now become another nation with long-range missile capability.

Considering that Iraq used chemical warfare in their recent war with Iran makes this a potentially foreboding event.

In the center of this Middle East cauldron stands Israel, the only true democracy in the region. We have had a long and deep friendship, dating back to President Harry Truman being the first head of state to recognize the new State of Israel in 1948. While we have not agreed on each and every issue, and will not in the future, we both seek stability and the avoidance of war.

And when war has been instigated by her Arab neighbors, the United States has stood firm every time in our support of Israel.

Accordingly, our Nation and Israel share a healthy military relationship which is fundamental to the interests of both countries. For example, the Nebraska Air National Guard's Civil Engineering Squadron will travel to Israel in 1990 to learn first hand Israel techniques for the rapid repair of damaged runways.

We have benefited from Israel combat experience with American weapons against Soviet weapons. Israel ports provide an opportunity for the ships of our 6th fleet in the Mediterranean to make port calls for ship repairs and crew rest after long times at sea in dangerous areas off Libya and Lebanon.

Furthermore, Israel and the United States share intelligence information regarding the ever-present threat of terrorism.

Since it is only through international cooperative efforts that terrorism can be defeated, this relationship is of great importance to the free world. We are also cooperating in research for the strategic defense initiative, over which I have jurisdiction as chairman of the Senate Strategic Forces and Nuclear Deterrence Subcommittee. This research could help defeat an attempt to launch a single nuclear or chemical weapon mounted on a ballistic missile against us or Israel by a madman such as Qadhafi in Libya.

While the Israeli Government has been divided of late, and our differences over how to handle the Palestinian question have been front-page news, it would be instructive to ponder for a moment what the Middle East would be like today if Israel did not exist or had been defeated in an earlier conflict.

There would be no true multiparty democracy in the area and there certainly would be no peace.

The Middle East, one of the world's strategic crossroads as well as its oil capital, would be left in the hands of warring factions. Iran is still in the grip of religious fanatics. Syria executes its internal political opponents and has never given up its decades-old dream of incorporating Lebanon. Libya's Qadhafi would have little counterbalance except for Egypt, which paid a high price of Arab disdain for over 10 years due to signing the Camp David accords.

Iraq would again be tempted to rejuvenate its territorial ambitions and the Jordanian state could very well become an endangered species. Finally, envision a Palestinian state which would undoubtedly be led by a "president" Yassir Arafat.

This is why legislation requiring the President to submit periodic reports to Congress on the U.S.-PLO dialogue to ensure compliance with promises regarding an end to terrorism and recognition of Israel's right to exist is so important. Another bill to prohibit the United States from making further contributions to the United Nations if it grants full membership to a unilaterally-declared Palestinian state also is pending and having the desired effect.

President Bush concurs with this approach and a move to seat the "State of Palestine" has been stopped at least for now.

The Palestinian issue does need to be resolved. Unfortunately, since the high hopes of Camp David in 1979, very little concrete progress has been made. Both sides need to show more flexibility and serious negotiations must begin.

Hopefully the current Irsaeli and Egyptian political initiatives, with the United States as a helpful partner, can bear fruit.

However, just as it takes a strong United States to negotiate successfully with the Soviet Union, it takes a strong Israel to negotiate successfully with her Arab neighbors who outnumber her many times over in people and weapons and surround her geographically.

There have been recent suggestions that this is the time for the United States to actually reduce foreign aid to some of our traditional friends. Foreign aid in general is not a popular political expenditure for most Americans, especially during these times of an extreme budget crunch. Foreign aid should be recognized for what it is, an obligation for a superpower—not only for legitimate humanitarian-type help but as an investment in countries that are of particular importance to our key national security interests and stabilization for our peacekeeping interests around the world.

While the actual dollar amounts of help is important, any cut may well be interpreted as a lessening of our interest. Any cut at this juncture, however limited, could send the wrong signal.

While we celebrate the dramatic and welcome changes in Europe the past few months and an obvious lessening of tensions there, we still have important obligations to such Southern European areas as Greece and Turkey, to name only two. Even with their differences these two countries are absolutely essential to stability in that area. I caution against any changes.

Likewise, with the troubles of the Aquino government in the Philippines, and in the middle of negotiations for our two key military bases there for stability in the Pacific, we would be foolhardy to risk the possible consequences of a cut in current aid.

Given the improving conditions in Europe, I suggest that the most likely new major trouble spot for the 1990's will be the Middle East.

Here we have two solid friends, Israel and Egypt. It is not in our self interest, given their current troubles and threats, to venture into any action that could be misinterpreted as a lessening of our concern. The extension of the Camp David accords remains the only viable chance of a long-term peaceful solution. Therefore, it is my view that even a relatively small cut would unfortunately carry with it a wrong signal at precisely the wrong time.

We must stay on course with all of the parties involved and not introduce unnecessary sticking points at a time when staying power and patience are at a premium.

With strength and flexibility, and with the involvement of the United States, Israel and her neighbors can negotiate successfully for peace in a troubled region. We all hope and pray that day comes soon.

DEATH OF ARDYS HEISE

Mr. WILSON. Mr. President, I rise today to honor a fellow Californian who so recently has passed away. Ardys Heise died in a traffic accident August 29, 1989, leaving behind her a repertoire of civic endeavors, awards, honors, and fond memories of a woman who dedicated herself to serving the people of California.

Ardys will be treasured by the thousands of people she has touched through her tremendous efforts and outstanding achievements. She held an active interest in both educational and health related issues, serving as a member of the Council for the Advancement and Support of Education, the American Association of Community and Junior Colleges, the Children's Hospital and Health Center Public Relations Advisory Committee, and as campaign area chairman for the American Cancer Society.

Ardys will be remembered best as a woman who felt an enormous passion to enhance the lives of everyone around her. Every challenge she undertook was approached with a relentless fervor to succeed, and she dedicated herself to programs representing the improvement of her community and the need of its members. I applaud Ardys and her accomplishments, and know she has left a lasting impression on everyone who had been fortunate enough to know this outstanding woman, citizen, and friend.

TESTIMONY OF FORMER SECRETARY OF DEFENSE JAMES R. SCHLESINGER BEFORE THE ARMED SERVICES COMMITTEE

Mr. NUNN. Mr. President, the Armed Services Committee is conducting a series of hearings on the implications of the recent dramatic changes in the Soviet Union and Eastern Europe for our national security policy, our military strategy, and, ultimately, our defense budget.

Last week, the committee focused on changes in the Soviet threat. We received testimony in public and closed session from Judge Webster, the Director of Central Intelligence; General Soyster, the Director of the Defense Intelligence; and General O'Lear, Director of Intelligence for the U.S. European Command. We heard from three U.S. experts on the changing nature of the Soviet threat, and then heard from four highly respected European and Japanese experts on allied perceptions of the Soviet threat.

On Friday, we had a very productive dialog and discussion with the Subcommittee on Defense Cooperation of the North Atlantic Assembly.

Today, Dr. James R. Schlesinger testified before the Armed Services Committee. There is probably no one better qualified than Dr. Schlesinger to address the critical issues before us today. He has been a tireless and effective advocate of a strong NATO alliance for many years. One of his priorities as Secretary of Defense in the mid-1970's was to rebuild our NATO forces after the Vietnam war. He is one of the Nation's most respected and creative thinkers in the area of national security policy, military strategy, and doctrine.

Dr. Schlesinger testified very forcefully that the threat of a conventional attack on NATO by the Soviet Union and Warsaw Pact has decreased dramatically. As a result, Dr. Schlesinger believes that the United States should, in his own words, "plan now radically to scale back our forces in Europe."

Mr. President, I know my colleagues will find Dr. Schlesinger's testimony timely and thought-provoking. I ask unanimous consent that his prepared statement before the Armed Services Committee today be inserted in the RECORD at this point.

The full transcript of the hearing amplifying his statement will be available in the committee in the near future.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT BY JAMES R. SCHLESINGER BEFORE THE COMMITTEE ON ARMED SERVICES, JANUARY 30, 1990

Mr. Chairman, Members of the Committee: I want to thank you for your invitation to appear today before the Committee to assess the dramatic changes in Eastern Europe and the Soviet Union and their impact on national security policy. As members of the Committee will recall, the issues of European security, of the balance between conventional and nuclear capabilities and their role in the deterrence of possible attack have been close to my heart for many years. Consequently, the events that have been unfolding in this past year have had a special poignance for me. Since the late 40s and the collapse of the wartime partnership with the Soviet Union, the preservation of a free Western Europe has been the centerpiece of American foreign policy. Now that policy has been crowned with success—and, in that, we are entitled to take some satisfaction.

Mr. Chairman, let me start with two essential points.

First, international politics has already passed through an historic watershed. Change continues; indeed, it may well become more dramatic in the period ahead. By the changes he has initiated, Mikhail Gorbachev—for it is primarily he—has altered the world order as we have known it since 1945. He has unleashed forces that he cannot control and did not anticipate. From the standpoint of the Soviet Union, he has opened up a Pandora's Box, and the elements released cannot again be contained. The lines of force that have governed international relations in the post war period have now been permanently altered. To proceed as if transformation had not occurred would ultimately be self-defeating.

Second, let us be clear about what we have accomplished. America has fulfilled its historic responsibility. We have been steadfast. We have helped preserve the democracies of Western Europe during difficult times—and have helped create the new, flourishing Western Europe of today. For forty years we have stood the watch. We have won. I say this not in a spirit of gloating but as an historic fact. Indeed, one cannot fail to respect a Soviet Union, which from a far weaker economic and political base, was prepared, in the name of its own ideology, to sustain this challenge to the United States and much of the free world for so long a time. Yet, while we should be magnanimous in victory, we should not fail to celebrate this American accomplishment. Were Winston Churchill alive today, I believe that he would refer to the steadfast American role of these past forty years as—our finest hour.

However, Mr. Chairman, as a country we must move on. We must recognize that the international environment has now been transformed. We must not go on doing what we have done in the past—on the premise, why change a successful strategy? Were we to do so, it would prove self-defeating. We would damage our international standing and lose the respect of our rivals, the support of our allies, and the confidence of the American public. Thus, quite properly, the rationale for our European deployments is up for review and debate.

The military balance has been radically altered. How long the Warsaw Pact may survive as a political association is an open question, but its role as a military alliance and a military threat has been largely broken. The modest reduction in Soviet military deployments has been dwarfed by the essential departure of her Warsaw Pact partners as military allies. Under these circumstances one cannot conceive of a Warsaw Pact offensive save as an act of supreme folly.

American deployments in Europe over the years have been justified as a symbol of the American commitment and, since the 70s, as a part of a stalwart conventional capability intended to help deter Soviet or Warsaw Pact attack. Mr. Chairman, that role for the American forces has now been superseded. The new (and substantially reduced) role for those forces is to provide negotiating leverage—to help assure the substantial drawdown of Soviet forces in Eastern Europe. In the present context, however, arms control negotiations raise as many questions as they answer. Events have now begun to outrun the relatively slow pace of negotiations. In some circumstances that can be helpful, and in other circumstances harmful. In the present circumstances, I believe, that requires careful judgment rather than an automatic response.

I pointed out earlier that Mr. Gorbachev has unleashed forces that can no longer be controlled—and which portend further dramatic change. Among those forces are the changes in government and the process of democratization in Eastern Europe. Already both Hungary and Czechoslovakia have requested the Soviet Union to remove its troops from their countries. In East Germany popular ferment has forced what is now an interim government to move the prospective date for elections forward from May to

March. Once a democratically elected government is in place, a request to the Soviets to reduce and ultimately withdraw Soviet forces is more or less foreordained. In brief, the process of political change has already imposed severe pressure on the Soviet Union to reduce, and perhaps ultimately eliminate, her forces in Eastern Europe. Given its altered international stance and its domestic goals the Soviets will find these pressures hard to resist. Indeed, Soviet leaders have themselves spoken of withdrawing all their forces from Eastern Europe by the year 2000.

Thus, a process is already underway, more or less spontaneously, massively to reduce Soviet forces. It would be ironical and perhaps detrimental, if that process were to be slowed by lengthy negotiations. It would be worse than ironical if the CFE negotiations were to result in legitimatizing the long-term presence of Soviet forces in Eastern Europe—that might otherwise be withdrawn in the absence of such negotiations and such legitimatizing. It would be far worse, if the nations of Eastern Europe were to hold the United States or NATO responsible for the continued presence in their countries of Soviet forces. In brief, standing firm while negotiations continue may bring a less than optimal outcome.

I am a long time Atlanticist. You will recall, Mr. Chairman, that during my tenure as Secretary of Defense my principal concern was the rebuilding of our NATO forces, the development of a more persuasive deterrent posture, the creation of a stalwart conventional capability, and the resistance to pressures, such as the Mansfield Amendment, for the reduction of the American presence and commitment. Over the years, former colleagues have called for a downsizing of U.S. forces. Rightly or wrongly, I have always resisted. Given this background, Mr. Chairman, I believe a certain weight can be attached to the following recommendation: we should plan now radically to scale back our forces in Europe. The time is now. Implementation may extend over months or years, as circumstances warrant. But the reduction should not be precluded by the ongoing negotiations in Vienna.

Mr. Chairman, over the years this Committee has heard much about burdensharing. As long as the Warsaw Pact threat remained substantial, I thought much of the comment overblown. Now, however, Belgium has announced the withdrawal of its forces from Germany. The Germans themselves have indicated a reduction of the Bundeswehr by roughly twenty percent. Other European countries are preparing to reduce both forces and spending.

Mr. Chairman, as long as a sizable Warsaw Pact threat existed, a major American deployment was vital to European security. But, as that threat is reduced, the United States should not be in the position of increasing its share in European security. The time has come, more or less, for Europe to move towards the condition stated by former Chancellor Helmut Schmidt—Europe should be defended (primarily) by French and German forces.

We must also look ahead. As we move toward German reunification, as almost inevitably we must; as the Soviet forces in Eastern Europe are drawndown, and the threat to Western Europe recedes, we shall find that the eagerness and the welcome for American forces in Europe dwindles. The stationing of so large a set of foreign forces on German soil has become a growing irritant to the German public. We have been obliged to curtail low-level flying, night training, and so on. Imagine what will occur when the perception of the Soviet threat, already much reduced, recedes further. Whatever its present inclination, a German government will be obliged to pay heed to public opinion. We should begin to prepare now for that development, now foreseeable.

We should begin now to discuss the character of a residual force that is desired by our European partners. That force can be a symbol of the abiding American commitment, insurance against the international environment (despite all present prospects) turning darker again, and a logistical base for the return of U.S. forces, if that should prove necessary. Such a residual force, after the scaling down of the Soviet presence, would be but a fraction of our present deployment.

At the fortieth anniversary summit of NATO in June President Bush put forth a proposal for the reduction of conventional forces, then specifing a ten percent U.S. reduction. It was a prudent and productive proposal, but in my judgment time has now overtaken it. Since June a lot of water has flowed over the dam. Changes in Eastern Europe have made untenable the continued stationing of Soviet forces at anything like their present level. In formulating policy now we need to take these changes into account. We have other needs for our defense dollar. Given the budgetary pressures that we all understand, it would be unwise to short-change other, longer term requirements for defense spending just to preserve for somewhat longer a NATO force, the role of which has both been sharply altered and diminished, and the size of which is transitory.

In 1815, after the defeat of Napoleon; in 1848, after the revolutionary changes in Europe, imperial Russia advanced its forces far to the west—just as did the Soviet Union in the wake of the defeat of Nazi Germany. But imperial Russia ultimately withdrew her forces, and now, some forty-five years after World War II, the somewhat similar advance of the Soviet Union into the heart of Europe is coming to a close. Events are now forcing the pace of change in Eastern Europe. The Soviet empire and the Soviet threat are receding. Some of our defense people like to speak of the "uncertainties". To be sure, there are uncertainties. But the outcome of these uncertainties will not lead to the reimposition of Soviet domination in Eastern Europe—nor the restoration of the classic threat that has concerned us since the Berlin blockade. All the king's horses and all the king's men cannot put that particular humpty dumpty together again.

Unless we in the defense community acknowledge that fundamental and irreversible changes have taken place, we will come to seem irrelevant. Our role in Europe and to some extent in the world generally has been altered. Therefore, our forces should now be pointed towards their future role. We will, I feel sure, feel obliged to remain a global superpower. But we should cling neither to past glories nor to past problems. The great American mission in Europe is now drawing to a close. It has been, in my judgment, America's finest hour. For forty years we have provided a shield protecting the new and reborn democracies of Western Europe. But now we must move on to new tasks—among them helping to develop the new architecture of European security.

Mr. Chairman, I thank you for your attention. I shall be pleased to respond to any questions.

GEORGE KENNAN'S WISE COUNSEL ON EAST-WEST RELATIONS

Mr. PELL. Mr. President, on January 17, 1990, former Ambassador George F. Kennan testified before a Foreign Relations Committee hearing chaired by my esteemed colleague the senior Senator from Delaware [Mr. BIDEN] concerning the situation in the Soviet Union, the prospects for Eastern Europe and the need for new thinking about political and economic relations with that region. Professor Kennan has testified before the committee previously, and we have welcomed his comments as providing some of the most thoughtful and perceptive guidance for American policy concerning the Soviet Union and East-West relations.

In his prepared testimony Professor Kennan warned that President Gorbachev's position "is in some respects a precarious one and could change unexpectedly at any time," but that "it would be wrong to expect that the policies he has pursued would be likely to be totally and drastically altered by his successors." He noted that Gorbachev "has taken a view of Russia's place in the world more enlightened by far than that of any other Russian statesman of this century, and has made an outstanding contribution to the overcoming of the cold war and to the laying of the foundations of a more stable and peaceful Europe."

Professor Kennan sees the current situation as one of great opportunity. He urges that should we "take a much more forthcoming attitude in the negotiations for mutual reductions of conventional armaments in Europe." At the same time, he warns that "the extreme instability of the situation in East Germany, and the ensuing discussion of the possibility of German unification" present "the greatest potential dangers." Ambassador Kennan states:

> To attempt to move towards (German) unification on the political level before all these questions have been replaced by comprehensive alternative arrangements acceptable to all of Germany's neighbors and to the Soviet Union and ourselves would be to invite complications of the most serious nature.

Mr. President, because of the great importance of Professor Kennan's testimony and because it was presented at a time when many of us were not in Washington or even in the country, I ask unanimous consent that the text of his prepared statement be printed in the CONGRESSIONAL RECORD at this time.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT BY GEORGE F. KENNAN BEFORE THE SENATE FOREIGN RELATIONS COMMITTEE, JANUARY 17, 1990

My appearance before the Committee this morning is in response to the Committee's invitation. The following statement has been prepared on the assumption that the matters on which the members of the Committee would like me to comment are primarily the prevailing situations in the Soviet Union and in Eastern Europe, and the problems these situations present for American foreign policy. The following is a summary of the impressions and views on these subjects with which, as a private citizen who does not give systematic study to these matters, I come before the Committee.

The situation in the Soviet Union is, at this moment, unstable in high degree. The extensive failure, to date, of perestroika to meet even the normal demands of consumers in the large cities; the disorders in the Transcaucasus (Georgia, Armenia, and Abzerbaizhan) and in Moldavia; and the demands of people and Communist parties in the Baltic countries for virtual secession from the Soviet Union; these, coming at a time when the political institutions of the Soviet state are in process of basic change, has created a situation of great difficulty and danger for Gorbachev, who is viewed as personally responsible for all these crises and difficulties. So great are the political burdens he has now come to bear that it is doubtful in my opinion that he could have remained in office as long as he has were it not for his high international prestige, constituting as it does an important asset for the Soviet state, and for the fact that none of his senior colleagues has any program to offer as an alternative to the one he has created and carried forward. Such, indeed, is the burden of troubles he is now carrying on his shoulders that it is questionable whether there is any among his potential rivals who would like, at the present time, to assume this burden in his place.

While it is clear, in the light of the above, that Gorbachev's position is in some respects a precarious one and could change unexpectedly at any point, it would be wrong to expect that the policies he has pursued would be likely to be totally and drastically altered by his successors. Actually, his foreign policies have been the least controversial of any of the efforts he has put forward; and there is no evidence of the existence of any competing faction calling for their abandonment. Beyond which, much of what he has initiated has already been locked into position by circumstances to such an extent that any complete reversal would scarcely be possible.

Regardless of the possibilities for Gorbachev's political survival, the fact remains that he has taken a view of Russia's place in the world more enlightened by far than that of any other Russian statesman of this century, and has made an outstanding contribution to the overcoming of the Cold War and to the laying of the foundations for a more stable and peaceful Europe. This being so; it remains in our interests and in those of world stability that he should carry on with his ideas and initiatives as long as his energies and the patience of his colleagues permit him to do so. It is not, of course, our business to help him in the solution of his internal-political problems; nor could we do so if we wanted to. Even in the economic field our possibilities are limited. He has not asked for our economic or financial help; and there is no reason why we should press anything of that sort upon him. What we could conceivably offer would be in any case, in the light of our own situation and many other demands on our resources, of negligible importance compared with the dimensions of the problem.

What we *could* do, on the other hand, that would be in Gorbachev's interests as well as our own, would be the following.

First, we could remove, or at the very least suspend, those wholly unnecessary and undesirable impediments to the development of Soviet-American trade that exist in the form of the Jackson-Vanik and Stevenson amendments.

Secondly, and of even greater importance, we could take a much more forthcoming attitude in the negotiations for mutual reductions of conventional armaments in Europe. The relief that a drastic reduction of the Soviet forces in this region would bring to the Soviet government (and, incidentally, to ourselves as well) would be of greater significance, financially and otherwise, than any direct help we could conceivably extend.

Finally, we should keep in close touch with the Soviet government in connection with the questions now arising from the momentous changes in Eastern Europe, bearing in mind that a number of these questions have serious implications from the standpoint of both Soviet and American security interest, and cannot be favorably addressed without the concurrent understanding and agreement of both parties.

In East Central Europe (by which term I mean to include all the non-Soviet members of the Soviet bloc as well as Yugoslavia) we also have a situation which, while decidedly to be welcomed in its general outlines, is unstable, and not without dangerous aspects.

The new regimes that have emerged from the recent dramatic events in a number of these countries are only interim arrangements, headed in large part by reform communists, and intended to be overtaken later in coming months by elections of one sort or another. The bureaucracies set up by previous hardline Communist regimes remain, for lack of anything else, largely in place. Their complete replacement may not even be necessary; and such changes as are called for can, and probably must, come gradually. The forthcoming elections, on the other hand, are generally expected to result in the success of non-Communist elements and the establishment of regimes in which the real Communist participation, if there is any, will be minimal.

In almost all these countries, except in Poland, the democratic elements are still poorly prepared to face the task of reordering political life that lies before them. While the prospects for successful adjustment to the new situation vary from country to country, we must expect that it will be, for the most part, at least a year or two before the emerging democratic establishments can be smoothly functioning.

Meanwhile, all the new regimes will confront severe problems of economic adjustment—problems that will require for their solution heavy sacrifices by their own people in addition to considerable foreign assistance. This will unquestionably add to the political strains with which the new regimes will have to cope.

A dangerous feature of the coming period in that part of the world will almost certainly be the release of strong, previously repressed ethnic and nationalist impulses in several countries. These can heighten internal tensions as well as straining international relations within the region, particularly between Hungary and Romania. But it is the extreme instability of the situation in East Germany, and the ensuing discussion of the possibilities of German unification, that present the greatest potential dangers. No movement in the direction of German unification, or even public discussion of such a possibility, could fail to come up at an early stage against the security problems which such development would be bound to present. The security arrangements existing today in much of Europe—the two alliances (NATO and Warsaw Pact), the presence of foreign military forces on the territories of both parts of Germany, the existence of powerful indigenous German forces in both the Germanies; and the situation of Berlin. Germany's greatest city, under theoretical four-power control—are totally incompatible with an immediate unification of Germany. They would have to be fundamentally altered before any such unification could be seriously considered. To attempt to move towards unification on the political level before all these questions have been replaced by comprehensive alternative arrangements acceptable to all of Germany's neighbors and to the Soviet Union and ourselves would be to invite complications of the most serious nature.

So much, in brief, for the situation in the region under discussion. What does this spell for American policy?

The problems of the designing of a new political and economic relationship of the Eastern European countries to the remainder of Europe is primarily one for the Europeans themselves to confront; and I see no reason why we should take any prominent part in it. Let the other Europeans draw up their own plan, and implement it with such of their own resources as they can spare for it. If we can help in minor subsidiary ways, so much the better; but the initiative, the responsibility, and the main burden of implementation must be theirs.

In the designating of a new European security framework, on the other hand we—for many and obvious reasons—must be actively and intimately involved.

By what principles should we be guided in this involvement?

First, and for the short term, I suggest that we should press for an internationally accepted and binding moratorium of at least three years' duration on basic changes in the two alliance structures and on any alternations in the composition of the European community of European sovereign states; this—to give all of us time to prepare, in a careful and deliberate manner and by wide international discussion and agreement, a new European security structure to replace the present one, which has been deprived, by recent events in Russia and Eastern Europe, of its basic rationale. This would not bar extensive reductions in the force structure now being maintained in Europe within the framework of the two alliances: it would serve only to preserve, for at least this limited frame of time, the continued validity of the two alliances and the basic obligations of their respective member-nations.

As for the participation of this country in the creation of a new security structure for Europe. I see this as proceeding in three stages:

First, a careful study of the problem itself on the part of our government, drawing on both governmental and non-governmental expertise;

Secondly, preliminary discussions with our allies as well as with the Soviet Union and other members of the Warsaw Pact; and

Thirdly, a general and final conference of all immediately interested parties, possibly within the framework of the Helsinki agreements, looking to an arrangement that would cover all military forces of any sort, indigenous or foreign, based on European soil.

SENATOR PELL'S ADDRESS ON ANNIVERSARY OF WINSTON CHURCHILL'S "IRON CURTAIN" SPEECH

Mr. BIDEN. Mr. President, on January 10, the distinguished chairman of the Foreign Relations Committee delivered a fittingly eloquent speech to commemorate the 44th anniversary of Winston Churchill's famous address at Westminster College, in Fulton, MO, in which Churchill warned of an "iron curtain" descending across the continent of Europe.

In commemorating Churchill's historic address, Senator PELL described a conceptual framework that can guide American policy as we seek to advance, in the words of Senator PELL's title from "Iron Curtain to Common European House"—an integrated civilization extending "from Vladivostok to Moscow and Berlin, on to Paris and London, and across the Atlantic to Washington and San Francisco."

Senator PELL stated that we have reached "a watershed moment," in which "the United States faces a new role. No longer the unchallenged leader of an alliance confronting the 'Iron Curtain,' we are called upon to become an active and exemplary partner in a 'common house' joining the Old World and the New."

The Foreign Relations Committee's chairman warned, however, that "unless history's movement is channeled by adroit statesmanship, the foundations of this 'common house' will be shaken and cracked during construction—by chaos, retrogression, and an unstable international order vulnerable to the miscalculations and imbalances that led to two world wars."

Mr. President, I ask unanimous consent that the text of Senator PELL's excellent address at Fulton, which reflects a keen understanding of such "adroit statesmanship," be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

IRON CURTAIN TO COMMON EUROPEAN HOUSE: AMERICA'S ROLE IN THE OLD ORDER AND THE NEW

(By Senator Pell)

Forty-four years ago, a redoubtable world statesman chose this place, in the very heart of America, to proclaim an ominous truth and to issue a momentous challenge.

Winston Churchill had been America's staunch partner through the agony of a global war that had yielded human slaughter on a scale previously unimagined. Across hellish battlefields, in hideous gas chambers, and finally in the inferno of nuclear incineration, the world had undergone a vast orgy of annihilation. As the dust settled, Americans, and people everywhere, yearned for respite and a new beginning.

But through the mist of these rising hopes, Churchill perceived a stark and unhappy reality: that the allied victory over fascism had given way to a new form of international conflict that would again summon the full energy and commitment of the United States.

America, Britain, and France remained united. But their expedient alliance with the Soviet Union had, at war's end, transmuted into political-military confrontation over the future of Europe. In this rift with Stalin, Churchill saw the emergence of a huge strategic fault line that would endanger all the world. He sensed the opening of the perilous chapter in human affairs that history would entitle the Cold War.

With these ringing, now famous words, Churchill described the specter facing the Western democracies:

"From Stettin in the Baltic to Trieste in the Adriatic, an iron curtain has descended across the Continent. Behind that line lie all the capitals of the ancient states of Central and Eastern Europe. Warsaw, Berlin, Prague, Vienna, Budapest, Belgrade, Bucharest and Sofia, all these famous cities and the populations around them lie in what I must call the Soviet sphere, and all are subject in one form or another, not only to Soviet influence but to a very high and, in many cases, increasing measure of control from Moscow."

This cheerless tableau, as Churchill painted it in the winter of 1946, was rendered all the more dismal against the bright backdrop of idealism that has been shown the previous spring in San Francisco, where delegates from 50 nations met to establish the United Nations.

Most of us on the Secretariat were young men fresh from wartime service, in civilian clothes that we had not worn for several years. How vividly I can recall the aspirations so many of us attached to that enterprise after the gruesome waste of this century's second great conflagration. We shared a vibrant hope that the world's nations, despite their diversity, might eventually be brought into a cooperative governing order that would embody, and seek to uphold, agreed principles of international behavior and enduring values of human justice and decency.

Less than a year later, Winston Churchill stood here in Fulton, Missouri to warn that such a world was not soon to be within our grasp. The cancer of tyranny was again spreading, and Churchill's purpose was to beseech America to put aside postwar self-absorption and rise again to global responsibility.

The challenge, as Churchill rightly saw it, was not to wage war anew, but to wage a new form of war—President Kennedy would later call it "a long twilight struggle"—that would emphasize diplomacy and economic assistance while deploying military weapons primarily for deterrence.

History has, I believe, recorded that in responding to the challenge Churchill so eloquently voiced, the United States summoned a statesmanship comparable to Churchill's. In his famous "long telegram" from the American embassy in Moscow, George Kennan brilliantly conceptualized the policy of communist "containment" that was to guide American foreign policy in the decades ahead. This policy took tangible form when Secretary of State Marshall proclaimed a visionary strategy to rescue Europe from the economic squalor and political vulnerability that persisted from the war's devastation.

American acceptance of this historic task was undertaken without knowledge of where such a policy might lead, or the degree of success or failure that awaited it. No one then could have known that, four decades later, the countries recipient of Marshall aid would comprise the core of a thriving European Community fully committed to the principles and institutions of democratic pluralism. Certainly no one then could have predicted that leadership in this community would come from a German Federal Republic that would build, on the moral and physical ruins of the Third Reich, a civilized and prosperous parliamentary democracy.

Lacking any such certainty about the future, the United States assumed its central role in postwar history guided by one, uniquely American instinct: an unprecedented determination to infuse realpolitik with a powerful faith in the surpassing strength of man's aspiration for freedom and self-determination.

At the outset, American policy-makers could not know just how tragically accurate Churchill's "iron curtain" metaphor would prove to be. Initially, President Truman offered Marshall aid to all of Europe's destitute nations, only to discover that Stalin would prevent his Eastern European captives from partaking. Indeed, not until the following year, 1948, did Czechoslovakia fall to a communist takeover, slamming the "iron curtain" fully shut across the entire span of Europe.

Coincidentally, by then having joined the Foreign Service, I found myself in Czechoslovakia at that moment, charged with the task of establishing a new American consulate general in Bratislava. That dignified little building, which was to be closed and kept shut thereafter, has for me remained a small but enduring symbol of the East-West interaction snuffed out by Stalin and his miserable minions. In my own personal journey from San Francisco in 1945 to Czechoslovakia in 1948, I had paralleled America's postwar passage from high hope to sobering reality.

Soon thereafter came the Berlin blockade, the Berlin airlift, and Senate passage of the Vandenberg Resolution. With this authorization of American participation in an international alliance of collective security, the United States stepped from the shadows of traditional isolationism to assume a commanding and, I trust, permanent role on the world stage. In 1949, leaders of the Western democracies assembled in Washington to sign a North Atlantic Treaty that would provide the basis for four decades of transatlantic partnership.

As the years passed, NATO was to become the most formidable alliance of nations ever assembled. Sparked by Marshall aid, West European economies revived and were gradually integrated. Britain and France joined the United States as nuclear powers. And with its democracy firmly established, a peacefully thriving West Germany entered the alliance, rearmed as a partner in defense. Eventually, led by the United States, 16 NATO democracies—representing the preponderance of the world's industrial and military strength—stood voluntarily, as they are today, prosperous and united in common cause.

For America, this saga was not without cost—cost that would prove severe. Sadly, an anti-communist world role went hand-in-

glove with a search for enemies within; the McCarthy witch-hunt of the early 1950's became a tragic episode that severely tested our political institutions. Meanwhile, the outbreak of hostilities in Korea exposed America to the pain and frustration of so-called "limited war." Seeming to portend worldwide communist aggression, Korea led us also to a major redeployment of troops in Europe that our allies have welcomed to this day. More ominously, Korea precipitated America's assumption of France's colonial role in Indochina—a role that would lead, in the 1960's, to a deepening, bitterly controversial military involvement. Domestic strife over Vietnam became our greatest domestic crisis since the Civil War.

But in Europe our policy proved steady. Although the cost in monetary terms remained high, we bore that burden with little rancor, punctuating our transatlantic relationship only occasionally with minor disputes over trade, missile deployments, burden-sharing, and, most recently, by unexpected presidential ideas for total disarmament and continent-spanning anti-nuclear astrodomes.

This continuity derived from a consensus we shared with the citizens of Western Europe. We found common interest in a NATO alliance that sought no territorial gain but rather only the defense of democratic freedom. NATO's strategy remained constant: the original policy of containment.

Underlying that policy, and the source of its strength, has been a simple wisdom about the nature of the East-West confrontation, something I remember first enunciating forty odd years ago. According to the ideological legacy of Marx and Lenin, capitalist democracy contains the seeds of its own demise. But in fact it is rigid, centrally-planned communism that contained such seeds and was indeed destined to destroy itself. In the name of attaining a higher form of human society, communist leaders committed their most fundamental mistake. They rejected, and then used brutal force to suppress, the deepest drives of the human spirit: to think freely; to write and travel freely; to worship freely; and, materialist though it may be, to pile up a stake—a nest egg—for one's family and children.

Thus, time was on NATO's side. It was indeed always my own view that if we followed Churchill's old dictum long enough—to "jaw-jaw, not war-war"—the other side was bound to succumb to an internally-generated force for change.

How the West might best encourage that change became a central issue in American politics. Some, myself among them, argued for active engagement through arms control and trade; we hoped in effect to infiltrate communist societies by opening, through exchanges, small doors that would let in light: points of light! Others favored presenting a stone wall of relentless criticism and defiance. Sadly, the debate between proponents of these two tactics often became so vitriolic as to eclipse the ground we shared: our common bedrock belief in the superiority of free institutions.

What neither liberals nor conservatives could have predicted, even six months ago, was how quickly change, once begun, would sweep the Soviet empire. A critical factor was the instantaneous communication of our electronic global village. But the catalyst, of course, was the remarkable Soviet leader who took office in March 1985. At first, accustomed to his stodgy predecessors, foreign observers were skeptical. They wondered whether Mikhail Gorbachev was no more than a slick packager of old ideas. Then came the dawning realization that when Gorbachev uttered the phrase "new thinking," he was not speaking in a deceptive code.

By evidence thus far, Chairman Gorbachev's purposes are not those of an altruist but of a broad-gauged politician. Gorbachev has recognized that the Soviet Union must build on a foundation of realism. Whatever its size and achievement in technical science and military production, the Soviet Union is a nation in relative and perhaps absolute decline. Proceeding from this reality, and determined to spark a national renaissance, he has embarked on a plan of stunning scope.

Viewed through a long lens, Gorbachev's plan represents a resumption of the historic task begun by Peter the Great three centuries ago but abandoned two centuries ago by Catherine the Great. His purpose is to end Soviet isolation and integrate his vast nation into the life, economy, and culture of Europe. This means, most fundamentally, liberalizing his nation: opening its doors to the oustide world and lifting the yoke of repression from the minds and spirits of the Soviet citizenry so that individuals, not central planners, can become that society's motive force.

To modernize the Soviet Union, Gorbachev has recognized the need for resources to focus on its vast problems and domestic needs. And to achieve partnership with Europe—to bring the Soviet Union into what he calls the "common European house"—he knows he must end the division of Europe imposed and maintained by his predecessors. Taken together, these purposes have produced Gorbachev's policies of Soviet military retrenchment and of permitting Moscow's erstwhile satellites to find their own way according to the long-denied principle of self-determination.

Once this point was fully grasped in Eastern Europe, the Soviet empire collapsed like the proverbial house of cards. Last year's magnificent rush of events revealed what we had every reason to expect: that only a rare East European, save those with a vested interest, was actually a communist. Even to those who once had embraced it as the path to a more noble. Less materialist society, communism had become a tested and proven failure. Indeed, as the cards fell it was ironic that communism's only real defenders were those few who had managed to milk the system for materialist gain.

With Gorbachev's implicit encouragement, the peaceful uprising of Eastern European's as they reached to take control of their own destinies, has disintegrated the "iron curtain." But if its disappearance is fast becoming an established reality, Europe's "common house" is as yet only a promising dream.

In principle, the superpowers have agreed that the "common house" should include them both, extending from Vladivostok to Moscow and Berlin, on to Paris and London, and across the Atlantic to Washington and San Francisco. But underlying today's widespread jubilation is also a well-founded fear: that unless history's movement is channeled by adroit statesmanship, the foundations of this "common house" will be shaken and cracked during construction—by chaos, retrogression, and an unstable international order vulnerable to the miscalculations and imbalances that led to two world wars.

This concern has motivated the spontaneous search for a new European "architecture" strong enough to avoid these dangers. Our Secretary of State recently responded by stressing the value and "synergy" of existing institutions: NATO, the European Community, and the Conference on Security and Cooperation in Europe. I judge this to be sound.

But I would submit today that the European Security Conference—the so-called "Helsinki process"—warrants more emphasis than American policy has accorded thus far.

In 1975, the Helsinki Final Act, although non-binding, committed 33 European nations, the United States, and Canada to agreed principles and continuing talks on three tracks: military, economic, and political. Initially, Helsinki drew criticism as a "second Yalta" that allegedly ceded legitimacy to the Soviet empire in exchange for empty promises. But in practice Helsinki diplomacy has worked. For 14 years, Western delegations have sounded a steady and resonant drumbeat on human rights. And the Helsinki-sponsored conventional force talks in Vienna are nearing fruition in a first-phase agreement.

This is achievement in itself, but I would contend that the reverberations of perestroika have so shattered the ice of Cold War assumptions as to set the stage for elevating the Helsinki process and moving to test, and capitalize on, a moment of historic opportunity.

Chairman Gorbachev has in fact called for a CSCE summit, a proposal embraced by President Mitterrand and other Europeans. But whereas the Bush Administration appears reticent, I believe our response should be one of energetic engagement. A well-conceived Helsinki II treaty, comprehensive and binding, could be blueprint for Europe's common house.

Would an emphasis on Helsinki require that we abandon or downgrade NATO and the European Community? But no means; those bodies can and should coordinate Western participation during creation of a broader framework of stable European partnership.

The *Military* track of the Helsinki process is central, for two reasons. First, it can expedite the draw-down of forces in the most intensively armed region in the history of the world. Even as the Berlin Wall is cut apart, the fact remains that the two Germanys, smaller even together then the state of Montana, are host to some 10,000 nuclear weapons and more than a half-million foreign troops.

Second, steady disarmament and comprehensive verification will, if properly structured, alleviate some of the anxieties about German unification and about the resurgence of deep-seated rivalries held in check by forty years of bloc-to-bloc confrontation.

The initial Vienna accord, anticipated next year, will primarily reduce Warsaw Pact forces, bringing the two sides down to levels just below where NATO now stands. A Helsinki II treaty should codify the goal of establishing equal ceilings at levels far lower—at least 50% lower—at the earliest possible date. Our aim should be to "lock in" the express Soviet intent to withdraw from Eastern Europe entirely over the next decade, and to provide a framework within which Gorbachev or any successor can proceed to do so without resistance from his military.

The alternative, of course, is to allow disarmament to occur spontaneously as nations, East and West, shed burdens as they see fit. Such as laissez-faire approach is, in my view, too dangerous in the cauldron of Europe. Clearly we do not wish to allow a

negotiating process to impede the pace of any unilateral Soviet withdrawals from Eastern Europe. But negotiated reductions offer multiple gains: overall predictablility, insurance against the specter of a German military monolith, a fairer sharing of defense burdens among the Western allies, and ultimately lower numbers all around as ceilings are established and then ratcheted down.

Verification arrangements must of course guard against cheating. As President Reagan said so often, trust but verify. But they can also yield a more positive benefit: a constructive fabric of cooperation and confidence that engages national militaries in a joint multilateral enterprise. The essence of this enterprise, already under discussion, would be thousands of annual inspections of troops and equipment.

Imagine a world where every movement of more than 100 tanks and 5000 troops is known to all and subject to inspection. Add to this a system of aerial overflights—the "open skies" proposal, which I support—and Europe's military "transparency," as negotiators call it, would be complete. Once operational, measures of such unprecedented scope would in themselves constitute a new European security system.

Does Helsinki require enshrining the two blocs or else dissolving them simultaneously? My answer is neither. Indeed, the West must be clear on the difference between NATO, as a voluntary collaboration among nations, and a Warsaw Pact that has been no more than an instrument for Soviet coercion.

To be sure, creating the new regime will necessarily involve the two blocs. But the regime should maximize the responsibility of each nation to comply and its right to satisfy itself of compliance by others. Thus, while NATO can serve as a coordinator for Western participation, the aim should be ever-growing confidence in the regime itself. Each nation—whether Hungary vis-a-vis Romania or Greece vis-a-vis Turkey—must be assured that it is fully apprised of the military activities of its neighbors and that any violation will be condemned and resisted by all other parties.

Meanwhile, on the *economic* track, the West should be guided by two premises. First, Eastern Europe's transition to democracy depends crucially on economic revival. Economic distress helped to create the Revolution of 1989; economic collapse could ruin today's revolutionary promise. Thus, in the calculus of our own security, timely and adroitly coordinated Western aid represents "defense" spending far more cost-effective than additional arms procurement. Only now is this truth being fully absorbed by our Executive branch.

Second, it is essential that the single-market European Community not become a fortress of exclusion, posing barriers against Eastern Europe or the United States. Rather, the Common Market must serve as a base for eventual extension of that market throughout the common house. A Helsinki II treaty should codify this objective, along with constructive standards and conditions for Western trade, investment, and aid in the East.

On the *political* track, our main objective should be to accord the vexing issue of German unification what it most needs: orderly sequence. The Helsinki participants, including the two Germanies, should agree on a stipulated period, on the order of ten years, during which East Germany could develop democratic institutions and the two Germanies could expand economic and social interaction. Then, formal unification could proceed, if both Germanies desire it, according to the principle of self-determination.

Currently, the Kremlin and many others see German division and both superpowers' presence as the safest guarantee against German revanchism. But this timetable, in conjunction with agreed military reductions affecting Germany, should ease concerns about rapid German unification.

In speaking of German reunification, though, I am speaking of the eventual unification of the two existing German states. I am concerned about Chancellor Kohl's statement that "the German people can regain its unity in free self-determination." Carried to its logical conclusion, this call for the German people "to regain its unity" could include not only the current two Germanies, but also western Poland, the former East Prussia, Austria and even the Tyrol.

Just as Winston Churchill waved a warning flag from this very spot some forth-four years ago, so I believe that we should wave a warning flag at this point and time. It must be made very clear that neither West nor East will permit a Germany larger than the present two parts. Chancellor Kohl's Ten Point Program must be enlarged to include an eleventh point reaffirming the present German borders. This is now conspicuously absent. A Helsinki II treaty should pledge all signatories to the permanence of Germany's exterior borders.

Finally, I believe the Helsinki participants should establish, perhaps in Berlin, an interparliamentary organization where legislators from all 35 countries can regularly discuss both the procedures of democratic government and the policies that result from those procedures. From election rules to housing, environment, health care, and social justice, the 35 have much to learn from each other. Winston Churchill's speech here in 1946, entitled "The Sinews of Peace," urged a special bilateral relationship between Britain and the United States. Today a multinational network of personal ties among legislators can be sinews of the peace we hope to build.

By its nature, the political "architecture" of even a perfectly-conceived Helsinki II treaty can produce no fixed result but only durable institutions of consensus-building, cooperation, and decision. Within the West, NATO and the European Community represent such architectural achievement. The historic challenge before us is to expand those models into a new structure that spans, then heals, Europe's division.

To be sure, after our decades of primacy within NATO, Helsinki multilaterialism may severely test American humility and diplomacy. But at this watershed moment, the United States faces a new role. No longer the unchallenged leader of an alliance confronting the "iron curtain," we are called upon to become an active and exemplary partner in a "common house" joining the Old World and the New.

We enter this era looking back upon a century of perpetual struggle between oppression and freedom, between barbarism and civility—a struggle between darkness and light.

I have always found special poignancy in that moment 75 years ago, in the month of August 1914, when the European monarchies stood, barely realizing it, on the brink of a great abyss into which they would soon plunge suicidally. One who sensed the enormity of the impending catastrophe was Britain's Foreign Minister, Lord Grey, who wrote prophetically that "The lamplights are going out all over Europe. We shall not see them lit again in our lifetime."

For millions of Europeans, Lord Grey's premonition proved too terribly true. From the Great War's ashes rose fascism; a Second World War even more horrifying; and then, for much of Europe, prolonged subjugation to a stultifying communist ideology of false promise and practical brutality.

In this long postwar darkness, many brave souls struggled, dissidents introducing through their courage a flicker of candlelight. Occasionally, fires burst forth, as in East Germany in 1953, Hungary in 1956, and Czechoslovakia in 1968, when Alexander Dubcek sought to create "socialism with a human face." Each time these flames were extinguished.

Ten years ago, a process of illumination was begun once again—this time, appropriately, by an unemployed electrician in Gdansk, who sought "solidarity" with his fellow citizens to generate the necessary power. Gloriously, Lech Walesa's cause prevailed and his light spread, perhaps because no one, even in the shrouded halls of the distant Kremlin, could any longer see a future in a world so bleak.

A few weeks ago, after 21 years of exile in Bratislava, not far from that closed American consulate, Alexander Dubcek returned to Prague. On a balcony above Wenceslas Square, he stood with the gallant reform leader Vaclav Havel overlooking a multitude of his countrymen huddled against the cold. Extending his arms in a symbol of human embrace, Dubcek stated the issue as simply as it could be put: "Why," he asked, "*should* there be darkness when there can be light?"

Days later, an incandescent source of light, Andrei Sakharov, died. That noble man, who will take a place among the great figures of our century, had become a glowing tribune for his people in the struggle for democracy in the Soviet Union. A genius in science, he had seen at an early age that man's ultimate achievement is not the accumulation of knowledge but the summoning forth of decency in a civilized society. Consumed with this purpose, with many sacrifices behind him, with his work undone, and intending to rise still another day to challenge his countrymen, Andrei Sakharov spoke these final words: "Tomorrow there will be a battle."

There will indeed be battles, as others, in the Soviet Union and elsewhere in Eastern Europe, resume Andrei Sakharov's quest. To them, and the aspirations they represent, America must now respond with a bold creativity, working with our allies to extend a firm hand of cooperative partnership.

As we pass from the era of the "iron curtain" to the building of a common and brightly lit house, our inspiration derives from those champions of justice, known and unknown, who fought against the darkness. We share the purpose of those men and women who met in San Francisco nearly a half century ago in hope that anarchy in and among nations could be tamed. And, not least, we draw confidence from the vision of those who responded to Winston Churchill's challenge here in Fulton. They shaped and sustained a contribution to a civilized world order of which Americans can be deeply and permanently proud.

LIBRARIAN OF CONGRESS JAMES BILLINGTON ON RUSSIA'S QUEST FOR IDENTITY

Mr. PELL. Mr. President, Prof. James H. Billington, the distinguished scholar of Russian history who serves as our very able Librarian of Congress, has published two articles describing the drama of historical change now underway in the Soviet Union and Eastern Europe, and linking this to its roots in earlier cultural, literacy, and religious traditions now surging back to the surface in that region.

It may prove to be one of the most salient historical facts of this era that for all of communism's impact through the better part of this century, it left untouched the deeper currents of national and cultural identity in Russia and the other countries of Eastern Europe.

Professor Billington's articles are dense with wisdom and fascinating conjectures and information. We see that culture, literature, voluntary associations, a resurgence of religion, a restoration of love for the land and the symbols of an earlier nationhood are all starting to shine through the overlay of communism that has been the ruling principle in these nations for the past several generations.

Mr. President, I ask unanimous consent that the text of James Billington's two articles in the Washington Post January 21 and 22 be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Jan. 21, 1990]

THE SOVIET DRAMA—RUSSIA'S QUEST FOR IDENTITY

(By James H. Billington)

In the midst of any great historical change, witnesses and participants alike are often unable not only to predict and control events, but even to understand the essential nature of what is happening.

Consider how astonishingly the momentous events in the Communist world have contradicted the recent conventional wisdom of the American foreign policy establishment: (1) The Soviet system is immutable and rooted in Russian tradition. (2) It will never permit change in Eastern Europe, least of all in East Germany. (3) Movements from below like Solidarity in Poland are hopelessly romantic and foredoomed. And (4) the only hope for weakening the Russian threat is *Realpolitik* played with leaders who show foreign policy independence like Deng Xiaoping in China and Nicolae Ceausescu in Romania.

Now that Solidarity has created a non-Communist government in Poland, the Russians themselves have pushed East Germany and the others toward change, and only the Chinese and Romanian leaders have resisted violently, one might have expected some serious reexamination of basic assumptions. Instead, the same self-confident experts have reappeared with a new conventional wisdom: (1) Economic failure has led to political reform in the U.S.S.R., which has, in turn, (2) uncorked popular pressure for more consumer goods and a universal desire to be more like us. (3) Individual Communist powers are moving in this direction largely in accordance with how "Western" their political and economic traditions have been—Eastern Europe rejoining Europe, China regressing back into Oriental despotism and the Soviet Union torn between its more progressive minority nationalities and a regressive Great Russian nationalism.

This new wisdom may superficially describe what has happened recently, but it offers no deeper understanding of what to look for next and perpetuates the underlying intellectual weaknesses of the old wisdom: a naive belief that economic acquisitiveness and manipulative political leadership are all that move history and a skepticism that beliefs and ideas really matter.

The West has entered the '90s largely as a spectator "waiting for Gorbachev." The latest conventional wisdom seems to be that the intentions, policies and survivability of "the man of the decade" will determine the fate of the world's last remaining empire—although there is disagreement as to whether or not he has plunged the U.S.S.R. into a "terminal crisis" ("Z" in Daedalus) or has "transformed the world" (Time).

All this shifting wisdom continues largely to overlook two central facts about the great transformation that will probably determine its outcome and Gorbachev's place in history:

The current crisis in the Communist world is basically one of *legitimacy*, not of political leadership or economic productivity.

The decisive element in resolving this crisis will be the *identity* that the dominant Russian nationality defines for itself within the Soviet Union.

Legitimacy is a central problem in Communist states, where power is justified not by counting votes or by investing a monarch with traditional authority. Communist power is legitimate only if its leaders are carrying out their self-proclaimed historical mandate to bring into being a just and abundant egalitarian society.

This secular ideology never had much legitimacy in Eastern Europe, where it was imposed by the Red Army in the wake of World War II. The overthrow of Communist regimes there in 1989 has not yet created alternative political or economic institutions, but it has created an altogether new formula for legitimacy. It combines reasserted religious and national values with newly asserted democratic and constitutional beliefs.

The challenge to Communist legitimacy has not yet gone so far in the U.S.S.R., because Communism is a native rather than an imported movement. It has been in place since World War I, and it partially relegitimized itself by the Soviet victory over Hitler. But Gorbachev, without initially intending to do so, has opened up a crisis of legitimacy in the Soviet Union. This raises the question of whether the U.S.S.R. might also produce a new legitimacy that, however different in timing and form, would essentially replicate the East European pattern of replacing Communism with a benign mixture of national tradition and democratic innovation.

Gorbachev would seem an unlikely leader to raise the question of legitimacy. He was, after all, a pure child of the privileged inner-party apparatus who had never run any major economic enterprise or political region before becoming head of the party. His initial impulses were in the classical Leninist mode of getting the system moving again through temperance, work discipline and economic reform.

When I asked Gorbachev late in 1987 what he would like to be remembered by posterity as having done for Soviet society, he began with the word "dynamism" and made it the main theme of fascinating impromptu soliloquy. This was what the U.S.S.R. needed after Brezhnev's long period of "stagnation." His economic reforms were bundled in a typically value Leninist slogan (*perestroika*) that only the party leader could define, along with deviations on the "left" (Boris Yeltsin) and "right" (Yegor Ligachev).

But opening public discussion (*glasnost*) proved more successful than opening the economy (*perestroika*). When Gorbachev turned from economic to political reform, he opened up a crisis of legitimacy that he has not been able to resolve.

His basic purpose in creating a new, elected parliament was to create the dynamism he had not engendered with his half-hearted economic reforms—by mobilizing the young and energetic professional class against the encrusted party bureaucracy. Gorbachev was careful to keep a balance of reserved seats for the party faithful and to ensure his own position as chairman-arbiter.

But Gorbachev also used the parliament to legitimize and protect himself—televising its sessions and publicizing its authority so that his own power could no longer be abrogated (as Khrushchev's had been) by Communist bodies alone. Since the new parliament was inserted from above into a society rediscovering its vocal chords, it initially became a more tribune for prophetic statements about fundamental problems than a body capable of doing anything about them.

The deep and protracted public outcry about the woes of the U.S.S.R. has been taken by some as a sign of the system's "terminal crisis" or of the people's masochistic immaturity. But it may rather be a rising crescendo in the basic debate over Communist legitimacy that is *deeper*, more *difficult* and more *decisive* in the U.S.S.R. than in Eastern Europe.

The Soviet crisis of legitimacy is *deeper* than in Eastern Europe because it deals with evil inflicted on themselves rather than imposed by others. What Vaclav Havel has profoundly noted about Czechoslovakia—that all who live in totalitarianism share some measure of guilt for its degradations—is far more true of the U.S.S.R., which originated the evil, lived longer under it and is still governed by a political party that killed more of its own people in peacetime than any other government in recorded history.

Resolution of the crisis in the U.S.S.R. will be especially *difficult* not only because the criminal party is still in charge but because the U.S.S.R. is a multi-national state, Soviet leaders cannot simply fall back for legitimacy from Communism to nationalism, asserting unity against a foreign oppressor as in Catholic Lithuania. The national minorities often quarrel with each other; and the largest non-Russian nationalities, in Central Asia and the Ukraine, are themselves divided. The dominant Russian nationality is for the first time led by a post-war generation that is not viscerally inclined to legitimize everything simply by continued indignation against the German invaders of nearly a half-century ago.

The Soviet resolution of the legitimacy crisis will be *decisive*. The Soviet leadership, which opened the Pandora's box of change

in the Communist world, retains unparalleled military and police power, which could still be used for a domestic crackdown or for stirring up external trouble. Gorbachev has assembled a leadership that has never been more overwhelmingly Russian in ethnic composition and regional experienced. The agitation of national minorities has heightened the self-consciousness of the ruling Russians, who have themselves awakened to seek new answers to the question of who they are and where they are going.

Resoluton of the general crisis of legitimacy, therefore, depends to a considerable degree on what kind of a modern identify the ruling Russians define for themselves within the U.S.S.R.

Moscow is the center not just of Soviet power, but of the search for Russian identity. Returning there recently, I found a situation that borders on the surreal. The parts are recognizable, but they do not fit together, and there is no overall coherence. Educated people who have at last gained some of the freedom and reform they have long sought seem more unhappy and pessimistic than ever. The Gorbachev leadership stands center-stage, but as in the theater of the absurd, in eerie detachment both from its base of power in the police and army and from the perspectives of ordinary people.

The growing shortage of goods, the rise of narcotics and the disaster of Chernobyl are all given apocalyptic significance. Some seriously speak of the imminent end of the world (as early as 1991, when the feasts of the Annunciation and Easter will occur on the same day). Everyone is reading the sensational new novel "The Man Who Did Not Return," which depicts the violent and devastated Russia that allegedly emerges by 1993 as a result of perestroika.

Gorbachev continues to legitimize himself largely by his international stature, while his tiny band of genuine supporters—many of them fellow alumni of Moscow University from the early post-Stalin years—plunges on into the uncharted terrain of writing new laws for a real legislature. Whereas the cause of reform had troops without leaders in China, Russia has leaders without troops.

Gorbachev has disoriented many by destroying the old without clearly defining—let alone building—the new. Russians, more than the minority nationalities, find little new authority to believe in. "I believe only Kashpirovsky," proclaimed my Muscovite cab driver, explaining that his enormously popular quack who purports to heal through television is "the only person in this city of talk who is doing something really useful for real people."

The Russian people, having at last become aware that they themselves have gained so little from Communist rule, would like to be recognized as something more than the people responsible for all that has gone wrong. Gorbachev, the Russian son of a rural father and Orthodox mother, is conscious of this desire. He has gone much further to accommodate it than Khrushchev, his only real role model as a Soviet reformer, who launched a program against the Russian Orthodox Church almost as vicious as Stalin's while exhorting Russians to pour scarce resources into an alleged rising tide of revolution in the distant Third World.

By contrast, Gorbachev emphasizes improvement at home—in the ecology as well as the economy of Russia. His wife, the first spouse of a Soviet leader to stake out a public role, serves on the board of a new Cultural Fund, which is largely devoted to recovering lost cultural artifacts from the Russian past. She attended the lavish state ceremony in the Bolshoi Theatre celebrating the Millennium of Christianity among the Eastern Slavs in 1988.

But Gorbachev has taken away the old history books without yet providing new ones. This is a particularly hard blow for the Russians, who had previously appeared as the vanguard of human progress in the Russocentric version of Communist history that the U.S.S.R. had propagated ever since Stalin's nationalistic turn in the 1930s.

Gorbachev and any successor in ruling this deeply disillusioned people can probably find only four possible answers to the question of Russian identity. There are extreme alternatives on the right and left that provide clearer answers than Gorbachev has given, but they are not ones he has been willing to accept. And there are two very different answers that could evolve from his present course, but which could also increase his political vulnerability. These four possible resolutions will be considered in a subsequent article—along with my speculation that the scenario that currently seems least expected may ultimately be the most likely.

[From the Washington Post, Jan. 22, 1990]

THE SOVIET DRAMA—LOOKING TO THE PAST

(By James H. Billington)

Mikhail Gorbachev's determination to seek both legitimation and models for reform primarily in the West has produced a bitter nationalist reaction among many ordinary Russians—as it did in the past under innovative tsars like Peter the Great and Alexander II.

Those were the two names Gorbachev mentioned to me in June 1988, when I asked him what prerevolutionary figures from Russian history interested him as possible models for his own programs and problems. Like both of these aggressively innovative tsars, Gorbachev faces a popular opposition among Russian traditionalists. He no doubt hopes that his conservative opponents will eventually simply fade away into the forest as the Old Believers did under Peter the Great. But he must have more realistic fears based on the more modern and more relevant example of Alexander II, the Anglophile reformer who freed the serfs and opened up Russia, only to be assassinated by younger radicals who did not believe he had gone far enough.

Alexander II was the victim of rising expectations that he could not satisfy in the first age of mass journalism. Many fear that Gorbachev may suffer some such fate in this first age of mass television. But the more relevant lesson to be learned from Alexander's reign may be that evolutionary, progressive reform from above may not be possible when the society below is throwing up new extremes of right and left that feed on each other and destroy the moderate, progressive center.

The Gorbachev leadership is being whipsawed by the simultaneous opposition of swelling popular movements from both right and left. Fear that extremes may once again squeeze out the center accounts for the increasingly frequent suggestion in the U.S.S.R. that violence is inevitable and some form of civil war probable. Yet both of these extreme alternatives are almost certainly more popular at the moment than Gorbachev's own cautious reformism—and largely because they provide clearer answers than the Gorbachev leadership to the basic question of Russian identity.

(1) On the right there is a traditional reactionary answer to the question of Russian identity. Not only among delegitimized bureaucrats but also among worried writers and ordinary people, there has been a resurgence of Great Russian chauvinism, which sees a strong, Russian-dominated political machine as the only glue that can hold together an otherwise fragmented and potentially anarchic imperial domain.

This reactionary answer to the question of Russian identity derives authority from the practical experience of managing the largest and most long-lived empire of the modern world. The Russian army and police and the Russian language have been the controlling elements in an empire where subject nationalities have been essentially kept in territorial compounds and often played off against one another. In striking contrast with most of Eastern Europe, nationalism in Russia has always been a reactionary, imperial banner. But it is a popular flag that will surely find more appealing bearers than Yegor Ligachev if the opportunity for replacing Gorbachev should arise.

(2) Directly opposite the nationalists on the right are the radical reformers to Gorbachev's left. They are led by educated Russians, principally Muscovites, who argue that Russia's proper identity can be found only be proceeding directly to build a pluralistic, multiparty democracy based on the rule of law following essentially Western models. They see a new Russian identity being forged by the moral tasks of building a just society rather than by the physical exercise of sustaining an empire.

The radicals on the left have lost a great moral leader in Andrei Sakharov, but they have won the moral high ground and much of the best talent in the new post-Stalinist generation. They, too, will probably find a more effective leader than Boris Yeltsin, if power should come within reach.

(3) Maneuvering between two positions that both have broader support than his own, Gorbachev may nonetheless succeed in gradually moving the Russian people toward the kind of de-ideologized productive dynamism in which he seems to believe. If he were able to open up the economy more boldly or de-collectivize agriculture and thus raise living standards, he might develop a sustaining constituency for what seems to be a third alternative of his own. This would be a pragmatic authoritarian identity that discards traditional questions of national identity altogether and avoids the need to relegitimize the system by either returning to Russian tradition or plunging on to real democracy.

But his increasingly conservative and unproductive economic policy has produced all the resentments of an open competitive system while retaining all the inefficiencies of the old centralized command system. I found a consensus in Moscow that unless there is a turnaround in the declining standard of living, the odds will favor more internal violence that will produce a reactionary turn and probably sweep away Gorbachev's already retrenched reform program. Hence the pessimism, the apocalypticism, and the growing desire either to get out before there is a search for scapegoats or to keep one's head down.

It all boils down to the question of whether the Russians can find a non-Leninist and nonchauvinist identity for themselves: a way of feeling good about themselves without feeling hostile to others.

The conventional wisdom is that this is asking too much of human nature in gener-

al and of an aggrieved people like the Russians in particular. But this last conventional wisdom might prove as wrong as the preceding ones. For we have entered a world of unpredictable contingencies in which the thirst for freedom has spread like an uncontainable epidemic.

The Russians may be developing a fourth alternative answer to the problem of identity that is more positive than mere chauvinism and may, indeed, be the prerequisite for any long-term evolution toward democracy.

(4) The new Russian identity is based on a large-scale if often unconcious determination of the Russian people to rediscover everything meaningful in their shared experience that Stalin attempted to destroy and that Stalin's successors continued to defile: traditional village culture, the soil and rivers of a once pristine ecology, the liturgical beauty and long-suffering compassion of grass-roots Russian Orthodoxy, and the artistic majesty of a once-honored monastic culture that carried that faith across the forbidding Siberian frontier on to Alaska. The voluntary association for historical preservation has the largest membership of any organization in the U.S.S.R. An even more passionate environmental movement has been growing in strength ever since it forced the Politburo to drop its plans for diverting the flow of rivers in the Russian north three years ago.

Many high officials who still call themselves Communists now purport personally to find a new and deeper basis for morality in the philosophically rich Russian literary tradition of Dostoevsky and Tolstoy. Now the corpus of works published in the U.S.S.R. has expanded to include figures who came into direct, heroic conflict with the Soviet regime like Bulgakov, Pasternak and the still-living Solzhenitsyn. Educated people are increasingly turning to the older Russian religious tradition, which infuses these writers' works.

Many who were present contend that the remarkable church service held last autumn—the first since 1918—in the Kremlin's Cathedral of the Assumption, where the tsars were once crowned, was the most moving single gathering they have ever attended. Part of that feeling may be attributed to the most surprising fact of all: the growing sympathy for restoring at least some version of a monarchy.

Of course, collective historical restitution, inner moral conversion, and the proliferation of independent cultural organizations among Russians may not ultimately effect the dynamics of power in the U.S.S.R. Many Russians speak wearily about their own continued fatalism and passivity. The Leninist political tradition is skilled at coopting Russian national symbols. Token gestures may be enough to keep the lid on.

But the thirst for new cultural institutions is now being satisfied throughout the U.S.S.R. almost entirely by a rising tide of new voluntary organizations that reject Communism in all its forms. There is almost no popular support for the current fall-back effort of reformers within the political system to relegitimize Communism by juxtaposing a good Lenin to a bad Stalin.

Much activity centers on a massive new Russian Encyclopedia designed to run for at least 50 volumes in a systematic effort to recover the lost regional history of Russia during the Soviet period. I talked with retired military officers who are among the organizers of a new multi-volume village encyclopedia, which will essentially attempt to reconstruct the culture and ecology of rural Russia prior to the atrocity of collectivization.

I watched a remarkable privately made documentary film, "Land in Desolation," which is rumored to have reduced some of the Politburo to tears but which has still not been publicly aired even in this time of glasnost. The movie presents a devastating yet elegiacally beautiful picture of the desecration of natural beauty and historical monuments by man's wanton economic development along the upper Volga.

Common to all the mistaken conventional Western wisdom has been a patronizing attitude toward the older, unfamiliar Eastern cultures in which Communism came to power. There could, of course, be a mistake in the opposite direction if we became too romantically optimistic about the power of any traditional culture to overthrow a totalitarianism that may itself have become part of that culture.

But the essence of the Stalinism that almost all Russians are now committed to rejecting was immoral state-supported violence against its own people. It is hard to see how a return to Stalinist repression could be effective in view of the desperate practical need to find a new moral authority that can remotivate the population.

Neglected aspects of the Russian cultural experience may also make a return to tradition more compatible with democracy than we have been inclined to think. There was more independent civil society and local organizational innovation in the late tsarist period than the largely state-centered historians of the Russian empire have acknowledged; a rich set of institutions of local self-government and community-based welfare institutions was set up in the 70 years before the Revolution. The most traditionalist ethnic Russians, the Old Believers, were also the most entrepreneurial. It seems appropriate that the newly reformed ministry of culture is now supporting the Cultural Fund in a restoration of the main Old Believer center at Bela Krinitsa, which was destroyed by Stalin in 1947. The writer Daniel Granin has attracted 6,000 members in a short space of time to his new Society of Charity in Leningrad, which promotes voluntary humanitarian services independent of the state.

We cannot know if the Russians will eventually find their post-Stalinist identity by combining a religious-tinged return to tradition (alternative 4) with a secular move forward to democracy (alternative 2). It would at best be a tortuous process—and one fraught with peril in the near term. For the Russians must simultaneously deal with a potentially dissolving empire as well as a demonstrably dead ideology. The current conventional wisdom could yet prove correct that the present course (alternative 3) will continue unless or until supplanted by a reactionary nationalism (alternative 1).

If we in America must therefore keep up our guard, we should at the same time raise our sights. For Russians in the information age are looking outward as well as inward for answers to unprecedented problems. We are the only nation by which they can measure themselves as they struggle to build democracy in a multi-ethnic continental context. Our paths will not converge, but we may find unexpected common horizons.

CONCLUSION OF MORNING BUSINESS

The PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

CLEAN AIR ACT AMENDMENTS OF 1989

The PRESIDENT pro tempore. Under the order, the Senate will resume consideration of Calendar Order No. 427, S. 1630, the Clean Air Act Amendments of 1989, which the clerk will report.

The assistant legislative clerk read as follows:

A bill (S. 1630) to amend the Clean Air Act to provide for attainment and maintenance of health protective national ambient air quality standards, and for other purposes.

The Senate resumed consideration of the bill.

Pending: Chafee amendment No. 1219, to control methyl chloroform pollution.

Mr. BAUCUS. Mr. President, we are now back on S. 1630, amendments to the Clean Air Act. The pending amendment is the amendment offered by the Senator from Rhode Island, Senator CHAFEE, an amendment to add methyl chloroform to the list of ozone depleting substances to be phased out along with specifically named chlorofluorocarbons.

Mr. President, the Senator from Rhode Island offered the amendment because, as he stated in his presentation before the Senate, methyl chloroform is a substance which depletes the stratospheric ozone layer. We have all read and know about the ozone hole that has developed over Antarctica. It has spread not only over Antarctica, but there is very sound scientific evidence that the stratospheric ozone layer is also being diminished over North America as well.

Why is it important that this amendment be before us today, an amendment which I have cosponsored, an amendment which the majority leader, Senator MITCHELL, has also cosponsored? It is important because the scientific evidence is clear that with depletion of the stratospheric ozone layer surrounding the Earth, a layer that is about 70,000 feet above us, there is more ultraviolet light that comes down from the Sun and strikes the Earth.

Now, why is that significant? That is significant because with increased ultraviolet light bombarding the Earth, there is increased incidence of various forms of skin cancer, many of which are melanomic, that is, the kind of cancer that can lead to death, and there is an equal incidence of nonmelanoma cancer, the kind of skin cancer that does not lead to death but the form of cancer that requires medical attention.

Increased ultraviolet light also causes increased cataracts, injury to the eye. There is also evidence that it begins to affect people's immunological system. The evidence is overwhelming. It is not disputed. The increased incidence of ultraviolet light that comes to Earth has this adverse health effect on humans and other species on this Earth.

In fact, the evidence is so overwhelming that many countries of the world agreed in a joint environmental agreement just a couple years ago called the Montreal Protocol to reduce the production of substances which cause the depletion of the stratospheric ozone layer. This is an agreement which phases out chlorofluorocarbons and halons. The amendment of the Senator from Rhode Island, would also phase out methyl chloroform and goes beyond the current provisions of protocol.

These substances, Mr. President, are very insidious. Why do I say that? I say that because they contain chlorine. Chlorine is the substance which, when it finally gets up to the stratospheric ozone layer 70,000 feet above us, begins to knock out these ozone molecules. CFC's have a 100-year life, so when one chlorine molecule knocks out an ozone molecule, it does not disintegrate; it does not dissolve; it just keeps on for another 100 years knocking out more ozone molecules. It is the chlorine that knocks out ozone molecules. Ozone depleting substances last a long, long time. If today there were a total ban on the emission of chlorofluorocarbons, on the emission of halons, and on the emission of methyl chloroform, the stratospheric ozone layer would continue to deplete. So it is all the more imperative to begin today to add methyl chloroform to these other substances so that we can begin to get the job done.

Now, why methyl chloroform? Why should that be added? Methyl choloroform should be added because its potential to deplete the ozone layer is as great as that of chlorofluorocarbons and halons. Once in the atmosphere, mythel choloform, has a life of 3 or 4 years. Its pernicious use makes it a significant ozone depletor. Therefore, if we can limit a substance which has tremendous effect, but which lasts only a few years, then there will be a significant effect in beginning to reduce the adverse effect of these ozone depleting substances.

Chlorofluorocarbons and halons and methyl chloroform, what are they? For what are they used? Chlorofluorocarbons are basically used in air-conditioning and refrigeration. We enjoy the benefits, certainly, of air-conditioning; we enjoy the benefits of refrigeration. Chlorofluorocarbons are also used in foam for insulation and packaging.

Many substitutes have been already developed. In fact, the largest producer of chlorofluorocarbons in our country, Du Pont, agreed on its own a year or two ago to phase out production of CFC's and also to begin to develop their own CFC substitutes. Other companies are also developing substitutes. Here, again, the scientific evidence is very clear. Substitutes can be developed and are being developed in place of CFC's which are used now for refrigeration, air-conditioning, and foam.

These substances are used for degreasing; they are a solvent; they are used to clean parts. They are also used in the electronics industry, in a cleansing process for manufacturers of semiconductors and other electronic equipment. Again, for these processes substitutes are being developed.

Mr. President, the bill also includes provisions to encourage the production of substitutes and a time-frame within which substitutes can be developed. Mr. President, the amendment of the Senator from Rhode Island to add methyl chloroform is a very important contribution to this bill. It is an amendment which should definitely be adopted.

Mr. President, I urge Senators to come to the floor to debate this amendment. We have to vote on this amendment. We have to move this bill. This is the first amendment on which there will be a vote. We have been on the Clean Air Act amendments now for some time, now into the second week, and there has not yet been a vote. I can understand that, because we have reconvened this year after a 2-month recess. There is a problem of inertia. It takes time for the Senate to get geared up. In addition, this is a very complex bill. The Clean Air Act is not an easy, simple act to immediately understand, and Senators and their staffs and various people interested in the bill around the country are beginning to learn what is in this bill. So it takes time. But I urge us to get on with it. Let us get moving. The amendment is now pending. It is before us. I am going to make every effort to try to get a vote on this amendment today. I urge Senators, therefore, to look at the amendment so they can be very well informed about the amendment so they can vote accordingly. When they do look at the amendment, I am quite confident they will realize that this is necessary. The amendment offered by the Senator from Rhode Island should be adopted.

Mr. President, I see the Senator from Minnesota [Mr. DURENBERGER] is on the floor. He has worked very, very diligently on this bill, particularly on a very important part of this bill, the air toxics provisions.

I want to say, Mr. President, to Sentors and the people of Minnesota how much I value the contributions of the Senator from Minnesota. I look forward to working with him as we get this bill agreed to by the Senate.

Mr. President, I thank the Chair. I yield the floor.

Mr. DURENBERGER addressed the Chair.

The PRESIDENT pro tempore. The Senator from Minnesota [Mr. DURENBERGER] is recognized.

Mr. DURENBERGER. Mr. President, I thank the Chair and I thank my colleague from Montana for his very generous comments. I am reminded of our many times in our first terms in the Senate together. We came in together in 1978. We went to his home State of Montana, which happens to be my mother's home State, I having been born in Great Falls—and we talked about health care.

I understand—and I think he would appreciate this a great deal—that just within the last day or so the senior Senator from Montana was honored by the American Hospital Association with an honorary membership, which is something they do because it is less expensive than others, I think. But the significance of the award goes way beyond the honorary membership in the organization because Senator BAUCUS was honored this year with the hospital association's recognition as the outstanding Senator with contributions to rural health care in America.

And those of us from West Virginia, Minnesota, and Montana can certainly appreciate the value of raising the consciousness level across this country of the inadequacy of reimbursement to rural hospitals and rural physicians.

The Senator from Montana and I spent a lot of time in the late seventies and early eighties in his beautiful State dealing with that issue. He has been appropriately recognized by those who should know best across this country for his contributions.

I wanted to mention that today, not apropos the subject we are on here, but I am reminded of the fact that while we gazed off in long distances in the so-called Big Sky country—and I guess you can see farther in Montana than you can see anywhere else in the world because you can get up higher to look at it, more than any place other than Nepal, I suppose—the realities of the clean air were much on the minds of the Senator from Montana at that time.

The problems being created—many of them outside his home State, some of them in his home State, but a variety of them outside of his home State—of atmospheric pollutants were much on his mind at that time.

So I think it is very fitting that he is playing a leadership role on this particular bill, and it is a pleasure for me, given that historic background, to make a small contribution here to our

colleagues' understanding of the most difficult subject.

I came to the floor late last week to talk about the kinds of pollutants that are being regulated under the Clean Air Act. Too many of us tend to think about the Clean Air Act in terms that we can relate to and our constituents can relate to, and are either relating to it as the senior Senator from West Virginia, the Presiding Officer of the Senate currently, would think about it in terms of not only the air in his State but the fact that there are many people in West Virginia to breathe that air because so many West Virginians are rooted in that State because the good Lord millions of years ago blessed that State, of all of the States of this country, with those rich fossils that became the fuel that generated so much of the energy in this world.

So I have heard the senior Senator from West Virginia speak on the environment not only from the quality of air that West Virginians breathe and the rest of Americans breathe, but also in the context of the way in which we use all of Mother Nature's blessings, not just the air but the fossils that became the fuel and the energy which, incidentally, happens to produce jobs in West Virginia.

So each of us comes to this subject from one or the other of thousands of ways to look at it. The most difficult part of this, and the one that I do not do a very good job at certainly, is dealing with the chemistry, dealing with the public health aspects, and dealing with how many people die because this is like the defense budget where you can see people die, or the potential for people dying. Many of the things we talk about here take a lifetime to become a reality.

When the atomic bomb was dropped on Nagasaki or Hiroshima, of course you can see an instant effect. When the Bhopal disaster occurred in India or a similar disaster occurred a few years ago in the State of West Virginia, people did not just drop like flies. When the Three Mile Island problem occurred on this little island in Pennsylvania, people did not drop like flies. The concerns are not easily visually expressed because in so many cases we are talking about long-range health effects for those who are exposed and who in an uninformed way are having their health destroyed.

That is what makes this a very difficult task. That is why it is hard to get 100 Senators to come to the floor to argue this bill to fruition.

So I am going to allot myself a portion of time this morning to try to explain some parts of this bill and some of the regulations of pollutants with which I may be more familiar than others.

There are two kinds of pollutants regulated under the Clean Air Act. One group, called criteria pollutants, are emitted in millions of tons and are air pollution problems across broad regions of the country. There are six criteria pollutants including sulfur dioxide, carbon monoxide, lead, ozone, nitrogen dioxide, and particulates.

EPA sets ambient air quality standards for each of these pollutants and states must take actions to assure that the standard is not exceeded. Issues related to criteria pollutants are generally referred to as the nonattainment problem reflecting the fact that many of our major urban areas have failed to attain Federal standards for healthy air quality.

The other kind of pollutants are called hazardous air pollutants or air toxics. They may be cancer-causing substances, but other health and environmental problems may also be caused by air toxics. My comments this afternoon will focus on routine emissions of these toxic air pollutants.

The list of hazardous substances emitted into the air is a long one. A few examples will serve to illustrate the nature of these pollutants.

The list includes benzene which is a potent cancer-causing substance. The cancer is leukemia. Gasoline fuels sold in the United States are on average 1.6 percent benzene and the percentage has been climbing over the last few years; 85 percent of human exposure to benzene comes from auto pollution.

A second example is mercury. Mercury is a metal found in trace amounts in coal and released to the air when the coal is burned. it is also released by incinerators burning garbage. It is used in latex paints to prevent mildew and as the paint weathers substantial amounts of mercury may be released into the air.

Ammonia is a chemical used in industry. In fact, it is emitted by major manufacturing plants in 30 different industrial groups. It is also a fertilizer and is distributed broadly in commerce for that purpose. Although low exposures to ammonia are safe, high exposures can burn the eyes, skin, and lung tissue. Ammonia emissions in 1987 were larger than the emissions of any other air toxic.

The fluid that dry cleaners use to clean our clothes is a suspected carcinogen released in large amounts. So is the solvent that hospitals use to sterilize equipment. The solvents used in many paints and consumer products are also carcinogenic.

A large portion of the air toxics problem is caused by pollutants which are formed by the combustion of fuels. Diesel soot from buses in cities is an example. Up to 860 cancer cases per year are caused by diesel emissions. Dioxin and furans are also examples of highly toxic combustion byproducts.

The list is long and touches every major industry from mining base metals to making high-technology electronics.

Major manufacturers are now required to report their air emissions of 350 of these substances. The data is summarized in a toxics release inventory by EPA which reported 2.7 billion pounds of air emissions in 1987. I have a chart here, Mr. President, which shows the air emissions as a portion of the total 22.5 billion pounds of toxic substances released into the environment in 1987.

It is thought that the 2.7 billion pounds reported on this inventory are only one-fifth of the actual total air emissions, since not all air toxics are covered and only major industries in the manufacturing sector of the economy must collect data; 10 billion pounds would be a better estimate counting other industry, cars and trucks and all the small sources.

The largest amounts of emissions were in Texas, 239 million pounds; Ohio, 173 million pounds; Louisiana, 138 million pounds; Tennessee, 135 million pounds; and Virginia, 132 million pounds.

Mr. President, I ask unanimous consent that a list of the 25 air toxics which are emitted in the largest quantities and a State-by-State listing of these emissions be printed in the RECORD at this point.

There being no objection, the lists were ordered to be printed in the RECORD, as follows:

THE 25 TRI CHEMICALS WITH THE LARGEST TOTAL AIR EMISSIONS, 1967

Total TRI release/transfer rank	Chemical name	Forms reporting TRI air emissions (number)	Total TRI air emissions		TRI air point source emissions		TRI air fugitive emissions	
			Pounds	Percent	Pounds	Percent	Pounds	Percent
7	Ammonia	2,015	318,028,225	11.98	263,255,197	14.53	54,773,028	6.49
9	Toluene	3,052	258,279,298	9.73	158,224,319	8.73	100,054,979	11.85
8	Methanol	1,870	196,038,365	7.38	150,553,896	8.31	45,484,469	5.39
11	Acetone	1,981	178,348,341	6.72	93,382,045	5.16	84,966,287	10.07
14	1,1,1-trichloroethane	2,915	151,233,854	5.70	67,675,070	3.74	83,558,784	9.90
13	Methyl ethyl ketone	2,019	145,810,523	5.49	107,662,482	5.94	38,148,041	4.52
12	Xylene (mixed isomers)	2,625	137,243,778	5.17	104,968,124	5.80	32,255,654	3.82

THE 25 TRI CHEMICALS WITH THE LARGEST TOTAL AIR EMISSIONS, 1967—Continued

Total TRI release/transfer rank	Chemical name	Forms reporting TRI air emissions (number)	Total TRI air emissions		TRI air point source emissions		TRI air fugitive emissions	
			Pounds	Percent	Pounds	Percent	Pounds	Percent
18	Carbon disulfide	76	136,167,830	5.13	132,832,896	7.33	3,334,932	.40
17	Dichloromethane	1,329	118,439,343	4.46	76,552,582	4.23	41,886,781	4.96

Mr. DURENBERGER. Mr. President, although these air toxics can cause many adverse health effects, cancer is the principal concern; 25 percent of all Americans die of cancer. There are 1 million new cancer cases reported each year, and 470,000 fatalities from this disease. Most of those deaths are caused by smoking and poor diet. A small, but significant percentage, of the cancers are caused by exposure to environmental pollutants.

Human exposure to toxic substances is principally the result of air pollution. We also find contaminants in drinking water and food, but an EPA study of 18 widely dispersed pollutants

found that most of the human exposure for 13 resulted from air pollution.

In a 1989 study examining the potential cancer-causing effects of exposure to air toxics, EPA estimated a national annual cancer incidence of approximately 2,700 cases as the result of exposure to about 30 toxic air pollutants. This would mean that 190,000 of the Americans now alive might be expected to contract cancer from exposure to these 30 air toxics.

In 1987 the South Coast Air Quality Management District—that is the local air pollution agency for Southern California—released an independent study on ambient concentrations of approximately 20 air toxics in the Los Angeles area. This study found that EPA's estimate of the cancer effects of air toxics may be low, both because it underestimates exposure and because it underestimates risk for specific pollutants.

Based on the California data and extrapolating to the whole Nation, cancer incidence attributable to toxic air pollution may be projected to be as high as 500,000 fatal cases for those Americans now alive.

Both the EPA and California estimates are based on studies of only a small number of the pollutants. The EPA estimate reflects a series of studies for 15 to 30 pollutants. The South Coast Air Quality Management District looked at 20 pollutants—not including products of combustion like dioxins and furans which may be among the most potent threats.

By way of comparison, the air toxics legislation before the Senate lists 200 substances for control. OSHA has regulated about 500 substances in the workplace. And a handful of States with active air toxics programs have set standards for 708 different pollutants. An estimate of cancer risk based on exposure to only 20 or 30 substances certainly understates the threat that this form of air pollution presents to public health.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a table from an EPA publication entitled "Cancer Risk from Outdoor Exposure to Air Toxics" which lists the pollutants and estimated cancer cases for the 30 pollutants which EPA reviewed. I also ask unanimous consent that a table summarizing the South Coast study be printed in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

SUMMARY OF ESTIMATED NATIONWIDE ANNUAL CANCER CASES BY POLLUTANT

Pollutant	EPA classification	Estimated annual cancer cases	
		Range estimate	Best estimate
1. Acrylonitrile	B1	13–14	13
2. Arsenic	A	8–68	68
3. Asbestos	A	82–126	88
4. Benzene	A	143–181	181
5. 1,3–Butadiene	B2	244–266	266
6. Cadmium	B1	6–16	10
7. Carbon tetrachloride	B2	31–47	41
8. Chloroform	B2	29–115	115
9. Chromium (hexavalent)	A	113–283	147–257
10. Coke Oven Emissions	A	7–11	7
11. Dioxin	B2	2–125	2–111
12. Ethylene dibromide	B2	25–68	68
13. Ethylene dichloride	B2	16–45	45
14. Ethylene oxide	B1–B2	5–6	6
15. Formaldehyde	B1	124–240	124
16. Gasoline vapors	B2	17–76	17–76
17. Hexachlorobutadiene	C	9	9
18. Hydrazine	B2	6	6
19. Methylene chloride	B2	3–5	5
20. Perchloroethylene	B2	6–13	6

Nickel	26	6	([1])
Total	15,500	11,320	

[1] Basin-specific data not available
[2] No data available.

Mr. DURENBERGER. Mr. President, the overall number of cancer cases is only one dimension of the problem. Another dimension of the problem is that the risk is not spread evenly. Those living near large chemical plants or in concentrated urban corridors face much higher risks than most Americans. So, it is also an equity issue.

EPA has examined cancer risks at more than 2,600 industrial facilities across the United States as part of its effort to promulgate air toxics regulations. At more than one-quarter of these facilities, toxic emissions produced cancer risks greater than 1 in 10,000 for people living nearest these plants. That is 1 additional cancer for each 10,000 persons exposed to emissions from these plants at the highest levels.

Mr. President, I ask unanimous consent that a table reporting cancer risk for emissions from various industrial plants which EPA has surveyed be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Pollutant	Number of point sources in risk range [1]					
	10^{-1}	10^{-2}	10^{-3}	10^{-4}	10^{-5}	$<10^{-5}$
Acrylonitrile	0	0	3	10	8	5
Arsenic	0	0	6	17	28	33
Asbestos	0	0	5	26	28	270
Benzene	0	0	31	109	24	64
Butadiene	1	34	13	8	2	1
Cadmium	0	0	2	19	77	268
Carbon tetrachloride	0	0	6	15	17	15
Chloroform	0	1	45	49	9	32
Chromium	0	0	2	9	14	394
Coke ovens	0	13	25	5	0	0
Epichlorohydrin	0	0	0	0	0	19
Ethylene dichloride	0	1	7	9	2	1
Ethylene oxide	0	0	1	94	195	4
Methylene chloride	0	0	7	40	114	17
Perchloroethylene	0	0	0	0	340	18
Trichloroethylene	0	0	0	0	4	38
Total	1	49	159	410	853	1,179
Cumulative percentage	0	2	8	23	56	100

[1] Less than 1 percent of the total number of point sources emiting these pollutants are shown. The majority of the point sources not shown would rank in the $<10^{-5}$ range.

Total number of sources assessed: 2,651.

Mr. DURENBERGER. Mr. President, the 1987 south coast study which I cited a moment ago estimates that cancer risks in parts of the Los Angeles area for the mix of air pollutants from industrial sources, highway fuels, and small business may exceed 1 in 1,000. These are extraordinarily high risks. Based on the actual ambient concentrations recorded as part of the study, cancer deaths from air toxics in the Los Angeles metropolitian area alone were projected at 222 per year.

There are two aspects of the high-risk problem. Some people are exposed to concentrated emissions from large industrial or commercial facilities. Others living in concentrated urban areas breathe a complex soup of air pollutants emitted by a large number of sources with additive risks much higher than the risk faced by the average American.

OMB Director Richard Darman was quoted in the press last summer as saying that the chance of dying from exposure to air toxics is about the same as the chance of being hit by lightning. And therefore, we should take the money that would be spent implementing this program and spend it buying every American a pair of rubber soled shoes. I don't know if that is an accurate quote or not. But it is certainly not an accurate representation of the air toxics problem.

Lightning is a random event spreading a small risk of death approximately evenly across the whole population. Toxic air pollution from industrial sources is, on the other hand, not random. The risks are unevenly distributed. Those living near large chemical and manufacturing plants or

in highly developed urban areas face much larger risks than the general population.

It is not just a question of incidence—small risks widely distributed. It is also a question of equity. Those Americans living near these big plants and facing these high risks of toxic air pollution are like lightning rods in our chemical society.

Should some Americans face high exposure to cancer-causing substances as the price of an industrialized society? The technology to substantially reduce these exposures is available. As a nation we can afford to put that pollution control technology in place.

Many Americans need the measure of protection provided by this bill. They can't afford to move to a better neighborhood to avoid the plant or the dump or that oxymoron of urban life, the expressway. It is our responsibility to assure all Americans some measure of protection from the high cancer risk of toxic air pollution.

Mr. President, cancer risk is not the only air toxics problem. Only a third to a half of these chemicals are suspected of causing cancer. The rest are on the list because of other adverse effects: birth defects, genetic mutation, reproductive disfunction, neurotoxicity, damage to internal organs—the kidneys and the liver, principally—accumulation in the tissue of fish and birds.

In fact, many of these pollutants have a health effect which has already been discussed at some length in this debate—they are ozone precursors. They are volatile organic compounds which combine with nitrogen oxides in the atmosphere to form smog. The air toxics provisions of title III in this bill would likely be justified from the standpoint of ozone controls alone, not counting their role in reducing toxic air pollution.

Air pollution has also become a principal source of water pollution. Eighty percent of the most serious toxic pollution including PCB's, mercury and pesticides in Lake Superior and 50 percent in Lake Michigan is fallout from the air and not from sewage or industrial discharges to the lakes or the watershed.

Mercury has recently become a significant water pollutant in the Great Lakes region. Mercury bioaccumulates in the tissue of fish and may affect organisms all up the food chain including waterfowl and man. All of the lakes in the State of Michigan are posted with warnings. Pregnant women and children should not eat the fish at all. Healthy adults should not have more than one meal of fish per week.

Senator CHAFEE mentioned the widespread problem of mercury pollution in his comments last week. I have here a map showing the 20 States in the Union which have posted a lake or river for mercury contamination.

Mr. President, I ask unanimous consent that a list of these 20 States be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

STATES ISSUING HEALTH ADVISORIES FOR MERCURY CONTAMINATION

Alaska, California, Colorado, Connecticut, Oregon, Delaware, Florida, Georgia, Massachusetts, Michigan, Minnesota, Montana, Nevada, New Mexico, New York, North Carolina, South Carolina, Tennessee, Texas, Virginia, Wisconsin.

Mr. DURENBERGER. Mr. President, last fall the Environment Committee held a hearing on the toxic air pollution problem. One of the most moving statements I have ever heard before the Environment Committee occurred when one of the witnesses addressed the mercury contamination problem. The witness was Robert Miller who is director of air quality for the State of Michigan. This is what he had to say:

I am here today to talk to you about one of the most important environmental issues confronting the Great Lakes Region, and, I hope I'll be able to convince you, [one of] the [most] important environmental issues facing the nation.

As I was trying to clear my mind last night of what faced me this morning, I was forcing my mind to think about my trip up north that I have planned in two weeks. As I was doing that, an image came to mind that sort of put in focus the message I want to give you this morning. And that was the image of a father and son going north on a fishing trip sitting around the camp fire preparing the fish that they caught during the day, but having to be worried whether eating those fish was going to affect their health.

The Great Lakes, like a pack of cigarettes, contain, in all of the States, a warning, just like the Surgeon General's warning, that says "Caution: this product can be hazardous to your health."

And it is not just the Great Lakes. We now have a fish advisory for every lake in the State of Michigan against eating the fish or moderating your consumption of fish because of the toxics that are in them. Research indicates that air toxics deposition contributes from 46 to 99 percent of the lead, up to 90 percent of the PCB's and up to 97 percent of the DDT entering the Great Lakes.

Over the past couple of years, I have been asked many times why I am so interested in this air toxics issue. Mr. Miller said it better than I ever could.

Mr. President, I ask unanimous consent that a June 29, 1989, article from the New York Times reporting on toxic pollution in the Great Lakes be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 29, 1989]

TOXIC RISK OF FISH IN LAKE MICHIGAN IS ASSESSED

(By William E. Schmidt)

CHICAGO, June 28.—The contamination of some Lake Michigan sport fish by toxic chemicals poses an increased risk of cancer among people who eat them, according to a report that will be released Thursday by the nation's largest conservation organization.

The release of the report by the National Wildlife Federation, at the peak of the summer fishing season, has stirred controversy—both because of the health questions and the possible economic impact—in the Great Lakes region, where sport fishing is now a $4 billion industry.

State public health and natural resource officials who have seen drafts of the wildlife federation's advisory say they believe it will only lead to further public confusion over the question of toxic contamination in fish. Dr. John P. Giesy, a researcher at Michigan State University's Center for Environmental Toxicology, said the federation's project exaggerates the risk of cancer in humans as a result of eating Great Lakes fish, a risk he describes as low.

Researchers who prepared the report studied only Lake Michigan because it is the most heavily industrialized of the Great Lakes, and because more data is available on it than on the other lakes.

WARNINGS TERMED OUTDATED

In the report, the National Wildlife Federation argues that the problem of toxic pollution in Lake Michigan fish is "more serious than has previously been reported," and that public health advisories on fish consumption issued since the 1970's by states in the Great Lakes Basin do not go far enough to protect the health of consumers.

"We recommend that people should restrict their consumption of Lake Michigan sport fish even more than is currently recommended by public health agencies," the federation advises in its booklet, which is the result of a two-year study. The National Wildlife Federation claims 5.8 million members nationally, of whom about 600,000 are in the Great Lakes states.

The report was prepared by Jeffery A. Foran, a biologist, and Barbara S. Glenn, a toxicologist, both with the federation's Great Lakes Natural Resource Center in Ann Arbor, Mich.

The federation's report calculates the relative risk of cancer that accrues as the result of eating, over a lifetime, varying quantities of certain popular sport fish, including lake and brown trout, chinook and coho salmon, walleye and yellow perch, that have been found to be contaminated by four toxic chemicals persistent in Lake Michigan and the rest of the Great Lakes Basin.

HOW RISKS ARE ASSESSED

Among other things, the report suggests that the risk of cancer is significantly higher from consuming contaminated Great Lakes fish than it is of eating lobster or flounder from contaminated waters in Quincy Bay, Mass., or salmon or Pacific cod from Puget Sound, Wash.

The chemicals, polychlorinated biphenyls, or PCBs, and the pesticides DDT, dieldrin and chlordane, have been associated in laboratory experiments on animals with a range of adverse health effects, including cancer. But recent surveys have failed to find a link between DDT and human cancers.

In drawing its conclusions, the wildlife federation said it used a statistical model of

risk assessment adapted from the Environmental Protection Agency. In developing such risk assessments, researchers expose thousands of mice and rats to doses of chemicals and monitor them to determine rates of cancer. They then employ standard mathematical models to extrapolate risks to humans.

For example, the federation calculates that a person who eats just seven meals over a lifetime of lake trout measuring between 10 and 20 inches in length is running a 1 in 100,000 risk of getting cancer, a level of risk commonly used by government agencies in setting pollution controls.

HOW TO CUT RISKS

By these calculations, the risk level increases along with the amount of fish consumed. A person who eats as many as 70 meals of lake trout over his lifetime runs a much higher risk, of 1 in 10,000, the federation concludes.

Depending on which example is used, that means that of 100,000 people, or 10,000 people, who eat that much fish over their lifetime, one person may develop cancer in addition to those who would have developed cancer even if they had not eaten the fish.

Mark Van Putten, the director of the federation's Great Lakes Natural Resource Center, said the report is not intended to stop people from fishing.

COMMERCIAL FISH STANDARDS

"But people need to know how to reduce their risk of cancer from eating the fish they catch," said Mr. Van Putten. "And they also need to get mad, so government agencies and industry finally do something to clean up the toxic chemicals that are still being loaded into the lakes."

The federation says it is a goal of the advisory to force tougher action against toxic contaminants.

The wildlife federation advisory does not address the Great Lakes $300 million commercial fishing industry, which is regulated by the Food and Drug Administration. But it does describe as "outdated" the standards the agency uses for determining whether commercial fish is contaminated.

However, an official with the Federal agency said most of the fish harvested commercially in Lake Michigan are whitefish, which do not have significant levels of chemical contamination.

Asa Wright of the Michigan Department of Natural Resources said he believes that existing advisories about fish consumption are working. "People want to know, basically, is the fish safe to eat or not?" he said. "And that is what we are trying to tell them."

In general, state advisories for Lake Michigan recommend that people not eat bottom-feeders like carp and catfish, and larger fish of certain species, such as lake trout, chinook and brown trout. Beyond that, people are advised to reduce their consumption to no more than one meal of such fish per week.

The state warnings, like the wildlife federation's, urge that nursing mothers, pregnant women, women who expect to bear children and children under the age of 15 not eat any of the fish listed in the advisories.

Although the levels of toxic chemicals have dropped from their peak in earlier years, there has been a "general leveling off of the rate of decline," says Valdas V. Adamkus, the regional administrator in Chicago for the E.P.A.

Recent studies have detected an increase in certain birth defects, including crossed bills and club feet, among some fish-eating birds, including terns and cormorants. However, there is little evidence of the effect that such chemicals may have on the health of humans who eat contaminated fish.

Mr. DURENBERGER. Mr. President, these toxic air pollutants are emitted by many different sources of human activity. I have here a chart which shows various of the source categories and the number of cancer cases attributable to each based on the EPA study of 30 pollutants which I previously discussed. This chart indicates that the largest portion, that is about 55 percent, of the cancers are caused by emissions from motor vehicles—cars and trucks.

So-called area sources, generally small commercial facilities like service stations, dry cleaners, and pesticide applications cause another 25 percent.

And the final 20 percent of the 2,700 cancer cases are attributed to industrial point sources including chemical plants, oil refineries, utility boilers, coke ovens, and other manufacturing facilities.

I believe this chart may seriously underestimate the contribution of the large industries. Remember that only 30 pollutants were considered in the studies which this data summarizes. Emissions from motor vehicles have been carefully analyzed, but the coverage of industrial emissions is much less complete. EPA's studies cover less than 1 percent of the industrial plants emitting these substances and don't take into account literally hundreds of other toxic pollutants. The industrial contribution to the total cancer toll is likely much greater than this chart would indicate.

Mr. President, I ask unanimous consent that a table containing the data from which this chart was prepared be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

SUMMARY OF ESTIMATED CANCER CASES BASED ON MODELED AMBIENT CONCENTRATIONS, BY SOURCE CATEGORY

Source category	Annual cancer cases	Percent of total	Principal pollutants
1. Motor vehicles	769–1,461	(53–57)	PIC, 1,3-butadiene.
2. Secondary formaldehyde	106–154	(7.4–6.1)	Formaldehyde.
3. Electroplating	120	(8.3–4.7)	Hexavalent chromium.
4. TSDFs	48–140	(3.3–5.5)	Dioxin.
5. Woodsmoke	89	(6.2–3.5)	PIC.
6. Asbestos, Demolition	81	(5.6–3.2)	Asbestos.
7. Unspecified (point)	25–90	(1.7–3.5)	Arsenic, formaldehyde.
8. Cooling towers	0.01–111	(0.0–4.4)	Hexavalent chromium.
9. Gasoline marketing	22–75	(1.5–2.9)	Gasoline vapors, benzene.
10. Solvent use degreasing	22–36	(1.5–1.4)	Perchloroethylene, methylene chloride.
11. PVC/EDC/vinyl chloride	19	(1.3–0.7)	Vinyl chloride.
12. Iron and steel	17	(1.2–0.7)	Coke oven emissions, benzene, PIC.
13. Unspecified (area)	14	(1.0–0.6)	Carbon tetrachloride.
14. POTWs	13	(0.9–0.5)	Ethylene dibromide, vinyl chloride.
15. Sewage sludge incinerators	13	(0.9–0.5)	Cadmium, vinyl chloride.
16. Coal and oil combustion	11–15	(0.8–0.6)	Arsenic.
17. Municipal waste combustors	2–20	(0.1–0.8)	Dioxin.
18. Petroleum Refineries	8–14	(0.6–0.5)	Gasoline vapors, formaldehyde.
19. 1,3-butadiene production	10	(0.7–0.4)	1,3-butadiene.
20. Styrene-butadiene rubber produciton	10	(0.7–0.4)	1,3-butadiene.
21. Smelters	3–4	(0.2–0.2)	Formaldehyde.
22. Commercial sterilization/hospitals	3–4	(0.2–0.2)	Ethylene oxide.
23. Pesticide production/usage	3.4	(0.2–0.1)	Benzene.
24. Drycleaning	3	(0.2–0.1)	Perchloroethylene.
25. Chemicalm manufacturing (unspecified)	2.3	(0.2–0.09)	Acylonitrile, formaldehyde.
26. Pulp and paper manufacturing	2	(0.1–0.08)	Chloroform.
27. Drinking water	2	(0.1–0.08)	Chloroform.
28. Ethylene dibromide production	1.6	(0.1–0.06)	Ethylene dibromide.
29. Polybutadiene production	1.2	(0.08–0.05)	1,3-butadiene.
30. Ethylene oxide production	1.2	(0.08–0.05)	Ethylene oxide.
31. Ethylene dichloride production	1.2	(0.08–0.05)	Ethylene dichloride, trichloroethylene.
32. Waste oil burning	0.6	(0.04–0.02)	Arsenic.
33. Chlorohydrocarbon prod.	0.6	(0.04–0.02)	Trichloroethylene.
34. Asbestos manufacturing	0.5	(0.04–0.02)	Asbestos.
35. Asbestos renovation	0.4	(0.03–0.02)	Asbestos.
36. Glass manufacturing	0.4	(0.03–0.02)	Arsenic.
37. Hazardous waste combustors	0.3	(0.02–0.01)	Hexavalent chromium.
38. Paint stripping	0.3	(0.02–0.01)	Trichloroethylene.
39. Pharmaceutical manufacturing	0.2–0.4	(0.01–0.02)	Chloroform.
40. Benzene fugitives	0.2	(0.01–0.01)	Benzene.

SUMMARY OF ESTIMATED CANCER CASES BASED ON MODELED AMBIENT CONCENTRATIONS, BY SOURCE CATEGORY—Continued

Source category	Annual cancer cases	Percent of total	Principal pollutants
41. Nitrile elastomer production	0.16	(<0.01)	Acrylonitrile.
42. ABS/SAN production	0.13	(<0.01)	Acrylonitrile.
43. Asbestos fabricating	0.13	(<0.01)	Asbestos.
44. Other	13	(0.9–0.5)	Radon.
Total	1,440–2,545		

Mr. DURENBERGER. Mr. President, section 112 of the Clean Air Act adopted in 1970 requires EPA to list each hazardous air pollutant which is likely to cause an increase in death or serious illness. Within a year after listing EPA is to establish emissions standards which would apply to sources of the listed pollutant providing an ample margin of safety to protect public health.

In the 18 years of administering section 112, EPA has listed only eight pollutants: mercury, beryllium, asbestos, vinyl chloride, benzene, radionuclides, inorganic arsenic and coke oven emissions. No standard has been promulgated for coke oven emissions and for many of the other pollutants only a few of the source categories emitting the substance are actually regulated.

For instance, mercury is a listed substance, but mercury emissions from powerplant boilers exempt from standards are contributing to high mercury levels which cause lakes to be posted with health warnings in 20 States. Coal combustion contributes about one-quarter of all mercury emissions.

The problem under current law is a disagreement about the regulation of the cancer-causing pollutants. The law says that EPA is to provide an ample margin of safety to protect public health. Safety is the bottom line. But Government policy since the 1950's has been based on the principle that there is no safe level of exposure to a carcinogen. Taken together the two principles imply zero emissions of cancer-causing agents. That would be the only way to assure safety. But in an industrial society zero-emissions is a practical impossibility. This is the dilemma—in the very language of the law—which has paralyzed EPA for 20 years.

Over that period EPA has tried in a variety of ways to solve this dilemma by factoring feasibility and cost considerations into the very stringent health standard for hazardous air pollutants in the current Clean Air Act. They have been sued and lost on each occasion.

There is now a general consensus that section 112 needs revision. Industry has for many years opposed changes to the air toxics provisions of the Clean Air Act. However, in 1989 witnesses for the Chemical Manufacturers Association testifying before the Congress on behalf of a large coalition of industrial concerns finally acknowledged that the law does not protect public health and needs amendment.

The Environment and Public Works Committee has been working on amendments to section 112 since 1984. That work was started by the distinguished manager of the bill, Senator BAUCUS, whose amendment to the bill reported by the committee in the 98th Congress laid the foundation for the proposals we are considering today.

In 1987, the committee reported more extensive amendments to section 112 based on legislation which I introduced along with Senator LAUTENBERG and other members of the committee. As we prepared for possible floor debate in late 1988, committee members engaged in a series of discussions with the then-administrator of the Environmental Protection Agency, Mr. Lee Thomas, to reach a compromise. Although complete agreement was not reached, Mr. Thomas did release a proposed air toxics bill from EPA. We also made significant modifications in the bill that we had reported to close the gap between the committee and the executive branch.

At the opening of the 101st Congress, Senator BAUCUS asked Senator LAUTENBERG, Senator BREAUX, and I to jointly develop a bill for introduction. We did, to the surprise of many. The compromise bill, S. 816, which the three of us produced was sponsored on a bipartisan basis by 13 members of the committee and has been reported without significant change for consideration by the full Senate.

Subsequently, President Bush prepared and submitted legislation which in its structure and most of its details is very similar to the program which the committee has developed. The President's bill has contributed greatly to forming a consensus on this difficult subject. I very much appreciate the commitment which the President and the people in his administration have made to resolve this difficult problem.

I want to emphasize the long effort to accommodate views and concerns in the preparation of this bill. Dozens of changes have been made over the 3 years that this specific proposal has been under consideration here in the Senate.

This bill has not sprung from the well of environmental extremism as some would assert. That charge is very surprising to me. The original Clean Air Act authored by Senator Muskie and reported to the Senate in 1970 prohibited any emissions of the hazardous air pollutants listed under section 112. Zero emissions. The Congress ultimately adopted a standard requiring an ample margin of safety to protect public health implying zero emissions of cancer-causing substances.

That's current law, the policy adopted by the 91st Congress 20 years ago. It is a very stringent standard for the protection of public health. Some might even call it environmental extremism. But I suspect that most Americans would still endorse the language of section 112 as the appropriate goal for clean air—an ample margin of safety to protect public health.

It is not a program, however. Section 112, whatever its appeal as a plain statement of the public's expectations, has not worked as a program because it asks more than any administrator of EPA has ever been willing to require.

So, we're in the business of moderating current law. It is a moderate program that we propose. As I hope to show today, the program this bill would establish builds on 20 years of experience in regulating toxic substances in various media. It makes no great departure from accepted practices and principles.

It is comprehensive. Measured by the meager record of current law, it will have a large impact.

But it is also reasonable. Measured by the impossible expectations and schedules of the current statute, it provides a program which is deliberate, which reflects the limited capacity of the Government and the regulated community to reduce the threat to public health presented by hazardous air pollutants.

MACT PROGRAM

The new air toxics program required by S. 1630 will have two phases. In the first phase EPA is to require major sources of these air toxics to install best available pollution control technology. There is also a program to control the smaller area sources. In a second phase, the bill imposes more stringent standards, if they are necessary to protect public health.

The bill establishes a list of 191 air pollutants and a mandatory schedule for issuing emissions standards for the major sources of these pollutants. The standards are to be based on the maximum reduction in emissions which can be achieved by application of best

available control technology taking cost into account.

These technology standards should achieve emissions reductions that average between 90 and 95 percent from current levels. Major sources of air toxics, like chemical plants, oil refineries, steel plants, and wastewater treatment plants, will be grouped into industrial categories. Over a 10-year period EPA will set standards for 200–250 categories of sources. After the standard is published for an industrial group, sources in the category will have 3 years to comply.

Mr. President, this approach to regulation of toxic pollutants is not without precedent. A program very similar to the one I have just described has already been implemented under the Clean Water Act for toxic discharges to surface waters.

Toxic pollutants under the 1972 Clean Water Act were to be regulated using the same authorities that had been made available to regulate hazardous air pollutants under the Clean Air Act in 1970. EPA was to publish a list of toxic pollutants within 90 days and within a year promulgate effluent standards that would provide an ample margin of safety to protect the most affected aquatic organisms. Thus, the original authority to regulate toxic discharges to surface waters was very similar to the current structure of section 112 of the Clean Air Act.

And like the Clean Air Act toxics provisions, it didn't work. During the 3-year period following passage of the 1972 Clean Water Act, EPA promulgated standards for only six toxic pollutants. In the mid-1970's the Environmental Defense Fund and the Natural Resources Defense Council brought suit against the Agency for failure to list more toxics and to promulgate standards as mandated by the act. In June 1976, EPA and the plaintiffs entered into a consent decree that established a new formula for the development of effluent standards for toxic water pollutants.

This agreement created a list of 129 priority pollutants and required EPA to promulgate effluent guidelines based on best available control technology for each pollutant and each industrial category. There were 14,000 dischargers divided into 21 industrial categories and 399 subcategories subject to these toxics standards.

When it amended the Clean Water Act in 1977, Congress incorporated the basic provisions of the consent decree into the statute. The 129 priority pollutants were listed by law. EPA was required to issue BAT standards for each industrial category. The program to control toxic effluent through categorical standards based on the best available control technology for major industrial categories is now in place.

The provisions of S. 1630, the bill now before the Senate, requiring the development of standards for many industrial categories of toxic air emissions are very similar to those which have already been implemented under the Clean Water Program. The definitions are parallel. The regulated entities are likely to be the same industrial plants. The list of pollutants is of approximately the same length. And the period of time to implement the program is based on the clean water experience.

Considering that we have been through it all once before, the Senate should be very comfortable with the standard-setting program which this bill mandates for air toxics in the first phase.

AREA SOURCE PROGRAM

The bill contains a separate program to control the smaller area sources of these pollutants. Area sources include dry cleaners, wood stoves, gas stations and cars, buses, and trucks. EPA is to develop a national area source strategy which will reduce cancer risks from these pollutants by 75 percent, the goal the President announced last summer.

RISK ASSESSMENT

Mr. President, the next area that I want to talk about, before I get into what has become the somewhat controversial second phase of the air toxic program, I am going to describe the risk assessment process which the EPA uses to determine the health effects of these pollutants. This discussion, if you thought the rest of this was technical, and we have not quite emptied the galleries, but if you thought the rest of this was technical, this is the part that really gets technical, and if you have something else to read it might be a good time to do it. I know the current occupant of the Chair will not do that. He is going to obviously pay attention to all of this. But it is kind of important because the experts up in the galleries that are concentrating on what we are doing here know that this risk assessment is sort of a foundation stone to a very thorough debate on the health protection aspects of this program.

We have a chart that shows how technical this looks.

Here, for all of you that love to look at charts—this is not quite Rube Goldberg—those of you who have the ability to concentrate on this process can follow the general outline of the risk assessment methodology. As we begin with the basic chemical, we follow it through its sources which are the pathway to exposures in air, surface water, and ground water. We follow our lab experiments. This is where little animals and so forth get involved in the process. We do not want to show little animals—it is not popular—so we show test tubes here. But this is the lab experiment, the epidemiological studies which result in dose and response data on this side.

Out of the examination of sources of chemical pollution, we follow the exposure assessments where we model the fate in the transport of the chemical, we monitor it, we come up with the ambient pollution concentrations, and we determine the estimated health risk to that population. Over on the lab side, we do potency assessment, we identify the hazards with some specificity, we get the input from our epidemiological studies, and we do quantitative potency estimates. Again these combine here with people in estimating the health risk.

That is up there to give a general picture of what risk assessment is all about.

For most of the adverse health effects caused by these pollutants—effects like liver and kidney damage, bronchial irritation, nerve damage, and skin or eye irritation—there are levels of exposure below which no adverse effect will occur. There is a safety threshold that can be identified. These levels are generally determined by exposing laboratory animals, sometimes humans, for the milder effects, to various doses of a substance to determine the safe level of exposure, the no effects level.

Public health standards for exposure are then set at that level or below, with a margin of safety often included to protect especially sensitive populations, like children and those with preexisting illness.

For cancer-causing substances, which are also called carcinogens, Government policy has long been based on the principle that there is no safe level of exposure. There is no threshold for adverse effects. This policy principle was established by HEW Secretary Arthur Fleming in the mid-1950's in testimony before the Congress. It is based on the presumed cancer mechanism where one aberrant cell, triggered by exposure to one molecule of a cancer-causing substance, can develop into a tumor.

Even though there is no safe level of exposure, the chances of contracting a cancer from exposure to a particular substance are not the same for all levels of exposure. The chances of contracting a cancer increase as the level of exposure and the length of time that a person is exposed increase. And some carcinogens are more potent than others—that is, smaller exposures are more likely to produce tumors.

The relationship between the level of exposure and the likelihood of contracting a cancer for any particular substance is expressed as a probability, like 1 in 10 or 1 in 100, or 1 in 1,000,000, and is determined by exposing laboratory animals to the substance at various levels. The experi-

mental animal exposures are high compared to those which would be experienced by the human population.

These high dose animal exposures are then extrapolated to low dose human exposures using a statistical model taking into account the type of exposure and the appropriate physical characteristics of the populations. In some cases, human data can be used to determine cancer risk probabilities where workers have been exposed to a high level of a substance and the effect is pronounced.

The probability of contracting a cancer is usually stated as the excess number of cancers which would occur over a lifetime as the result of exposure to a substance at a particular level. Each person has about a 25 in 100 chance of contracting cancer currently. If, in addition to the background causes, a person is exposed for a lifetime to an air pollutant with a 1 in 100 risk, then the chances of getting cancer increase to 26 in 100. Emissions from coke ovens located at steel plants are associated with cancer risks in the 1 in 100 range.

Public health agencies like EPA are engaged in a process of determining which substances are carcinogens and the level of risk associated with various levels of exposure. Substances which have demonstrated cancer-causing potential are generally classified as "known," "probable" or "possible" human carcinogens. Mr. President, I ask that a list of the substances which have been classified as carcinogens by EPA be printed at this point in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

UNIT RISK FACTORS USED TO COMPARE CANCER RISK

Pollutant	EPA Classification *	Unit risk factors $(\mu g/m3)^{-1}$	Reference
1. Acetaldehyde	B2	$2.2X10^{-6}$	1

69. Pentachloronitrobenzene	C	$7.3X10^{-5}$	3
70. Perchloroethylene	B2	$5.8X10^{-7}$	2
71. PCB's	B2	$1.2X10^{-3}$	3
72. Pronamide	C	$4.6X10^{-6}$	3
73. Propylene oxide	B2	$3.7X10^{-6}$	2
74. Reserpine	B2	$3.0X10^{-3}$	3
75. Styrene	B2	$5.7X10^{-7}$	1
76. 1,1,2,2-tetrachloroethane	C	$5.8X10^{-5}$	3
77. Thiourea	B2	$5.5X10^{-4}$	3
78. Toxaphene	B2	$3.2X10^{-3}$	3
79. 1,1,2-Trichloroethane	C	$1.6X10^{-5}$	3
80. Trichloroethylene	B2	$1.7X10^{-6}$	2
81. 2,4,6-Trichlorophenol	B2	$5.7X10^{-6}$	3
82. Vinyl chloride	A	$4.1X10^{-6}$	[c] 2
83. Vinylidene chloride	C	$5.0X10^{-5}$	1

* For a discussion of how EPA evaluates suspect carcinogens and more information on these classifications, refer to "Guidelines for Carcinogen Risk Assessment" (51 Federal Register 33992). The EPA classifications used in this report are: A=proven human carcinogen. B=probable human carcinogen (B1 indicates limited evidence from human studies; B2 indicates sufficient evidence from animal studies but inadequate evidence from human studies). C=possible human carcinogen.

[b] Based on inhalation study. Oral study suggests a unit risk factor of $3.3X10^{-3}$.

[c] Oral studies suggest a unit risk factor of $4.2X10^{-5}$. U.S. Environmental Protection Agency, Office of Research and Development, Office of Health and Environmental Assessment. Health effects assessment summary tables, first quarter fiscal year 1989. January 1989.

Mr. DURENBERGER. Mr. President, the risk is stated in terms of probabilities, generally, as the number of additional individuals per 100, 1,000, 10,000, 100,000 or 1,000,000 which would contract a cancer as the result of exposure to a substance at a particular concentration in the air over a whole lifetime of exposure—that is, 24 hours per day for 70 years.

A 1-in-100 chance may also be stated as 1×10^{-2} (1 times 10 to the minus 2) or just 10^{2} (10 to the minus 2). A 1-in-1,000,000 chance would also be stated as 1×10^{-6} (1 times 10 to the minus 6) or just 10−6 (10 to the minus 6). Risks don't always fall at the whole number level. One might see a number like "7.2×10^{-5}" (7.2 times 10 to the minus 5) which means that for each 100,000 persons exposed to the substance at precisely that concentration over a 70-year lifetime, 7.2 persons would be expected to contract a cancer.

In the case of point sources like industrial plants, the persons living closest to the plant will have the highest risks because the concentration of the substance will be greatest near the fenceline of the plant. At least a portion of the air toxics debate is stated in terms of the risk to the maximum exposed individual or MEI, an hypothetical person living at the fenceline of the plant breathing the emissions 24 hours per day for 70 years.

Risk numbers are individualistic; they refer to the likelihood of an adverse effect experienced by one person at a particular place and level of exposure, even though they are stated as if large groups were exposed.

Cancer effects may also be stated as an incidence number—that is, the number of people in any group who may be expected to contract cancer in any 1 year as a result of exposure to the substance. This translates the risk to individuals into a mortality toll for the whole community stated as cancer cases per year.

For air pollutants like benzene which are emitted by a large number of sources—in the case of benzene, its automobiles—exposure is likely to be approximately the same for almost all persons in the group. Therefore, very high cancer incidence levels may occur. The study by the South Coast Air Quality Management District which I cited a moment ago indicates that there may be 99 leukemia cases in the Los Angeles area alone each year as the result of exposure to benzene emissions.

On the other hand, air pollution from point sources like industrial plants disperses rapidly as the distance from a source increases. Exposure for any sizeable group of people is likely to be low for most and the estimation of the incidence is likely to be low in these cases. Coke ovens used in steelmaking present very high risks to those living nearest the fenceline of the plant. But incidence may be low. EPA's estimate indicates that the 43 coke oven batteries in operation cause an additional 7 to 11 cancer cases per year across the whole country.

These two means of describing risk, the risk of contracting a cancer experienced by the person most exposed, and the overall incidence of cancer in a community where exposure levels are likely to vary a great deal—reflect two different aspects of the air toxics problem. Incidence is the public health concern stating the actual mortality and morbidity that may be caused by air pollution. The risk to the maximum exposed individual—to the so-called MEI—is the equity concern reflecting the uneven distribution of cancer risk.

HEALTH STANDARDS AND RESIDUAL RISK

The bill addresses the air toxics problem with a two-phase program. In

the first phase, which I described a moment ago and which works like the Clean Water Act, all major sources of 191 listed substances will be required to meet an emissions standard based on application of the maximum achievable control technology [MACT]. There is a broad consensus in support of the first phase of the program. The bill reported by the committee and the President's bill are very similar for the first phase of the program.

The second phase of the program is designed to eliminate adverse health and environmental effects which may continue to be present even after best available control technology has been installed. There is no guarantee that best available control technology will reduce emissions by an amount sufficient to provide safe levels of exposure. In the case of carcinogens there is no safe level of exposure. There will always be a risk remaining after technology-based controls, unless emissions are entirely eliminated. The second phase of the program is designed to reduce these residual or leftover risks.

The residual risk phase of the program divides the air toxics into two groups. For the first group, those substances which are not known to be carcinogens and for which a safe level of exposure can be determined, EPA is to assure that the standard reduces emissions to levels below the safety threshold, with an ample margin of safety for sensitive populations.

The second type of pollutants are the carcinogens, the substances which EPA has determined may cause cancer based on animal studies or human mortality data. Almost all of the controversy which is being generated by this air toxics legislation centers on the part of the program which addresses the residual risk of those substances on the list which are classified as carcinogens.

For each carcinogen, EPA is to set two residual risk standards that are simultaneously applicable. One is to be set at the emissions level reflecting a 1-in-1,000,000 lifetime risk of cancer to the individual who would be most exposed to emissions from plants in the industrial category. And a second standard is to be set at a level reflecting a 1-in-10,000 lifetime risk to the maximum exposed individual.

Each source—that is each industrial plant—must meet the 1-in-1,000,000 emissions standard in 3 years, if it can—if technology is feasible to reduce emissions to that level. However, if a plant can demonstrate, on a case-by-case basis, that the technology is not available to meet the 1-in-1,000,000 standard, then it can get a waiver from the requirement. The waiver would be granted by the State agency issuing the permit for the plant. The waiver could be renewed each 5 years when the permit is renewed.

Any plant which gets a waiver from the 1-in-1,000,000 standard will be subject to the 1-in-10,000 standard. Again, the compliance period is 3 years. And again some flexibility is provided. Any plant which can demonstrate to EPA that it would have to shut down as the result of the emissions limitation at the 1-in-10,000 level can be granted a one-time, 5-year extension. If it still cannot meet the standard at the end of the 5-year period, it must shut down.

No plant will be subject to a shutdown requirement until at least 15 years after the bill is enacted and some will have up to 23 years before compliance is required. The 15-year compliance date results from a long series of regulatory steps.

Mr. LIEBERMAN addressed the Chair.

The PRESIDING OFFICER. Will the Senator from Minnesota yield to the Senator from Connecticut?

Mr. DURENBERGER. I will be pleased to yield.

VISIT TO THE SENATE BY THE SPEAKER OF THE HUNGARIAN PARLIAMENT

Mr. LIEBERMAN. I thank the Senator from Minnesota. I interrupt briefly for a special introduction to the Members of the Senate.

Today we are honored by the presence of the Speaker of Hungary's Parliament, Mr. Istvan Fodor. Mr. Fodor has been in the vanguard of the democratic movement in Hungary since being elected to parliament in 1980. Throughout the 1980's, he helped lead the fight for pluralism and open elections in his country. At the end of 1988, he was instrumental in establishing an independent group of members inside the Parilament. Since October 1989, he has been the Speaker of the Parliament.

As we know, Hungary has been at the forefront of peaceful, democratic change in Eastern Europe. Democratic leaders, like Mr. Fodor, did not give up hope after the brutal repression of the Hungarian Revolution in 1956. They worked patiently for years pushing for economic and political reforms. Their efforts were crowned last year when the remains of Imre Nagy, the leader of that revolt, were disinterred from an anonymous mass grave and given a state burial. A righteous and courageous man was finally given his due.

Mr. President, today Hungary is looking to the future. It has already adopted major economic reforms that have attracted economic investments from the United States, Western Europe, and Japan. Equally important, Hungary is proving to be a model for other Eastern European countries on the way to political reform. Multiparty elections will take place within 8 weeks, on March 25. Hungary deserves our support for leading the democratic changes in Eastern Europe. Members of this body, I know were proud to come forward in a very tangible way to offer the first examples and evidence of that aid last fall before our recess. Gallant leaders like Speaker Fodor have our gratitude for leading the way toward the end of totalitarianism in Eastern Europe and for leading the way to a better tomorrow for the people of Hungary and a more peaceful tomorrow for all the people of the world.

I hope that those of my colleagues who are on the floor will have the opportunity in the next few moments to say hello and welcome and good luck to Speaker Fodor.

Again, I thank my friend and colleague from Minnesota for yielding these few moments of his time.

The PRESIDING OFFICER. In behalf of all of us here in the Senate, Mr. Fodor, we welcome you here. It would be nice if you were to see all of us on the floor this morning. That is not the way democracy works. Senators are busy in their committees. It is a pleasure and privilege to have you with us today. Thank you very much.

The Chair recognizes the Senator from Minnesota.

Mr. DURENBERGER. I am certainly honored to be here at the time Mr. Fodor, the Speaker, is here. It may be some democracies do not work like this. If you can manage to get all members of your assembly on the floor at any one time, I congratulate you. Every speaker on the floor would love to have the audience of all of his colleagues. But I can tell from the statement I am making now, which is going on much too long, even though it is designed to educate, while so many of my colleagues are in committee meetings during the course of this day, we have the wonderful invention of television and variety of other medium by which our colleagues are provided with an opportunity to expand the representative part of this very special democracy. I consider it an honor for the Senator from Connecticut to have interrupted me at this particular point.

CLEAN AIR ACT AMENDMENTS OF 1989

The Senate continued with the consideration of the bill.

Mr. DURENBERGER. Mr. President, the first technology-based standards [MACT] are to be issued 2 years after enactment. Sources will have 3 years to comply, 5 years from enactment. The residual risk review does not begin until after the MACT compliance date and will continue for 2 years. It is completed 7 years after en-

actment. If a residual risk standard is necessary, sources will have 3 years to comply; that is 10 years from enactment. And if sources would be required to shut down, they would be given 5 more years for total of 15 years from the time the President signs this bill until the date that risks would have to be reduced to the 1-in-10,000 risk level.

That is certainly a generous regulatory schedule. Under current law, zero emissions are to be accomplished within 15 months—months not years—from the day on which EPA first lists a carcinogen as a hazardous air pollutant.

For some sources the whole process will begin much later, because the last of the technology-based standards, the MACT standards, may not be issued until 10 years after enactment. Sources in the last group would not be subject to an absolute requirement to meet the 1-in-10,000 risk level until 23 years after enactment.

To summarize the program for health-based standards: It is a second phase of the standard-setting process which comes after the technology-based standards. It applies at the same plants which have installed technology and is intended to assure that public health and the environment are fully protected. For cancer-causing substances, the goal of the program is to reduce risks to a level no greater than one excess cancer for each million persons who might be exposed to the highest emissions levels from plants in the source category.

If plants cannot meet the 1-in-1,000,000 risk level they can get a waiver. But they must meet a 1-in-10,000 level not later than 10 years after they have complied with the technology-standards, which for the first sources regulated is 15 years after enactment of the bill.

For pollutants other than carcinogens, emissions are to be reduced to levels below the safety threshold with an ample margin of safety to protect public health.

SUPPORTING PRECEDENTS AND OTHER EVIDENCE

Senators may well ask whether there is any precedent for the health-based standards, the residual risk program, that the committee is proposing. As has already been said here on the floor, this is an extremely complex area of public policy. And the committee bill sets clear goals for public health protection. If the approach we are recommending was entirely untried, we would bear a heavy burden in this debate.

But that is not the case. There are several precedents and other evidence which can be cited in support of this particular approach.

First, many States already use these tools in their own programs to regulate air toxics.

Second, the Federal Superfund law which deals with very similar public health issues is built along these same lines.

Third, this program is consistent with the two-step process for setting standards which Judge Bork established in a case decided by the D.C. Court of Appeals addressing the regulation of vinyl chloride, an airborne carcinogen, as a hazardous air pollutant under current law.

And fourth, I will share with the Senate the recommendations of a group of experts in the field of risk assessment who were gathered to consider these very same questions and who recommended much the same approach at the conclusion of their deliberations.

Mr. President, 28 States already use or are planning to use risk assessment procedures like those which the committee is recommending to control air toxics.

The 28 States are Arizona, California, Colorado, Connecticut, Florida, Idaho, Iowa, Kansas, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, New Jersey, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Rhode Island, Vermont, Washington, West Virginia, Wisconsin, and Wyoming.

There is variation in these State programs, to be sure. Not all States use the same benchmarks. Some States focus on 1-in-1,000,000. Some are at 1-in-100,000. Only Louisiana uses a 1-in-10,000 risk level like the upper limit on risk in the Senate bill.

And risk assessment is used for a variety of purposes in these State programs. Most States use it to define acceptable levels of exposure to carcinogens. Some only use it for screening purposes, to identify pollutants which are of concern. Others only use it for some pollutants or for some types of facilities. But the point is that it is a methodology already widely used at the State level to control airborne carcinogens.

Mr. President, I ask unanimous consent that a chart listing the 28 State programs which use risk management for the regulation of cancer-causing air toxics be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

RISK ASSESSMENT: STATE AGENCIES [1]

Agency:	Source of risk factors			Use of risk assessment results			Acceptable risk levels	
	EPA	Agency	Other	Screening	Additional CTRL	Other	New sources	Existing sources
Arizona	X					To determine level of control required to meet ambient stds.	1X10	
California			X			To set priorities and determine benefits of control		
Colorado			[2]P				Planned $1X10^{-6}$	
Connecticut	X	X	X			To establish ambient air quality standards	Varies	Varies
Florida							$1X10^{-6}$	[3]
Idaho	X			X	X		$1X10^{-5}$	
Iowa	X				X		$1X10^{-6}$	
Kansas	X			X			$1X10^{-6}$	
Louisiana	X			X			$1X10^{-4}$	$1X10^{-4}$
Maryland	X	X	X			For screening analysis and case-by-case risk management	Planned $1X10^{-5}$	$1X10^{-5}$
Massachusetts	X	X				To set AALS and in some overall environmental assessments	$1X10^{-6}$	
Michigan	X	X		X	X		$1X10^{-6}$	
Minnesota	X				X		$1X10^{-5}$	$1X10^{-5}$
Mississippi	X				X		$1X10^{-6}$	$1X10^{-6}$
Missouri	[2]P					To determine risks at superfund sites		
New Jersey	X		X		X	Residual risk analysis	$1X10^{-6}$	
New York	X	X				To set AALS for some carcinogens	$1X10^{-6}$	$1X10^{-6}$
North Carolina	[2]P				[2]P		Planned $1X10^{-6}$	Planned $1X10^{-6}$
North Dakota	X				X		$1X10^{-6}$	
Ohio	[2]P	[2]P			[2]P		Planned $1X10^{-5}$	
Oklahoma	X				X	X	$1X10^{-6}$	$1X10^{-6}$
Oregon	X					To help assess health impact and provide info. on control needs	$1X10^{-5}$	
Rhode Island	X	X				To determine BACT for PSD sources and to set AALS	$1X10^{-5}$	$1X10^{-5}$
Vermont	X					To set ambient levels and evaluate impacts	$1X10^{-6}$	$1X10^{-6}$
Washington	[2]P					To limit health impact	Planned $1X10^{-6}$	
West Virginia	[2]P			[2]P	[2]P		Not yet estabi'd	Not yet estabi'd.
Wisconsin	X					To set de minimis emission levels	$1X10^{-6}$	$1X10^{-6}$
Wyoming	X				X		$1X10^{-6}$	

[1] This table lists only those agencies that use a risk assessment approach.
[2] A "P" indicates the agency plans to implement the particular feature.
[3] Considered infrequently by Florida for case-by-case risk assessment of existing sources.

Mr. DURENBERGER. Mr. President, we also have a document which describes some State programs in further detail. These are the States which use risk assessment to define absolute standards that may not be exceeded and that may require shut down. The paper lists the States of Arizona, California, New Jersey, Rhode Island, Vermont, and Wyoming. In the case of California, it is several local pollution control agencies rather than the State itself which have adopted these absolute limits. Mr. President, I ask unanimous consent that this document, which was prepared by the association representing State and local air pollution control officials, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXAMPLES OF STATES WITH RISK ASSESSMENT LIMITS THAT MAY PRECLUDE OPERATION

The following states have indicated that the risks from carcinogenic emissions must be below a certain acceptable level in order for the facility to be allowed to operate:

Arizona—A new source may not commence operation if it poses a risk greater than 1×10^{-6}.

California—Although the state program does not have a level of acceptable risk, several of the local agencies do, including:

Great Basin (Bishop, CA)—A new source will be denied a permit if it exceeds 10 times the acceptable carcinogenic risk level (e.g., 1×10^{-4}.

SCAQMD (Los Angeles, CA)—New sources (and a limited number of existing sources) must reduce their risk to 1×10^{-5} in order to obtain a permit.

Ventura County (Ventura, CA)—For both new and existing sources, a risk level over 1×10^{-5} is considered to be unacceptable.

New Jersey—The state has a policy, although there is no formal regulation, that risks greater than 1×10^{-4} are unacceptable (from new sources and certain existing sources). In individual cases where the risk exceeds 1×10^{-4}, however, the source may argue that there are extenuating circumstances or perform additional modeling to obtain a permit.

Rhode Island—New sources will not receive permits unless they pose a risk of less than 1×10^{-5}. Existing sources are given approximately 18 months to reduce their risks below this level, although the compliance schedule is flexible. Since the program is not very old, there has yet to be an instance of a facility that was unable to meet the limit and was forced to cease operations. Although the state has the authority to shut a plant down, it is unlikely to exercise this right.

Vermont—The state has established acceptable ambient concentration limits that represent a risk of 1×10^{-6} for both new and existing sources. A source that exceeds this limit will not be granted a permit. Furthermore, the regulation provides the state with the authority to shut down existing sources that do not reduce emissions below the acceptable limit. However, the state will work with sources to help them comply (e.g., establish a compliance schedule).

Wyoming—The state's policy is to refuse to issue permits for new sources that exceed a risk level of 1×10^{-6}. The agency will work with sources to assist them in reaching compliance; no source has yet been unable to reduce its risk level below 1×10^{-6}. It is uncertain whether the agency would have the authority to refuse absolutely to issue a permit.

Mr. DURENBERGER. I note for Senator SIMPSON, who expressed deep concern about this approach last week, that his State has a very stringent program. In his opening statement on this legislation, Senator SIMPSON asked who has done 1 in 1,000,000? Well, the answer turns out to be his own State. This paper says the following about the Wyoming program:

The state's policy is to refuse to issue permits for new sources that exceed a risk level of 1×10^{-6} (1 in 1,000,000). The agency will work with sources to assist them in reaching compliance; no source has yet been unable to reduce its risk level below 1×10^{-6} (1 in 1,000,000).

As he so often does, the assistant Republican leader used rather colorful terms to describe his skepticism about this proposal. In reply, I would only say that they apparently "eat this stuff for breakfast" out in Wyoming, too. In fact, Wyoming already has a program to control cancer risks from air toxics which is similar to the one we are proposing here today.

I also read the description of the Vermont program:

The state has established acceptable ambient concentration limits that represent a risk of 1×10^{-6} (1 in 1,000,000) for both new and existing sources. A source that exceeds this limit will not be granted a permit. Furthermore, the regulation provides the state with authority to shut down existing sources that do not reduce emissions below acceptable limits. However, the state will work with sources to help them comply.

That is a more stringent program than the committee is proposing to the Senate. It is already operating at the State level. I would note for the distinguished Republican manager of the bill, Senator CHAFEE, that the Rhode Island program is very similar to the program that was just described for Vermont, except Rhode Island uses a 1-in-100,000 rather than a 1-in-1 million upper limit on cancer risks.

Finally, with respect to State programs, Mr. President, I read into the RECORD today a portion of the testimony which Mr. Bruce Maillet provided to the committee in its hearings on this subject. Mr. Maillet is the director of the Massachusetts Division of Air Quality Control and was testifying on behalf of the State and Territorial Air Pollution Program Administrators and the Association of Local Air Pollution Control Officials. These are the government officials at the State and local level who will actually have to carry out these programs.

This is Mr. Maillet's testimony on the subject of residual risk comparing the committee's bill to the administration bill and given to the committee on September 21 of last year:

Once control technologies have been applied to new and existing sources of toxic air pollutants, both bills call for the evaluation of residual risk. However, there are important distinctions between the two approaches, including the level of discretion afforded EPA in determining whether there are unacceptable residual risks.

STAPPA and ALAPCO are especially pleased that [the Committee's bill] specifies a "benchmark" or "bright line" by which to evaluate individual risks from carcinogens. We believe that the one-in-one million goal in the bill is justified, and agree with the approach allowing industry some additional time to develop the controls necessary to achieve this risk level. We suggest that the bill's risk reduction program be strengthened, and wish to work with the Subcommittee in this regard.

I continue to quote:

STAPPA and ALAPCO are concerned with the residual risk component of S. 1490 [the Administration bill]. The bill does not contain a benchmark against which to measure residual risk and, instead, provides the EPA Administrator with full discretion—considering costs and technological feasibility—to decide if a second phase of controls is even necessary.

So, that is a perspective from the States on the residual risk program recommended by the committee. They are in complete support of the approach that we have taken.

Second, I indicated that I would cite the risk reduction provisions of the Federal Superfund Program as a precedent for the legislation we are considering today.

Superfund is the program administered by the Environmental Protection Agency which is dedicated to cleaning up abandoned hazardous waste sites. Exposure to hazardous substances at these old dumps is very similar to exposure that results from industrial plants that are point sources of air toxics. Individuals living near the fenceline of these facilities—both the dumps and the chemical plants—may be exposed to very high risks while the overall number of persons exposed may be low.

Superfund uses the very same structure for controlling risks to carcinogens that we have incorporated in the health standard for air toxics which is now before the Senate. Superfund is implemented through a regulation called the National Contingency Plan. Let me read from the preamble to that plan which was published in the Federal Register when revisions were proposed last winter. This is a quote from the preamble describing the workings of Superfund:

For carcinogens, EPA generally considers pollutant levels corresponding to individual lifetime risks of cancer of one in 10,000 to one in 10,000,000 as generally protective of

human health and the environment. This is expressed as the 10^{-4} to 10^{-7} unit cancer risk range. * * * Traditionally, EPA starts such analyses at the 10^{-6} risk level (that's 1 in 1,000,000), modifying this goal as the examination of the pertinent factors * * * and the selection of remedy criteria [indicate] are appropriate.

The Superfund regulation itself says:

For known or suspected carcinogens, acceptable exposure levels are generally concentration levels which represent an excess upper bound lifetime risk to an individual of between 10^{-4} and 10^{-7}.

The words which appear in the Federal Register describing the Superfund program also describe the residual risk elements of S. 1630, for airborne carcinogens. The goal of Superfund, like the goal of the bill before the Senate, is to eliminate risks to the most exposed individuals which exceed 10^{-6} or 1 in 1,000,000.

In Superfund 1 in 1,000,000 is called the point of departure. Where a reduction of risk to not more than 1 in 1,000,000 can be accomplished with a Superfund cleanup, it is the remedy chosen. Where it can't be accomplished for reasons of technical infeasibility, a less protective remedy may be selected, but the upper bound of acceptable risk for the alternative is not to exceed a 1-in-10,000 lifetime risk of cancer to the most exposed individual.

Superfund cleanups are to be implemented, in the first instance, by the parties which caused the pollution. But where a responsible party with sufficient financial resources cannot be found, Superfund pays for the cleanup out of a Federal trust fund.

The Federal Government will spend $1.7 billion on Superfund cleanups this year. And that money will be spent to carry out a public health policy which has the same structure as the residual risk program for air toxics which the committee has put before the Senate.

Our air toxics program is not some novel scheme which pursues never-before-imagined standards for public health protection. Its risk reduction goals are a replica of the Superfund Cleanup Program which this body has supported overwhelmingly and for which this body provides an annual appropriation of nearly $2 billion.

I expect that all of those who support Superfund will support title III of S. 1630. It is the same proposition. I don't see how a Senator could come to the floor one day and vote to spend nearly $2 billion in public funds on a program to reduce cancer risk for individuals living near abandoned dumps and then on the next day vote against a program with the very same goal and risk reduction rules applied to chemical plants spewing the same cancer risks into the air.

The third precedent that I would cite in support of this approach to setting health standards for hazardous air pollutants is the decision of the D.C. Court of Appeals in the vinyl chloride case (*NRDC* v. *EPA*, 824 F.2d. 1146). The decision for the court was written by Judge Robert Bork.

Most of those who thoroughly understand this subject believe that Judge Bork's opinion departs dramatically from the plain language of the statute. Nevertheless, it is seen as a thoughtful attempt by the court to reconcile the high expectations of the law with the practical realities of industrial society.

The vinyl chloride decision requires EPA to set standards for hazardous air pollutants in a two-step process. In the first step EPA is to define an acceptable level of cancer risk from sources of the pollutants without considering cost in any way. The only factor to be considered in the first step is health. The emissions standard for sources in the category must at least assure this level of health protection and sources which can't meet this acceptable level of risk must shut down.

In a second step, EPA is to consider the need for an "ample margin of safety" in controlling these emissions. In the second step EPA may consider costs. If technology is available to go beyond the acceptable level of risk to provide more health protection, EPA is to require additional control to meet the goal of an ample margin of safety.

This two-step process is parallel to the structure of the health-based standards which are required in the second phase of the program which the committee is recommending. S. 1630 sets an upper limit on risk 1 in 10,000 which all sources must eventually achieve or shut down. The Congress is saying that a lifetime risk of cancer to the most exposed individual no greater than 1 in 10,000 is the definition of acceptable risk which the Court directed to be applied in the first step.

In parallel to the second step prescribed by the court, S. 1630 requires risk to be reduced to a level not exceeding a lifetime risk of 1 in 1,000,000 for the most exposed individual at each source where that reduction can be achieved with feasible technology. That is the ample margin of safety. As the court provided, the requirement that lifetime risks be limited to 1 in 1,000,000 takes other factors into account. If there is no feasible technology to meet this level, the source may receive a waiver through the permit process to emit at higher levels. There is no absolute compliance date for the 1-in-1,000,000 standard.

I would not support that bill reported by the committee that begins with a technology-based program, before it gets to the two-step process for health standards which Judge Bork suggested. As a result the bill allows 15 years before any source must comply with the purely health-based standard for acceptable risk, which is the first step in the two-step process. Under current law sources are required to meet the acceptable risk level prescribed by the court within 2 years.

It appears to me that S. 1630 is entirely consistent with the model for regulating carcinogens which the court outlined. To make that point more directly, I have a fourth piece of evidence in support of the structure of the residual risk program that we are proposing.

In the course of this debate I suspect that some Senators will say that the residual risk program in the committee bill is unscientific, that it does not reflect sound scientific thinking and that professionals trained in fields relevant to risk assessment would not use it in a regulatory program as it is used here. And there are some entitled to put Ph.D. after their name who have written papers to that effect.

But it is not the unanimous consent opinion on the subject. The Center for Risk Management, sponsored by the public policy organization Resources for the Future, convened a group of individuals knowledgeable in these fields—as knowledgeable as any you will find—in February 1988 to ask how risk assessment should be used in programs to regulate air toxics.

The group met on several occasions and issued a report with specific recommendations. This was a unique undertaking. I don't know of any other effort like this.

I have their report here. I will read a portion of it and ask that the remainder be placed in the RECORD. But first let me read you the names of the individuals who participated in this project:

Walter C. Barber, Vice President, Environmental Management, Chemical Waste Management, Inc.

Paul F. Deisler, Visting Executive Professor, University of Houston.

John A. Haigh, Principal, Temple, Barker and Sloane, Inc.

Thomas D. Hopkins, Gosnell Professor of Economics, Rochester Institute of Technology.

Bruce W. Karth, Vice President, Safety, Health and Environment, E.I. duPont de Nemours, Inc.

Paul R. Portney, Director, Center for Risk Management, Resources for the Future.

Christopher H. Schroeder, Professor of Law, Duke University Law School.

Roger Strelow, Vice President, Corporate Environmental Programs, General Electric Company.

This group called itself the Hazardous Air Pollutant Strategy Group. Their charge was to recommend a standard-setting process for air toxics at EPA which would implement the decision of the Court in the vinyl chloride case. Now, let me get directly to their recommendations, and this is a quote from their report:

In our view, the Administrator should define acceptable risk as a numerical ceiling

on the excess risk of disease to which any person will be exposed. This "benchmark" should be defined in terms of the incremental (excess) lifetime risk to the maximum exposed individual (MEI), so that no person incurs a risk above the benchmark. Any level of emissions that generates excess risks above the benchmark should be regarded as unacceptable or unsafe.

I continue to quote:

Reasonable people can disagree about the proper numerical benchmark and different Administrators may have different opinions. [The Hazardous Air Pollutant Strategy Group] believes, however, that the benchmark—that is, the level of "acceptable" risk—should be made explicit and that some reasoning and/or evidence about public values should be offered to justify the benchmark employed. Note that the acceptable level of risk is not necessarily the same as the "de minimis" level, which typically be a smaller quantity.

And I continue to quote:

The [Hazardous Air Pollutant Strategy Group] does not believe that the benchmark of acceptable individual risk should be compromised just because it may apply to a small population. In other words, [the Group] does not favor public policy promised on a finding that high individual risks are "acceptable" if few people will actually be exposed to such high risks. Rather, society should act to reduce large risks to even one person. In summary, the benchmark itself should be defined as a ceiling on personal risk to the MEI.

Mr. President, I find that discussion quite consistent with the legislation which the committee is putting before the Senate. These gentlemen were asked to consider the very proposition which is now the subject of debate. And they came to the same conclusion which the committee did.

It is a difficult proposition to be sure. But they recommended—not without reservation, even the committee has reservations in the use of risk assessment—but they recommended an approach for controlling risks of non-threshold pollutants like carcinogens which is very similar to the bill the committee has reported. These are men of academia and business and law with long experience and training in fields where risk assessment is used and understood.

Let me just repeat the last paragraph of their recommendation which I read a moment ago:

The [Hazardous Air Pollutant Strategy Group] does not believe that the benchmark of acceptable individual risk should be compromised just because it may apply to a small population. In other words, [the Group] does not favor public policy promised on a finding that high individual risks are "acceptable" if few people will actually be exposed to such high risks. Rather, society should act to reduce large risks to even one person. In summary, the benchmark itself should be defined as a ceiling on personal risk to the MEI.

The Hazardous Air Pollutant Strategy Group did not recommend a particular risk level for this upper limit, because their views differed on that point. The committee is recommending a lifetime risk of 1 in 10,000.

CRITICISMS

Mr. President, the critics have offered a series of arguments against the health standards for hazardous air pollutants which are proposed in this bill. The attack comes in four principal areas.

The critics say that the risk assessments produced by EPA are too conservative, that EPA studies substantially overstate the risks.

The critics say that the health standards should not consider the equity problem at all, that it should focus only on the number of cancers in the whole population and not on the risks faced by those living at the fenceline of these big chemical plants.

The critics say that the health standards should not contain bright lines, but rather, should allow the Administrator broad discretion to balance a series of factors.

And the critics say that implementing the health standards of this bill will cost the country too much for the benefit that is gained.

The first set of arguments against the bill is directed at the "risk assessment process" which EPA uses to determine the health threat posed by particular carcinogens. Industry argues that EPA's risk assessment model does not present a real picture of risk because it has multiple safety factors that compound the risk estimate exponentially.

The conservative assumptions most often mentioned include the linear extrapolation from high animal doses to low human doses and the assumption that an individual spends 70 years at the fenceline breathing 24 hours per day. Indeed, EPA describes the risks developed in its air toxics program as the likely upper bound risk rather than a best estimate. But EPA also staunchly defends this approach.

Although the assumptions are conservative, there is good reason for a conservative approach. I would cite three specific issues in risk assessment to demonstrate the role that conservative assumptions play.

The first issue is linear extrapolation. The complaint is that estimating risks to humans for low-dose exposures using animal data from high-dose experiments does not produce an accurate picture of true risks.

But linear extrapolation does not always overstate the risk. It may also underestimate risks. Benzene is an example. Benzene is one of the principal air toxics. It is a known human carcinogen emitted in large quantities from gasoline supplies and auto tailpipes in every community across the Nation.

I have here a figure prepared by the National Institute of Environmental Health Sciences. It is a very complicated figure and I am not going to attempt to explain it to the Senate in any detail. But what it shows is that the body metabolizes benzene along two different paths, only one of which leads to cancer. It is a metabolite of benzene and not the benzene itself which triggers leukemia.

All of the benzene is metabolized along the first cancer route until the capacity of that path is overwhelmed. The remaining benzene is sloughed off on the second route and does not have a toxic outcome.

In a briefing provided last year scientists from NIEHS reviewed these mechanisms with us and their surprising conclusion for benzene, one of the principal cancer-causing air pollutants, is that low doses produce more toxic metabolites than high doses and that a linear extrapolation underestimates—underestimates the risk of cancer from this pollutant.

Let me quote from the NIEHS briefing material directly:

Production of "toxic" metabolites decreases at high doses. There are shifts in metabolic pathways. Relatively more toxic metaboles result from continuous low dose exposure than from acute high dose exposure. Linear high to low dose extrapolation may underestimate the risk!

Another factor which causes risks to be underestimated, even with EPA's conservative assumptions, is secondary exposure. EPA's estimates are generally based on air dispersion models using emissions rates as the raw data, rather than on actual measurements of exposure. These models do not take into account the possibility that the population will be exposed to the pollutant by another pathway.

Particulates may be deposited on soils and other surfaces and then becomes airborne again as the result of wind or human activities. Metal emissions may be taken up by plants or animals and become part of the human food chain. Volatile organics may be transformed in the atmosphere to pollutants which are even more potent as carcinogens—for instance, formaldehyde—than the substance originally emitted.

I have here another chart which I would share with the Senate. It demonstrates the combined effect of underestimated risk and secondary exposure. This chart compares EPA's model for estimating the cancer risk of air toxics with work done by the air pollution control agencies of California. This chart estimates cancer incidence for eight pollutants in the Los Angeles area. EPA's model would lead one to believe that these eight pollutants would cause just 19 cancer cases annually. Whereas the California air pollution control agencies would estimate 221 cancer cases, very nearly a dozen-fold more.

Note that most of the variation in the risk estimate is for benzene and chromium. Those are the only two pollutants for which the California agen-

cies have completed their own independent estimates of cancer-causing potency. And they found the potency much higher than the EPA model. Some additional increase in the estimated risk results from the difference between exposure estimated by EPA's air dispersion model using emissions data and actual ambient exposures which were measured by the California agencies. EPA's risk assessment methods do not uniformly overstate cancer risks.

Mr. President, I ask unanimous consent that this table comparing EPA and California risk estimates be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

EFFECT OF UNIT RISK FACTORS ON ESTIMATED ANNUAL CANCER CASES: THE SOUTH COAST STUDY

Pollutant	Estimates of annual cancer cases using—			
	South coast study unit risk factors		EPA unit risk factors	
	Ambient measured	Model predicted	Ambient measured	Model predicted
Benzene	99	55	16	8.6
Carbon tetrachloride	1.4	.001	1.4	.001
Chloroform	1.3		1.3	
Ethylene dibromide	.37	.007	1.1	.02
Ethylene dichloride		.007		.007
Methylene chloride	8.0	3.4	.92	.39
Perchloroethylene	.59	.43	.59	.43
Trichloroethylene	.33		.43	
Arsenic	1.5	.0001	1.5	.0001
Beryllium	.09	.0003	.09	.0003
Cadmium	.49	.96	.49	.96
Chromium	108	102	8.6	8.2
Nickel	.37	.09	.56	.14
Total annual cancer cases	221	162	33	19

Mr. DURENBERGER. Mr. President, a final point to keep in mind, is that the risk estimates are done for individual pollutants while a particular facility may be emitting a multitude of substances. The risks stated to not take into account exposure to other carcinogens which may compound the effects of the particular pollutant under consideration.

Mr. President, I have another chart here which shows the air toxics emissions from just one facility located in Kingsport, TN. This information is taken from the 1987 toxics release inventory which was required by the Emergency Planning and Community Right-To-Know Act of 1986.

This one plant emits 75 of the 350 substances for which emissions reports are required. Total emissions of these toxics substances to all media are more than 42 million pounds. It is easy to see from this very long list of pollutants, that standards which focus only on a few substances are not likely to protect public health.

And even if tight standards are set for all of the substances individually, substantial risks could still occur when persons living near a plant are exposed to large number of different substances. A 1-in-10,000 risk for each of 10 substances is a 1-in-1000 risk, if the effects of the substances are simply additive. The risk may be substantially higher if the effects are synergistic.

Here we have a plant emitting 75 different substances. And this plant is only ranked 33d on the list of major emitters reporting under the community right-to-know law.

Mr. President, I ask unanimous consent that a copy of this table be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

THE 500 LARGEST RELEASES OF TOXICS, DETAILED SUMMARY, 1987

[Reported in pounds]

National rank, facility, and chemical name	Fugitive air	Stack air	Water	Injection	Land	POTW's	Other off-site	Total released

Mr. DURENBERGER. Mr. President, part of the criticism of the bill is directed at the use of the maximum exposed individual as the focus of concern. This argument attempts to minimize the public health risk associated with air toxics and may also include an attack on the technology-based standards of the first phase, as well.

The argument takes the following form. According to EPA's most recent study, 2,700 cancer cases annually can be attributed to air toxics; 80 percent of those can be attributed either to mobile sources or area sources. Only 20 percent can be attributed to industrial plants. Considering that 470,000 Americans die annually from cancer, that's not much of a public health problem. The Nation ought to focus its public health dollars elsewhere. It is overall cancer incidence that is important and not the risk to some individuals most exposed.

In reply and first, I would say the two concerns should not be seen as mutually exclusive. Removing benzene from gasoline—where the risk of the American population averages about 1 in 100,000, but cancer incidence is high as the result of widespread exposure—should not be seen as a strategy which excludes control of a point source of benzene like coke ovens where about 50,000 Americans face risks in the 1-in-100 range. Both risks should be addressed.

Second, the public health perspective as characterized by these critics does not reflect the view of the American people with respect to avoidable risks. The public will generally accept low levels of risk that are spread over the whole population. However, they find high risks, even when only a few are exposed, abhorrent. This aversion to high risk is consistently reflected in Federal and State regulation.

Let me use a hypothetical example to illustrate the public's perception of these risks.

During the Ford administration, the Government conducted a program to inoculate the public for swine flu. The vaccine was administered to prevent what might otherwise have been 1 million flu deaths. It was known that a small number, 100 or so, of those receiving the vaccine would die from an adverse reaction to the vaccine. But the small risk spread evenly over the millions taking the vaccine was considered acceptable.

Imagine, however, that the plant producing the vaccine would emit tons of a very toxic pollutant as a necessary part of the production process. Suppose that the 100 persons experiencing the adverse effect were not among those taking the vaccine, but residents of a small town in which the vaccine production plant was to be located and that the adverse effect was cancer caused by the toxic emissions from the plant.

If those were the facts, it is unlikely that the American public would have supported the program. They would have opposed a public health program which saved a million lives because it would impose very high risks of adverse effects on a few individuals from an identifiable group. The vaccine would never have been produced.

In our society, imposing involuntary, high risks on a few is not perceived as a sufficent justification for an activity which benefits even a very large number. The American public wouldn't accept high individual risks even as the cost of a lifesaving vaccine. I do not know how industry apologists can argue that the public should tolerate high individual risk for tire plants or coke ovens or oil refineries.

Time and again the public has demonstrated its willingness to spend more to eliminate these high risks imposed on a few than it would spend to eliminate the same number of cancers spread in small risks over the whole population. It is not only lawyers who insist that equity be a consideration in this program. The American people want these high risks eliminated.

A third criticism of the bill is a complaint about the lifetime risks of 1 in 10,000 and 1 in 1,000,000 which are used as bright lines in setting the health standards.

It is argued that risk assessment cannot be used to establish these very precise regulatory thresholds. At this stage in its development, risk assessment may be used to compare two activities to determine which presents the greatest risk. It may also be used to identify threats that are serious and those that are negligible. But some maintain that using it to identify a precise emissions standard is to push it beyond its capacity to produce useful information. These critics recommend that EPA be given the authority to balance the product of risk assessment with other considerations including cost.

This is not a persuasive argument to me, Mr. President. It seems to me just another way of saying that health standards should be diluted to reflect the costs of providing clean air.

Let us review the basics once again. Government policy says that there is no safe level of exposure to a carcinogen. Therefore, we cannot set safety thresholds for cancer-causing substances in our regulatory programs. We can describe cancer risk using probability estimates based on animal experiments. But in 20 years, EPA has been unable to define an acceptable level of risk and shape an air toxics program using these probability estimates. Therefore, the committee is

proposing a 1-in-1,000,000 lifetime risk to the most exposed individual as the goal for regulation, to be met by facilities which can, with an overall cap on the cancer threat presented by emissions from any plant at a lifetime risk of 1 in 10,000 to the MEI.

With that as a background, let us suppose that the facts were other than they are. Let us suppose that a threshold for cancer risks could be determined. Does anyone doubt that the threshold would be adopted for the purpose of regulation? The very program we have under discussion uses thresholds for other health effects where they exist to set emissions levels in the second phase. That's not a controversial proposal.

If thresholds for cancer could be demonstrated, if there were a level below which tumors would not occur, I am sure that the threshold would have been translated into emissions standards long ago. And how would that threshold be identified for each pollutant? It would be identified using the very same techniques to assess health effects which are used in the risk assessment models to establish cancer probabilities today.

Would the methods be conservative? You bet, they would be. Would they be open to dispute and revision as we learn more? Of course. But the very same procedures which are used in risk assessment to classify a substance as a carcinogen and to determine its potency would be used to identify bright line thresholds for regulatory purposes, if thresholds could be demonstrated. And no one would suggest that those thresholds be diluted with cost considerations in setting health based standards.

Mr. President, I don't intend to simply defend the bright line health standards of this bill against it's critics. I want also to go on the attack, to say as clearly as I can why the balancing which is suggested by some would be wrong and a substantial threat to public health.

The attack comes in two parts. First, the authority to balance several factors removes EPA's obligation to regulate. The legislation we are considering today is necessary because EPA has refused to regulate airborne carcinogens to acceptable levels over a 20-year period. It is difficult under any circumstances to hold a recalcitrant agency to a congressionally mandated policy. Without objective measures against which to compare decisions, it is nearly impossible.

The 1-in-10,000 and 1-in-1,000,000 lifetime risk levels are objective measures which can be determined by any independent scientist using publicly acknowledged risk assessment methods. It is possible, with a bright line, for those outside the Agency to demonstrate that those inside the Agency are not doing their job. A program which allows EPA to balance many factors including cost removes effective oversight by the Congress and citizens to force action by reference to an objective measure of the Agency's duty to regulate.

The second part of my attack on this balancing notion is more important. It is the lowest common denominator issue. When the Agency is given discretion to consider a variety of factors, including or excluding explicit mention of cost, it immediately turns its attention to the least viable entity in the source category and sets a standard based on the capacity of that facility to cleanup. This is the no shut down mentality which has always been at the heart of the EPA air toxics program.

EPA has time and again set emission standards for hazardous air pollutants based on the amount of control which is possible for the plant with the least economic viability or the least technical capability to install control. Even if the rest of the plants in the industry could achieve substantially greater emissions reductions, it is the worst facility that sets the industry standard. Taking cost into account has meant—whatever Congress may have intended—that no source is to be shut down.

That approach to standard-setting sacrifices all of the health protection which could reasonably be achieved by facilities in a better position than the least viable entity. The purpose of the bright line 1-in-10,000 and 1-in-1,000,000 standards is to overcome the lowest common denominator problem.

Mr. President, I have a chart here to illustrate this problem. It shows emissions from six plants after the MACT technology-standards have been put in place. All the plants have the same emissions level.

The area shaded in a darker color represents the amount of additional reduction which each plant could achieve using feasible technology. It is not the case that MACT forces every plant to make maximum reductions.

We have shaded these columns so that the additional reductions which can be achieved are variable. The oldest plant has the least capacity to make further reductions. The newer plants can make more substantial cuts.

Now, how do we regulate to protect public health in this situation. I have drawn three lines across the chart. One represents the emissions level which can be achieved by the least viable plant. It is the emissions level that EPA has proposed in the past when it has balanced risk with other factors. I have also drawn lines which would represent the 1 in 10,000 and 1-in-1,000,000 lifetime risk levels.

The point to be made is that considerable health protection which could be achieved at other plants is sacrificed when the emissions standard is based on the control which the least viable plant can afford. The purpose of the bright line regulation is to assure that this additional health protection which is fully justified is achieved for the people living near these plants. That's the issue at stake here. Will the troubles of the plant in Tennessee be used to relax the health standard for the plant in Texas? Will the process used in the plant in Washington be the balancing factor which puts folks near the plant in Wisconsin at greater risk?

It may be appropriate to give individual facilities any number of case-by-case waivers, as the bill does already, to reflect individual problems and to compensate for the imprecise character of the risk assessment product. Plant No. 2 on this chart is not forced to meet the 1-in-1,000,000 risk level under the bill until feasible technology is available. Plant No. 1 is given 15 years to make the investments necessary to meet the 1-in-10,000 standard.

Case-by-case flexibility is appropriate and is already included in the legislation. But allowing other factors to be considered in the process of setting the actual standard is to assure that the amount of health protection which can actually be achieved is sacrificed to the predicament of the lowest common denominator.

A fourth criticism of the bill is cost.

We have seen several cost estimates already and we will likely see more. I don't believe that it is possible to accurately estimate the potential cost of the health standards required by this legislation.

The bill provides 15 years before any facility is required to meet the 1-in-10,000 standard or shut down. That is such a long time, that we can't even know what kind of pollution control technology will be available to meet these requirements.

Fifteen years ago, the first automobiles were being equipped with catalytic converters only 5 years after a 90-percent reduction in hydrocarbons from tailpipes was required and described as infeasible by the auto companies. Today, automobiles are equipped with a wide range of pollution control systems that make even the car of 1975 seem a relic by comparison.

Fifteen years ago only one acid gas scrubber was installed on a powerplant. Today, the utility companies argue that with a bit more time, that technology will be superseded by clean coal technologies which can get even greater emissions reductions at much less cost. Fifteen years ago no one had heard of selective catalytic reduction, atmospheric fluidizied bed combustion, spray dry scrubbers, baghouses, or thermal DeNox. Today, all of those systems are in operation on plants across the country.

Given 15 years, it is likely that most sources emitting air toxics will invest in technologies which allow them to reduce emissions to meet the health standards without significant economic disruption. Considering the history of the Clean Air Act over the past 20 years, there is every reason to believe those technologies will be discovered.

Therefore, it is not possible to project with any accuracy the likely costs of the health standards in this bill.

Over this past weekend, the administration sent up its cost estimates for S. 1630. The administration says that it will cost $6 billion in the year 2005 to meet the health standards required by title III of S. 1630. The unreasonable risk approach which the administration is proposing as an alternative would presumably cost $1.5 billion.

There is, of course, no reason to believe these numbers. Any other numbers could have been picked with equal justification. The administration recognized this point in the paper which it sent up with its cost estimate. Let me quote directly from that paper:

It should be noted that any additional post-MACT residual risk controls will take place well into the future (approximately 15 years). While it is impossible to predict how production processes and control technologies may change, it is safe to assure that changes will occur.

That is the point which I just made, Mr. President. Technology will change. But then this paper goes on to say:

The potential costs associated with source closure that are provided here are based on the assumption that current control technology and residual risk levels will not change * * * these lists were developed assuming that there is no change in current control technology, demand for the product, or manufacturing process. * * * As mentioned above, given the length of time that is involved before residual risk determinations must be made it would be unreasonable to assume that all of these items would remain static.

That is an astounding statement. One might call it "clean air glasnost." The administration sends up a paper attacking the Senate bill as too costly because it includes health standards which are not diluted by cost considerations. The paper estimates these costs at $6 billion. And then in the footnotes the paper acknowledges that the estimate is unreasonable. I have seen a lot of estimates like this in my years in the Senate. But I have never seen one that admitted its own assumptions were unreasonable.

The reasonable assumption, given the history of the Clean Air Act, is to expect that there will be dramatic changes in pollution control technology which will significantly reduce the cost to meet these health standards. Each time the Congress has passed a clean air bill industry has said it will shut down America. That has never come to pass. We have consistently underestimated the ability of technology to reduce air pollution. We have asked too little. Air pollution continues to be a threat to public health.

On the subject of jobs, I am puzzled by the administration's position. The rhetoric has been to the effect that the health standards in this bill threaten economic havoc with whole industries shutting down. On the other hand, the paper sent up by the administration indicates that the projected job loss from this provision is in the range of 11,000 to 14,000.

I do not think those jobs will be lost. Jobs are important, every job is important, and I don't treat the job issue cavalierly.

Nevertheless, the estimate, 11,000 to 14,000 jobs, is not very large. Layoffs of that size are announced virtually every week as this business or that business adjusts to changes in the market. 11,000 jobs spread over the entire economy in a program that begins 15 years from now and is implemented over an 8-year period does not seem like a big loss. That's 1,350 jobs a year beginning in the year 2005 and only on the assumption that no new pollution control technology or manufacturing processes are developed.

Mr. President, I ask unanimous consent to print in the RECORD a list of firms which have laid off employees in the last 3 months.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Publicly announced employment cutbacks by large corporations

Company	Number of employees
Honeywell	400
National Semiconductor	2,000
First Interstate	2,000
Unocal	462
Wang	9,500
Ford	300 to 500
United Technologies	354
Xerox	680
Quotron	400
Prime Computer	2,500
GE	1,100
Amdahl	400
Weyerhauser	350
Bank South	300
Digital	700
Mack Truck	1,800
Shearson	700 to 800
Drexel	400 to 500
Chrysler	2,000
Lockheed	5,935
Comex	16
Dana Corporation	2,000
Kelsy-Hayes	1,000
Bell Atlantic	1,200 to 1,500
Data General	2,200
Eastman Kodak	4,500
Xyvision	80
IBM (estimated cuts—10,000 to 15,000)	600 to 800
Unisys	8,000
Recognition Equipment	250
Miniscribe	110
Abitibi	250
Burr-Brown	104
General Motors	Up to 5,000
Rockwell International	300
CMI Corporation	100
Computer Associates	900
Hughes Aircraft	1,000
Merabank	160
Westmoreland Coal	800
RJR Nabisco	1,640
Ashton Tate	346
Cummins Engine	100
Cognos	30
Philipp Brothers	70
Campbell Soup	2,800
Carolina Power & Light	720
Terex	500
GTE	800
Braniff	200
New York Post	140
Colt Industries	950
B. Altman	1,600
Texas Instruments	1,500
Datapoint	50
Salomon Brothers	100
Merrill Lynch	1,000
Motorola	2,500
Occidental Oil & Gas	900
Cray Research	400
Applied Learning Int'l	140
Polysar Inc.	30
U.S. West	2,000
Sikorsky Aircraft	150
McGraw-Hill	1,000
GF Corporation	300
AT&T	8,000
Pitney Bowes	1,500
Conrail	450
CSX	200
Motor Wheel	275
Hawaiian Airlines	200
Brown Transport	1,100
Gulstream Aerospace	75
Arrow Electronics	75 to 100
CS First Boston	100
Nynex	2,500 to 3,000
Boeing	1,200
Pacific Telesis (5 years)	5,000

Mr. DURENBERGER. Mr. President, it is a long list. Many of the layoffs have involved several thousand workers. But even with all of these layoffs, the U.S. economy has generated a net of 364,000 new jobs. In 3 months 364,000 more jobs existed than 3 months before even in an economy where dozens of large layoffs have been announced; 11,000 jobs spread over 8 years to achieve health standards for toxic air pollutants does not seem a high price to pay by comparison.

ALTERNATIVES

A final aspect of this debate that I would touch upon this afternoon are the alternatives which have been proposed to the health standards that are in the committee's bill.

The committee has taken a middle ground position. On one side of this debate, the environmental community is asking that cancer risk from industrial point sources be limited absolutely to no more than a 1-in-1,000,000 chance of contracting cancer. That is a traditional definition of negligible risk and is included in the air toxics legislation which Congressman WAXMAN has introduced on the House side.

On the other side, the administration is proposing that no specific standard be placed in the law. Rather EPA would be given authority to regulate any unreasonable risk should it be discovered. That same unreasonable risk standard has been used in the other laws for chemicals and pesticides, but has not worked well. Finding an unreasonable risk means balancing the costs of control against the adverse health effects of the pollutant on a case-by-case basis with no firm standard.

The bill reported by the Senate committee has a residual risk goal of 1 in 1,000,000. Sources which can reach that level will be required to do so as they would be under the Waxman bill. However, sources which can't get to 1 in 1,000,000 because it is not feasible may get a waiver. They may continue to operate at higher risk levels. But the bill puts an overall cap on the risk that will be allowed at 1 in 10,000.

I do not believe that the unreasonable risk program which the administration is suggesting can work. It is the authority for standard-setting in two statutes on the books today, the Toxic Substances Control Act and the Federal Insecticide, Fungicide and Rodenticide Act.

Only one pollutant has been regulated under TSCA and that one only recently. FIFRA has more than its share of problems and the President is now proposing legislation to move away from the unreasonable risk standard which is used in FIFRA. In fact, the President has proposed legislation which would adopt a more explicit risk range of 1 in 100,000 to 1 in 1,000,000 as a trigger for actions banning pesticide uses under FIFRA.

It does not make sense to propose an unreasonable risk standard as a fix for a statute that has been broken for 20 years while at the same time you are declaring that very fix to be broken in another statute which is designed to solve similar public health problems.

Mr. President, that concludes my comments on the health standards required by this bill. I want to say again how much I have appreciated working with Senator LAUTENBERG and Senator BREAUX to develop this legislation.

I look forward to a thorough debate on these issues in the days ahead. As I hope I have made clear, I strongly believe that the health standards established by this bill are needed to protect the American public from the risks of illness and death associated with airborne carcinogens. After 20 years of false starts under the Clean Air Act, we finally have the chance to create a comprehensive and reasonable program to control toxic air pollutants. I am sure that the Senate will make the best of this opportunity.

I only conclude by giving the appropriate credit not only for implementing the design of this section, but for simplifying the presentation of this statement this morning to a member of the staff of the Environment and Public Works Committee who has been a long-time colleague of mine on these issues, Jimmie Powell.

With that, Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Chair thanks the Senator and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BINGAMAN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BINGAMAN. Mr. President, I ask unanimous consent that I be allowed to proceed as in morning business for no longer than 10 minutes for purposes of introducing two pieces of legislation.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The remarks of Mr. BINGAMAN pertaining to the introduction of S. 2034 and S. 2035 are located in today's RECORD under "Statements on Introduced Bills and Joint Resolutions.")

The PRESIDING OFFICER (Mr. KERRY). The Senator from New York.

Mr. MOYNIHAN. Mr. President, the Clean Air Act Amendments of 1990 are a source of considerable satisfaction to New Yorkers, and to this New York Senator. We are now to see, as I believe, the first national legislation that undertakes to lessen the problem of acid rain, a matter of immediate concern to our State, and about which our own State has already taken considerable steps on its own.

Acid rain is a relatively new issue within the spectrum of environmental concerns. The term is graphic, even gripping. But, of course, rain is naturally acidic. The interaction of water with carbon dioxide in the atmosphere creates a mild acid—carbonic acid—such that normal rain has a pH measure of 5.6, well below the neutral level of pH 7.0. Obviously then we are dealing with an issue of degree, and in consequence need to be especially cautious about measurement. Which is no more than to say that environmental science, like any applied science, is a matter of infinite pains.

This, then, is the opposite of the romance of science, as it is sometimes termed. The 20th century has been enthralled by this romance, and understandably so. It is the romance, of course, of genius; notably—singularly—of youthful genius. The New York Times Book Review recently noted that of four giants of quantum mechanics in the early part of the century, two, Paul Dirac and Werner Heisenberg, were accompanied by their mothers to Stockholm to accept their Nobel Prizes! That is not something likely to happen to an environmental scientist, a subject I would like briefly to address.

In 1970 it fell to me to lead the first United States delegations to meetings of the newly established NATO Committee on the Challenges of a Modern Society. CCMS, as it came to be known; an enterprise conceived by Steven Hess, now of the Brookings Institution. I believe it fair to say that this initiative, proposed by President Nixon on the occasion of the 20th anniversary of NATO, marked the first official effort by the United States to share environmental concerns with European allies and, of course, with Canada. That same year President Nixon established the Environmental Protection Agency, here at home. In Brussels we developed what could only be termed as eclectic agenda—trying to interest Europeans who still somehow saw themselves in a postwar recovery period, with little time or resources for something as "optional" as environmental concerns. For this reason we searched for the dramatic; I certainly admit that. But a curious consequence is that we continuously came up with the inconclusive.

I think especially of the issue of global warming, which intrigued me at the time, and which I thought would attract others as well. As indeed it did. Save that for every scientist I could find that was convinced the world would end in fire, there was another who was equally persuaded of ice, and I was left with no better fix on the subject than Robert Frost in his celebrated poem on that subject.

I am as near to innumerate as anyone who has ever served on the President's Science Advisory Council or the Board of Directors of the American Association of for the Advancement of Science. Even so, as I worked up my somewhat erratic briefs for these meetings in Brussels, Venice, and other European locations, I acquired at least some sensitivity to the difficulties of environmental science. They remind me of the difficulties of the social sciences. Things happen over great spans of time, and never happen a second time in the same way. It is even possible to argue that nothing even happens at all! Time series can be formidable. For example, Dr. Andrew R. Solow of the Woods Hole Oceanographic Institution has come up with a time series of the date on which Lake Constance, the third largest lake in Europe, has frozen every year since 875 AD. Specifically, the Upper Lake. Eleven centuries! Dr. Solow finds evidence in this time series for the Little Ice Age, the proposition that Europe got colder, and food accordingly scarcer, for a long period extending through the 15th century, and has been getting warmer since. May I note that my wife, an architectural historian whose special interest

is Central Asia, believes that something such as that can be detected in the social history of that region. Clearly this is not a subject for persons with a short attention span.

Accordingly, when I came to the Senate in 1977 and joined the Committee on Environment and Public Works, I was immediately attracted to the question of the knowledge base on which we are legislating. My first concrete opportunity came with the issue of acid rain. This first presented itself as a wildlife issue, rather as an issue concerning that near-to-sacred subject of trout-fishing. I must admit that I am, or once was, a trout fisherman. The Bible speaks of the four rivers of life. I reckon these to be the Beaverkill, the Willowimec, the Neversink, and the Battenkill. I grant there are other views, but there you are. Fish were dying off in lakes in the high Adirondacks. The cause was something called acid rain. At Cornell, Dr. Carl Schofield found the process by which acidity could kill fish. Acidic water was found to leach inorganic aluminum from the bedrock that underlies the high mountain lakes that Dr. Schofield and his graduate students studied in the Adirondacks. The aluminum, not the acidity, was killing the fish by interfering with the proper functioning of the gills.

All that is important to know, but clearly not enough. To legislate we needed to know more. On September 14, 1979, I introduced legislation to establish a 10-year National Acid Precipitation Assessment Program. In my statement I described our situation:

> This legislation freely acknowledges our ignorance and seeks to extend our knowledge by greatly increasing the scope and intensity of research.

In short, it was proposed to discover if there was a problem, and if so, the extent of its severity, and what must be done about it. The bill was enacted on June 30, 1980, as the Acid Precipitation Act of 1980.

There followed the most extensive research program in the history of environmental legislation.

I would hope the history will be written one day. In drafting the legislation I knew we would need at least a 10-year data series, but I figured this could be achieved with relatively small costs. Then the issue took off, thanks in large measure to our neighbors in Canada who were growing quite troubled by the prospect of our air pollution killing their lakes. By the early 1980's acid rain had become a ranking environmental issue. Legislation such as that we now have before us was introduced in Congress, and garnered considerable support.

Save in the Office of Management and Budget. Here I would ask the Senators such as are present this morning, and others who might hear or read these words to pay close heed. It is a standard proposition in American government that in the face of a difficult policy choice, often the easiest escape is to appoint a study commission. I do not question that this happens on occasion. On the other hand, there are few policy choices about which we know as much as we would like to know, or even need to know. The notion that more research is a way of avoiding action is mischievous at best, and at its worst it is profoundly inimical to serious social policy including environmental policy. All that is required is that those who do not want to respond to a problem know just enough about a subject to know, typically, how little is known. Whereupon they say: Prove it.

This is what happened to acid rain in the 1980's. Those who wanted "action" were confronted with the proposition that they could not prove their case. And in truth they could not.

What is left of Newtonian mechanics tells us that there is no action without a reaction, and in this instance it was rather a remarkable one. Conscious that it was blocking action on acid rain on grounds that the research was inadequate, the Reagan administration raided research budgets all over the Federal establishment to ensure that NAPAP was fully, indeed lavishly funded. In a decade it will have expended $500 million—10 times what I had originally provided for. Not only is it the longest research project associated with environmental legislation, it is now by far the largest and most expensive.

I will not attempt to recount the research findings in any detail, not least because the final report will not be available until next September. Next month an international conference will convene in Hilton Head, SC, to consider research papers summarizing and interpreting data. However, the main findings seem clear enough from the reports presented to our committee. The Wall Street Journal recently noted my view, that the findings come under the heading of good news. The sky indeed is not falling. Basically the research seems to indicate that the aquatic systems in the Northeast are sufficiently robust that they are not very sensitive to continued acid deposition at current rates—have I noted that there can be dry precipitation as well as wet?—nor are they likely to be particularly responsive to reduction in deposition. The number of acidic lakes is not rising. As regards the forest, there is no general decline. Surely, this is good news.

In a word, this legislation is not going to change many lakes, and of course it is going to impose considerable costs. This is what economists call opportunity costs. There are other things we could do with the money. I must constrain myself lest I get carried away listing specifics. On the other hand there will be quite specific benefits, not least in the area of visibility. I, for one, have been amazed to learn how much visibility—how far you can see on a clear day—has been reduced in the United States during my lifetime. Something like half. Getting the view back is no small benefit.

In any event, we must pay the price for the attitude of the executive branch in the 1980's. They were determined not to do anything. In response the American people grew determined that something should be done. Let me quote from a letter from a distinguished American scientist who is familiar with the NAPAP findings.

> Reducing acid precipitation precursors clearly would provide benefits of many sorts. This is not a case where the program has zero benefits. The question is whether the benefits are enough to justify the social costs involved. If we were starting de novo with what we know now, this issue would not occupy the prominence on the national environmental priority list that it has achieved.

He continues:

> Acid Rain has become a symbol of a government that is either uncaring or ineffective. The entire environmental enterprise in this country has been sullied in the public mind by the apparent inability to "do something."

And so here we are. If we were to rank acid rain as an environmental and public health priority, it would not be near the top of the list. Even so, the public is convinced that acid rain is a problem that needs solving. If we do not respond, we will have great difficulty moving on to other, perhaps more pressing, matters.

I have prepared an amendment, which I will offer at the appropriate time. It directs the EPA Administrator, in consultation with the Secretary of Commerce and the Secretary of Labor, to report annually to the Congress on the costs and benefits to the economy of the Clean Air Act. A simple idea, really. What are we spending, and what is it getting us.

In addition, the bill before us already contains two amendments I offered during committee consideration of the bill. The first will require EPA to keep a registry of all acidic lakes, and to tell us when they become nonacidic.

The second will continue NAPAP beyond its original 10-year mandate. NAPAP will monitor acid rain controls as they go into effect to tell us how much they cost, and what effect they are having in all cases—on lakes, on forests, on visibility.

I hope my proposal for an economic impact statement will be received in the spirit in which it is offered. It is years now since Aldo Leopold's "A Sand County Almanac" appeared, and Americans began to think to some purpose about an "ethic dealing with

man's relation to land and to the plants and animals that grow on it." This environmental ethic is above all an ethic of responsibility to the future. It is the most demanding of all the responsibilities that we accept. And of course it is easily, all too easily put off. I hold, and here declare, that the ethic extends to a consideration of costs, and of alternate uses of resources. I do not fear such information. I long for it; just as I long for an environmental movement eager to make its case and able to do so.

In this regard I would most especially wish to compliment EPA Administrator Bill Reilly for having invited 10 most respected members of the American scientific community to convene a NAPAP Oversight Review Board:

Dr. Kenneth Arrow, professor of economics at Stanford and Nobel Laureate;

Dr. John Bailar, professor of epidemiology and biostatistics at McGill University and Science Adviser to the U.S. Office of Disease Prevention Health Promotion;

Dr. John Gordon, dean of the School of Forestry and Environmental Studies at Yale;

Dr. Glen Hilst, consultant in atmospheric sciences;

Dr. Simon Levin, director of the Center for Environmental Research at Cornell University;

Dr. Thomas Malone, president emeritus of St. Joseph's College;

Dr. William Nierenberg, director emeritus of the Scripps Institute of Oceanography;

Dr. Milton Russell, professor of economics at the University of Tennessee and Collaborating Scientist at Oak Ridge National Laboratory;

Dr. Chauncey Starr, president emeritus of the Electric Power Research Institute; and

Dr. John Tukey, professor emeritus of statistics at Princeton.

It would be difficult to assemble a more prestigious panel. The Senate, and the American people, are much in debt for the work this panel has already performed. I could wish we had a more concrete way to express our gratitude.

We are also in debt to a group of younger scientists who are pioneering what Howard Raiffa at Harvard has called the messy real world of risk assessment. I think here especially of John D. Graham and his associates at the Harvard School of Public Health. Dr. Graham testified before our committee on techniques for assessing the danger of airborne toxic pollutants. Clearly there are difficulties with the techniques envisioned in title III of the bill. It is great to be desired that these difficulties be resolved before this bill becomes statute. It is well within the ability of the Congress and executive to do this in the months ahead. And if we can we ought. An ethic of responsibility requires no less.

RECESS UNTIL 2:15 P.M.

The PRESIDING OFFICER. Under the previous order, the Senate stands in recess until the hour of 2:15 p.m.

(Thereupon, at 12:34 p.m., the Senate recessed until 2:15 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer [Mr. SANFORD].

The PRESIDING OFFICER. The Senator from Montana.

Mr. BAUCUS. Mr. President, we are on the Chafee amendment to the clean air legislation now pending before the Senate. The Chafee amendment, which the Senator from Montana cosponsors and which the Senator from Maine, the majority leader, also cosponsors is an amendment which adds methyl chloroform to the list of substances, methyl chloroform with chloroflurocarbons and halons, that would be phased out during this decade as production would be phased out and totally phased out by the year 2000. That is the pending amendment.

As manager of the bill I am prepared to vote on this amendment and if Senators do not come to the floor to debate this amendment in a fairly short period of time, then I will ask the Chair to put the question to the full Senate.

So I am putting Senators on notice at this moment that there will be a vote on the methyl chloroform amendment, that is the amendment offered by the Senator from Rhode Island, quite shortly. So Senators, if they so choose, have the opportunity to come to the floor to debate the amendment.

I think it is an excellent amendment. It is one that should be added, but we have to move this bill along. Here we are in the second week since the Senate has come back in session and there have been no votes yet on the Clean Air Act. It is this Senator's hope that we will complete debate on the Clean Air Act before the February recess. That gives us the rest of this week plus next week.

If we are going to complete action, if we are going to get on with the Nation's business, we have to get on with the Clean Air Act. That means we have to get on with the amendments that are pending before us. The pending amendment is the Chafee amendment.

Again I urge Senators to come to the floor because otherwise in the near future, very shortly this afternoon, the manager of the bill will put the question to the Chair so that we can vote on the amendment.

Mr. President, I yield the floor.

The PRESIDING OFFICER. The Senator from Idaho.

Mr. SYMMS. Mr. President, I have spoken on this bill at some length and found that I did not have time to get as far through the bill in my first opening remarks as I wished to do.

I still think that it is very important for all of our colleagues in the Senate to recognize that no matter whose figures you use in estimating these costs, the difference between the administration's bill and the bill that is before the Senate depends on whose figures you use. But those figures range anywhere from $20 billion to $50 billion or more per year cost. The administration's bill is estimated at $18.9 billion and that is per-year cost imposed on the American economy. The EPA estimates on the Senate bill are $41.9 billion per year. There are other estimates on the Senate bill that go up to as high as $104 billion per year.

I think it is interesting to point out in that those costs are imposed, not over a 5-year period, but over a 1-year period.

I think that Senators need to be advised to study what is in this bill, and how it impacts their own States. Go take a look at the fact that in the bill that is before the Senate, the definition of major source in the committee bill drops from the EPA separate levels of today of 100 tons per year to 25 or even 10 tons per year in some areas. At 100 tons, you are already regulating dry cleaners, large ones, large print and paint shops, and so forth.

The lower thresholds could even make the smaller businesses "major sources," which means that they would be subject to all permit fees and monitoring, et cetera. That may sound easy to Senators. But what I am inviting you to look at is that the fee that can be imposed, if the area goes into nonattainment for whatever reason, could end up costing a business as much as $500,000 a year if they produce 200 tons of this product a year. It could impose up to $500,000 a year in fees on some small businesses.

I think that it is interesting to note that we spend $2 billion a year, Mr. President, in our research budget for cancer research from the Federal budget. Yet this bill will impose a cost of somewhere between—how much?—$40 billion to $104 billion a year on the American people. I do not know whether that is a good tradeoff or not. I think clean air is a noble goal. But how much do we want to pay to get the last pollutant out of the air? I think that is a question Senators have to ask.

I mentioned stage II the other day but I think it is worthy of mentioning again. Senators need to be advised that this bill may require gas stations in your State to have stage II gas pump refueling nozzles put on. And since the State of New York has found that stage II is impossible to enforce, you would need to hire an EPA policeman to stand at every fuel station, not

necessarily to arrest all the people, but at least to show them how to use this nozzle, to be sure that it is pushed up tight against the automobile when they are filling it up with fuel.

Mr. President, if they have not tried one of these, I would invite my colleagues to go fill their cars up with fuel in the District of Columbia and see what one of these accordian things looks like. They do not have them over in northern Virginia but they have them in the District of Columbia.

So, Mr. President, I think that it is important that we start looking at what the realistic costs of these devices are. The costs can be $10,000 to $12,000 to put them in a service station and a maintenance cost of another $2,500 a year or so to keep them up. I think that it is important.

Mr. President, I ask unanimous consent to have printed in the RECORD an article by Warren Brooks from the Washington Times dated January 30, 1990.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times, Jan. 30, 1990]

HOW GREEN IS OUR BUDGET?

(By Warren Brookes)

When Senate Environment Subcommittee Chairman Max Baucus, Democrat, went home to Montana for the Christmas holidays, he was confronted by representatives of two of his state's largest industries—cadmium and lead mining—demanding to know why he voted to shut them down.

They had to show him an obscure provision on pages 427-429 of his proposed Clean Air Act Amendments (S. 1630) covering municipal-waste disposal. It forces the Environmental Protection Agency administrator to prevent the productioin of "any product or article distributed in commerce" that "may present a threat to human health or the environment as the result of incineration," even if it is harmless when manufactured or used. This puts thousands of companies and industries at immediate direct risk of survival.

Mr. Baucus was reportedly stunned by this revelation, but then too many senators are equally ignorant of how wildly irresponsible this 587-page monstrosity is. President Bush's public promise to veto a bad bill has only fueled the eagerness of some to prove their "greenhood," knowing the president will bail them out and take the heat.

Small wonder the stock market, sensing this gridlock and devastation to a weak economy, is falling out of bed.

Tomorrow night, Mr. Bush will try to put the greenies back in the bottle with a Cabinet Department of Environmental Affairs and a $2 billion rise in environmental spending, including a shocking 57 percent—$375 million—increase in global-warming research. (See Table)

The president is hoping these largely symbolic moves will make it possible for him to curb the $104 billion economic mayhem in the bill now being debated in the Senate. While that is the worst-case estimate of the real cost of this bill by the Business Roundtable, it is not far from a likely official estimate about to come from the Congressional Research Service which reportedly has already put a $62 billion price tag on just one section of the bill, "air toxics."

The reason for this massive cost are the Senate provisions requiring a residual risk of no greater than 1 in a million that even EPA Deputy Administrator William Rosenberg admitted "would force us to shut down most major steel plants, such as the Great Lakes Steel plant I visited the other day." No wonder a dozen or so leading Democrats reportedly prevailed on Senate Energy Chairman Bennett Johnston, Louisiana Democrat, to rewrite Mr. Baucus' lunatic bill.

Yet Mr. Bush has only his own "greenie" cohorts to blame. For example, in the Bush environment budget is the statement that raising the corporate average fuel economy (CAFE) standard for autos "will have the added benefit of reducing CO_2 emissions." this ratifies global warming as policy, and makes it tougher to get out of the Senate bill a mindless provision that forces CAFE up to 40 miles per gallon—at a cost of tens of billions of dollars.

This is why putting EPA Administrator William Reilly into the Cabinet may be the only way to make him politically accountable. In Cabinet meetings, Mr. Reilly might just have to explain to Health and Human Services Secretary Louis Sullivan why the Senate proposes to spend $50 billion to $100 billion a year to deal with a total cancer risk of less than 3,000 (realistically, less than 30), when Mr. Sullivan's entire cancer research budget is $2 billion.

This is expecially striking when cigarette smoking now kills over 500,000 people a year, at least 100 times as many Americans as all clean-air risks put together. (That's why the 1977 Nobel Prize winner in nuclear medicine Rosalyn Yalow told us "we should rename the EPA the Tobacco Protection Agency!")

Mr. Reilly also might explain to Commerce Secretary Robert Mosbacher why he now is risking "green gridlock" by proposing to sign international protocols on volatile organic compounds (VOCs), after signing them on chlorofluorocarbons (CFCs) and methyl chloroform (MC).

The U.S. paint and varnish industry for example, having first been forced by EPA to use CFCs and MC in order to get rid of VOC-producing solvents, were then forced by the international ban to use them again, only to have Mr. Reilly cut off that avenue of escape.

He should be compelled to explain to Agriculture Secretary Clayton Yeutter why he just banned an entire class of fungicides (EDBCs) whose total realistic cancer risk to the entire U.S. population is fewer than five per year, and which are now used to save the population from far more toxic natural fungi.

He could explain why it makes any sense to subsidize higher-cost, lower-output "organic" agriculture to raise products whose actual consumer' toxic risk could be higher, when the FDA says pesticides do not pose any significant consumer health risk.

He might also tell Office of Management and Budget Director Richard Darman why he decided to impose mandatory recycling on all municipalities without any reference to its impact on the nation's commodity scrap markets, or any evaluation of costs and benefits.

He could tell the whole Cabinet whether he proposes to go on spending $1 billion in global-warming research mainly with the believers, or allot an equal amount to the growing army of skeptics and other who think the problem is vastly overstated.

Most of all he should be forced to explain why his department has such a huge vested interest in the rash pursuit of zero-risk on Capitol Hill that now threatens both our economy and freedom.

If putting Mr. Reilly in the Cabinet would force him to confront such issues, it might be a good move, but it's a very small finger in the great green hole George Bush has opened in our economic dike which is now leaking so badly on Wall Street and Main Street.

THE BUSH ENVIRONMENT BUDGET PROPOSAL, FISCAL 1991

[In millions of dollars]

	Fiscal 1990	Fiscal 1991	Increase—	
				Percent
Forestation	361	455	94	26.0
Wetlands	372	460	88	23.7
Superfund	1,530	1,740	210	13.7
EPA operating costs	1,936	2,166	230	11.9
Maintaining environment infra.	488	579	91	18.6
Federal facility cleanup:				
Energy Department	2,190	2,791	601	27.4
Defense Department	1,402	1,520	118	8.4
Other agencies	116	175	59	50.9
Global warming research	659	1,034	375	56.9
Natural resources research	710	814	104	14.7
Total environment	9,764	11,796	2,032	20.8

Source: Office of Management and Budget.

Mr. SYMMS. Mr. President, I see my distinguished colleague is on the floor. It is obvious that his chest is bursting and rather than have him sit there and have any more pride than certainly he and his friends in California deserve from the outstanding performance of the San Francisco 49'ers, I will yield the floor, and I will continue this debate in a few moments.

I yield the floor.

The PRESIDING OFFICER. The Senator from California.

Mr. WILSON. Mr. President, I ask unanimous consent to proceed as if in morning business.

A TEAM FOR THE AGES

Mr. WILSON. Mr. President, I thank my dear friend from Idaho for his graciousness in yielding the floor. He is accurate in his perception. I am, I confess, a little swollen with pride because for the second consecutive year I rise to honor and to ask my colleagues to join with me in honoring the San Francisco 49'ers, the Super Bowl XXIV champions. On January 28, 1990, the 49'ers defeated the Denver Broncos 55 to 10, to claim not only a record-tying fourth Vince Lombardi Trophy, but also a place in history as one of the greatest teams in professional sports.

The NFL playoffs have always given the league's best the opportunity to set new standards of excellence. The 49'ers may have raised this standard to an insurmountable level. If the word "dominance" can be defined in film, one need only play back the 49'ers road through the playoffs. During the past three games we have witnessed a 49er defense that allowed

its opponents only 26 points, while the 49er offense scored an incredible 126 points. The 49'ers set a Super Bowl record of 55 points, and their 45-point margin of victory was also a new Super Bowl record.

Leading this 49er charge to glory was quarterback Joe Montana, the most valuable player of Super Bowl XXIV, and the game's first three-time Super Bowl MVP. Two years ago, after suffering what was deemed to be virtually a certain career ending back injury, Joe Montana not only recovered and came back, but in what was supposedly the twilight of his career, he defied such expectations this year by becoming the highest rated quarterback in NFL history.

The Super Bowl was the brightest example of Montana's stellar season. The 49'ers golden-armed quarterback threw a Super Bowl Record five touchdown passes, three to last year's Super Bowl most valuable player, wide receiver Jerry Rice, another Super Bowl first.

And by the way, I will honor the request of the senior Senator from Mississippi by pointing out that Jerry Rice is from Mississippi. We are proud that he has chosen to play for San Francisco.

Montana also completed 13 consecutive passes and, after four Super Bowls, he has yet to throw an interception. If football has a man equivalent to baseball's Mr. October, his name is Joe Montana, the January man.

Tribute must also be given to San Francisco head Coach George Seifert. In his rookie year as the 49'ers field general, Seifert faced the dual pressure of leading his team to repeat as champions and filling the shoes of legendary coach Bill Walsh, the principal architect of this football dynasty. Not only did Seifert succeed, but he has led the team to an even higher standard of excellence.

Once again, I congratulate the back-to-back Super Bowl champion, San Francisco 49'ers. With four Super Bowl rings, they are more than just the team of the eighties. I submit, with I think pardonable and justifiable pride, that they are a team for the ages.

Thank you, Mr. President.

I yield the floor back to my distinguished friend from Idaho and thank him again for his courtesy.

CLEAN AIR ACT AMENDMENTS OF 1989

The Senate continued with the consideration of the bill.

The PRESIDING OFFICER. The Senator from Idaho is recognized.

Mr. SYMMS. Mr. President, I want to continue on with where I was a few moments ago and to address title II of the Senate Environment and Public Works clean air bill. Perhaps this title best exemplifies my concern for what this bill is all about.

Mr. President, this title of the bill I think has some serious problems. I want to get to those as fast as I can. But according to the cost estimates for the EPA, the Senate Mobile Sources section will eventually impose an added cost of $11.4 billion on the Nation, each and every year. The administration's mobile source recommendation, on the other hand, is estimated to cost only $1.7 billion. Yet, Mr. President, nearly all the health benefits that can be claimed by the proponents of the committee bill can be claimed by the President for his proposal as well.

Even more ironically, the principal cause of pollution in my home State of Idaho are unrelated to further tailpipe controls. The added cost of both proposals, the committee's and the President's, will do little to nothing to improve the public health in my State and, I might say, in many, many other States.

Why, then, should Idahoans have to pay more for their cars so as to solve a problem in Baltimore or to solve a problem in Los Angeles? If we are going to impose these needless costs on them, why do it at a price tag of $11.4 billion when the same thing can be accomplished by $1.7 billion?

I do not deny that cleaner air saves lives, reduces hospital cost, increases worker productivity, and yields a number of other economic benefits, but it is possible to claim those benefits at a lower price tag. After all, there has to be some common sense applied to this.

I made the comment to my colleagues, Mr. President, somewhat tongue-in-cheek, but partly serious, that if the 20-year-old automobiles pollute 20 times more than the new ones, in many ways it would be cheaper to purchase a new automobile for everyone in America who has a 20-year-old car, take those old cars, the old ones that are still polluters, crush them up and send them back to be recycled, and give them a new car and pass no bill. We would clean up more air, and at the same time, let the economy struggle and continue to go forward.

I believe there is a serious problem here that my colleagues often do not talk about on the Senate floor. If this legislation that is before us today were to pass the Senate in its current form and the people in the country would find out they are going to have this enormous cost imposed on them at a time when they are struggling to compete with the Japanese and with the Western Europeans and with other countries, the Koreans and other of our trading partners, if they were to find out what costs would be imposed and how much it would reduce the profits of major American companies, and profits in general, for that matter, we would probably find the stock market would start selling off from the psychological fears on the part of the American people.

People will stop planned expansion and have a spilloff. It would become a self-fulfilling prophecy of a built-in recession, guaranteed, thanks to the Congress of the United States, if we impose legislation like this.

That is why I have always said, Mr. President, when I see this bill: This bill is a classic example of bad legislation. The old saying is if you love sausage and you love law, you should never watch either being made. If people saw what is in this bill and knew the tremendous burden the costs of the regulations would impose on American men and women, they would truly believe the safest time of their lives is when Congress is not in session. That is the only time when we cannot get up to this kind of mischief to pass this kind of legislation.

That is not to say any of us here in Congress are not in favor of cleaner air or as clean air as we can afford. But it is simply to say at some point in time when we talk about gold plating air pollution, we remove common sense from the equation. This kind of extravagant regulation results in so little benefit at so great a cost. It is important to note that these mobile source emissions will continue to decrease as newer, cleaner vehicles replace the older, less controlled cars and trucks.

Less than 35 percent of the motor vehicles on the road today were built to the latest standards which already control tailpipe emissions up to 96 percent. In fact, approximately 85 percent of automobile emissions are from pre-1983 vehicles.

As is, the committee bill will have a tremendous impact on motor vehicles and the consumers who buy them. Vehicle manufacturers have made it clear that the proposed tailpipe standards of the committee bill, taken together with carbon dioxide emission controls, refueling controls, requiring light trucks and vans to meet passenger car standards, the 100,000-mile extended useful life definition, more stringent testing, certification, and recall requirements, would have the effect of eventually eliminating some vehicle classifications because there is no known technology with which to meet all of these provisions.

In addition, the potential cutbacks in model offerings would result in job losses. The National Association for the Advancement of Colored People was among the first to recognize that these job losses would impact blue-collar minorities first. In a letter to members of the Committee, NAACP

Executive Director Benjamin Hooks said:

> We understand that it is proposed to adopt mobile emission standards that are more stringent than those contained in the Administration's clean air proposal. The tough clean-air bills that are before the Congress need not be made any tougher * * *. The NAACP is concerned that the adoption of more stringent mobile emission standards would have serious implication for the auto industry, auto dealers and consumers. Customer acceptance and satisfaction could be jeopardized by unreasonable standards which, in turn, could have a severe impact on the market and cause job losses. In recent years, the industry has lost thousands of jobs; many of these job losses were borne by minorities.

And since more stringent requirements could also have an adverse impact on fuel economy and driveability of models that might remain, automotive fleet-dependent industries would suffer as well. Outcomes, such as these are not acceptable.

POTENTIAL COUNTERPRODUCTIVITY

It is bad enough that the mobile source provisions in the Committee bill are both burdensome and unnecessary. What is even more troubling is that several of the bill's measures will actually impede local efforts to attain the ozone and CO_2 standards and worsen air quality.

For example, among the bill's requirements are substantial further reductions in the oxides of nitrogen, NO_x, standards for vehicles nationwide, irrespective of unique or localized air quality problems. It is now broadly accepted in the scientific community that reducing NO_x emissions in some settings may work at cross purposes with the goal of reducing ambient ozone levels.

Specifically, increased regulation of NO_x emissions may actually increase ozone concentrations in some areas, a phenomenon scientists call the "NO_x inhibition effect." In the complex chemical process leading to the formation of ozone, NO_x can both promote and inhibit ozone formation, depending on the atmospheric hydrocarbon to NO_x ratio. Based on research conducted by EPA and others on this subject, it can be shown that more stringent NO_x control could negate the ozone improvements otherwise resulting from HC control in most major U.S cities.

In other words, the committee bill could actually erect substantial obstacles to ozone attainment precisely in those few remaining areas of the Nation where significant further measures are needed. Speaking of similar NO_x standards in the Clean Air amendments reported by the committee in 1987, EPA Administrator Thomas expressed "concern [that] some of the NO_x provisions of this bill could actually exacerbate the ozone problem." Since only a few counties in the Nation (in the Los Angeles area) currently do not attain the nitrogen dioxide, NO_2, air quality standard, trading further NO_x reductions for increased ozone levels would be both wasteful and counterproductive.

Likewise, the sharp mobile source emission reductions sought in the committee bill may well take us backward rather than forward, especially in the short run. It stands to reason that impractical new controls that delay or interrupt the availability of new vehicles, or impair their driveability or fuel economy, will lead some consumers to defer new vehicle purchases and keep their existing vehicles longer. If enough potential new car buyers follow this course, the result will be deteriorating air quality because older vehicles are less well controlled than the new ones that otherwise would have replaced them.

As I said, Mr. President, it might make more sense to appropriate a certain sum of money to buy up some of the old cars, and we might end up getting more improvement in air quality for less money and provide a better opportunity for more people to continue working and have the opportunity to achieve the American dream.

This prospect is more than just theoretical. A Brookings Institution study of the last round of vehicle emission standards has confirmed that "even a small change in the scraping rate [i.e., vehicle turnover] can exert a significant effect on short-run emissions outcomes," so that "any regulation that results in higher new car prices will raise aggregate emissions."

In fact, the Brookings study concluded that costly new car hydrocarbon controls may lead to increased emissions for as long as 5 years after the standards take effect. Thus the bill's mobile source provisions may actually make attainment more difficult in the near-term—think of that; it may make it more difficult in the near-term, with the passage of this legislation, the noble cause of which is to have cleaner air for Americans, because it will slow down the turnover rate of the current fleet and ignore the modern technology that is taking place in the new fleet—the simplicity, the better design, and so forth, that is taking place in our new modern automobiles which have cleaner emissions than the older cars that they replace.

And this, during the period when a substantial number of areas now only marginally "nonattainment" would otherwise be coming into attainment solely because fleet turnover would ensure a broader penetration of the state-of-the-art controls already required under the act.

The Brookings analysis also concludes that even over the longer run, "it is obvious that costs must greatly exceed benefits since the incremental costs of [vehicle emissions] control rise rapidly in the vicinity of current standards." One important reason for this is that "the relationships between [motor vehicle] emissions and air quality measures is tenuous at best." As the Brookings study observed:

> Surprisingly and even shockingly, Congress has legislated emissions controls on mobile, industrial, and utility sources without insisting upon careful measurement of the effects of these programs. Expenditures on air pollution controls have exceeded $20 [now $31] billion a year in recent years, but there appears to be little interest in spending even as much as 1 percent of that amount to measure the effect of these expenditures upon air quality.
>
> * * * * *
>
> Finally, it is unlikely that even the full implementation of the monitoring network planned by the EPA will be sufficient to capture the effects of mobile-source controls across the many air sheds with air pollution problems. Congress must show some interest in gauging the effects of automobile emissions controls before the EPA will develop a monitoring system and an analytical framework that is capable of measuring the impact of exhaust controls upon local air quality.

The Brookings study estimates that "the annual costs of the current automobile emissions program are certainly greater than $10 billion a year." Given the ineffective and, in many respects, counterproductive character of tighter controls and what Brookings calls the "rapidly" rising marginal costs of obtaining incremental emission reductions, it is evident that the mobile source controls in the committee bill are seriously flawed, and could actually take us backward in our attempts to clean up the air.

Mr. President, it is very obvious to this Senator that the bill needs a great deal of work. It is very obvious to this Senator that it would be a grave mistake for the Senate to pass this bill as it stands by February 10, as our friend from my neighboring State of Montana is suggesting. I could not disagree more with the distinguished subcommittee chairman that we should push forward with this bill.

It seems to me it is time to let the rest of the Senate dissect this monstrosity and recognize that this bill is a bill that would be destined to put this country in a tailspin, to make us less competitive, costs thousands of jobs, and possibly do little to clean up the environment.

Oh, we might have an enormous clean air program, but no one may have a job, and in some areas, interestingly enough, just because of the natural meteorological situation, you will not have any cleaner air anyway, whether you pass this bill or you do not, because there are other factors that enter into it.

CARBON DIOXIDE STANDARD

Mr. President, another provision of the Committee bill, the carbon dioxide tailpipe standard, is a clear abuse of the Federal Motor Vehicles Emissions

Standards Program, and an unprecedented and not-too-covert attempt to usurp an issue within the jurisdiction of the Senate Commerce Committee.

Carbon dioxide is not an air pollutant—it possesses no physical, chemical, biological, or radioactive property that presents, in and of itself, a threat to public health or welfare. To regulate such a substance through an emission standard under title II of the Clean Air Act flies in the face of the clear and express purpose of the Act, "to prevent and control air pollution."

The proponents of the committee's CO_2 standard may argue that CO_2 is an air pollutant because it acts in the stratosphere as a "greenhouse gas." Such an argument is transparent, however. First, to make it, one must begin by assuming some connection between manmade sources of greenhouse gas and global mean temperature increases, and that such hypothetical increases are of a degree that can adversely affect public health and welfare. But then, even making such assumptions, the committee bill addresses such a small fraction of the total worldwide CO_2 emitted—U.S. vehicle emissions—that it is very unlikely the standard would have any measurable effect on global temperatures.

The only functional purpose of the committee's CO_2 standard is to make mute all laws and regulations dealing with corporate average fuel economy [CAFE]. CO_2 is the natural product of combustion. The only way to generate less of it per-mile-traveled is to increase fuel economy. To meet the committee bill's CO_2 standard, in fact, cars will eventually have to attain a 40-mile-per-gallon fuel economy. Consequently, the CAFE standard becomes mute—a "deadwood" artifact of law with no consequence. The committee provision would have the effect of completely supplanting the current CAFE standard.

So I think what you can be looking forward to if this bill passes is to have small, as Senator MOYNIHAN calls them, disposable automobiles that are very light, no air conditioners, no frills, nothing that would hang onto the car that might cause it to use any extra fuel but be very, very lightweight. In the name of cleaning air to breathe, you will have a much higher chance of crossing the River Jordan early because you will be killed in an auto accident driving an automobile that would not give you the protection that maybe a slightly heavier automobile would in the case of an accident.

As a matter of public policy, the degree to which the Federal Government should force the manufacturers of automobiles to attain greater fuel efficiency is much more than merely an environmental question. It involves matters of engineering design, safety, national energy policy, international competitiveness, and trade. The Commerce Committee of the Senate is far better equipped to address these concerns than is the Environment and Public Works Committee, and is appropriately given jurisdiction over legislation amending the CAFE. The CO_2 standard in the committee bill is an inappropriate usurpation of the Commerce Committee jurisdiction over this matter.

Ironically, as a matter of environmental policy, the committee bill's CO_2 standard is clearly detrimental to clean air goals. According to the testimony of auto manufacturers, the fuel economy required by the standard would necessarily require them to scale down the size of their vehicle lines. With certain larger vehicle classes no longer available, but with public demand for such vehicles still high, there would be a significant incentive to keep the older, larger, and more polluting vehicles on the road longer. As the Brookings Institution study I mentioned earlier pointed out, this decline in the scrapping rate for older vehicles would perpetuate many air quality problems.

An additional concern, Mr. President, is the tailpipe standards. The first phase of the standards would go into effect in model year 1993, which would not allow sufficient time to meet the necessary design standards, but Congress does not worry about that. We will just pass the law and if they cannot do it, I guess we will just not worry about it; let somebody else worry about it.

The standards proposed for the year 2003 have no basis in technical feasibility and are derived by merely calculating a doubling of the stringency of the proposed 1993 California standards. They simply took the California standards, doubled them, and then arbitrarily wrote it into the law and we are going to pass it here in the name of clean air whether they can meet the standard or not.

I can tell you one thing. This better be taken out of the bill, Mr. President, before it is passed. I would appeal to my colleagues that I hope there will be a leadership substitute offered. I hope it will be a bipartisan substitute that will be offered so that we can have a reasonable approach to this and not this extreme draconian bill that is before the Senate today.

The bill does not provide for a phase-in of the proposed standards. yet phase-ins are widely recognized as a meaningful cost-effective way to introduce new technology into a manufacturer's varied product line. They allow for proper planning and give manufacturers in-use experience on several models which they can then apply to all models in subsequent model years.

No provision is made for separate certification and in-use standards. Emission reductions achieved in certification may not realistically be met in-use because of factors, many of which are beyond the manufacturer's control, such as improper maintenance, poor fuel quality, and improper vehicle use.

The bill requires smaller light-duty trucks to meet the same standards as cars, ignoring the important functional differences in cars and trucks.

The standards proposed for larger light trucks, together with the current Federal useful life requirement of 120,000 miles, actually makes those standards more stringent than those in California.

PROHIBITING EMISSIONS AVERAGING

Requiring each and every vehicle or engine sold to meet each emission standard is unreasonable, not recognizing the normal production and testing variability which cannot be eliminated. Taken literally, it would appear to require testing of every vehicle produced, which would be enormously expensive and time-consuming. The prohibition is also unnecessary, since individual vehicle emission levels are inconsequential when compared to the impact of fleet emissions on air quality. No significant air quality benefit would result from adoption of such a prohibition.

Lighter trucks together with current Federal useful life requirements of 120,000 miles actually make those standards more stringent than those in California.

Mr. President, one other point I wanted to make. I think is very important. I mentioned earlier in my remarks about these stage II feelers that are like an accordion that you have to put on a gas pump. The controls on the vehicles to capture emissions during refueling could increase vehicle safety risks, even though it is duplicative of stage II, and they think they will have these on cars prior to the time that all the stage II fuel nozzles would be required, so you get to pay twice. You pay more money for the equipment to pump the fuel into your car; you pay more money for the automobile that you buy because it has an on-board fuel canister to catch the vapors.

But now get this:

These controls on vehicles to capture emissions during refueling—onboard systems—could increase vehicle safety risks, as has been noted by the National Highway Traffic Safety Administration [NHTSA], the National Transportation Safety Board [NTSB] and other organizations, both public and private, concerned with vehicle safety.

If there is any good to having the EPA Administrator be a Cabinet officer, I might say there might be one valuable lesson that can be learned. When EPA and the Congress start passing legislation that impacts safety

of travel, maybe the Secretary of Transportation would speak up at the Cabinet table and say, "What in the world are you folks up to over there?" Maybe the Secretary of Health and Human Services would speak up and say, "You are imposing hundreds of billions of regulatory costs on the American people. You want to spend that on preventing cancer, but we only have a $2 billion budget to do cancer research in my Department. What is going on here? What is happening? How did this get out of hand?"

Another point that I want to touch on very briefly is the Senate bill's requirement for onboard diagnostic systems. Such systems would monitor emissions control equipment and may one day eliminate the need for more costly and less efficient State emissions inspection and maintenance programs and recall programs. However, the provision in the bill too finely specifies the content and operation of the system. This may lead to many false failure indications causing consumer inconvenience in taking vehicles in for unnecessary repairs, and eroding confidence in the system, thus defeating its purpose.

USEFUL LIFE DEFINITION FOR CARS

The proposed doubling of today's 5-year/50,000-mile useful life nearly doubles the stringency of the emission standards. In order to be certain of compliance with the emission standards at 100,000 miles, a manufacturer would have to certify at significantly lower levels of emission to take into account normal deterioration of emission control equipment and production variability. Taken in combination with the other standards in the bill, this provision could be very difficult if not impossible to comply with.

MOTOR VEHICLE TESTING AND CERTIFICATION

Vehicles coming off the assembly line are randomly tested by EPA in a process called Selective Enforcement Audit [SEA]. This audit is to assure that the vehicles meet the standards. The committee bill requires a 90-percent pass rate in SEA. This provision, too, fails to take account of production variables that cannot be eliminated. This provision effectively tightens standards in the bill another 30 percent more.

USE OF STATE INSPECTION INFORMATION

Because of differences in testing equipment, procedures, and conditions in the various States' inspection and maintenance programs, the data collected in some of these programs does not necessarily correlate with the elaborate Federal test procedure used to certify vehicles. Use of this inappropriate data would only compound the many uncertainties that exist in EPA's current in-use data collection.

Allowing such State inspection and maintenance program data to trigger recall testing that would be paid for by manufacturers, as the bill would do, would effectively punish manufacturers for weaknesses in State programs over which they have no control.

FUELS PROVISIONS

FUEL VOLATILITY

The committee bill amends the Clean Air Act to require that the Reid vapor pressure [RVP] of gasoline sold during the high ozone season—May 16 to September 15—not exceed 9.0 pounds per square inch [psi] in class C areas—which are located along the west coast and in New England. This would effectively require RVP limits of 7.5 to 8.0 psi in ASTM class A and B areas, respectively. Gasoline with such a low RVP has not been sold in some class A and B areas in the past 20 years.

So you have another problem being imposed on the transportation of the American people. There is no free lunch, Mr. President. Somebody will have to pay for this. There is no free lunch, but this bill will be very, very costly to the American people.

Reid vapor pressure is a measurement of how volatile—or how "evaporative"—a fuel is at sea level at 100 degrees Fahrenheit. It marks one point on what is known as a fuel's "distillation curve." Gasoline must be refined so that the fuel performs properly at different points along the distillation curve. In order to easily start an engine in cold temperatures, at least 10 percent of the fuel should evaporate between temperatures of 122 degrees Fahrenheit and 158 degrees Fahrenheit. The effect of lowering RVP is to raise the distillation curve so that less than 10 percent of the fuel evaporates within that temperature range.

Certain class A and B areas of the Northwest and Rocky Mountain regions already experience very low temperatures in the May 16 to September 15 time period. EPA currently regulates fuels sold during that time period to achieve RVP's between 9.5 and 10.5 psi. Even at those levels, cold weather episodes have produced startup problems for certain vehicles. It is very likely that a lowering of RVP below 9.0 psi for such areas would create significant and widespread cold weather startup difficulties.

Part of the problem is that the actual RVP of fuel is always lower than the level at which EPA regulates it. This is because of EPA's "no tolerance" enforcement guidelines. Since gasoline RVP testing has a confidence level of 95 percent, and since EPA allows no tolerance above the established standard, refiners must produce fuel with volatility lower than EPA's standards to protect against test inaccuracies.

Ironically, the very areas where problematic RVP reductions might occur are located in States already in compliance with ozone standards. Consequently, the RVP reduction would be of little or no benefit to attainment of ambient air quality standards in those States.

This decreased responsiveness of the fuel stream with no accompanying air quality improvement would be costly as well. Decreasing RVP increases gasoline production costs since refiners must back out lower cost components. It also requires refiners to operate reformers at higher severity rates to compensate for octane loss. When reformers are run at high rates, volume is lost. The net result is a significant increase in the cost of gasoline to the customer. In those areas of the country where RVP reductions are unneeded and possibly pose startup problems, it does not make sense for Congress to require consumers to pay more for a less desirable product.

What I am saying is if I were out there in the field working at a service station trying to help people get their automobiles started, and they called up, and said, "What is wrong with my car? You just tuned it up," I would say, "Call your Congressman or Senator that passed and imposed the requirement to sell this fuel that won't start your car." Or, I'd blame it on some EPA regulation that happened to fit the standards of some of the dreamers along the banks of the Potomac where they know what is best for us, where they have no faith in free markets. They cannot see that in Eastern Europe people are clamoring to get what we have here. They want a market economy that allows free people working through free institutions to voluntarily allocate their scarce resources, goods, and services. They are clamoring for that, yet we are trying to impose a command-and-control economy by the Federal Government.

Mr. President, I see I have several colleagues on the floor who wish to seek time. I have not quite completed my dissatisfaction with title II of the bill, but I will just say that there are so many other things I want to mention.

Senator GRASSLEY came to me at lunch today and pointed out that many of his constituents in Iowa have engines on their farms that use leaded fuels, such as combine engines, tractor engines, stationary engines, corn feed mixers, and feed mills.

LEAD PHASEDOWN

The bill makes effective January 1, 1991, a complete elimination of lead in gasoline for highway use. This provision is unnecessary for health purposes, and costly to farmers and other owners of off-highway and antique vehicles that still require leaded fuel.

Today, leaded gasoline contains no more than one-tenth of a gram of lead per gallon. That, coupled with the continuing turnover of unleaded vehicles

in the national fleet, has resulted in attainment of ambient lead standards throughout the Nation. The few remaining lead concerns are site specific and do not require a Federal response that is nationwide in scope.

The bill also places a prohibition on the continued manufacture of motor vehicles requiring leaded fuels. This provision alone will ensure that the marketplace eventually phases out leaded fuel itself. In the meantime, however, there are a handful of individuals who, usually because of depressed economic conditions, continue to depend on leaded fuel vehicles. Many of these individuals live in rural areas where their demand for leaded gas, coupled with that of farmers, is sufficient to make refining, transporting and marketing of leaded gas economically feasible.

In April 1987, the EPA and USDA reported results of a joint study to determine the need for lead in gasoline-powered machinery. The study concluded: All engines performed satisfactorily on low-lead gasline.

Most engines experience excessive exhaust valve-seat wear when unleaded gasoline was used.

Nonlead additives demonstrated varying ability to reduce valve-seat wear.

It is estimated approximately 700,000 gasoline powered tractors nationwide are vulnerable to excessive valve-seat recession if operated on unleaded gasoline.

All combine engines are likely to experience excessive valve-seat recession if they have cast iron valve seats and are operated in medium or heavy-duty applications, using unleaded gasoline.

It appears a large number of farm trucks could be vulnerable to excessive valve seat recession if operated on unleaded gasoline.

So I am just saying, Mr. President, as I said the other day, I believe that we as Senators and Members of Congress should try to do things that will expand the happiness of our people—not harass them, not put them out of work, not for some cause that may or may not be scientifically prudent.

There is no question that if we do things to interfere with leaded fuel most old engines which need leaded fuel will start having exhaust fuel-seat wear. They will wear out when they use unleaded gasoline. They will have all kinds of problems. It is a cost that is being imposed on people with absolutely no evidence that anyone is suffering from a lead problem associated with the use of leaded gasoline in some farm and rural areas on small engines, on tractors and on stationary engines that run certain equipment.

While the committee bill does not expressly ban unleaded fuel for use in farm equipment, many refineries have already left the leaded fuel market, and the committee bill's ban on highway use of leaded gas will likely eliminate the remaining refineries. Without leaded gas suppliers, and in the absence of acceptable additives, farm equipment losses could be significant.

FUEL QUALITY

The bill also directs the Administrator of EPA to promulgate regulations establishing specifications for fuel quality. This, in essence, would give the Administrator the authority to mandate specific fuel formulations. Because each refinery configuration is different, a mandate such as this could require significant refinery modification or possibly force some refineries to close.

The Administrator should be given only the authority to set performance standards which can be satisfied by any fuel achieving comparable emissions reductions. The Administrator must also compare the cost-effectiveness of the performance standards program to that of other ozone reduction strategies before promulgating regulations. This will ensure that the projected air-quality benefit justifies the cost of compliance and will allow each fuel supplier to produce fuel which meets these standards in the most cost-effective manner possible.

OXYGENATE MANDATE

The committee bill currently incorporates a provision requiring that fuels with at least a 3.1-percent oxygen content be sold in all areas classified as nonattainment for CO_2 from October 1 to March 31 each year. In the absence of other avenues through which to encourage domestically produced ethanol to enter the fuel stream, this provision is necessary.

But its costs is significant, and its value to air quality limited. Since its effect would be to require the splash blending of ethanol, and because splash-blended ethanol is currently given a 60-cent-per-gallon exemption from fuel-use taxes, the provision would result in significant loss of revenue to the highway trust fund, the fund out of which we pay for the maintenance and upkeep of this Nation's infrastructure.

Furthermore, the value of splash-blended ethanol to attaining clean air goals is limited, especially since such fuels must necessarily be granted a variance allowing them to meet RVP standards one pound higher than other fuels. Many of the areas where splash-blended ethanol would be mandated will likely reach attainment merely through vehicle fleet turnover, thus eliminating the value of the ethanol blend.

A much better method of utilizing ethanol in the Nation's fuel supply is in the production of Ethyl tertiary butyl ether [ETBE]. ETBE is a clean burning ethanol- and isobutylene-derived compound, currently unavailable since it cannot compete with cheaper imported, methanol-derived MTBE and splash blends. However, should the U.S. Treasury follow through with their proposed rule to extend the "blenders tax credit" to ETBE, the need for a 3.1-percent oxygenate mandate would be greatly lessened. The committe bill's oxygenate requirement could then be lowered to 2.7 percent or some other level that assures continued clean air improvement and yet leaves highway funds intact.

OUTER CONTINENTAL SHELF

The Department of the Interior is currently charged with regulating offshore air quality, including the air quality concerns associated with offshore oil and gas production. It carries out this charge through the offices of the Mineral Management Service [MMS].

The MMS is charged with safety considerations as well as environmental review, which is an important duality of responsibility on offshore drilling rigs. Not every kind of control equipment used "onshore" can be safely used offshore. Because of its ongoing offshore inspections, the MMS maintains a regular presence that is of great value to enforcing and monitoring compliance with offshore air emission standards.

Nevertheless, there are some who have criticized the Department of the Interior for not having done an adequate job. The logical response to such an accusation would be to redouble efforts to ensure that Interior does a better job. Unfortunately, the committee bill does not take the logical course.

Rather, it merely places the regulation of offshore sources in the hands of the EPA. Forcing EPA's air quality office to assume authority over an area of the Outer Continental Shelf poses some awkward problems, not least of all being the fact that States, who implement most EPA air quality measures, cannot be expected to regulate sources outside their own boarders.

Offshore air emissions should be regulated by the agency that has the best authorities, funding, personnel and resources. Whether that agency is Interior or EPA depends on where the President chooses to place such resources. Because of this very fact, questions of executive reorganization have traditionally been a Presidential prerogative. There is no reason why the committee should seek to usurp that prerogative now.

Mr. President, I could go on and on on this bill on the fuel things. But there are better ways to do things than we are trying to do in this bill. ETBE is one way that would be better.

But the fact is that, in summary, I guess I would say, this bill basically denies the logic of the basic fundamental principles of using sound sci-

ence, of using technology, and of allowing people to work freely in the marketplace to solve these problems, and use the best available technology that they can be developed at a time, to have the best and simplest design which will provide for the cleanest emissions and for the best long-term health of our economy.

This legislation will throw a roadblock in the crossroads of common sense. It will intervene in the progress that is being made through advanced technologies, through simple designs, through improved technologies, whether it is car design, fuel mixing, fuel blending, or different varieties of alternate fuels.

There is no question that the proposal that the President has sent to us, and that I think will be offered in probably a modified form here in a few days, will offer Senators a chance, if they are concerned about doing something about clean air, about doing something about it in a much more sensible, moderate fashion, and it will be much better for the American people than to go whole hog and throw the baby out with the bathwater—pass this very draconian, expensive, excessively regulating bill on the American people to achieve, though noble goals, only minimally cleaner air than is proposed by the alternate bill which the President has offered, or a bill that I am sure sooner or later will be brought to the floor.

Mr. COATS addressed the Chair.

The PRESIDING OFFICER (Mr. KERREY). The Senator from Indiana.

Mr. COATS. Mr. President, I would like to take this opportunity to explain some of my views on the legislation pending before the Senate.

I am one who truly hopes we can fashion a rational, reasonable, achievable piece of legislation that will bring about needed improvements in the air quality of our country and of our country's cities, yet, also balances it with a very important need to maintain a competitive, effective, growing, dynamic economy.

Achieving the balance between those two goals is not going to be an easy task. We have a proposal before us on the Senate floor, S. 1630, which proposes one way of doing that. The President and the administration have offered another proposal which shares some of the goals of S. 1630, yet departs in a number of areas in an effort to achieve the same ultimate end.

There is legislation under consideration in the House of Representatives, and there are a number of compromises that have been discussed. I have been engaged in discussions with others of my colleagues, and we will be debating amendments to the basic legislation that is before us. My primary concern is that, while we want to make efforts at improving the existing Clean Air Act and bring about needed changes designed to improve America's air quality and move us toward a safer, cleaner, healthier environment, that we not do so in a way which would result in either not achieving that goal in a reasonable fashion, or in doing it in such a way that we inflict severe damage on our economy.

We all want to leave future generations a legacy of a cleaner, healthier American environment. Yet, we also want to leave the legacy of a dynamic, expanding, growing economy, one that provides opportunity and jobs and the kind of quality of life that many of us have enjoyed in the past several decades in this country.

Therefore, finding that very balance that allows us to achieve both of those goals is one of the most daunting and challenging tasks that this body has faced in a long, long time. We have struggled mightily over the past decade to work on proposed changes in the clean air laws. As a member of the House Energy and Commerce Committee for 8 years, I directly served on a committee with jurisdiction over these questions, and participated in many of the epic struggles which took place on that committee to attempt to achieve that balance. We failed, for a number of reasons, to enact legislation.

In my opinion, clearly the time has arrived whereby we will move forward and enact into law this year, 1990, amendments to the Clean Air Act. We can argue that this might not be the time; yet, it is clear to me that after a decade of discussion, we are at the point where the President strongly endorses changes in the clean air law, with the majority of the Senate, led by the majority leader. And with, I think, a majority in the House of Representatives supporting it, we are going to see legislation this year. The only questions are, what will that legislation contain, and what impact will it have on our national economy and the local economies for each of our States?

I begin this discussion with a reference back to a time period of severe economic distress for the area that I represent in my State, and the Midwest in general. This country, in 1982, 1983, extending into 1984, experienced a severe economic recession.

As someone who represented over 550,000 people in the northeast corner of Indiana, the Fourth Congressional District, I experienced first-hand the effects of that recession. It did not simply involve looking at unemployment statistics, at lines on a chart, at numbers on a page; it involved looking into the faces and eyes of individuals who are and were deeply effected by that recession; of being laid off without a prospect of a new job, or at the prospect of a job at far lower wages; families sacrificing and scrimping and trying to hold the line, hold their home, maintain some semblance of income, as the depression that hit our particular area deepened.

Indiana had two choices at that particular time. One was to fold up and say that is it for the industrial Midwest, that is it for major manufacturing; the other was to roll up our sleeves and go to work and do something about it. I am proud that the people I represented in the State of Indiana took the latter course.

We have made what some would call a remarkable recovery. Our economy has been booming. We have created hundreds of thousands of new jobs, millions across the country. We have restored a competitiveness to our manufacturing sector that is remarkable. We are poised and ready to complete on a worldwide basis.

The steel industry, for instance, has made a remarkable turnaround. The auto-truck industry has come up with several years of back-to-back growth in increased sales and profits. The machine-tool industry and other industries so vital to not only the industrial Midwest, but the entire manufacturing base across this country, have made substantial progress. We do not want to see that impeded, stopped, eroded, or minimized by legislation that we pass here, whether it is this act or another act or pieces of legislation that affect our national economic policy.

During this time period, it is important to note that these industries made substantial improvements in terms of how they deal with environmental questions. It was not simply a matter of turning on the boilers, opening up the machines and letting it roll, as we had in the past. There were mandates under the original Clean Air Act. There were other environmental mandates and voluntary compliance with a standard that we all were trying to reach in achieving cleaner production processes and making improvements in the air.

We worked together throughout the decade of the eighties to improve that competitiveness, rebuild our factories and regain our market share, and at the same time, invest billions of dollars in environmental concerns. For instance, I think one of the most impressive success stories, one that has not been told all that often in terms of achieving better air quality, is regarding changes in the American automobile. Since 1970 hydrocarbon emissions from automobiles—hydrocarbons being a precursor for urban ozone—and carbon monoxide, those two emissions have been reduced by 96 percent. A 96-percent gain in reduction of emissions coming out of the tailpipe of the American automobile. That is a remarkable achievement. That is a costly achievement. Billions have been invested to in that achievement. It is a needed achievement.

I salute the auto industry for its efforts as responsible citizens of this country and for investing the billions of dollars necessary to make these improvements.

In addition, nitrogen oxide, which is much harder to control, has been reduced by 76 percent.

While we continue to face the need to bring about additional reductions, the substantial reductions that have already occurred should not go unnoticed or unmentioned.

Let me turn to steel. The steel industry has long been the backbone of the Midwest manufacturing base. In the past several years, the primary polluter of the steel industry, the coke oven, has been made 90 percent pollution free, a 90-percent gain.

I think we should also not allow this fact to go unmentioned or unrecorded because the steel industry has done a remarkable job in attempting to make a contribution, not only to international competitiveness, but also to America's clean air efforts.

So the task we are faced with today is not to start the process. The task we are faced with today is to continue to complete the process. In many instances, what we are trying to achieve through these Clean Air Act revisions is finding ways to reduce or eliminate that remaining 10 percent.

The first 75 or 90 or 80 percent of the achievement, although very costly, is less costly than achieving the last part. Because when you get to that last 2, 3, 5, 6 percent, you have to employ extremely expensive technology to achieve those last gains. That is why it is important that we look at this legislation on a rational, objective, reasonable basis and find a way in which we can make those improvements, and yet not bankrupt our industries or lose our competitiveness worldwide, which we have struggled so hard to gain.

That is why we need to work together—not divided by region, not divided by party, but work together as a Senate body—to achieve a piece of legislation which will allow us to truly reach goals that we all want to reach.

Mr. President, the bill before us has, in my opinion, a number of problems. Perhaps those problems can be summed up in the fact that it is immensely expensive and while Hoosiers and other Americans are willing to pay substantial amounts to improve our air quality, it is important that we note what those amounts will be, what impact they will have on our economy, and ask questions as to whether or not the gains that we achieve are worth the cost that we pay. It is not to say that we do not need to achieve additional gains in cleaning up the air or that we are not willing to pay additional money to do so. It simply says that we must weigh the cost versus the benefit; we must provide a careful objective analysis on each section of this bill to determine whether or not the amount paid is worth what we achieve and to examine alternative ways of achieving that same improvement in air quality.

It has been widely discussed and estimated that the bill before us will cost American industry, and therefore the American economy, somewhere in the range of $40 billion to $45 billion per year for the decade of the nineties in order to achieve the requirements set out in this legislation, S. 1630.

Other groups have looked at this piece of legislation and estimated the cost as high as 100-plus billion dollars. The Business Roundtable, a coalition of business and industry interests, last week released a study which estimated that the bill would cost a minimum of $54 billion per year, not total, but per year, and perhaps as much as $104 billion.

That study indicates that the cost of just the residual risk requirements in title III, the air toxic section, alone might cost $45 billion a year, nearly twice what the President's proposal cost. The EPA estimates that residual risk requirements could potentially shut down 39 of 40 coke ovens in this country, effectively shutting down the steel industry.

The steel industry employs 70,000 people in Indiana, and used to employ a lot more than that. Changes that were necessary in the decade of the eighties to reshape American steel production cost literally hundreds of thousands of jobs. The economic impact that is being felt in many parts of my State and other States around this country.

So when we look at legislation which potentially is going to cost in the range of $40 billion to $100 billion a year, we need to ask some very tough questions. We need to be very careful about how we proceed on this, because the impact will not be on the steel industry, the impact will not just be on auto industry or the electric utility industry. The impact will be on our Nation as a whole. You cannot impose a $40 billion minimum cost a year on American industry without it having some negative impact, and probably a substantial negative impact on our ability to maintain competitive, quality products at competitive prices.

We face a world today where our competition is no longer the factory down the street or the State next door, but the nations overseas, or the conglomerate of nations that are taking place in Europe in 1992, or the Asian rim nations. It is important that we look at the American economy as a whole and determine what we need to do to make sure it remains competitive, because that is what is going to provide jobs for Americans in the future and that is what is going to keep America No. 1.

Let us say that you do not agree with all of these estimates—and I do not know if they are accurate or not—different people come up with different numbers. No one disputes the fact that this is going to be an immensely costly piece of legislation, whether we adopt the President's bill or whether we adopt the Senate bill, or the House bill. Whatever we end up with, it is going to cost a lot of money. As I said, Americans, I believe, are willing to pay for cleaner air but they want to do so in a way that results in real gains and does not cripple our economy.

Let me now turn, if I could, to some specific provisions and just in a broad, general way talk about how they impact Indiana and how they might impact our Nation as a whole.

Title IV of the bill deals with acid deposition control. Acid rain has been talked and discussed for a number of years. Effects on Eastern lakes and streams and forests in the East have been debated hotly in this body, in the House of Representatives and across this country. It is clear that while we know a lot more in 1990 than we knew 10 years ago, there are still a number of questions that remain in terms of cause and effect, exact damage to the environment, the health implications, and so forth.

As someone who represents the industrial Midwest, an area which produces most of its power to run that heavy industry by burning fossil fuels, namely coal, Indiana is directly impacted by the provisions of title IV. There is a preception, first, that acid rain is decimating our eastern seaboard and some of our forests, streams, and lakes—and I am not one to say just exactly what the extent of that is. But Congress several years ago authorized a massive study to find specific answers to the cause and effect as of the damage, and what we ought to do to alleviate it. The national acid precipitation assessment report, NAPAP, has reported some preliminary findings. Those preliminary findings indicate some damage, and yet as former EPA Administrator Lee Thomas told the Energy and Commerce Committee in the House not all that long ago, in the latest interim assessment there is no reason for panic, no reason for alarm, no reason to rush to judgment, no reason to enact measures which may turn out 10 years from now not to have solved the problem. We ought to let the science finish its course; we ought to let this massive investment of over $350 million, using eminent scientists from around the country, following models and doing studies and coming up with specific scientific evidence; we ought to let that base our decision on what we do with acid rain rather than just simply make assumptions and go forward.

Having said that, we are making assumptions and going forward. There is a general consensus now that we will move forward on acid rain. We can question whether we should do it this year or wait for the return of that report. But it is obvious that for political reasons or whatever other reasons, we are going to go forward now in 1990, we are going to reduce substantially the amount of sulfur dioxide emissions from powerplants across this country and principally in the Midwest. We will probably end up with a 10 million ton of SO_2 reduction by approximately the year 2000, and that we will do so in a way that will impact on about 100 utility plants in this country before 1995.

As I said, you can debate whether or not we ought to be doing that. The reality is that is what we are going to do. Since that is what we are going to do, we ought to do it in the most rational way possible.

I want to state for the record because I think there is a perception among Members of this body, and there is a perception around the country, that the Midwest utilities have done nothing to clean the air, that there has been no investment, that there has been no attempt to do that.

First of all, there needs to be an understanding as to why we generate the amount of power that we do. It is to manufacture steel and aluminum and machine tools and a whole number of products that are essential components of goods made in this country, durable goods. It requires an enormous amount of power to do that.

Following World War II, we invested heavily in the Midwest in building manufacturing plants, both before the war and after the war, that turned out an amazing cornucopia of goods for this country to consume and to sell worldwide and which played a direct role in terms of our economic success in this past half century.

Such powerplants were built and used coal, a relatively cheap source of energy, to produce the power which drove the heavy machines and drove the equipment necessary to produce these goods and services.

So this manufacturing base is critical to our economy and so important to America's competitiveness. The automobiles and the trucks and the machine tools and the plastics and the agriculture equipment and the pharmaceuticals; these are the lifeblood of the midwestern economy and the national economy. Many are produced in the industrial Midwest.

Those powerplants that were built to supply that power have a record for producing power in substantial amounts but also have a record of being responsible environmentally. We have spent a great deal of money to try to control the emissions from those plants. Indiana is proud of our environmental record in powerplant emissions. We are fourth in the Nation in terms of total dollars spent for emissions control.

We know we need to do more. We know we need to contribute more to the clean air debate that is going on here and we are willing to do more. We are willing to pay our fair share. We are willing to participate in this effort to make our air clean. Since 1980 alone Indiana utilities have spent $1.2 billion in emissions control, and we know that we will have to do much more in the future.

Let me cite some specific examples. Public Service of Indiana, one of the companies most impacted by S. 1630 and by this whole debate, serves 500,000 residential and 39,000 business customers in 69 of Indiana's 92 counties. They recently announced that they will install an additional scrubber at the Gibson plant in south central Indiana. The Gibson plant consists of five units and supplies a total of 52 percent of their power, representing 16 percent of Indiana's total electric capacity. Public Service Indiana is moving forward to make sure that it is putting in place the necessary emissions controls for the future, and is willing to do more to work with this body and to work with the Congress and work with the President to achieve gains in the control of emissions for that plant.

Northern Indiana Public Service Co., which has a remarkable record of investment in the decades of the 1970's and 1980's in terms of controlling pollution, recently began construction of an innovative clean coal technology project. That was awarded in round II of the Department of Energy's Clean Coal Technology Program, and the NIPSCO pure air project will employ new technology by allowing more than one unit to be hooked up to the same scrubber.

The Department of Energy thinks this holds a great deal of promise in terms of controlling emissions, and if it works it can save a great deal of money. We hope that the legislation before us today will allow us to accommodate these kinds of efforts that are under way and these kinds of projects that can make substantial improvements in the Nation's air quality.

These are only two examples of a whole series of examples of efforts undertaken by Indiana utilities in the past couple of decades to address the question of emissions into the air. I could list many, many more, but for time's sake I will move on.

The bill before us today, by most conservative estimates, indicates that while Indiana contributes 7 percent of the country's sulfur dioxide emissions, we are going to pay at least 1½ times that, maybe more, in terms of cost to clean that up.

The Midwest's nine States, which, as indicated, contribute about 50 percent of the Nation's emissions, will by most estimates have to pay over 70 percent to meet the requirements of the legislation before us.

This comes at substantial cost to us in Indiana. We do not look at this lightly. The Indiana Department of Environmental Management estimates that, on a statewide average, Indiana rate payers are going to experience an average rate increase of 9.6 percent, or almost 10 percent. Our largest utility, Public Service Indiana, which I mentioned before and which serves a majority of the consumers of Indiana, is projecting a rate increase of up to 21 percent for its customers. Indianapolis Power and Light Co., which serves the largest city in Indiana, indicates an increase of 11 percent.

These are not inconsequential rate increases. They impact all rate payers from the richest to the poorest. The low-income and the fixed-income residents of the State of Indiana are going to severely impacted by a 10-percent electricity rate increase. It is no small thing to say to a senior citizen on fixed income, or to a low-income person living in one of Indiana's cities or rural areas, that they are going to have to have a 10-, 15-, 20-percent increase in their electric rates. So this needs to be borne in mind as we examine the impact of these bills in terms of real costs on real people.

Mr. President, what we are asking for is not a stall tactic. We are not asking to kill this legislation. We are asking for a reasonable, rational compromise which allows those of us from States that are heavily impacted by the provisions of title IV, the acid rain section, to meet the goals that all of us as Americans want to meet, to achieve gains in clean air, but do so by maintaining mining jobs for those who are mining coal in southern Indiana, by maintaining the ability of all ratepayers across Indiana to pay their electric bills at the end of the month, and by the ability of midwestern manufacturing—steel, autos, machine tools, plastics, agriculture equipment, and other endeavors—to maintain and enhance their ability to produce quality products at competitive prices, to compete worldwide, and provide not only jobs for those in my State and others, but also to provide a continued expansion of the economic growth that we have experienced in the last several years.

I think in Indiana we legitimately ask the question as a State which has contributed to providing support for expenses that are incurred by other regions of this country because of natural disasters or financial disasters or other things that happen. We are asking other States in the country to not look at this as a regional Midwest-only problem, but to have some sym-

pathy and some support for a sector of the country which is so important, not only to the economy of Indiana but the economy of the United States and the economy of New Mexico and the State of Washington and Idaho and Rhode Island and Connecticut and Montana and other States.

We have just passed, in this body, a substantial piece of legislation designed to bail out the savings and loan industries. Hoosiers, who have contributed virtually nothing to this crisis, are going to have to pay over $325 million to meet the tax burdens for this new law; 6½ times our share of the problem is going to have to be paid by Hoosiers because of a financial crisis that basically impacts two States, but which potentially could have ripple consequences on all 50 of our States.

If that is the case with savings and loans, it is also the case with clean air. Yes, it impacts on 9 Midwestern States, but it has a ripple effect to all 50 of our States. Is it fair to simply say, well, we will put the burden on those States that have most contributed to the problem, and we will not worry about the impact on the rest of the country or contribute to its solution?

We willingly put up funds to help pay for Hurricane Hugo and the damage it caused to Charleston, SC and other parts of the Southeast. We willingly paid our share to help repair the damage for the earthquake that occurred in San Francisco this last fall. We did not say, "Well, that is in San Francisco; tough break. We do not have earthquakes in Indiana, so we will not worry about that." Or, "The hurricanes hit the coast and they do not hit Indiana, so we will not worry about the hurricane in South Carolina."

We paid our fair share because we are one country, and what is good for Indiana ought to be good for South Carolina, and that is true for all States of our Nation.

Cleanup costs imposed on Indiana to meet the requirements of S. 1630 are going to cost 1,350 of Indiana's 4,500 coal miners their jobs, and that is going to ripple into an effect of 13,000 job losses in southern Indiana. These higher costs translate into higher manufacturing costs, and result in a loss projected by the Indiana Department of Environmental Management of nearly 20,000 jobs.

Mr. President, I do not want to belabor the acid rain section here. I have a number of other things I want to say about it. As we get into the specifics of the bill, I will be debating and talking about specific provisions here and ways in which I would suggest we can make improvements in this legislation.

For instance, the deadlines imposed under S. 1630, by moving the administration's deadline back a whole year from December 31, 1995 and December 31, 2000 to January 1 of these years, makes a difference of 2 whole years in terms of our timeframe in which we can achieve the reductions required under the bill. That is substantial in terms of its cost and will substantially increase the amount of sulfur dioxide reductions required under the provisions of S. 1630.

Clean coal technology, which I referenced before, needs to be discussed and debated on this floor because it can make a substantial contribution to cleaning up air in this country. The imposition of an allowance for clean coal technology will allow midwestern utilities and other utilities to achieve needed gains in control of emissions in a more cost-effective way. We need the flexibility to employ that technology rather than mandating a specific technology that currently exists. We have spent a great deal of money in this country providing for model programs and test programs for clean coal technology.

Mr. President, I have been informed that I have been a little more long winded than I had planned. I did tell our colleague from Connecticut that I would make sure I reserved time for him to speak on this bill.

I have a lot of things left I want to say because I have only addressed, to this point, one title of this bill. The Midwest is under a triple whammy. We get hit in the acid rain title. We get hit in the air toxics title. We get hit in the ozone title. We get hit 1, 2, 3. Some of us are worried it is going to be 1, 2, 3, and you are out.

I have a good hour's worth of material here that I want to discuss in terms of how it is going to impact my State of Indiana, in terms of how it is going to impact this Nation, and some suggested changes that I think would improve this legislation. It is a discussion which I think every Senator ought to be concerned about.

For the time being, in deference to my pledge to my colleague, I will wrap up my comments on title IV, the acid rain section. I will reserve my remarks on the ozone and air toxics sections for another time.

In wrapping up my comments on the acid rain section, let me just suggest two or three more specific things that I think ought to be discussed, debated, and worked out on this floor so we can move forward with a bill that is more realistic in terms of our meeting those two goals I talked about before.

I suggest the EPA Administrator be given the authority to waive the phase II deadlines for utilities which enter into clean coal technology contracts in good faith, but are then prevented from installing and implementing those projects for reasons beyond their control.

It is incumbent on this body, I think, in drafting legislation, to encourage utilities to make long-term decisions which are in the best interests of our Nation's clean air policy. Yet the legislation before us is going to drive them in the opposite direction.

Another provision of the bill which concerns me is the baseline that is used for figuring current emissions allowances. The baseline is supposed to be the annual average quantity of MMBtu's consumed in fuel during the calendar years 1985, 1986, and 1987, and yet drastic fluctuations in the economy make some of these baseline estimates very unrealistic.

Indiana, as I said, was pulling out of a difficult economic period during that time. Powerplants were not up to full speed as they are now. And using those years as baseline penalizes them and penalizes our country in terms of our ability to remain competitive.

So there needs to be flexible in terms of what baseline we use. I had two utilities that were putting new units in place during the years of the baseline, so they were in test phase and they were not up to speed. Yet just for a small—sometimes a matter of weeks—test period, that emission level is counted as part of their baseline.

Indianapolis Power & Light, and Southern Indiana Gas & Electric Co., which had units being retrofit for parts of 1985, are penalized by this bill because of the arbitrary setting of a fixed baseline, and that ought to be looked at.

I have talked about the disproportionate share of costs that are going to have to be assumed by the Midwest. Let me mention one other specific provision.

The President's proposal included a provision which would respond to a problem titled "the WEPCO fix." It results from a court case and efforts by the Environmental Protection Agency to require that DOE-sponsored clean coal technology projects comply with new source performance standards.

There is confusion here on where we are going with this. I have some indications that the committee is willing to take a look at this. I think we need to, in a sense, have a WEPCO fix which addresses a very real problem. Utilities may be making a very real effort to comply with performance standards, but yet will be penalized if we do not bring about a change in the legislation, at least as it is currently being considered.

There are a number of things here, Mr. President. In the interests of time, I will defer that to a further discussion.

In conclusion, I just want to say that I have traveled to every part of Indiana in the last year, talking with utility presidents, talking with consumers, talking with manufacturers, talking with State government officials, and

local officials about the impact of this clean air legislation on their businesses and on the State of Indiana and on manufacturing in general.

I am concerned that we are moving forward with a piece of legislation which does not adequately address the very real concerns expressed to me. Whether it is in Gary, the home of the American steel industry, an area where people have worked so hard to pull that industry out of the pit that it was in in the early and mid-eighties and make it competitive worldwide again; or whether it is in Fort Wayne, in surrounding areas, a city and area that has worked so hard to help rebuild the American automobile and truck industry and now has a state-of-the-art plant operating, which is potentially jeopardized by some of the provisions in this bill, or whether it is in small machine tool businesses across the State of Indiana; southern Indiana coal miners; Indiana utilities; manufacturing facilities all across our State; we are directly impacted by the provisions of this bill. I submit to the Members that the industrial Midwest, which is the heart of manufacturing of heavy duty equipment and materials in this country, has a ripple effect all across this Nation. If we are going to impose a cost of $40 to $100 billion on American industry, we better know what the results are gonig to be and the effects are going to be.

I want to finish by saying there is room for compromise. There is room to reach both of those goals. There is room to achieve needed improvements in clean air and yet maintain a competitive economy. I am hoping that I can work with my colleagues in presenting not only Indiana's case but America's case in finding that very necessary compromise. I appreciate the patience of my colleagues. I will take up at another time discussion of other parts of this bill. I look forward to being able to alert Senators to potential problems which I believe can be fixed. Mr. President, I yield the floor.

Mr. LIEBERMAN addressed the Chair.

The PRESIDING OFFICER. The Senator from Connecticut.

Mr. LIEBERMAN. I thank my friend and colleague, the Senator from Indiana, for his courtesy in curtailing his remarks for now. We look forward to his continued contribution to this important debate.

Mr. President, I rise to support the amendment currently before the Senate introduced by the Senator from Rhode Island, the Senator from Montana, the majority leader, and others. This amendment would phaseout the use of methyl chloroform by the year 2000. I commend my colleagues for their leadership not only in offering this amendment but in dealing generally with the problem of damage to the stratospheric ozone layer in the Clean Air Act.

For many people, the problem of the stratospheric ozone layer is difficult to comprehend. We cannot see it. We cannot smell it, but its effects are very, very real on all of our communities and on all of our people. In fact, in the long term, the growing hole of the ozone layer could have dramatic effects, perhaps as serious as any other form of air pollution, on the health of people in America and, indeed, throughout the world.

We have, as we learn in this bill, good ozone and bad ozone. If I may express my biases here, bad ozone is what becomes smog and exists close to the Earth. The good ozone exists up in the stratosphere and is one of the subtle gifts of nature, one of the wonders of God's creation of the Earth, this magnificent balance that the natural environment provides us. In fact, the stratospheric ozone layer, it could be said, protects our existence on this Earth as we know it because it shields us and all living things from the ultraviolet radiation of the Sun that would otherwise reach the Earth and cause us great harm. Without the protection of the stratospheric ozone layer, it is not too far-fetched to say that life as we know it on this Earth would cease to exist. It is a strong statement, but from all that I have read, it is true.

For many years, as we now come to understand, we have inadvertently been destroying the stratospheric ozone layer, this blanket of protection that nature and God gave us. Early evidence of decades of pollution came in the form of the now famous hole in the ozone layer detected by scientists over Antarctica. Research has now tied the depletion in stratospheric ozone to the release of a group of chemicals that we use in our daily lives. Included in this group are chlorofluorocarbons, CFC's, halons, carbon tetrachloride, methyl chloroform, and others. Over time, we have come to understand that these chemicals escape into the air and collect in the upper atmosphere. The chlorine molecules in those chemicals break up the ozone molecules up in the stratosphere. The unfortunate mathematics are that it takes one of the former to destroy the latter, that is, one of the chlorine molecules destroys many of the ozone molecules. The thinner the ozone shield is, the more ultraviolet rays will hit the Earth, and as a direct consequence there will be a tremendous increase in the amount of skin cancer. We may come to a point where a day at the beach becomes a thing of the past.

In 1987, when awareness was growing of the consequences of these stratospheric ozone depleting chemicals, the great nations of the Earth gathered in an unprecedented conference in Montreal and adopted what have become known as the Montreal Protocols. This agreement call for a gradual phaseout of the use of some of the stratospheric ozone depleters.

Since 1987, really just about 3 years ago, science has shown us that the pace of those protocols is insufficient. We need to act faster. That is why the Clean Air Act now on the floor would ban CFC production by the year 2000. That is why it is essential that we amend this bill to include a phaseout and a ban, of the use of methyl chloroform, another stratospheric ozone depleter by the year 2000.

I understand that this amendment, if adopted, does not come without a cost to the industries that make and use methyl chloroform, several of which, I must say, are located in my State. In reality we are at a stage in our development and our relationship with the natural environment where there is a need to make choices to protect our environment and our health. Most of those choices involve change and cost. As all of us have stated repeatedly in the Clean Air Act debate, when we talk about cost of improving the environment and protecting it, we also must speak of the cost of not protecting the environment. We must pay particular attention to the health costs involved. In fact, skin cancer is already on the rise because of stratospheric ozone pollution. Unless we act, the incidence of that cancer will increase dramatically. The Environmental Protection Agency provided us numbers that, frankly, when I looked at them the first time and second time, I found hard to believe.

This is what they tell us: Failure to act in this legislation to ban the use of stratospheric ozone depleters will have the following impact between now and 2075. In the United States—these are not world figures—we will have 3.6 million nonmelanoma cancers; 3.6 million people will have nonmelanoma cancers; 64,900 people will actually die as a result of cancer caused by the hole in the ozone layer; and there will be 363,000 additional cases of cataracts.

It is difficult to assess the health care costs associated with so incredible an outbreak of disease, let alone try to determine its emotional impact on the people and families involved. The cost of weaning our economy from the use of methyl chloroform is undoubtedly far less than the cost of doing nothing.

Mr. President, I believe strongly that we need this amendment to the Clean Air Act if we are to promise the public truly cleaner and healthier air. I congratulate the sponsors of this amendment for offering it.

Mr. President, I yield the floor.

Mr. BYRD addressed the Chair.

The PRESIDING OFFICER. The Senator from West Virginia, the President pro tempore.

Mr. BYRD. Mr. President, let me state at the outset that I fully support the goals of this legislation that is before the Senate. Protecting the environment and ensuring clean air are important to the citizens of this Nation and integral to our responsibilities to preserve and protect the quality of life for future generations. There is no question that we shall have failed in our obligation to our children and to their children if we do not take effective steps to combat urban smog, to reduce the precursors of acid rain, to control emissions of toxic and hazardous air pollutants, and to minimize the release of chlorofluorocarbons [CFC's], and other trace gases which may contribute to the problem of global warming.

We must keep in mind, however, that this legislation involves far more than revisions to an air quality regulatory program. As a result, there is no proper place in this debate for oversimplification. The topic of how best to protect the quality of the air we all must breath is surely among the most complicated, contentious, and important that this body will ever address. We are, in fact, carving out a policy agenda—in environmental, economic, and energy terms—that will guide this Nation through a new decade and into a new century. Yet, I have heard much oversimplication on this Senate floor already. I have heard repeated attempts to frame this issue in "all or nothing" terms.

There are no black hats and no white hats in this particular debate. There is not one Member of this body who is an advocate of dirty air. To characterize this debate as being between those who favor clean air and those who favor dirty air is an absurdity. That kind of emotional and rhetorical demagoguery does nobody any good; it polarizes the Senate; and it contributes nothing to a real understanding of all the issues at stake. It is the last thing that is needed when dealing with a national problem that is as difficult and important as this one.

We are not here to discuss only the environment and the quality of our air. We must also discuss the economic and energy future of our Nation. The legislation we are considering will have a significant impact on our economic competitiveness. For example, the future of our domestic steel industry, which lies not only at the core of our great industrial strength but is likewise critical to our national defense, is also at issue in this debate. What we finally do here and the way in which we do it will have repercussions in the economic and energy arenas as well as for the management of the environment for many years to come.

As a result, Mr. President, there can be little room for shibboleths or specious oratory in this debate. The implications are too far-reaching and the stakes are simply to high. Stridency will only prolong the deadlock. We must try to forge a consensus as to the merits and strike a balance on the substance of this legislation. There are no rights and wrongs here; there are only different views of how to reach a common goal.

Our task would, of course, be a great deal easier if the choice were simply between clean air and dirty air. If we could simply conclude that issues involving the impact on jobs and local economies or the competitiveness of key industries or the future of this Nation's energy policy were peripheral or simply nonexistent, we could probably dispose of this legislation in an afternoon. But these are not peripheral issues and they are real, and the tradeoffs involved are complicated.

Arguments have been made that costs and dislocations caused by the compliance requirements of this legislation pale in comparison to the public health benefits. But what will we really have accomplished if we succeed in removing certain pollutants from the air and at the same time level the economies of whole communities and regions? is that progress?

Is that kind of devastation not even to be considered here? Is it our intention to mindlessly punish communities that mine coal or produce steel or chemicals or automobiles? These activities are essential to the economic health and national security of this Nation, and a means of support for millions of Americans. These are also real people with real families—men and women who do hard, dirty, and often dangerous work. Are we to punish certain regions because of some sort of legislated value judgment about who is responsible for the quality of our air?

Mr. President, the purpose of this legislation should not be to decide who are the winners and who are the losers. We are not here out of some arrogant sense of self-righteousness to reward one region of the country while we punish another. The problems that this bill seeks to address are national problems that require national solutions. It is my hope that we will approach these problems with the same sense of national responsibility with which we approached the savings and loan crisis. Let us respond to our environmental needs as we responded to the San Francisco earthquake and Hurricane Hugo disasters—as one Nation pulling together to solve problems. We will not prosper as a Nation if we view ourselves and act as if we are nothing more than a loose collection of disparate regions, with one seeking to profit from the losses of another. So let us try to ensure that the responsibilities associated with a clean environment are fairly and equitably distributed.

Some of the rhetoric heard so far in this debate has been singularly unhelpful.

To come to this floor now and attempt to make the case that this is not simply a debate about clean versus dirty air is to be in an unenviable position. To try to argue that we must consider economics and jobs and our energy future as we try to improve the quality of our air is tantamount to inviting the label of "dirty air" Senators.

Indeed, we have heard that amendments to this bill which might reflect regional concerns are "dirty air" amendments. That is the same attitude, I regret to say, that is reflected in this legislation. But oversimplified, moralistic pronouncements have no place here.

What is required is a balanced approach to solving our environmental problems. Pitting one region of the country against another, or one fuel source against another, or one industry against another, will not work well for the future of the Nation. Equally important, we must not needlessly force our environmental policy to conflict with our economic and energy policies. We should instead strive for balance.

The legislation before us, however, lacks the required balance and, without some changes, it will remain inadequate, unworkable, and unfair. The shortcomings of this legislation are evident throughout the bill. The air toxics provisions, for example, threaten to shut down, without adequate justification, certainly most of the coke ovens in the United States. Some would say not all of them.

Such a shutdown would, in turn, adversely affect our domestic steel industry, which is vital to both our economic well-being and our national defense. The acid rain title is, in my view, filled with tremendous inequities and problems. I suggest, in fact, that the acid rain title provides an excellent example of how this bill, while pursuing laudable goals, fails to incorporate sound economic, energy, and environmental policies.

Acid rain control is an issue that is of great concern to the people who live in the Midwestern and Appalachian States.

Initially, I have some concerns about the wisdom of enacting new acid rain control legislation prior to completion of the study currently underway by the National Acid Precipitation Assessment Program [NAPAP]. There is, in my mind, some question as to why, after spending 10 years and $400 million of taxpayers' money on a scientific study of this issue, we are now moving ahead with new legislation on the issue before that study has been completed.

Publication of NAPAP's integrated assessment is scheduled for September

of this year, only a few months away. I believe we would be wise to wait for the results of the NAPAP study before enacting costly new acid rain controls. I am, however, a realist. I recognize that perceptions of risk have out distanced any prerequisites for greater scientific certainty. For that reason, we are here, in this greatest of deliberative bodies, seeking to find a consensus on the issue of acid rain control without the full benefits of that important scientific information.

It is my hope that, as we proceed, we will be able to enact a bill that does not disproportionately burden any region of our Nation, impose intolerably high costs on any industry, weaken our national energy security, or counterproductively undermine long-term environmental goals in pursuit of immediate, short-term benefits. It is my concern that the legislation that is before us now fails on at least some of these counts.

In what ways does this bill fall short? First, it unfairly requires that a handful of States achieve a disproportionate share of the overall emission reductions mandated by the bill. According to the Environmental Protection Agency [EPA], the regulatory approach contained in this bill would require nine States to make nearly 90 percent of the total phase I sulfur dioxide emission reductions. Yet these same nine States are responsible for only a little over one-half, 51 percent, of the Nation's total sulfur dioxide emissions. Admittedly, within these States, there exists some potential for achieving relatively low cost emission reductions. The fact remains, however, that the EPA estimates that these nine States will bear 73 to 80 percent of the costs of complying with the bill's phase I requirements.

The bill also seriously threatens the high-sulfur coal industry. The EPA estimates that this bill, as a result of the widespread fuel-switching it would encourage, would cause the loss of between 6,000 and 9,000 high-sulfur coal mining jobs by 1995. By the year 2000, the number of jobs lost, according to the EPA, would escalate to 17,000. These job losses would be the direct result of estimated reductions in high-sulfur coal production of more than 100 million tons annually.

Job and coal production losses of this magnitude would be severe to a region still reeling from Reaganomics and its ill-considered economic and trade policies.

Furthermore, the direct effect of this legislation on high-sulfur coal employment and production represents only the tip of the iceberg. In my home State of West Virginia, mining employment accounts for more than one out of every four jobs in some of our northern counties. As a result, mining employment sometimes provides in excess of 40 percent of the personal income in these local economies. When mines are shut down, not only do miners and their families suffer but whole communities also suffer.

The EPA estimates that total job losses in northern Appalachia, both those directly attributable to mining and those indirectly dependent on the mining industry, would exceed 50,000 by the year 2000. In a region of our Nation already suffering from high unemployment, such losses would be devastating, creating a series of ghost towns through northern Appalachia and bringing economic ruin to thousands of American families.

Calculate the cost of thousands of families on unemployment. Calculate the lost productivity. Calculate the human misery. I believe we can have both clean air and economic stability, and it is toward that end that I hope we shall endeavor to work as we move forward on this legislation.

I also believe that we can have clean air without weakening our Nation's energy security. The acid rain control provisions of the bill before us, however, fail to meet this goal. The bill we are now debating would strongly discourage the use of high-sulfur coal. Yet, such coal is one of our greatest domestic sources of energy, and to preclude its use would significantly undermine our long-term energy security. Why do something so foolish when the possibilities for coal are so apparent?

Coal is our most abundant domestic energy resource, and high-sulfur coal constitutes approximately 40 percent of available domestic coal reserves. Since the beginning of coal mining operations about 200 years ago, more than 40 billion tons of coal have been mined in the United States. Yet, according to the National Coal Association, that represents less than 2 percent of our estimated coal reserves. Our coal reserves represent as much as 90 percent of our demonstrated fossil fuel reserves, and have the same energy content of 5,600 trillion cubic feet of natural gas or 1 trillion barrels of oil. Best of all, no military task force will ever be required to guarantee the movement of domestic coal on our rivers, railroads, and highways.

Since shortly after the 1973 oil crisis, U.S. electric power generation has relied increasingly on coal as its basic fuel. Over that time, according to the National Coal Association, the coal share of power generation rose from 46 to 57 percent. Coal has replaced imported oil as a generating fuel, with electric utility coal use increasing by 85 percent, equivalent to 3.1 million barrels of imported oil daily over the last decade and a half. Yet, because coal is a competitive industry, its constant dollar cost has actually declined in recent years. In essence, coal has helped power American industry while stabilizing the cost of electric power all over this country, in the Northeast as well as in other areas of the country.

I believe that for us to abandon or greatly threaten the use of high-sulfur coal, even though such coal can be burned cleanly and with minimal impact on the environment, would be unwise. We, as a nation, cannot afford to increase our dependence on foreign oil and gas. According to the Department of Energy, by the year 2010, oil and gas prices will increase more than eight times faster than coal prices. Beyond concerns related simply to price, I am sure we all can recall the dangers of becoming too dependent on imported oil, and recent statistics indicate the ominous beginnings of a return to dangerously high levels of dependency. Coal is the key to our energy future, and we should not be needlessly erecting barriers to its use.

Finally, let me say that the bill before us actually sacrifices long-term environmental goals in pursuit of immediate environmental benefits. The most effective way of addressing, simultaneously, the goals of environmental improvement and energy security is through the continued development of clean coal technologies. These technologies offer the promise of both greater emissions reductions and enhanced energy efficiency. As a result, clean coal technology can provide an answer to the acid rain environmental concerns raised in this bill, as well as many of those raised in the debate over global warming.

It is for these reasons that I have been such a strong supporter and proponent of clean coal technology over the past several years. Through the appropriations process, I have supported, to date, nearly $2.8 billion in matching funds for the purpose of developing and demonstrating, innovative clean coal technologies. These technologies require very long lead times. They have had a lead time now of 3 or 4 years. But much longer lead time is necessary before they can come to full fruition.

I believe the Clean Coal Technology Program is one of our most forward-looking energy programs. It offers tremendous promise for the future, both in terms of meeting future energy needs and providing for a cleaner environment. Let us not act now in a way that would effectively impede this program at a time when it is allowing us to make such enormous strides toward the development of clean and efficient energy technologies.

I am deeply concerned that the legislation before us now would do precisely that by removing much of the real incentive for the further development and eventual deployment of new clean coal technologies. If we are ever to realize the full benefits of such technol-

ogy, we must provide adequate time and incentives to assure the commercialization and use of the technologies currently in the early stages of development. This bill fails to provide either adequate time or adequate incentives. It is my hope that this bill can be amended so as to provide both the time and the incentives necessary to allow clean coal technologies to reach their full potential.

Clean coal technologies provide us with an opportunity to see that our environmental goals and our energy and economic goals are not necessarily divergent, but, rather, that they can be achieved together. I hope we will apply this lesson to many of the issues before us in this bill. This is not a tug-of-war in which one side must win and the other lose. There can and should be reasonable trade-offs so that we all win. It is possible to have an adequate and secure energy supply without serious or detrimental effect on the environment. It is possible to preserve our industrial strength and lay the groundwork for future economic growth and stability without permanently soiling or scarring the world or poisoning the air in which we live and breathe. Let us try to find the common ground here. Let us work together to pass legislation that will establish wise environmental, economic, and energy policies.

We owe our children a clean, healthy environment in which they can raise their families. We also owe them a vibrant, healthy economy in which they can realize their greatest dreams. As Henry Wadsworth Longfellow once wrote: "We judge ourselves by what we feel capable of doing; others judge us by what we have done." Let us act now so that future generations of Americans will look back some day on what we have done and note that we acted for the common good by laying the foundation for a healthy environment and a health economy.

The PRESIDING OFFICER. The Senator from Washington [Mr. GORTON] is recognized.

Mr. GORTON. Mr. President, it is appropriate that we begin the new year with a debate on the provisions of an actual clean air bill. We can no longer afford to gamble with the quality of our air. It is our responsibility to ensure that our citizens—now and in the future—enjoy clean air. I commend the President for his leadership in presenting a comprehensive proposal to Congress. I further commend the Senate and the Environment Committee leadership for bringing this critical issue to the floor for debate.

Clean air. As an avid runner I appreciate breathing clean air. But, this country's big cities are threatened by smog and by ozone depletion. Hundreds of toxic air pollutants are emitted by major industries, motor vehicles, small businesses and "area sources" every day. The Environmental Protection Agency estimates that toxic air pollutants contribute to 1,500 to 3,000 deaths per year.

The current standards, mandated by the Clean Air Act of 1970, certainly built a sound foundation for a new effort, but they are not adequate for today's challenge. That challenge is: as a nation we still breathe dirty air in a majority of our cities. It is time for compliance standards sufficient to meet the challenge.

The seven titles of S. 1630, the Senate's clean air bill, address major threats to our Nation's environment and the health of millions of Americans. Acid rain, urban air pollutants, and toxic air emissions all menace our daily lives and activities.

Too often, Mr. President, we take our environment for granted. I recognize the national need for cleaning our air, and I know that my home State of Washington will benefit from strong clean air legislation. My home State is blessed with thousands of acres of pristine parks, wilderness and forests enjoyed by generations. Those attractions have contributed to the Northwest's rapid growth. Guidelines must be provided to diminish the potential loss of the natural resources and beauty with which we have been so abundantly provided.

For these reasons, I support the need for a Clean Air Act, as do all Members. S. 1630, as it appears on our desks, however, contains provisions that I believe need revision.

First, I support a fair distribution of the costs associated with acid rain controls. In my State, utilities have made major investments to reduce sulfur dioxide emissions and have done so without financial assistance from others. I believe that the polluter pays philosophy should be adopted, and will work with my western colleagues to ensure that adoption.

Emissions allowances are also vitally important to the utilities in my State. As we continue to experience rapid growth in the West our need for increased electricity will require increased generating power—perhaps the construction of new plants. Our utilities should be insured that emission allowances will be available for future construction. They should not have to subsidize the cleanup of the Midwest plants through the purchase of their allowances.

I strongly support tougher motor vehicle standards. Our goal should be that day every car should truly be a clean car. Motor vehicles are responsible for approximately 40 percent of the ozone problems facing us today. We must tackle this problem head on; every car owner can, and should, shoulder his or her share of this responsibility.

Mr. President, I applaud President Bush, the Senate leadership, Senators BAUCUS and CHAFEE for their efforts in bringing the debate on Clean Air to the Senate floor. When I say debate, that is what I mean. We must ensure that we understand all the technical provisions contained in S. 1630 before voting its final passage. I believe that changes will be needed to improve the Environment and Public Works bill and I intend to play an active role in some of those revisions. I have mentioned three specific areas of interest and am currently considering others. We are taking a big step in the right direction and I look forward to working with sponsors in seeing that a workable and effective package becomes law.

The PRESIDING OFFICER. The Senator from Vermont [Mr. JEFFORDS] is recognized.

Mr. JEFFORDS. Mr. President, I rise in support of the Chafee amendment, which establishes a phaseout schedule for methyl chloroform, a proven ozone-depleter.

Mr. President, I want to make it clear that the scientific evidence clearly indicates that methyl chloroform destroys the stratospheric ozone layer. The stratospheric ozone layer serves to shield us from excessive doses of ultraviolet radiation from the sun. Ultraviolet radiation has been clearly linked to incidences of skin cancer.

As we debate the issue of ozone-depleting chemicals, many will eagerly offer testimony from scientists debunking the theory of global warming. However, while I believe that we must strive to reduce emissions of gases linked to global warming, I am immediately concerned about the ozone hole that now exists over Antarctica.

A recently released scientific report, prepared by international experts under the auspices of the United Nations and chaired by U.S. scientists from NASA and NOAA, has found that there has indeed been a "large rapid, and unexpected decrease in the abundance of springtime Antarctic ozone over the last decade."

Further, the group found that "the weight of scientific evidence strongly indicates that manmade chlorine and bromine compounds are primarily responsible for the ozone loss." In addition, the experts found that "there is a downward trend in ozone during the winter and mid-to-high latitudes in the northern hemisphere over the past two decades."

Further review of the document leads me to conclude that manmade chlorine and bromine compounds have destroyed a sizeable portion of the stratospheric ozone layer over the Antarctic, and this phenomenal destruction is now beginning to occur over the United States. The evidence justifies a sharp curtailment in our

production and use of ozone-depleting compounds.

Why are we targeting methyl chloroform?

Methyl chloroform clearly is not as destructive, unit for unit, as are the CRF's and halons—already proposed to be regulated by this bill. However, methyl chloroform is manufactured in such high quantities that it is responsible for about 13 to 16 percent of the total loading of chlorine in the upper atmosphere. This percentage alone indicates that it is a candidate for phaseout.

The Environmental Protection Agency has concluded that substitutes exist for about 90 to 95 percent of the methyl chloroform users.

Methyl chloroform has a relatively short atmospheric lifetime—on the order of 6-10 years, compared to 60-120 years for CFC-11 and CFC-12, respectively. EPA's position is that phaseout of methyl chloroform is the "single most important source for near-term reductions in stratospheric chlorine levels."

Mr. President, I recognize that this amendment has broad implications for a variety of commercial and industrial users. Many of the CFC's halons and methyl chloroform compounds have been extremely important in our country's technological progress. As a group, these compounds are typically nontoxic to humans, are not flammable, and do not contribute to smog formation. They have been cheap and adaptable to a variety of users.

Unfortunately, they are destroying the ozone layer.

Mr. President, we can live without methyl chloroform. We cannot live without the stratospheric ozone layer. The evidence supports both of these conclusions.

I urge my colleagues to support the Chafee amendment.

I yield the floor.

Mr. BAUCUS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. ROCKEFELLER). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOLE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECOGNITION OF THE REPUBLICAN LEADER

Mr. DOLE. I think my leader time was reserved earlier this morning.

The PRESIDING OFFICER. The Senator has 10 minutes.

Mr. DOLE. I will use just a little over a minute of that.

MIKHAIL GORBACHEV

Mr. DOLE. Mr. President, the question this afternoon is:

Is Mr. Gorbachev stepping down as head of the Communist Party? We do not know yet. But even initial report ought to remind us how foolish it would be to gut our defenses on the assumption that Gorbachev would succeed. That is why we need to put the peace dividend on hold. There has been a stampede around here to dismantle our defenses and start spending the so-called savings on all kinds of new Government programs. We heard it all day yesterday in the democratic "rain dance" of budget criticism.

Well, the wake-up alarm just sounded in Moscow. If anyone is foolish enough to gamble with our national defense based on the political life and death of one man—Mikhail Gorbachev—then we are in deep trouble.

Already, the stock market, according to one report, is experiencing wild gyrations based on the CNN report.

We want Gorbachev to succeed, but there are no guarantees. There never will be. The world is changing—minute to minute. Is Gorbachev stepping down as party boss? Who knows? Is he in or is he out? We do not know. But one thing is certain—let us slow down. Let us look at reality. And let us call off this mad rush to spend a dividend we do not even have yet.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. COCHRAN. Mr. President, with leave of the manager of the bill, I ask unanimous consent that I may be permitted to proceed out of order to discuss a bill I am introducing for up to 5 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. COCHRAN. Mr. President, I thank the manager of the bill.

The PRESIDING OFFICER. The Senator from Mississippi is recognized.

Mr. COCHRAN. I thank the Chair.

(The remarks of Mr. COCHRAN pertaining to the introduction of S. 2039 are located in today's RECORD under "Statements on Introduced Bills and Joint Resolutions.")

RECESS UNTIL 5 P.M.

Mr. BAUCUS. Mr. President, on behalf of the majority leader, I ask unanimous consent that the Senate stand in recess until 5 p.m. today.

Their being no objection, the Senate, at 4:31 p.m., recessed until 5 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer [Ms. MIKULSKI].

DEPARTMENT OF STATE AUTHORIZATION FOR FISCAL YEARS 1990-91

The PRESIDING OFFICER. Under the previous order, the hour of 5 o'clock having arrived, the clerk will now report Calendar Order No. 421, H.R. 3792, the State Department authorization bill.

The legislative clerk read as follows:

A bill (H.R. 3792) to authorize appropriations for fiscal years 1990 and 1991 for the Department of State, and for other purposes.

The Senate resumed consideration of the bill.

Mr. MOYNIHAN. Madam President, today we will vote on H.R. 3792, the fiscal year 1990-91 Foreign Relations authorization bill. One section of that bill, section 128, deals with the ideological exclusion provisions of the 1952 McCarran-Walter Immigration, Naturalization and Nationality Act. In the Foreign Relations Authorization Act for 1988-89, I authored an amendment, which was adopted as section 901 of the Act, which stated:

Notwithstanding any other provision of law, no alien may be denied a visa or excluded from admission into the United States * * * or subject to deportation because of any past, current, or expected beliefs, statements, or associations which, if engaged in by a United States citizen in the United States, would be protected under the Constitution of the United States.

That provision contained a so-called sunset provision such that it would have expired by its own terms in 1989. It was subsequently extended. Now the Congress takes the final, decisive step and, in the measure today before the Senate, repeals the sunset provision altogether. Section 901 will now become a permanent part of our law.

Yesterday afternoon a colloquy was entered into the RECORD between the distinguished Senator from Wyoming, Mr. SIMPSON, and the vigilant ranking minority member of the Foreign Relations Committee, Senator HELMS. Senator SIMPSON stated that the bill before us, the Foreign Relations Authorization Act, does not put an end to the McCarran-Walter Act provisions concerning the temporary entry of an alien into the United States because of any past, present, or anticipated statements, associations or beliefs. Rather, as Senator SIMPSON interprets the bill, it merely requires that waivers be granted; the whole apparatus of lookout lists and endless forms and affidavits would continue in place. The distinguished Senator from North Carolina stated "Yes. That is a correct interpretation."

As the author of the provision I rise to state the contrary. By this act, Congress repeals these most pitiful provisions of the McCarran-Walter Act. It has taken 38 years to sustain Harry S. Truman's veto of the Immigration,

Naturalization and Nationality Act of 1952, but we have finally done so.

If anyone disagrees with me in this regard, they are free to attempt to defeat the bill. If the bill passes, however, the ideological exclusion provisions of the McCarran-Walter Act are dead, done, finished. In his veto message President Truman put the matter with great emphasis:

Seldom has a bill exhibited the distrust evidenced here for citizens and aliens alike—at a time when we need unity at home, and the confidence of our friends abroad.

For a generation and more, these miserable provisions made the United States present itself to other nations as a Nation of fearful, muddled, intimidated citizens. We were not that; we are not that; and now at last our statutes accord with the facts.

Section 901, as amended, is not a waiver provision, but a permanent substantive limitation on the Executive's authority to exclude aliens. Therefore, there is no justification for asking intrusive questions of prospective foreign visitors regarding statements and beliefs which would be protected under the Constitution. It is plainly the intent of Congress that persons no longer be required to go through a burdensome waiver process. Section 901—now permanent—renders a waiver process superfluous. Additionally, to so-called look-out list of excludable aliens maintained by the State Department should be purged of the names of persons previously considered ineligible because of political beliefs or associations which would be protected by the U.S. Constitution.

I ask the distinguished Senator from Rhode Island, the chairman of the Foreign Relations Committee, if he shares my interpretation of this provision.

Mr. PELL. I do indeed share the views of the Senator from New York, the author of this provision. Section 901 is now permanent. An administrative framework created to administer look-out lists and waivers no longer has any purpose. On the contrary, it is totally inconsistent with the action of the Congress in making section 901 permanent. The legislative history of the Foreign Relations Authorization Act for 1988-89 makes it very clear that section 901 was intended to end these intrusive practices. I will ask unanimous consent to have printed in the RECORD at the close of my remarks the relevant portions of the Senate Foreign Relations committee report on the Foreign Relations Authorization Act of 1988-89 and the conference report on that legislation.

Mr. MOYNIHAN. I thank the distinguished Senator.

Mr. PELL. I ask unanimous consent that the material to which I referred be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXCERPT FROM SENATE FOREIGN RELATIONS COMMITTEE REPORT ON S. 1394, FOREIGN RELATIONS AUTHORIZATION ACT, FISCAL YEAR 1988 (SENATE REPORT 100-75)

V. PROHIBITION ON EXCLUSION OF ALIENS BECAUSE OF POLITICAL BELIEFS

For many years, the United States has embarrassed itself by excluding prominent foreigners from visiting the United States solely because of their political beliefs. Among those excluded, or harrassed, in recent years have been Nobel Laureates Gabriel Garcia Marquez and Pablo Neruda, and authors Graham Greene, Doris Lessing, and Carlos Fuentes. In these cases and others, the excluded individuals had done no more than exercise rights to freedom of expression and association enshrined in the Universal Declaration of Human Rights—rights promoted in congressionally-initiated human rights legislation and constitutionally protected for all U.S. citizens.

The committee has adopted legislation, offered by Senators Simon, Moynihan and Kassebaum, to take away the executive branch's authority to deny visas to foreigners solely because of the foreigner's political beliefs or because of his anticipated speech in the United States. The committee considers this affirmation of the principles of the First Amendment to be especially appropriate in this bicentennial year of the U.S. Constitution.

The committee recognizes that more sweeping changes in the provisions of the law relating to exclusions and deportations are now pending in the Senate Judiciary Committee and in the House of Representatives. The committee believes that further changes in the law may well be needed and does not intend that the changes made in this legislation should be interpreted as lessening the need for a thorough review of those provisions.

This legislation in no way affects any existing authority to deny admission to aliens on national security or foreign policy grounds, except insofar as the denials are based on political beliefs, political associations, or the expected content of speeches aliens intend to give in the United States. Nor does the committee provision affect any existing authority of the executive branch to deny admission to an alien who engages in terrorist activity, or who is a member of a terrorist organization as defined in the Foreign Intelligence Surveillance Act. (50 U.S.C. 1801).

* * * * *

Section 504—Prohibition on exclusion of aliens because of political beliefs

This section, offered by Senators Simon, Moynihan, and Kassebaum, is intended to ensure that no alien is denied admission to the United States solely because of his or her political beliefs or political associations or because of the expected content of speeches he or she intend to give.

The committee notes that current law provides authority to deny admission to aliens on a variety of different grounds including those related to national security and more generally to the interests of the United States. (See e.g. 8 U.S.C. 1182(a) 27 and (29) and (f). These provisions have been used by the executive branch to exclude aliens on the grounds that their entry, presence, or activities in the United States would harm the national security interests, including the foreign policy interests, of the United States. Except insofar as aliens are denied admission solely on the basis of their political beliefs or associations or the expected content of speeches they intend to give in the United States, this section would in no way affect existing authority to deny admission to aliens on national security or foreign policy grounds, or the existing authority of the President to deny admissions by proclamation or to deny entry to aliens when the United States is at war or during the existence of a national emergency proclaimed by the President.

The committee believes that in appropriate circumstances, and as long as the denial is not based solely on the political beliefs or associations of the alien or the content of speeches intended to be given in the United States, the executive branch needs to have authority to deny admission to aliens on foreign policy or national security grounds. The committe notes that there is disagreement about the scope and desirability of existing authority to deny visas on these grounds. The committee, at this time, takes no position on these questions. In particular, the committee notes that the scope of Section 212(a)(27) of the Immigration and Nationality Act is currently under litigation in *Reagan* v. *Abourezk*, 785 F.2d 1043 (D.C. Cir. 1986), cert. granted, Dec. 15, 1986, U.S. (1986). The amendment should not be construed as taking any position on the issues in litigation in that case.

The committee underscores that the Executive branch needs the authority to deny admission to an alien who engages in terrorist activity, or is a member of a terrorist organization, as defined by the Foreign Intelligence Surveillance Act (50 U.S.C. 1801).

Paragraph three of the amendment is simply intended to make clear that no standing beyond that which already exists is conferred by the section. The committee notes that courts have granted standing to Americans seeking the admission of aliens for the purpose of hearing them speak. See e.g., *Kleindienst* v. *Mandel*, 408 U.S. 753 (1972), *Abourezk supra*, (cert. granted on other grounds).

EXCERPT FROM CONFERENCE REPORT TO ACCOMPANY H.R. 1777, FOREIGN RELATIONS AUTHORIZATION ACT, FISCAL YEARS 1988 AND 1989 (HOUSE REPORT 100-475)

TITLE IX—IMMIGRATION AND REFUGEE PROVISIONS

PROHIBITION IN EXCLUSION OR DEPORTATION OF ALIENS OF CERTAIN GROUNDS

The Senate amendment (sec. 504) prohibits the exclusion of any alien on the basis of any past or current political beliefs or political associations, or on the basis of the expected contents of the alien's statement while in the United States.

The House bill contains no comparable provision.

The conference substitute (sec. 901) is intended to ensure that no alien is denied a visa or excluded from admission into the United States, subject to conditions or restrictions on entry into the United States, or subject to deportation because of any past, current, or expected beliefs, statements or associations which would be protected under the Constitution if engaged in by a U.S. citizen in the United States.

The committee of conference notes that current law provides authority to the executive branch to deny admission to aliens or to deport them on a variety of grounds including those related to national security, ideo-

logical or political beliefs, and, more generally, the interests of the United States (8 U.S.C. 1182(a)). These provisions, since their codification in 1952 as part of the Immigration and Nationality Act, have been used by the executive branch to deny aliens entry into the United States on the basis not only of their potential threat to the national security interests of the United States or their past involvement in criminal activity, but not apply to aliens who have assisted in Nazi persecutions, aliens seeking refugee status, asylum, withholding of deportation or legalization who have engaged in persecution, or an alien who is a member, officer official, representative, or spokesman of the PLO.

Finally, the conferees do not intend that this section be viewed as in any way affecting the existing authority of the President to deny admissions by proclamation or to deny entry to aliens when the United States is at war or during the existence of a national emergency proclaimed by the President.

Paragraph (c) of the conference substitute simply makes clear that no standing beyond that which currently exists would be conferred by the section. The committee of conference notes that there are several pending legislative proposals which would expand such standing, and the conferees take no position on the advisability of adopting such changes.

The committee of conference notes that the Committee on Judiciary of both the House of Representatives and the Senate have under consideration legislation aimed at revising the grounds of exclusion and deportation by directly amending the Immigration and Nationality Act. The conferees expect that comprehensive legislation revising these grounds will be acted upon by these committees early in the second session of the 100th Congress.

Because of the expected expeditious consideration of comprehensive legislation revising these grounds by the Committees on Judiciary, the committee of conference has included a 1-year sunset provision in the conference substitute. Under this provision, visas which were applied for during calendar year 1988 and admissions into the United States which are sought during the period beginning on January 1, 1988, through February 28, 1989, would be covered by this section. The additional 60 days for admission into the United States was added in order to permit entry into the United States on the basis of visas issued late in 1988 which may not be used until early 1989.

It is the intent of the committee of conference that this section apply to all visas applied for in 1988, including immigrant and nonimmigrant visas, and to all determinations in admissibility made after December 31, 1987, and before March 1, 1988. Aliens denied visas or found inadmissible in the past for reasons that would have been prohibited by this provision shall be eligible to reapply in 1988. The conference substitute would apply whether the alien was denied a visa or found inadmissible from abroad, at the border, or in the context of an application for permanent resident status. It is also the intent of the committee of conference that visas issued during 1988, and permanent resident status granted during 1988, shall not be subject to recision after 1988 for reasons prohibited by paragraph (a) of the conference substitute.

BURMESE REFUGEE ASSISTANCE

Mr. MOYNIHAN. Madam President, as the sponsor of the provision providing for humanitarian assistance for Burmese in both the Foreign Operations appropriations bill and the Foreign Relations authorization bill, I would like to clarify my intent in offering these amendments in order that these provisions will be interpreted by the administration consistent with the intent of the Congress.

The appropriation bill in amendment 91 of the conference report provides for "humanitarian assistance for displaced Burmese students at camps on the border with Thailand." The authorization bill that we are about to vote upon in section 702(b), provides for "humanitarian assistance for displaced Burmese on both sides of the border between Thailand and Burma."

In a prior colloquy with Senators LEAHY and KASTEN, the managers clarified the term "students" stating that the term is being used to describe a wide variety of Burmese who have had to flee their homes since early 1988 as a result of political repression. The colloquy made it clear that it was not the intent of the conferees to require the administration to impose a restrictive definition of the term in making its determinations regarding humanitarian assistance.

It is now important, Madam President, to clarify the intent of the managers in passing the authorization language today that uses the term "displaced Burmese," This language is intended to reinforce the principle that the administration should not impose a restrictive definition of those Burmese eligible for the humanitarian assistance. There should be absolutely no racial test imposed by the administration as to who may be served by these funds—ethnic Burman or those of mninority groups in Burma.

While the primary beneficiaries of this assistance are intended to be Burmese students and others who have fled the repression of the Burmese regime since the events of 1988, there is at the same time a clear recognition on the part of the Congress that the "students" have taken refuge with ethnic minorities in the border areas of Burma, including, Karen, Karenni, Mon, and others. And that these minorities have also suffered from the repression of the Burmese regime. Some of these populations have fled into Thailand. And given the military offensive against the students and minorities by the regime, more displaced persons are likely to be found on both sides of the border between Burma and Thailand.

I trust that it is the intent of the managers that the language of the authorization statute providing for assistance to displaced Burmese should be interpreted to mean assistance for both the student populations, both Burman and ethnic minority students who have fled since the events of 1998, and the civilian ethnic minority populations on both sides of the border with Thailand that have been displaced because of the repression of the Burmese regime. Are my views consistent with those of the distinguished managers?

Mr. PELL. I agree with the views of the Senator.

Mr. LEAHY. That is also my understanding of the intent of the provisions.

Mr. KASTEN. I also agree with the statements of the Senator from New York.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on third reading of the bill.

The bill was ordered to a third reading and was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, shall the bill pass?

The yeas and nays have been ordered. The clerk will now call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Hawaii [Mr. INOUYE], is necessarily absent.

Mr. SIMPSON. I announce that the Senator from Wyoming [Mr. WALLOP] is necessarily absent.

The PRESIDING OFFICER. Are there any other Senators in the Chamber who desire to vote?

The result was announced—yeas 98, nays 0, as follows:

[Rollcall Vote No. 2 Leg.]

YEAS—98

Adams	Fowler	McClure

Ford	McCain	

NOT VOTING—2

Inouye	Wallop

So the bill [H.R. 3792] was passed.

Mr. MITCHELL. Madam President, I move to reconsider the vote by which the bill was passed.

Mr. PELL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The Senator from New York.

Mr. MOYNIHAN. Madam President, the majority leader is on the floor.

I rise for two purposes. The first is a celebratory one. I note that today, 38 years after the fact, the Senate has unanimously sustained the veto message of Harry S. Truman on the infamous McCarran-Walter Immigration and Naturalization Act of 1952. During the last 38 years, in virtually every country on the globe some person, respectable or otherwise, but legitimate in any event, was told he could not come to this country for fear that he might say something that would infect the minds of Americans who are presumably incapable of thinking for themselves in matters of foreign affairs and public policy.

The Committee on Foreign Relations has been pressing this matter for 3 years. We have suspended the act, but with a sunset provision. Today the McCarran-Walter measure is permanently repealed.

A colloquy entered in the RECORD between myself and the very distinguished chairman of the Committee on Foreign Relations notes that this matter is now done with, and the "lookout lists" and the endless forms and affidavits which the Immigration and Naturalization Service has developed over 38 years are to come to an end here and now as well, assuming that the President will sign the bill, which I am sure he will do.

On a second issue, Madam President, may I note that this measure comes before us this evening in altered form. The bill as it originally passed the Senate, then the House of Representatives, and after a conference committee of both bodies, contained an amendment which I offered, section 109, having to do with actions by members of the executive branch which involved the soliciting of funds from foreign governments and institutions and persons in order to avoid prohibitions on the use of public moneys for such purposes.

The President vetoed that bill which had been very carefully debated here in the Senate. Out of concern for other provisions, not the least the McCarran-Walter provisions, the House of Representatives dropped section 109, sent the bill otherwise intact to us and, out of concern for the McCarran-Walter provisions and other matters, I chose not to offer the amendment once again at this time.

But I do rise, Madam President, to say that this is not an end of the issue. We are involved here with a grave constitutional question which, as was noted on the floor yesterday, recently and conspicuously arose in the Iran-Contra episode. But the matter goes to the very basis of the relationship between the Presidency and the legislative branch in foreign policy. It goes to the fundamental question of whether ours is to be a nation and a government of laws.

Madam President, the President's veto message stated that this section would result in: "A dangerous timidity and disarray in the conduct of U.S. foreign policy."

That, Madam President, was not the view of the Senate and not the view of the House. We were not seeking to bring about timidity, much less disarray. If there was ever an example of disarray, we saw it in those years when the executive branch sought to avoid the prohibitions of the Boland amendment with respect to aid to insurgencies in Central America and shipped arms to Iran unbeknownst to the Congress much less to the American people. That strikes me as disarray.

What we were seeking was to restore to government the processes of lawfulness. I will take a moment of the Senate's time, if I may, simply to read the prohibition. It says:

> Whenever any provision of United States law expressly refers to this section and expressly prohibits all United States assistance, or all assistance under a specific United States assistance account, from being provided to any specified foreign region, country, government, group or individual, for all or specified activities, then no officer or employee of the executive branch may (A) receive, accept, hold, control, use, spend, disburse, distribute, or transfer any funds or property from any foreign government (including any instrumentality or agency thereof), foreign person or United States person, (B) use any United States funds or facilities to assist any transaction whereby a foreign government (including any instrumentality, or agency thereof), foreign person or United States person, provides any funds or property to any third party, or (C) provide any United States assistance to any third party, if the purpose of any such act is furthering or carrying out the same activities with respect to that region, country, government, group or individual for which United States assistance is expressly prohibited.

Madam President, an effort has been made to say that this was somehow an ex post facto act with respect to the Iran-Contra affair. It was not. We made clear that this referred to future acts. We made clear that it only applied to prohibitions in which this statute was specifically cited. The greatest care was taken that we should do no more but also no less than see to the obedience to law.

The distinguished majority leader on July 18 of last year, when this amendment was being debated said: "Mr. President, this amendment can be summed up in three words: Obey the law." In fact, that is what it says. It states that neither the President nor the Secretary of State nor any member of the U.S. Government has the right to break the law.

Yet this simple provision, in the aftermath of that wrenching experience still unresolved—Admiral Poindexter's case is even now in the headlines—was vetoed. It was vetoed, Madam President, in full conformity with earlier positions the executive branch has taken that encouraged the original events of Iran-Contra or were used to justify it.

Theodore Draper, in an article which will appear in the March 1 issue of the New York Review of Books entitled "The Constitution in Danger," has this to say about the persons recently or even now on trial here in Washington. He said:

> Yet to justify their actions they held forth on just this constitutional issue—

The issue of the preeminence of the President, his prerogatives as against his powers—

> A highly dubious theory of a Presidential monopoly of foreign policy had filtered down to them. Their reasons reflected a school of thought that calls into question the constitutional foundation of this country.

Theodore Draper does not make such statements lightly and I would not repeat them on the Senate floor lightly.

We approached a constitutional crisis of the utmost gravity. It was only the chance, or perhaps it was not a chance, revelation in a Beirut journal that the arms sales to Iran were going on that alerted the country and Congress. Had that not happened, where might we have ended?

Where we were heading is no place this Senate would wish to see us go. And we did not legislate in the immediate aftermath. We did not legislate hurriedly. We waited until last year. Senator RUDMAN of New Hampshire could not have been more cooperative and helpful in seeing to it that this language was carefully crafted, because it was a criminal statute and vagueness is fatal to any such statute.

But this was a bipartisan effort. We engaged in good-faith negotiations with the White House attorneys. They never seemed to reciprocate the spirit in which we were trying to negotiate. And the bill was vetoed. Very well. The issue then remains.

I stand here, Madam President, to say that I will return to this matter. I am authorized to speak for the distinguished majority leader that he wishes to do the same. We do not have this matter behind us and we owe it to this generation and above all we owe it to generations to come to see that a severe challenge to the constitutional balance in the United States does not go unregarded and unrestituted.

The simple fact of the matter is that, with respect to foreign policy, the Constitution provides for shared powers, shared responsibilities. And the growing doctrine of Presidential prerogative, by denying those constitu-

tional provisions, puts the basic law of this Nation in jeopardy.

We will find an appropriate occasion on which to offer the amendment again and as often as it is vetoed, Madam President, it will be again offered.

I hope the day will be at hand when reason and an understanding of the seriousness of this matter reaches the President. We spoke with everyone in the executive branch practically, save the President. One would think he would want to know what we think about this and why we were acting as we did and not simply accept his staff's version of what we were doing, something which we found difficult to understand and which, in the circumstances, was unhelpful.

Madam President, I have made the points I rose to address. I thank you for restoring order to the Chamber. And just for the good cheer of it, I note once again that Harry S. Truman has finally been vindicated on this floor.

CLEAN AIR ACT AMENDMENTS OF 1989

The Senate continued with consideration of the bill.

Mr. BOSCHWITZ. Madam President, I am glad that the Senate is finally seriously considering clean air legislation. While we have made progress since Congress last amended the Clean Air Act in 1977, millions of Americans still live with polluted air. The American Lung Association now estimates that the health costs alone of air pollution are around $40 billion—and that does not take into account other costs like polluted lakes, dying fish, reduced agricultural yields and the corrosion of buildings, all of which negatively affect our quality of life.

During his election campaign, President Bush promised that he would be the Environmental President, and quite clearly there is a much greater emphasis on environmental matters in this administration than in the last administration. For the first time in over a decade, a President has submitted a clean air bill to Congress, and I think that President Bush deserves our praise for getting the whole debate on clean air moving again.

The clean air issue is very complex, and lot of numbers are being thrown around to describe the costs and benefits of this bill. Many details will have to be worked out here in Congress, and we must be sure to analyze the costs and benefits of the different provisions of the legislation before a final bill is passed. It is important that we pass strong clean air legislation, but it is also important that we do not hamstring American industry in its ability to provide jobs and compete in world markets.

Acid rain has long been a concern of mine, especially due to its impact on the many thousands of lakes in Minnesota. I cosponsored Senator Proxmire's Acid Deposition and Sulfur Reduction Act in 1987, and I am happy to see that we are finally going to do something substantive about this threat.

However, I believe that we must look at past efforts when considering acid rain reduction measures. Minnesota's utilities and consumers have already paid heavily for emissions reductions, and they should not be punished for having been good citizens for many years. They should not have to pay again, either directly or indirectly, for cleanup costs in other states.

One of the most innovative portions of the President's proposal was that dealing with alternative fuels. While I was disappointed that these provisions were not included in the Senate bill passed by the committee, I hope that we will include an alternative fuels program as part of the final version of this legislation.

Expanding our use of alternative fuels includes doing what we can to ensure that the fuels we use now burn more cleanly. By increasing the oxygen content of gasoline, we can accomplish this goal. Ethanol provides us with the highest oxygen content feasible today, and I am happy to see that the Senate clean air bill recognizes this.

If we want to fashion a real long-term solution to the clean air problem, we will have to reduce our use of the fuels that contribute so much to this air pollution. Expanding our use of alternative fuels will have other benefits as well. It will help reduce our dependence on foreign oil, provide new markets for our farmers, and, of even greater importance, it will help to reduce the current trend of global warming.

Global warming has long been a major environmental concern of mine, and I believe that while we address the emissions of various pollutants under the Clean Air Act, we should also address the emissions of those gases contributing to global warming. This makes sense on a practical level. If we require industry to make certain clean air reductions now and then add to that burden in several years by requiring new global warming reductions, we hinder industry's ability to plan. If we begin to address the global warming problem here, however, it would allow American businesses to plan better for the future.

In addition, it is essential that we get ahead of the curve in addressing global warming. We must take action before the anticipated climatic changes become too difficult to slow or stop. The earlier we act to stop global warming, the less we will have to sacrifice in the long run. The reductions in motor vehicle carbon dioxide emissions called for by this bill would, among other things, be a good start in our efforts to stop global warming.

Of even greater immediate importance is the problem of stratospheric ozone depletion. The ozone hole over Antarctica is growing, the Earth's ozone layer is being destroyed, and people's lives and health will soon be endangered if we do not take immediate action. CFC emissions are the main reason for the ozone depletion, and they also contribute 15 to 20 percent to global warming. The Montreal Protocol would reduce CFC emissions 50 percent by 1998. We must eliminate all CFC emissions, however, in order to save our ozone layer and help reduce global warming. Title 7 of this legislation would do that, setting an example for the rest of the world to follow.

I am pleased to be part of the current effort to overhaul the Clean Air Act and address some of the serious environmental problems facing our Nation as well as the entire world. I plan to be very involved in this process, and will eventually offer amendments to the bill. Our efforts to reduce pollution in the United States should serve as a model for the other nations that share our Earth's air and climate to follow.

Mr. SYMMS. Madam President, parliamentary inquiry. Has the Senate gone into morning business?

The PRESIDING OFFICER. No. The pending business is the consideration of the Clean Air Act amendments.

Mr. SYMMS. Madam President, I ask unanimous consent that I might proceed for 5 minutes as though in morning business.

The PRESIDING OFFICER. Without objection, it is so ordered. The Senator may proceed.

(The remarks of Mr. SYMMS pertaining to the introduction of S. 2041 are located in today's RECORD under "Statements on Introduced Bills and Joint Resolutions.")

(The remarks of Mr. SYMMS pertaining to the submission of Senate Resolution 235 are located in today's RECORD under "Submission of Concurrent and Senate Resolutions.")

Mr. SYMMS. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. SPECTER. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SPECTER. I further ask unanimous consent to proceed for 5 minutes as if in morning business.

The PRESIDING OFFICER. Without objection, it is so ordered. The Senator may proceed.

JOE MONTANA, GREATEST QUARTERBACK OF ALL TIME

Mr. SPECTER. Madam President, now that we are near the close of the day on Senate business and there are no other Senators on the floor to talk about the pending legislation, the Clean Air Act, I have sought recognition to talk for a moment about a famous son of Pennsylvania, Joe Montana, who achieved stardom in the Super Bowl on Sunday. Since neither the Philadelphia Eagles nor the Pittburgh Steelers were successful in reaching the Super Bowl, although both made the playoffs this year, it is my anticipation as a Pennsylvania Senator that the Super Bowl next year will be a battle between the Eagles and the Steelers. I think it appropriate to make a comment or two about a famous son of Pennsylvania, Joe Montana, who achieved such excellence and stardom on this Sunday past in the Super Bowl and for the many years of his professional career.

I would also like to note at this time the unusual cadre of extraordinary football players who have come from southwestern Pennsylvania within a few miles of each other. For example, Tony Dorsett is from Hopewell in the southwestern Pennsylvania region. John Unitas is from Brookline; Dan Marino, from Pittsburgh; Mike Ditka, from Aliquippa. In enumerating these great stars, I have omitted others.

I could go on at length, Madam President, with others from Pennsylvania, such as Matt Millen, a star coming from Lehigh Valley; Chuck Bednarik, a great star of the Philadelphia Eagles of years gone by who attended the University of Pennsylvania the same time I did, although he is much older than I, of course; and outstanding players who participated from Penn State under Coach Joe Paterno.

But the great success of Joe Montana, I think, does merit a word or two.

In leading the San Francisco Fortyniners to victory in Super Bowl XXIV and to three other NFL championships in the decade of the eighties, Joe Montana has become for many experts the greatest quarterback of all time. Only history, as Montana himself has modestly noted, will make this determination, but there can be no doubt that he is the best extant today.

San Franciscans and Californians can take justifiable pride in Montana's considerable accomplishments. But so, too, can Pennsylvanians, for Joe Montana grew up and played his high school football in Monongahela, a town in southwestern Pennsylvania on the Monongahela River, just south of Pittsburgh.

It was here in this blue-collar, steel-producing area that Joe first developed those skills that have carried him to the pinnacle of his profession, before going on to national fame in leading the Fighting Irish of Notre Dame to the national collegiate championship in 1977 and later to the professional ranks with San Francisco.

Montana's achievements in the National Football League are nothing short of phenomenal. He holds the NFL's highest ranking ever for a quarterback in a season and for a career, thus far. In his four Super Bowls, he had completed the most passes, 83, for the highest completion percentage, 68 percent, for the most yards, 1,142, and for the most touchdown passes, 11. All of these are, of course, records. Incredibly, in attempting 122 passes in these pressure-packed games, he has never been intercepted. He also holds the record for the most consecutive completions in a Super Bowl game, 13.

Whatever the experts may conclude, all of this leads me to the inescapable conclusion that Joe Montana, of Monongahela, PA, is the greatest quarterback of all time.

Joe Montana adds immeasurably to the rich tradition that is Pennsylvania football. Its heroes are too many to try to number here, but it includes three Heisman Trophy winners, Johnny Lujack and Leon Hart, of Notre Dame, who hail from Connellsville and Turtle Creek, respectively, in southwestern Pennsylvania, and John Cappaletti, of Penn State, from Upper Darby, just outside Philadelphia. Another stalwart on this list is Joe Namath, of Beaver, again in southwestern Pennsylvania, who led the New York Jets to a great upset victory over Baltimore in the Super Bowl after an outstanding collegiate career at Alabama under the late, legendary Bear Bryant.

One of the greatest collegiate coaches of all time, Joe Paterno, of Penn State, also graces this Pennsylvania Pantheon of football immortals. Joe's teams are always among the Nation's leaders and twice won national championships in the eighties. The University of Pittsburgh has also won several national collegiate football titles.

In the professional ranks, the Pittsburgh Steelers have won four Super Bowls and the Philadelphia Eagles won two NFL titles in the late forties and again in 1960.

As so I urge my fellow Pennsylvanians to rejoice with their California counterparts in the great success of one of their own, Joe Montana, from Monongahela, PA, another Pennsylvania football legend.

I thank the Chair.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MITCHELL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SIMON). Without objection, it is so ordered.

MORNING BUSINESS

Mr. MITCHELL. Mr. President, I ask unanimous consent that there be a period for morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Senate proceed to executive session to consider Calendar items No. 571 and 572. I further ask unanimous consent that the nominees be confirmed en bloc, that any statements appear in the RECORD as if read, that the motions to reconsider be laid upon the table en bloc, and that the President be immediately notified of the Senate's action.

The PRESIDING OFFICER. Without objection, it is so ordered.

The nominations considered and confirmed en bloc are as follows:

DEPARTMENT OF THE TREASURY

Abraham N. M. Shashy, Jr., of Texas, to be an assistant general counsel in the Department of the Treasury (chief counsel for the Internal Revenue Service).

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Martin H. Gerry, of California, to be an Assistant Secretary of Health and Human Services.

LEGISLATIVE SESSION

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Senate return to legislative session.

The PRESIDING OFFICER. Without objection, it is so ordered.

DEPARTMENT OF VETERANS AFFAIRS FISCAL YEAR 1991 BUDGET REQUEST

Mr. CRANSTON. Mr. President, I rise today as chairman of the Committee on Veterans' Affairs to update my colleagues and to comment on the President's fiscal year 1991 budget request for the Department of Veterans Affairs [VA] and, most particularly, on the state of the VA health care system. I congratulate Secretary of Veterans Affairs Edward J. Derwinski and President Bush for their fiscal year 1991 budget request of $12.28 billion for the VA medical care account. The overall budget of $30.9 billion, however, is a mixed bag.

VA HEALTH CARE PROGRAMS

Mr. President, the $12.28 billion request for the medical care account is an 8.4-percent increase of nearly $956 million over the funding level available for the current fiscal year. It is the best VA medical care request submitted by a President in over a dozen years.

This good news for America's 27 million veterans is the result of the very effective advocacy of the first Secretary of Veterans Affairs, Ed Derwinski, who took his case directly to President Bush and did a tremendous job in convincing him that the downward spiral in VA health care must be halted. My hat is off to the Secretary for bringing about this major breakthrough in the battle to overcome the large budget shortfall VA has been saddled with since the summer of 1988.

In addition, many of my colleagues themselves made effective efforts in support of increased funding for VA health care. Twenty Senators joined me in an October 1988 letter to President Reagan, 40 Senators joined me in a January 1989 letter to President Bush, and 40 Senators joined me in a December 1989 letter to President Bush. Each of these letters represents a strong statement of congressional support for the VA health care system.

Mr. President, in addition, veterans' service organizations have been pressing hard for an improved VA health care system, through contacts with Secretary Derwinski, the President, and the White House Chief of Staff. On November 7, 1989, four major congressionally chartered veterans' service organizations—American Veterans of WWII, Korea, and Vietnam; the Disabled American Veterans; the Paralyzed Veterans of America; and the Veterans of Foreign Wars—issued a preliminary press release on their combined independent budget for VA, which will be formally presented to the Congress next month. I ask unanimous consent that that press release and letters from seriously disabled veterans in California, Illinois, Nebraska, and Washington, which are representative of hundreds of moving letters to the President, be printed in the RECORD at the conclusion of my remarks following the three letters to the President that I just described.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. CRANSTON. Mr. President, the fiscal year 1991 VA medical care request contains a number of very positive features. The $12.28 billion, while not including everything that is needed, would allow for the restoration of at least 2,337 full-time employee positions, including nearly 800 more nursing positions. This request also includes very welcome proposals for funding of an anticipated 3.5-percent January 1991 pay raise; for $70 million more for pay boosts for VA doctors and nurses; and for $8.3 million for improved health care quality assurance programs. I am encouraged by the proposal for $4.3 million to resume a process I have advocated for over 10 years to control ward drug stocks and by the President's goal of completing conversion to this unit-dose system by 1995.

Mr. President, the VA proposal also includes an increase of $31.4 million to fund VA nurse pay reform legislation. On May 9, 1989, I introduced legislation in S. 947 to require each local VA hospital director to establish and maintain a VA nurse pay scale that is competitive with nurses' wages elsewhere in the community. Provisions of S. 947 were then incorporated into S. 13 and passed by the Senate on October 3, 1989, in H.R. 901. They have not yet been enacted, but we have been working with the House Veterans' Affairs Committee over the last few months to reconcile the different Senate- and House-passed nurse pay provisions. I feel we are making progress.

The President's budget also includes an increase of $38.6 million to fund increases in special pay for physicians and dentists. I will shortly be introducing legislation to increase pay for VA doctors. The administration's request for funding is a recognition of the urgency of the problems VA faces in recruiting and retaining high-quality doctors and nurses and will definitely facilitate the enactment of legislation to enable VA to be more competitive in the health care personnel marketplace.

However, Mr. President, even with the significant infusion in funding proposed by the President in the medical care account, some important needs are not dealt with adequately. I would like to see more emphasis on the enormous unmet needs of veterans for posttraumatic stress disorder [PTSD] treatment, for extended care and geriatric programs, and for innovative ambulatory care approaches to avoid institutionalization.

CONSTRUCTION, RESEARCH, AND THIRD-PARTY COLLECTIONS

Mr. President, the $695 million requested for VA construction projects represents a substantial turnaround in administration requests. For fiscal year 1989, for example, the administration requested only $488 million for VA construction. I hope that this increased level will provide the opportunity for a long-term commitment to a more realistic approach to meeting the great need for modernization, improved safety, and patient privacy in facilities across the system, as well as for new facilities in some parts of the country.

By contrast, the proposed 7-percent, $14.1 million cut in medical and prosthetic research is shortsighted and a big disappointment. Not only does VA research make a major contribution to our national effort to combat disease and disability, but it is vital to maintaining a high quality of health care for the individual veteran patient and attracting highly qualified health and mental health professionals to VA by improving the professional milieu in which they work.

Mr. President, I also disagree with the large-scale effort to beef up collections from health insurers by assigning 800 employees—including apparently 300 new ones—to these duties and by charging insurers for the nonservice-connected care of seriously disabled service-connected veterans.

There is no need for a new corps of Federal bill collectors. VA would be better off contracting out these collections and keeping its own work force focused on patient care.

Moreover, Mr. President, requiring health insurers to pay for part of the care furnished certain veterans with serious service-connected disabilities could raise innumerable disputes as to whether the care involved is in any way related to a service-connected condition. Such a requirement would also involve sloughing off onto the private sector substantial costs for the care of severely disabled service-connected veterans—specifically those with disabilities rated at 50 percent or more—for whom the Federal Government has a statutory obligation to provide comprehensive care.

VA BENEFITS PROGRAMS

Mr. President, outside health programs, the budget offers some improvement over the Reagan record. The proposed staffing increase to reduce the Board of Veterans' Appeals response time and to prepare VA to defend cases before the new U.S. Court of Veterans' Appeals is welcome, as is a modest, $23.3 million increase in efforts to modernize VA's antiquated computer system for claims processing.

Equally meritorious, Mr. President, is the proposal for a $6.5 million increase in funding for VA's National Cemetery System [NCS], which has been forced to scrape by on very lean budgets for several years and was hard hit by sequestration this fiscal year. As a result of austere budgets throughout the eighties, the NCS has an equipment replacement and maintenance backlog of about $7 million and is having difficulties in carrying out adequate maintenance activities. I am pleased that that program, recently invigorated by the appointment of a highly energetic and committed new Director, Joann K. Webb, will receive some added resources.

These are all useful starts, Mr. President, but I would be surprised if committee budget hearings don't show a

need for more action in each of these areas, as well as for an increase in overall staffing in the Veterans' Benefits Administration in order to produce—rather than just to claim—real improvement in the quality and timeliness of claims processing and to avoid defaults under VA home loan programs.

The most objectionable feature included in the President's VA fiscal year 1991 budget is a series of proposals for major home loan legislative retrenchments. The President's budget proposes requiring veterans for the first time to make a downpayment—4 percent is proposed for loan amounts over $25,000—in order to get a VA-guaranteed conventional home loan. Congress created the VA home loan program in 1944 precisely to allow hundreds of thousands of veterans to purchase homes even though they could not come up with a downpayment.

The budget also proposes raising the VA loan fee by 40 percent—from 1.25 to 1.75 percent of the loan amount—and eliminating the fee exemption for veterans rated less than 30 percent disabled. On January 1, 1990, the loan fee rose by 25 percent—from 1 to 1.25 percent—under the recently enacted Veterans Home Loan Indemnity and Restructuring Act of 1989, title III of Public Law 101-237. As the Senate author of that legislation, I want to stress that the fee increase there enacted was imposed only in exchange for granting indemnification for veterans against liability to VA in case of default.

There VA home loan proposals appear to be a broad attack by the President and the Office of Management and Budget on a 46-year-old program to which Congress overwhelmingly reconfirmed its commitment just 3 months ago. I will oppose all such changes in the fundamental nature of this important veterans' benefit and very much doubt that there will be time for committee hearings on these kinds of proposals.

MAJOR LEGISLATIVE COST-SAVING PROPOSALS

Regarding other major legislative proposals by the President in the VA budget, Mr. President, I have for years suggested the use of nontaxpayer IRS and Social Security data, if properly verified, to protect against illegal payments of need-based VA pension. However, I have reservations about the proposal to cut off VA service-connected disability compensation payments for certain incompetent veterans, who generally are supervised under VA's fiduciary program. Under this proposal, a veteran's estate could be reduced to as little as $10,000 while the veteran is alive. The inheritance rights of brothers, sisters, aunts, and uncles of such veterans could be likewise substantially reduced. Those relatives may have been of much help and comfort to the veteran during his or her lifetime.

VA MEDICAL CARE SUPPLEMENTAL FUNDING FOR FISCAL YEAR 1990

Mr. President, returning to the subject of VA medical care, I repeat that I am delighted that the administration is taking such a positive step in its fiscal year 1991 budget toward providing an appropriate level of healthcare services to the men and women who served this country. However, I feel strongly that the budget request for fiscal year 1991 makes the need for supplemental funding for the current fiscal year even more obvious.

We must raise the current year's medical care funding level by about a quarter-billion dollars to match the program level the President proposes for fiscal year 1991.

I find it hard to believe the President really wants to wind the VA medical system down even further this fiscal year.

I find it hard to believe that the President really wants to tell thousands of veterans to hold on for another 8 months to get the care they deserve and are entitled to receive.

Without supplemental fiscal year 1990 funding, the VA healthcare system cannot carry out a balanced program without reducing staffing and service levels throughout the year, only to begin restoring those cuts on October 1 with approval of the administration's fiscal year 1991 request. Such wide swings in resources run directly counter to the goal of building a high-quality, stable staff of health professionals who can work together smoothly.

As I need earlier, on December 22, 1989, I was joined by 40 Senators in a letter to President Bush explaining that the VA health care system has been suffering from serious instability and ineffectiveness as a result of start-and-stop funding. I am convinced that the VA healthcare system cannot furnish a high quality of care unless it is provided consistent as well as adequate funding levels.

Thus, I will again be writing to President Bush with many of my colleagues to urge him to extend his commitment to VA health care by submitting a fiscal year 1990 supplemental request of $252.4 million to restore the fiscal year 1990 shortfall resulting from sequestration and a VA miscalculation in personnel costs. Neither of these contingencies, described in the December 22 letter, were anticipated when the fiscal year 1990 VA, HUD, and Independent Agencies Appropriations Act was signed into law on November 9, 1989.

Over the last few years, many VA medical centers have been forced to cut back on staff, close beds or even entire wards—including many nursing home beds—shut down innovative and effective programs like those for drug and alcohol treatment and hospital-based home care, postpone activations of completed facilities, and delay—often for dangerously long time periods—vital equipment repairs and purchases. Not all VA facilities have been affected in the same way; some were in a crisis situation in fiscal year 1989 while others began being seriously stretched this past fall. However, Mr. President, all VA health care facilities are experiencing major backlogs in replacement and repair of critical life-saving or life-sustaining equipment.

There is no questiion that if fiscal relief is not provided for fiscal year 1990, tens of thousands of veterans will be denied the quality of care—or denied the care entirely—that we owe them if relief is not provided for fiscal year 1990. It would be a cruel hoax on our sick and disabled veterans to dangle an improved health care system before them if they can just make it until October. Many will not survive to gain the benefit of the President's fiscal year 1991 request, and others will grow sicker while effective and timely treatment is postponed.

This is bad medical care and bad public policy.

Mr. President, I am encouraged by the commitment to the VA health care system manifested in the administration's fiscal year 1991 medical care budget request, and I ask my colleagues to join with me in urging President Bush to fulfill that commitment by sending forth a fiscal year 1990 supplemental request of $252.4 million to provide now—not 8 months down the road—for the funding level that is contemplated in the administration's fiscal year 1991 request.

EXHIBIT 1

INDEPENDENT BUDGET PROJECT FINDS VETERANS' PROGRAMS WILL CONTINUE TO DETERIORATE UNLESS ADEQUATE FUNDING IS PROVIDED

WASHINGTON, D.C. (November 7).—Four Congressionally chartered veterans' service organizations today charged a long series of inadequate appropriations for the Department of Veterans Affairs (VA) have had a devastating impact on services to veterans and their families, even as the quality and quantity of VA health care for veterans continues to deteriorate.

"The Independent Budget Project," is a collaborative effort by American Veterans of World War II, Korea and Vietnam (AMVETS); the Disabled American Veterans (DAV); Paralyzed Veterans of America (PVA) and Veterans of Foreign Wars (VFW). This is the fourth year the organizations have formulated a needs-based budget for the VA, that more accurately reflects funding levels necessary to meet minimum VA programs and services.

In a joint statement the project authors said, "This Veterans Day finds the nation's sickest, neediest and oldest veterans in jeopardy of losing access to quality health care and necessary VA programs and services. Unless a meaningful fiscal year 1991 budget

is forthcoming, this erosion will become a national disgrace."

For fiscal year 1991, the project's authors are calling for an estimated $13.4 billion VA health care budget. While these are preliminary figures announced far in advance of the fiscal year, the authors said they are realistic amounts that would, if approved:

Restore service to the level of that provided in 1988; assure entitled veterans that they will receive prompt and adequate health care; assure the needs of older veterans are fulfilled; assure AIDS funding is made available and not siphoned from other medical programs; and improve the efficiency of the VA system.

The Independent Budget's fiscal year 1991 health care proposal is an increase of $1.9 billion over the expected 1990 appropriation, which is already short by $600 million.

In the area of General Operating Expenses (GEO)—which is responsible for the administration of all veterans' programs and services—the project's authors again found a continuing deterioration in services, brought about by inadequate staffing, that includes:

A backlog in compensation and pension cases that has skyrocketed from more than 167,000 in October 1987, to over 650,000 at present; a deterioration in the timeliness and quality of case adjudication, with almost a third of the original compensation claims taking more than six months to complte; program delays such as those for disabled veterans who apply for vocational rehabilitation being required to wait on average more than 100 days before being interviewed by a vocational rehabilitation counselor; an inability to even contact the VA by more than one million veterans as a result of busy telephone lines or being placed on hold for interminable periods; unnecessary defaults on home loan by veterans at great cost to them and the government.

To address these problems in the Va's Veterans Benefits Administration, the Independent Budget projects a fiscal year 1991 appropriation of $910 million, which includes an additional 650 employees.

For the VA's construction program, the Independent Budget recommends $965 million be provided to prevent the continuing deterioration of the VA's physical plants, provide for the conversion of underutilized hospital beds to accommodate the long-term care needs of the aging veteran population, increase nursing home care units and update and expand outpatient facilities.

Representatives of the veterans service organizations that comprise the Independent Budget Project said they were releasing their proposals well in advance of the White House's recommendations because, "The need is now, the crisis is apparent. America's obligation to its veterans has never been in greater jeopardy. This Veterans Day, when members of Congress and the Administration are publicly recalling veterans' service and sacrifice, we hope they recall, too, the continuing need for adequate VA funding that must be met."

U.S. SENATE,
WASHINGTON, DC,
October 11, 1988.

Hon. RONALD REAGAN,
The White House, Washington, DC.

DEAR MR. PRESIDENT: We are writing to call your attention to the urgent funding problems now being experienced within the Veterans' Administration health-care program and to urge that you direct the Office of Management and Budget to send forth the supplemental request which was forwarded there. According to the Administrator of Veterans' Affairs, he has met personally with the OMB Director "to bring him up to date on the needs of the Medical Care account in FY 1989".

On September 9 and 20, the Senate Veterans' Affairs Committee held oversight hearings to explore various concerns which had been raised by VA doctors, nurses, and other health-care professionals, as well as affiliated medical schools, that the agency was not fulfilling its responsibility to provide prompt and effective health care to those veterans eligible for it. These concerns were validated at the hearing by 9 VA field witnesses who, testifying under oath, all described the current fiscal state of affairs as a "crisis" and "the worst financial crunch" they had ever seen in VA health care.

In connection with those hearings, the VA's Chief Medical Director has advised that the VA is facing at least a $635 million deficit for fiscal year 1989. Additionally, over the years, the agency has been reallocating large amounts of money from both recurring items—such as inventories, drugs, and prostheses—and non-recurring items—such as equipment and maintenance and repairs—in order to maintain daily operations. The cumulative effect of these reallocations is to reduce the current funding base by another $440 million, thus making the total VA health-care deficit approximately $1.1 billion in all.

On September 9, the Administrator testified that a supplemental request had been forwarded to OMB to assist in offsetting the anticipated deficit. The Administrator said he would do everything within his power, including appealing to you if necessary, to obtain timely Administration action on the request. On September 13, 1988, Senator Cranston wrote the Administrator to emphasize "two vitally important matters. . . . First, that the amount . . . in such a request be sufficient to enable the VA in FY 1989 to maintain its current levels of services and comply with all applicable laws; and, second, that your actions be most expeditious in order to produce an Administration request that can be considered by the House Appropriations Committee when it marks up an FY 1989 continuing resolution. . . . I would underscore the testimony of the Chief Medical Director . . . that an additional appropriation of $608 million [later revised upward to $635 million] is necessary for this purpose. Otherwise, depending on the amount of the shortfall, the VA would be forced to take a number of actions . . . to cut back on health-care services to veterans."

On October 1, because no supplemental appropriation was received by Congress, the VA, as predicted, began cutting back on health-care services and veterans are now being turned away from VA medical facilities. Yet a supplemental request has not been forthcoming from OMB. We believe that this is tragic. Many of these veterans have nowhere else to turn for health care. The result of these cutbacks will be that the health and quality of life of a number of these veterans will deteriorate—with fatal consequences in some cases.

We are especially concerned that OMB will be unsympathetic to the VA's supplemental request. In a May 24, 1988, letter to the Chairman of the House Appropriations Subcommittee on HUD-Independent Agencies, in connection with its consideration of the FY 1989 VA appropriation, OMB Director Miller stated that veterans' programs, among other items, are "a low-priority service".

Mr. President, we have been unable to determine whether or not the Administrator has sought your assistance. We wanted to be sure that you were personally aware of this very grave situation. We believe that the VA has an urgent need for additional funds in order to maintain the level of health-care services it offered in FY 1988. We respectfully ask that you personally intervene and instruct OMB to transmit the supplemental request to Congress immediately—in adequate time for us to act prior to adjournment.

Your immediate attention to this matter would be greatly appreciated.

With warm regards,

Cordially,

Alan Cranston, Max Baucus, John Melcher, Brock Adams, Dennis DeConcini, John D. Rockefeller IV, Howard M. Metzenbaum, Spark M. Matsunaga, Patrick Leahy, Kent Conrad, Claiborne Pell, Wendell Ford, Carl Levin.

Thomas Daschle, George J. Mitchell, Bob Graham, Donald W. Riegle, Daniel P. Moynihan, Jeff Bingaman, Quentin N. Burdick, Alan J. Dixon, Daniel K. Inouye, Frank R. Lautenberg, Terry Sanford, Tom Harkin.

U.S. SENATE,
Washington, DC, January 27, 1989.

Hon. GEORGE BUSH,
The White House, Washington, DC.

DEAR MR. PRESIDENT: We are writing about the urgent funding problems in the Veterans' Administration health-care program and to urge you to send forth a FY 1989 supplemental request for funds adequate to maintain workload, services, and programs at FY 1988 levels, and to revise the FY 1990 budget request in such a manner as to maintain those same FY 1988 levels.

On September 9 and 20, 1988, the Senate Committee on Veterans's Affairs held hearings to investigate reports of inadequate funding levels within the VA health-care system. At that hearing, VA medical center directors, doctors, and nurses virtually unanimously described, under oath, the fiscal state of affairs as a "crisis" and "the worst financial crunch" they had ever seen in VA health care. In connection with the hearing, the VA's Chief Medical Director testified that funding for VA health-care facilities for FY 1989 was $635 million less than was needed to operate them at the FY 1988 level.

On September 9, 1988, the VA Administrator testified that a supplemental request had been forwarded to OMB to assist in offsetting the anticipated deficit. On September 13, Senator Cranston wrote the Administrator to emphasize that the amount in such a request be sufficient to enable the VA in FY 1989 to maintain its current levels of services and comply with all applicable laws, and that action be taken expeditiously.

On October 11, 1988, no supplemental request having been received, 25 Senators wrote President Reagan calling his attention to the dire situation and urging him to direct OMB to send forth the supplemental request it had received. Those Senators received a November 4, 1988, response from the Acting OMB Director to the effect that the need for supplemental funding was being reviewed in the context of the President's FY 1990 budget request.

To date, no FY 1989 supplemental appropriations request for VA medical care has been received by Congress. Furthermore, the FY 1990 budget submission would require denying care to thousands of veterans who previously had access to such care, imposing copayments, sharply reducing funding levels for research, significantly decreasing the number of available residents necessary to provide patient care, and postponing activation of certain needed construction projects. Mr. President, these actions are totally unacceptable. Indeed, OMB cut a total of $1.427 billion out of the VA's request for its medical care, construction, and research programs—with a loss of 8,000 full-time equivalent employees (FTEE) from FY 1988 levels under the medical care and research accounts.

We have already received from VA facilities reports of thousands of veterans who, after years of receiving VA care, are being told to go elsewhere or who have been told they must wait long periods of time—in many cases a denial of care in and of itself—prior to receiving certain types of care or prostheses. Numerous programs and services are being cut back or eliminated altogether—home-based health-care services, alcohol and drug treatment centers, community nursing home care, and hospice care programs, just to name a few.

Not only do these cutbacks create serious hardships for veteran-patients and their families who have relied upon the VA to meet their health-care needs, but we believe that these reductions will produce a ripple effect, creating an increased demand on other overburdened Federal programs providing health and social services.

Mr. President, we respectfully ask that you instruct OMB to transmit an FY 1989 supplemental request to Congress immediately, and to restore to the FY 1990 budget the funds requested by the VA, in order to maintain VA programs and services at FY 1988 levels.

Your immediate attention to this matter would be greatly appreciated.

With warm regards.

Cordially,

Alan Cranston, James M. Jeffords, Spark M. Matsunaga, Dennis DeConcini, Timothy E. Wirth, Claiborne Pell, Patrick J. Leahy, David L. Boren, Max Baucus, Brock Adams, Tom Harkin, Paul S. Sarbanes, Bill Bradley, Bob Graham, Albert Gore, Jr., Wendell H. Ford, Howell Heflin, Frank R. Lautenberg.

Quentin N. Burdick, Terry Sanford, Kent Conrad, Jeff Bingaman, Howard M. Metzenbaum, Daniel Patrick Moynihan, Thomas A. Daschle, John D. Rockefeller IV, George J. Mitchell, Richard C. Shelby, Alan J. Dixon, Paul Simon, Dale Bumpers, Joseph R. Biden, Jr., Christopher J. Dodd, Herbert Kohl, Daniel K. Inouye, David Pryor, William S. Cohen, John F. Kerry, Donald W. Riegle, Jr.

U.S. SENATE,
COMMITTEE ON VETERANS' AFFAIRS,
Washington, DC, December 22, 1989.

Hon. GEORGE BUSH,
The White House, Washington, DC.

DEAR MR. PRESIDENT: We are writing about the dire funding problems in the Department of Veterans Affairs health-care system and to urge you to send forth an FY 1990 supplemental request and to maintain a VA medical care program level in your FY 1991 budget that would carry on the level that Congress intended to be achieved with the FY 1990 funds appropriated for VA medical care before sequestration.

The current, very serious crisis in VA medical care has been brewing for the last several years. As we approached the end of the 100th Congress, tremendous VA health-care funding difficulties became painfully obvious, and Congress enacted a $31.7-million FY 1988 supplemental appropriation for VA medical care.

In September 1988, both the House and Senate Committees on Veterans' Affairs received very compelling testimony about the severity of VA health-care funding problems and how the budget squeeze was adversely affecting the quality and quantity of VA care. On October 11, 1988, 25 Senators wrote to President Reagan urging the prompt submission of an Administration request for supplemental FY 1989 funding before the 100th Congress adjourned. Subsequently, 41 Senators wrote you in January 1989 urging submission of FY 1989 and FY 1990 requests for urgently-needed additional VA medical-care funding.

On March 8, the Senate Committee on Veterans' Affairs transmitted to the Senate Budget Committee bipartisan recommendations for $618.4 million in supplemental FY 1989 VA medical-care funding and for an additional $1.24 billion for FY 1990 over the Administration's request for VA medical care. These funds were needed to restore patient workloads and health-care staffing to approximately FY 1988 levels and to begin making the efforts necessary to deal with the enormous unmet needs of Vietnam veterans for PTSD treatment, the growing needs of older veterans for long-term care, the escalating demands for and costs of AIDS treatment, the great numbers of homeless veterans requiring care and shelter, and the need to fight the epidemic of drug and alcohol abuse.

On March 24, you submitted a request for supplemental VA medical-care funding for FY 1989. Delays in both houses due to unrelated matters caused enactment of the FY 1989 Dire Emergency Supplemental Appropriations Act to be postponed until June 30. The amount appropriated—$345 million—was $42 million above your supplemental request but just over half of the $618.4 million the Senate Veterans' Affairs Committee had recommended. These funds were to be used to begin re-building VA's staffing level and restoring programs and services, including many drug and alcohol programs, which had been closed down or curtailed. Unfortunately, the delays prevented VA from restoring the bulk of the workload reductions imposed because of the serious FY 1989 fiscal problems.

Regarding the FY 1990 VA health-care budget, the final FY 1990 medical care appropriation—along with a special add-on for expanded VA drug and alcohol treatment in an emergency drug measure—provided almost $11.5 billion for VA medical care, approximately $743 million above the Administration request.

Although this final appropriation level did not contain all the funding the Senate had recommended and believed necessary, the Appropriations Committees this year, as in prior years, did the best they could to provide adequate funding levels for the VA health-care system in the face of seriously inadequate Administration requests. For the last four fiscal years (FYs 1987–1990) alone, Congress has added over $1.7 billion to the Administration's appropriations requests for VA medical care.

When you signed the FY 1990 VA, HUD, and Independent Agencies Appropriations Act into law on November 9, it seemed that the funding level for FY 1990 would be austere but minimally adequate. Unfortunately, two matters have arisen that have thrown into disarray VA's plans to restore programs and services eliminated or curtailed last fiscal year, as the FY 1990 appropriated level would have permitted. First, sequestration under Gramm-Rudman, as modified by the FY 1990 reconciliation legislation, will reduce the VA medical care appropriation by $158.4 million. Second, we have learned that, as a result of a VA error in computing its FY 1990 personnel costs, VA is experiencing a $94-million shortfall in salary costs. (VA had used an average figure that was $483 too low because it was not adjusted to cover FY 1990 inflation.)

Once again the effort to stabilize VA health-care funding has been thwarted and VA is faced with extremely difficult choices as to what aspects of its medical programs must bear the brunt of the sequestration reduction. Since, as noted above, the appropriated amount provided for a truly bare-bones program in FY 1990, there are no soft areas in which shortages totalling $252.4 million—34 percent of the Congressional add-on—can be absorbed without impinging on the quality or quantity of care. There should be no personnel cutbacks because Congress has specifically directed VA to achieve a staffing level of 194,720 and has precluded personnel funds from being diverted to any other purpose. However, this means that the cuts will almost certainly lead to a badly unbalanced program with inadequate drugs, supplies, equipment, and maintenance. We understand from VA instructions to field facilities that medical centers will have to absorb 40 percent of the January 1990 pay raise and reduce substantially community nursing home care placements. In addition, savings will be achieved through postponing the activations of vital programs and services for which extensive construction funds have already been expended. The sequestration will thus deny to tens of thousands of veterans the benefit of the restored programs and services Congress had intended for them and cause delays in the care that would be provided by the hospital and nursing-home beds and outpatient clinics that have long been planned to be opened this fiscal year.

VA cannot continue to function on this start-and-stop basis, with inconsistent funding levels and inadequate commitment from the Administration from year to year. We urge you to demonstrate your commitment to the VA health-care system by sending forth an FY 1990 $252.4-million supplemental request to restore the shortfall resulting from sequestration and the miscalculation in personnel costs. For FY 1991, we urge you to propose sufficient funds to continue in FY 1991 the level of VA medical care that would be supported by the $11,578,092,000 FY 1990 funding level we are proposing for VA medical care. Our Nation owes no less to those who have served in the cause of maintaining our freedoms and national security.

We would greatly appreciate your prompt attention to this important matter.

With warm regards,

Cordially,

Alan Cranston, George J. Mitchell, Spark M. Matsunaga, John D. Rockefeller IV, Dennis DeConcini, Bob Graham, Wendell H. Ford, Dale Bumpers, Alan J. Dixon, Herbert Kohl, Quentin N. Burdick, James M. Jeffords, John Heinz, John F. Kerry,

NOVEMBER 18, 1989.

President GEORGE BUSH,
The White House, Washington, DC.

DEAR MR. PRESIDENT: I would like to add my voice to the many others who wish to express our concerns about the impact of VA budget cuts on my health care. Please Mr. President remember us and our families that have given so much for this nation.

Often I go to visit the grave of my older brother Mike Wyman who was killed in Vietnam. I used to walk there now I use a wheel chair. I too did service to the nation of six years in the Marines at a time when being in the service was not the in thing. But I thought that I could help in some way to prevent other brothers from the same death.

I am very proud of what my family did for this nation, but at the same time I am very concerned with the current status of the VA budget cuts. I am in need of very special care due to my spinal cord injury.

I understand that many people ask you for many things, I ask that you don't forget those of us who paid a high price for this nation. Please consider the VA budget very carefully, our health care depends on it. Thank you for your attention to this matter.

Sincerely,

RAYMOND D. WYMAN.

HERRIN, IL.

NOVEMBER 13, 1989.

President GEORGE BUSH,
The White House, Washington, DC.

DEAR PRESIDENT BUSH, I'm a service connected paralyzed veteran of 45 years. I've been denied use of my legs since 1944, please don't deny much needed medical care in my future along with thousands of other disabled veterans. The V.A. Budget needs increases not decreases to provide proper medical care.

I thank you for being aware of our needs and hoping for positive increases in the V.A. Budget.

Sincerely,

WILDER A. JOHNSON.

Yacolt, WA, November 2, 1989.

DEAR MR. PRESIDENT: My name is William L. Walker. I am a permanently disabled service-connected veteran of the Korean conflict. I am writing this letter concerning and asking for your help in upgrading the quality of medical care we, the veterans, receive from the Veterans' hospitals and from the Veteran's Administration.

In the past few years the budget has been woefully inadequate. Many veterans who should be treated are being denied treatment because of the fact that even today there are hospitals that are understaffed and floors on hospitals that are not being used because the V.A. cannot afford to hire the nurses and other personnel that are needed to operate them. In the case of the Portland, Oregon, V.A. Hospital, two floors on a brand new hospital are not being used and many, many veterans in the Portland and Southwest Washington area are being denied treatment.

The last two times that I tried to be treated at the Portland hospital, I was denied entrance or treatment at that facility. The reason, they said, was they were all filled up and did not have room for another veteran even though I am service-connected. Once I was in route to the hospital in an ambulance because of a serious breathing difficulty. The V.A. advised the ambulance driver to take me to the closest local hospital and have me treated there.

Mr. President, I am tired of being punished for surviving in the Korean conflict. As a veteran it is almost impossible to think of the fact that you are denied treatment for a service-connected disability simply because there is no bed for you to be put in while they treat you.

Mr. President, I urge you to please think twice and give it an awful lot of thought when you come to the V.A. budget. The shrinking federal budgets and competing needs of others are also on your agenda but we, the veterans, were promised that if we became disabled in combat that we would be taken care of by the Federal government. Now it's your time to keep your promise. So I ask you, President Bush, on behalf of the veterans, please help us. The impact of the V.A. budget cuts on our health care has to be taken into consideration.

I hope that I hear from you concerning this or at least take my letter into consideration whenever it comes time for the V.A. budget. Thank you very much.

Sincerely,

WILLIAM L. WALKER.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Kalbaugh, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

(The nominations received today are printed at the end of the Senate proceedings.)

EXECUTIVE AND OTHER COMMUNICATIONS

The following communications were laid before the Senate, together with accompanying papers, reports, and documents, which were referred as indicated:

EC-2242. A communication from the Chairman of the Board of Directors of the Panama Canal Commission, transmitting, pursuant to law, a report, including unaudited financial statements, covering the operation of the Commission during fiscal year 1989; to the Committee on Armed Services.

EC-2243. A communication from the Administrator of the Energy Information Administration, Department of Energy, transmitting, pursuant to law, a report entitled "Annual Energy Outlook, 1990"; to the Committee on Energy and Natural Resources.

EC-2244. A communication from the Deputy Director of the Defense Security Assistance Agency, transmitting, pursuant to law, a report of those foreign military sales customers with approved cash-flow financing in excess of $100 million as of October 1, 1989; to the Committee on Foreign Relations.

EC-2245. A communication from the Comptroller of the Currency, transmitting, pursuant to law, notice of adjustments to compensation for the Office of the Comptroller of the Currency for calendar year 1990; to the Committee on Governmental Affairs.

PETITIONS AND MEMORIALS

The following petitions and memorials were laid before the Senate and were referred or ordered to lie on the table as indicated:

POM-399. A resolution adopted by the Senate of the State of West Virginia; ordered to lie on the table.

"SENATE RESOLUTION No. 7

"Whereas legislated requirements for improved air quality should be realistic and take into account both technological feasibility and costs of compliance; and

"Whereas the application of Maximum Achievable Control Technology (MACT) plus a residual "unreasonable risk" standard (taking into account available technology and economic costs as well as risks to the nation's health) would, in fact, constitute a balanced approach to controlling air toxics; and

"Whereas compliance with MACT could cost the domestic steel industry alone up to five billion dollars, according to EPA estimates; and

"Whereas the Clean Air Act has had positive effects on industrial emissions to date. The proposed amendments now pending, dealing with air toxics, would have devastating consequences which would require controls beyond today's available technology to meet arbitrary risk levels that are both inflexible and scientifically unsound and, if adopted, would require the closing or shutting-down of many domestic coke plants, steel mills, coal mines and other related businesses; and

"Whereas use of an arbitrary and scientifically unsound numerical standard such as 10(−4) or 10(−6) maximum individual risk from air toxics would have a disastrous impact on U.S. international competitiveness; and

"Whereas these plant closings and business shut-downs would cause thousands of workers to lose jobs and loss of revenues to an already depressed economy in West Virginia as well as the rest of the nation; and

"Whereas many of America's major foreign competitors rely on government subsidies to cover the cost of their environmental expenditures, and compliance with pending Clean Air Act amendments would impose a higher cost burden on domestic industries than any other nation imposes on its industrial manufacturers; Therefore, be it

"*Resolved by the Senate*, That the United States Congress is requested to continue to support the Clean Air Act as originally introduced, rejecting the amendments that have been added or may be added in com-

mittee thereby enacting clean air legislation that is reasonable and reponsible. It should enact MACT and a balanced unreasonable risk standard for control of air toxics. It should reject the scientifically unsound use of a 10(−4)/10(−6) maximum individual risk standard or air toxics thereby protecting both the environment and the economy of West Virginia and this nation; and, be it

"Further resolved, That the Clerk of the West Virginia State Senate is directed to forward copies of this resolution to the President of the United States, the Clerks of the respective houses of the United States Congress and each member thereof, including the members of the West Virginia delegation."

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BIDEN, from the Committee on the Judiciary, without amendment:

S. 1229. A bill for the relief of Maria Luisa Anderson (Rept. No. 101-237).

S. 1467. A bill for the relief of Geetha Kannan (Rept. No. 101-238).

S. 1493. A bill for the relief of Roswitha Starins (Rept. No. 101-239).

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first and second time by unanimous consent, and referred as indicated:

By Mr. COHEN:

S. 2032. A bill to amend the Internal Revenue Code of 1986 to provide for a credit for health insurance expenses; to the Committee on Finance.

By Ms. MIKULSKI (for herself, Mr. BUMPERS, Mr. PELL, and Mr. ADAMS):

S. 2033. A bill to amend title XVIII of the Social Security Act to provide for coverage of annual screening mammography under part B of the Medicare Program; to the Committee on Finance.

By Mr. BINGAMAN (for himself, Mr. MITCHELL, Mr. KENNEDY, and Mr. HARKIN):

S. 2034. A bill to authorize the creation of a National Education Report Card to be published annually to measure educational achievement of both students and schools and to establish a National Council on Educational Goals; to the Committee on Labor and Human Resources.

By Mr. BINGAMAN (for himself, Mr. MITCHELL, Mr. KENNEDY, Mr. PELL, Ms. MIKULSKI, Mr. HARKIN, Mr. KOHL, and Mr. HATFIELD):

S. 2035. A bill to establish a Commission to examine the advisability of lengthening the school day and school year in United States public elementary and secondary schools; to the Committee on Labor and Human Resources.

By Mr. HEINZ:

S. 2036. A bill to authorize the conveyance to the Columbia Hospital for Women of certain parcels of land in the District of Columbia, and for other purposes; to the Committee on Governmental Affairs.

By Mr. LEVIN:

S. 2037. A bill to prohibit for the purposes of meeting the Gramm-Rudman deficit targets the recognition of shifts in dates of making outlays enacted within the year preceding adoption of a budget; to the Committee on the Budget and the Committee on Governmental Affairs, jointly, pursuant to the order of August 4, 1977.

By Mr. McCONNELL:

S. 2038. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to require a 20-percent reduction in certain assistance under such act to a law enforcement agency unless such agency has in effect a binding law enforcement officers' bill of rights; to the Committee on the Judiciary.

By Mr. COCHRAN (for himself, Mr. PELL, Mrs. KASSEBAUM, Mr. HEINZ, Mr. LOTT, Mr. DOLE, Mr. WILSON, Mr. MCCAIN, Mr. CRANSTON, and Mr. HATFIELD):

S. 2039. A bill to improve the quality of student writing and learning, and the teaching of writing as a learning process in the Nation's classrooms; to the Committee on Labor and Human Resources.

By Mr. PELL (for himself, Mr. BIDEN, Mr. CRANSTON, Mr. DODD, Mr. KERRY, Mr. SIMON, and Mr. MOYNIHAN):

S. 2040. A bill to expand the size and scope of the Support for East European Democracy [SEED] Program; to the Committee on Foreign Relations.

By Mr. SYMMS (for himself, Mr. CHAFEE, Mr. DASCHLE, Mr. MATSUNAGA, and Mr. MCCLURE):

S. 2041. A bill to amend title XVIII of the Social Security Act to provide uniform national conversion factors for services of certified registered nurse anesthetists; to the Committee on Finance.

By Mr. MOYNIHAN:

S. 2042. A bill to establish the Thomas Cole National Historic Site in the State of New York; to the Committee on Energy and Natural Resources.

By Mr. HOLLINGS:

S. 2043. A bill to establish a reforestation program for timber lands suffering damages from natural disasters; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. BIDEN (for himself, Mr. LIEBERMAN, Mr. JEFFORDS Mr. WIRTH, Mr. MOYNIHAN, Mr. PELL, and Mr. SIMON):

S. 2044. A bill to require tuna products to be labeled respecting the method used to catch the tuna, and for other purposes; to the Committee on Commerce, Science, and Transportation.

By Mr. LAUTENBERG (for himself and Mr. SPECTER):

S.J. Res. 243. Joint resolution to designate March 25, 1990, as "Greek Independence Day: A National Day of Celebration of Greek and American Democracy"; to the Committee on the Judiciary.

By Mr. HOLLINGS (for himself and Mr. RUDMAN):

S.J Res. 244. Joint resolution to repeal section 614 of the Departments of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, 1990, and section 302 of the Foreign Relations Authorization Act, Fiscal Years 1990 and 1991; to the Committee on Appropriations.

By Mr. McCLURE (for himself and Mr. SYMMS):

S.J. Res. 245. Joint resolution designating July 3, 1990, as "Idaho Centennial Day"; to the Committee on the Judiciary.

SUBMISSION OF CONCURRENT AND SENATE RESOLUTIONS

The following concurrent resolutions and Senate resolutions were read, and referred (or acted upon), as indicated:

By Mr. SYMMS:

S. Res. 235. A resolution to express the sense of the Senate that the President of the United States be commended for his actions toward Panama and that the American servicemen and women who participated in "Operation Just Cause" merit the gratitude and appreciation of the Nation for their service to the cause of peace and freedom; to the Committee on Armed Services.

By Mr. MITCHELL (for Mr. FORD):

S. Res. 236. A resolution to make amendments to the Senate rules with respect to gifts and travel, financial disclosure, and conflict of interest; considered and agreed to.

By Mr. MITCHELL (for himself and Mr. DOLE):

S. Res. 237. A resolution to direct the Senate Legal Counsel to appear as amicus curiae in *Walter L. Nixon, Jr.* v. *United States, et al.;* considered and agreed to.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. COHEN:

S. 2032. A bill to amend the Internal Revenue Code of 1986 to provide for a credit for health insurance expenses; to the Committee on Finance.

HEALTH CARE INSURANCE CREDIT

Mr. COHEN. Mr. President, our Nation's health care system is in crisis. Most people have to struggle with the high cost of living. But the high cost of staying well or, indeed, alive is beginning to elude not only the poor but the vast majority of the American people.

Doctor and hospital bills continue to soar into the stratosphere while people of modest means sink deeper and deeper into debt and despair.

Yesterday, the President submitted his budget for the next fiscal year which included another proposed reduction in Medicare which, if accepted or endorsed by the Congress, can only result in pushing many hospitals, particularly those in rural areas, over the edge and into the abyss.

There is likely to be confusion on the part of many people who will wonder why we are so eager to explore space, for example—where indeed we may find the future—when we are so clearly failing to address the moral and physical imperatives of the the present.

We cannot flaunt the opportunity of the future any more than we can ignore the lessons of the past.

But heaven can afford to wait a little longer until we find a way to avoid what is rapidly becoming hell on Earth for the millions of Americans faced with health care they need and medical bills they cannot pay.

It is in that light, Mr. President, that I rise today to introduce legislation to help low- and middle-income Americans afford the vital protection of health insurance coverage. My legislation would provide a refundable tax credit to help offset the high cost of insurance premiums for individuals

and families not covered by employer-provided plans.

It is my hope that this legislation will be at least a modest contribution to the ongoing debate regarding the best means of extending health care coverage to the millions of Americans who are now uninsured.

There are approximately 37 million Americans—about one-seventh of our population—who have no health insurance. They are not old enough for Medicare, not poor enough for Medicaid and have no health insurance through an employer. In my home State of Maine, there are about 130,000 who have no health insurance at all.

According to data compiled by the United States Bipartisan Commission on Comprehensive Health Care, better known as the Pepper Commission, more than a quarter of the uninsured are children. Eighty percent of the uninsured are workers or members of families in which there is a worker. Over 60 percent of the working uninsured earn less than $10,000 per year. In addition, the Pepper Commission has found that another 20 million Americans are underinsured. Although covered by health insurance, the coverage of these underinsured Americans leaves them vulnerable to considerable out-of-pocket expenses for necessary medical care.

The consequences of being without health insurance can pose a tragic choice between financial hardship and medical neglect. In addition to facing the risk of high medical bills should they become ill or injured, the uninsured often postpone or forgo care until it is too late for less costly preventive treatment. Because they cannot afford the out-of-pocket costs of a visit to the doctor or even a short stay in the hospital for relatively routine care, these individuals and families often have no doctor they see regularly or other usual source of care. Instead, they depend on emergency rooms and hospital outpatient departments as their usual source of care much more than the insured do. Heavy reliance on emergency rooms and hospital outpatient departments strains the resources of these facilities, drives up the overall costs of health care, and suggests that services are not provided as appropriately and as timely as they should be for millions of Americans.

In fact, the Pepper Commission found strong evidence that a lack of appropriate and timely care leaves the uninsured in poorer health, generally, than the insured and ultimately leads to greater costs to society as a consequence of conditions made more serious by neglect.

A comparison of surveys over time indicates that the proportion of the population without health insurance has risen over the past decade, from an estimated 14.6 percent in 1979 to an estimated 17.5 percent in recent years. A number of factors have contributed to this increase, including a decline in the proportion of employers offering health benefits; the shift of employment to service industries less likely to offer health benefits; and the tremendous increase in the cost of health insurance premiums.

It is not only the uninsured who need be concerned about this problem, because the lack of insurance for millions of Americans affects us all. The current health care system still leaves our society with a significant bill for health care services to the uninsured. In 1988, the American Hospital Association reported that hospitals had spent $10.7 billion, or 6.3 percent of total expenditures, on uncompensated care. This was a significant increase over the $3.5 billion that hospitals spent for uncompensated care in 1980. This increasing level of medical care for which hospitals receive no payment is a growing strain on the financial resources of many facilities. It has also resulted in higher medical and health insurance bills for all health care consumers, because the costs of the care of those who cannot pay for it are ultimately shifted onto the backs of those who can.

The legislation I am introducing today would help American families to cope with the rising costs of health care and health insurance. It would establish a refundable tax credit to help families of modest means to purchase health insurance protection.

The proposed legislation would entitle individuals and families not already covered by an employer-provided health benefit plan to a tax credit to offset a portion of their health insurance premium costs. A credit of 60 percent would apply to premiums of up to $1,200 for individuals and $2,400 for families. Therefore, the maximum credit would be $720 for individuals and $1,440 for families.

The credit would be targeted to individuals and households most in need. Individuals with adjusted gross income less than $18,000 and families with adjusted gross income less than $28,000 would be eligible for the 60 percent credit. The credit would then be phased-out for individuals with incomes between $18,000 and $23,000 and for families with incomes between $28,000 and $33,000. The proposed credit would be completely refundable and available to workers through the adjustment of Federal income tax withholding. Households with income too low to incur Federal income tax liability would still be able to file for the refundable credit.

In submitting this proposal, I have attempted to be mindful both of cost considerations and the tremendous magnitude of the problem of the uninsured. If we are serious about extending health insurance coverage to those now uninsured we will have to face up to the costs of doing so.

Although addressing this immense unmet need will place some costs on the Federal Government, the costs of not addressing this problem are even more staggering. Those without health insurance are less likely to seek medical care when they need it and are more likely to go without it if they cannot pay for it. The result is that our society as a whole is paying dearly—for babies who will never overcome the disadvantage of inadequate prenatal care; for adults who lose productivity because of major medical problems that might have been prevented by more timely treatment; and through higher medical and insurance bills because there is no escaping the costs of essential care for those who cannot pay for it.

Mr. President, health care cost and access issues are going to demand a great deal of our time, consideration, patience, and effort during the coming year. In the coming months, three separate high-profile commissions will submit their recommendations for comprehensive health care plans—the Pepper Commission, the Social Security Advisory Commission also known as the "Steelman" Commission, and a task force appointed by the Secretary of Health and Human Services, Dr. Louis Sullivan. These panels are likely to offer differing opinions on the best solutions to our health care cost and access problems and I look forward to the conclusions and proposals of each of these panels.

The legislation I am submitting today represents what I believe to be a pragmatic and promising approach to addressing the most urgent health care problem facing our Nation. I urge my colleagues to join me in working to ensure access to quality health care for all Americans and hope that they will consider the legislation I am introducing today.

Mr. President, I recognize that this is a stopgap measure. It is a finger in the dike of a dam that is about to burst. But it seems to me that, if we can consider capital gains incentives in order to shore up the capital structure of this country by encouraging people to make long-term investments, if we can consider incentives to encourage people to contribute to their retirement plans, certainly within that context and within that debate we can also consider tax incentives to help and encourage families to purchase health insurance coverage.

We look forward to the recommendations of the Pepper Commission which is due to report in early March. I do not believe that the Pepper Commission report will be a panacea or indeed a perfect blueprint for our health care needs, but it is my hope

that it will provide the basis for building a consensus in this country for what has to be done.

Mr. President, I read an interesting article which appeared in the Journal of American Medicine in the January 5 edition. It was written by Nicholas E. Davies and Louis H. Felder, two, I believe, internists. I would just like to quote briefly the synopsis of this article. Drs. Davies and Felder believe that we need a radical overhaul of our entire health care system. They recommend:

That President Bush appoint a blue ribbon commission to study our present system in depth, then offer alternative solutions for its many problems. He should look closely at least at nine specific issues: controlling medical technology, instituting a resource-based relative value system for physician reimbursement, establishing an ongoing national medical ethics commission, instituting national malpractice reform, implementing universal medical coverage with Medicare-Medicaid reform, establishing a national health services research and planning institute, reducing the Nation's health care facilities, reducing physician supply and improving health promotion/disease prevention education.

Mr. President, a number of these may be, indeed, controversial. Perhaps nine specific areas may not be enough. There may be fewer than nine that need to be addressed. But certainly this article calls to our attention the need for a comprehensive overhaul of our entire health care system.

Drs. Davies and Felder suggest that:

The plan chosen should be the least disrupting to our present system, the least expensive commensurate with good care and the easiest to administer. It should have the best chance to survive the scrutiny of a disparate group of Americans with all sorts of vested interests.

Mr. President, I commend this article to the attention of my colleagues. I hope the legislation I introduce today will serve at least to provide temporary relief to the hard-pressed people who cannot afford health insurance, and I hope we can, indeed, develop the consensus that is going to be necessary to overhaul our system.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

APPLYING BRAKES TO THE RUNAWAY AMERICAN HEALTH CARE SYSTEM—A PROPOSED AGENDA

(By Nicholas E. Davies, MD and Louis H. Felder, MD)

The American health care system, and especially its cost, is out of control, inhibiting access to care for many, lessening quality of care for some, and creating an almost palpable angst among physicians and others concerned with this enormous national problem. Increased health care rationing in the next decade is inevitable, yet it must not be done with quick fixes, short-term solutions, and patchwork reform of our present system. That would create worse problems for health care in the 21st century and is clearly unacceptable. We recommend that President Bush appoint a blue-ribbon commission to study our present system in depth, then offer alternative solutions for its many problems. He should look closely at, at least, the following nine issues: controlling medical technology, instituting a resource-based relative value system for physician reimbursement, establishing an ongoing national medical ethics commission, instituting national malpractice reform, implementing universal medical coverage with Medicare/Medicaid reform, establishing a national health services research and planning institute, reducing the nation's health care facilities, reducing physician supply, and improving health promotion/disease prevention education.—JAMA. 1990; 263:73–76.

"For he spoke hard and bitter words to me, and shut the door of his soul on me, and I withdrew. But I should have hammered on it, I should have broken it down with my naked hands, I should have cried out there not ceasing, for behind it was a man in danger, the bravest and gentlest of them all. So I who came to save was made a supplicant; and because of the power he had over me, I held, in the strange words of the English, I held my peace."—Alan Paton, "Too Late the Phalarope."

We can no longer hold our peace. We see medicine, our profession, the bravest and gentlest of them all, in grave danger. And in that danger medicine is shutting the door of its soul on the American people and on itself. It is not insensitive; it does not want to do this. But that is the way the system is evolving. Bold action is demanded if the profession is to be saved from itself. It is this action that we will discuss.

We believe that the American health care system, especially its costs, is out of control. One has only to read a newspaper to learn that 87% of Americans see a need for fundamental change or to find out that at our projected rate of growth, by the year 2000 health care will consume 17% of the gross national product (New York Times. February 15, 1989:8; Atlanta Constitution Forum. November 24, 1988:2D).

Unfortunately, the enormous growth in health care technology during the past two or three decades has not been accompanied by a concomitant growth in the wisdom to control it. We believe that, if our system is to survive, costs must be lowered so that they do not consume more than the current approximately 11% of the gross national product.

What, then, must our nation do? The answer seems simple enough. We must reduce the cost of our health care system while maintaining the highest quality of care that is possible. We must set national priorities. In short, we must ration health care, starting with the simplest, most easily accomplished methods, at the same time seeking more information from the growing field of health services research (Time. May 15, 1989:84-86). In time, reasonable national standards or guidelines for quality care will be agreed on. We believe that what we lose in clinical freedom, long the almost sacred right of the practitioner, will be made up in savings to the American people and perhaps in improved quality of care to all our citizens. Certainly, setting national standards and priorities should lead to a more rational allocation of our nation's resources.

We have concluded that President Bush should appoint a national commission to study how best our nation can ration health care in the least onerous fashion in both the public and private sectors. We believe that medical organizations or others with vested interests in our present system cannot do this adequately and command the attention of Congress.

The commission, like the President's Commission on Federal Ethics Law Reform, must be bipartisan, have congressional support, and be adequately funded. It would be charged with looking globally at the American health care system, both in the short and the long terms, and, eschewing quick fixes, righting the wrongs and equalizing the inequities that have crept incrementally into the system during the past 40 years.[1] It would be charged with examining closely the infrastructure of our health care system, especially that concerned with planning. Finally, it would look at the interrelationships of the costs of our health care system with the costs of housing, education, meaningful work, and other fundamentals for leading a satisfactory life. It should have reasonable time to seek the best information available but it should set time-limited goals. It should be a valid effort to find commonly accepted answers to national health care needs that cannot be easily or quickly found in the deliberations of our partisan, often contentious political system.

An alternative forum might be the already constituted US Bipartisan Commission on Comprehensive Health Care, established by the Medicare Catastrophic Coverage Act of 1988 and signed into law July 1, 1989. Called the Pepper Commission after its late chairman, it is composed of six senators, six representatives, and three presidential appointees. Its primary concern is with the shortcomings in the health care delivery system that limit access to comprehensive care, specifically to the elderly and disabled, but generally to all Americans. Our concern is that it may not look at all the many factors in our complex system that need addressing.

A PROPOSED AGENDA—CONTROLLING TECHNOLOGY

Technology now dominates health care in America. Largely because of medicine's search for a technological utopia, health care costs are out of control, patients are unhappy, and corporate America is about to revolt. Schwartz[2] believes, as do we, that costs will remain out of control unless beneficial services are cut (a sad prospect) or limitations are placed on technological implementation.

Since the invention of the x-ray machine, the search for technological solutions to medical problems has diverted attention and resources from equally important political and socioeconomic approaches to health care reform.[3] Renal dialysis was the technological development that alerted the American public to the disturbing truth that resources for modern medical care were not limitless.[4] We must now somehow set limits on the use of technology without suppressing those forces that have made American medicine the best, and the most expensive, in the world.

A successful solution to the technology problem will depend on changing the ways physicians practice medicine. We believe the following approaches should be looked on most favorably: (1) Readjust the way physicians are reimbursed so that the excessive use of expensive technology and procedures is controlled. (See "Resource-Based Relative Value System for Reimbursing America's Physicians" section below.) (2) Reevaluate

the use of tests in clinical practice, using the method presently used by the American College of Physicians with its Clinical Efficacy Assessment Project or the proposed American Medical Association/RAND Corporation study that should soon be in place.[5] (3) Improve technology assessment, especially in new fields, and limit the use of technology that offers only marginal improvement in diagnostic or therapeutic results. (4) Discourage physicians from profiting from their own self-referrals, as is now happening with joint-ventured imaging centers and laboratories. (5) As suggested by Maloney and Rogers,[6] alter the training of physicians so that they are able to look more objectively at the technology imperative.

RESOURCE-BASED RELATIVE VALUE SYSTEM FOR REIMBURSING AMERICA'S PHYSICIANS

We believe that a rational and equitable physician reimbursement system must be developed in the United States if we are to control the cost of health care. No longer can we accept the "customary, prevailing, and reasonable" charges developed haphazardly during the past 40 years. This system has reimbursed handsomely—thus fostering—technical procedural skills, while reimbursing parsimoniously—thus casting disfavor on—time-consuming careful patient evaluation and management skills. Revision of the way physicians are reimbursed may have the most far-reaching effects, and perhaps the most unpredictable effects, of all the proposals that we make.

Hsiao and colleagues [7] at Harvard University have developed a resource-based relative value system for physician reimbursement. Most physicians seem to accept the rationality of this system, even those who do not agree with some of the details. It is supported by the Physician Payment Review Commission. After refinement, it should be signed into law by the President. (This bill was passed on the last day of the 101st Congress, an excellent beginning for health care reform in America.)

NATIONAL MEDICAL ETHICS COMMISSION

Ethical problems have arisen in both medical practice and research, largely brought on by new technology. They must be addressed, not by health care workers alone, but by an enlightened public. If there is to be national rationing of health care, as we think there must, to be done fairly there must be national guidelines that are agreed on by a significant majority of our citizens. Is fetal research acceptable? How about gene transfer research? Can we eliminate kidney transplants paid for by one state government and not by all state governments? Is it acceptable to place age limitations on heart transplants? Indeed, is any age-based rationing acceptable? A major advantage to a national ethics policy is that it is defensible on the grounds of consistency.

The discussion would then be what "principles or criteria . . . will be used to choose which patients will get what care when." [8] A national medical ethics commission could go a long way toward resolving these issues.

MALPRACTICE REFORM

Beginning in the late 1960s and continuing to 1988, the number of malpractice claims filed against physicians increased dramatically. Many feel that America's civil litigation system for adjudicating these malpractice claims and suits badly needs overhauling. "Wealth redistribution" and "social engineering" by our courts continue to come down hard on physicians, especially those in a few specialties.

The cost of health care in America would be dramatically reduced if physicians did not feel forced to practice defensive medicine. Reynolds et al [9] estimated the cost of defensive medicine to be 3.5 times the cost of malpractice premiums and to account for almost 15% of the total US expenditure for physician services. An informal survey by the authors found estimates of from 5% to 20% of all health care dollars being generated by physicians for defensive reasons.

Many states have already begun to enact reforms in their tort laws. There is evidence that there is a national leveling off, with less growth in claim frequency in those states where reforms have been enacted. The Task Force on Medical Liability and Malpractice, in its August 1987 report, lists eight policy objectives that should be followed as changes are made in the malpractice compensation systems.[10] They are an excellent basis for national reform of a compensation system that is crying out for leadership from our national medical and legal organizations.

UNIVERSAL COVERAGE AND MEDICARE/MEDICAID REFORM

Almost daily we read in newspapers and journals, or hear discussed on television or in medical meetings, the plight of the 37 million Americans who are uninsured and the other millions who are underinsured. It is clear that a consensus is being built for some sort of action to be taken in the very near future to see that access to adequate health care (a term yet to be defined) is available to all Americans.[11] The question now is: Which plan shall we choose? The plan chosen should be the least disrupting to our present system, the least expensive commensurate with good care, and the easiest to administer. It should have the best chance to survive the scrutiny of a disparate group of Americans with all sorts of vested interests.

We have reviewed many of these plans.[12-16] Space does not allow us to discuss them. Rather, we wish to stress to our national leaders the importance of looking at the big picture, of taking a long-range view, of avoiding quick fixes and patchwork reforms. With Dickman et al.,[17] we agree that "a cost-effective health care system cannot be pasted together like a collage." Therefore, while looking for solutions to universal coverage, we must at the same time either make significant adjustments in our two major entitlement programs, Medicare and Medicaid, or start over.

If one thinks of Medicare as a national burden, as do we, one must feel that Medicaid is a national disgrace. Medicaid is generally underfunded, politically manipulated, unevenly administered, and thought of as a welfare system (which, in fact, it is, but should not be). It most resembles a giant national medical Rube Goldberg machine.[11, 18, 19]

The Medicare system is far from good. Its convoluted bureaucratic ways confound the elderly, the very people it serves and the very people who need simplicity in their lives. It confounds physicians and other health care workers, who feel they are pawns to draconian rules that are devised as a response to failed expectations for the system. There is concern about future inequities in the system and about future insolvency of the Medicare trust fund, as expenditures are projected to exceed tax revenues in 1995.

Both the Medicare and Medicaid systems need a massive overhaul, again a subject too complex to discuss here. We believe that the plans developed by our nation in the next few years will determine what happens to health care in America for at least the next quarter of a century.

NATIONAL HEALTH SERVICES RESEARCH AND PLANNING INSTITUTE

We agree with Wennberg [20] that there is an intellectual crisis in the scientific basis of some elements of clinical practice. We believe there must be a national effort to support research in assessing the outcomes of patient care.[21, 22] This should apply especially to the wide variation in practice patterns that is found in the United States and to the use of high-cost or high-volume practices.[8]

Effective national planning is essential to reduce the cost of health care in America. We propose that a national health services research and planning institute be established, designed along the lines of the National Institutes of Health, but freestanding, to replace the underfunded National Center for Health Services Research. It would be charged with the overall federal research and planning effort to control health care costs while maintaining quality care. Like the National Institutes of Health, it would make extramural grants to study the issues in the practice of medicine that have so long eluded us. At an annual cost of, say, $100 million, it would consume only 0.02% of our national health dollars. It would undoubtedly save far more than this in both money and quality of care.

Our nation is moving toward national practice guidelines. Practitioners must be involved in establishing these guidelines. Some will feel they are producing their own shackles, but to us the alternatives seem worse.

HEALTH CARE FACILITIES

In autumn 1988, the Honorable Richard D. Lamm, former governor of Colorado, wrote: "We have too many hospital beds, possibly too many doctors, and too often they are not where they are most needed. On a typical day in the United States, there are at least 200,000 empty hospital beds." [23]

Therein lies a major factor in America's enormous health care expenditures. How did the Reagan Administration and Congress respond to the problem? On January 1, 1987, the Health Planning and Resource Development Act was repealed, ending its 40-year existence. Throughout those years, Congress had been "changing the program's mission to fit changing times." [24] But the administration was not pleased with its regulatory functions, nor were some powerful forces in the health care facilities industry. It was repealed without a replacement.

Because of the increase in total beds and the increase in those unoccupied, the hospitals of America have changed dramatically the way they operate, to the consternation of some patients and many physicians. Advertising now seems mandatory. All sorts of new services are being offered. Women's clinics, senior citizens' services, wellness clinics and fitness centers, and joint ventures with physicians are examples. These, too, increase costs, but they also attract patients who help fill empty beds. Closing an unneeded hospital, like closing a school or a military base, is difficult at best.

PHYSICIAN SUPPLY

Throughout the 1950s and 1960s, the number of physicians in America remained relatively stable, at 141 for each 100,000 citizens. The demand for physicians then increased, until there were 200 per 100,000 in

1980. It is anticipated that by 1990 there will be 260 physicians in America per 100,000 people.[25] It is well accepted that each new physician added to the health care system adds millions of dollars to the cost of the system during his or her lifetime by increasing the volume of services given to the American public. The question at hand, then, is how much health care is too much? When should we begin to decrease the supply of new physicians?

Granting that we have a serious distribution problem, we believe that America is becoming "overdoctored," as it is already "overbedded" in many communities. A 1987 position paper of the American College of Physicians said, "In an era of rising costs and limitations on the resources available to meet the demands for health care, the United States must face the reality . . . that it cannot continue indefinitely to expand its supply of physicians."[26] We agree with Petersdorf[27] that America "should go on a manpower diet—reduce the size of medical school classes, close some medical schools altogether and cut graduate training programs accordingly." Perhaps closing medical schools is too drastic a step for the American public to accept. But surely each entering medical school class could be reduced by a few students each year for a defined period without harming our entire medical education system.

EDUCATING THE PUBLIC

Since 1964, there has been a remarkable decline in atherosclerotic events and stroke in the American public. Among certain segments of the population, tobacco use has greatly declined. There has been significant change in sexual practices in male homosexuals, so that the marked rise in acquired immunodeficiency syndrome in that particular population is beginning to level off.[28] Each of these phenomena is attributable in large part to education of the public about health and disease. The most difficult task is to reach the uneducated, the unemployed, and society's dropouts.

The Bush Administration appears to be addressing the drug issue on high levels. There are many other issues that fall somewhere between health care, economics, and morality, such as teenage pregnancy and sex education.[29,30] This country spent $19.47 billion in federal funds on teen pregnancy in 1987 alone.[31] The costs of lost opportunities for the mothers and children and of future unemployment, welfare, substandard housing, poor education systems, and crime were not considered. Like the homeless, teenage pregnancy borders on being a national disgrace. It needs to be addressed squarely.

We favor raising taxes on alcohol and tobacco and using these funds to educate the public about staying healthy and avoiding disease. We believe this is a better way at this time than charging smokers and drinkers extra insurance premiums, or worse, as some have hinted, limiting their access to health care resources.

EPILOGUE

At a joint session of Congress on the 200th anniversary of the convening of our nation's first Congress, the Poet Laureate of the United States, Howard Nemerov, read a poem whose last lines were as follows (New York Times. March 3, 1989:10):

Praise without end the go-ahead zeal of whoever it was invented the wheel;
But never a word for the poor soul's sake
that thought ahead and invented the brake.

Mr. Nemerov has noted with elegance the two elements that we believe are essential for the future of our nation's health care system: we must think ahead and we must invent (and apply) a brake.

We believe that the President should appoint a commission to oversee the planning for a broad-based effort to apply the brakes to and reduce the costs of health care to the American people. This commission should first consider methods and then be the catalyst for controlling technology and for developing a more rational system for physician reimbursement. It should suggest ways to establish a national medical ethics commission, consider strategies in the reform of our malpractice laws, and debate the various schemes for universal access to health care, ultimately recommending one of them to Congress. At the same time, it should study Medicare and Medicaid and make recommendations for reforms in these programs, as well as making recommendations for establishing a national health services research and planning institute. The commission should devise a way to determine the need and recommend methods for controlling benignly the proliferation of health care facilities. First we should study the need for and settle upon the number of physicians trained as well as the number and distribution of subspecialists, and it should seek more effective ways of educating the public to promote good health and prevent disease. We recognize that this is not a complete list of the problems within our system, but they are nine of the major issues that need addressing now and for the future.

We believe that a majority of the nation's physicians, certainly the nation's internists, feel, as do we, that bold action is needed to right the wrongs and equalize the inequities that have been built into our health care system during the last 40 years. We believe that significant health care rationing is inevitable in the future and that it must not be based simply on the ability to pay. We believe that rationing must be instituted following open discussion with all concerned, instituted gracefully, if that is possible, after careful planning. Quick fixes, patchwork reforms, and short-term solutions must not be tolerated by the American people. Finally, we believe that health care costs must be reduced if the medical profession, a profession to which we have devoted over half of our lives, is to keep its door open to all Americans and, at the same time, attract bright, compassionate people to its ranks in the decades ahead. In these beliefs we wish to stand up and be counted.

We wish to thank Garland H. Davies, MA, Deborah M. Prout, MAS, and Mark E. Silverman, MD, for their help in preparing this article.

By Ms. MIKULSKI (for herself, Mr. BUMPERS, Mr. PELL, and Mr. ADAMS):

S. 2033. A bill to amend title XVIII of the Social Security Act to provide for coverage of annual screening mammography under part B of the medicare program; to the Committee on Finance.

MEDICARE SCREENING MAMMOGRAPHY AMENDMENTS OF 1990

Ms. MIKULSKI. Mr. President, I rise today to pay tribute to a remarkable woman and to reintroduce legislation to address a crucial health care need.

Mr. President, on January 7 of this year, this country lost a truly special advocate for women's health with the

death of Rose Kushner. Rose was a tireless fighter for the rights of cancer patients to participate in decisions involving the treatment of their cancers. Rose lost her own battle with breast cancer after 16 years. But her legacy will live on and on. She saved the lives and preserved the dignity of thousands of women by increasing their awareness of breast cancer and the methods available to treat it.

Rose Kushner's reputation as an expert and activist in the area of breast cancer prevention and treatment was internationally known. She was a tireless advocate of the need for education about breast cancer since 1974, when she underwent her own mastectomy. She authored several books and numerous articles on breast cancer. Her active participation in the field changed the medical profession's approach to breast cancer. There is now a much stronger emphasis on giving patients a greater say in their own treatment.

Rose's accomplishments were recognized by a very wide range of groups, both in the area of cancer activism and medical writing. Most recently, she received in the American Legion Auxiliary's 1989 Public Spirit Award; in 1988, she was chosen by the Ladies' Home Journal as one of the 100 most important women in America, and in 1987 she received the Medal of Honor and Medal of Courage from the American Cancer Society.

Shortly before she died, Rose suffered a great disappointment when Medicare coverage for screening mammograms was repealed last November. It was Rose who first convinced me several years ago to introduce a bill to cover this critical benefit, and Rose who fought side by side with me and many others to see the bill passed.

So I rise today, Mr. President, not only to pay tribute to Rose Kushner. I also want to send a message to the families of America who have been touched, either knowingly or unknowingly, by Rose's efforts. The message is this: Rose Kushner's efforts will be carried forward. That is why I am introducing legislation today, along with my colleagues Senator BUMPERS, Senator PELL, and Senator ADAMS, to restore Medicare coverage of screening mammograms.

This bill provides for Medicare coverage of up to one screening mammogram per year after age 40, based on the advice of a woman's physician. The physician payment for this screening would be capped at $60.

Mr. President, mammography screening can detect breast cancer when it is in it's very early stages. At this early stage, the chances for cure are over 90 percent. Yet it is estimated that fewer than 10 percent of women over 65 have mammograms regularly. One primary reason for this is that the cost of a mammogram can be a tremendous burden for an elderly woman on a fixed income. Mr. President, no woman should have to experience the devastating effects of breast cancer simply because she could not afford to have this simple screening procedure.

Mr. President, this morning we held a memorial service at the National Institutes of Health to commemorate the life and work of a remarkable woman. I can think of no more lasting memorial to Rose Kushner than to once again make law this benefit she fought so long, so hard, and so well for.

Margaret Mason, writing in the Washington Post, said this about Rose, "She gave us our voice. And now we cannot be quiet, not when someone dies of breast cancer every 13 minutes in the United States. And, not when we know that while 57,000 men died in combat in the Vietnam war, during that same 10-year period 330,000 women died of breast cancer."

Mr. President, we have a moving memorial to those men. Let this legislation be a memorial to Rose Kushner and all the woman who have died from a cancer that might well have been prevented.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2033

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Medicare Screening Mammography Amendments of 1990".

SEC. 2. MEDICARE COVERAGE OF ANNUAL SCREENING MAMMOGRAPHY.

(a) IN GENERAL.—Section 1861 of the Social Security Act (42 U.S.C. 1395x), as restored by the Medicare Catastrophic Coverage Repeal Act of 1989 and as amended by the Omnibus Budget Reconciliation Act of 1989, is amended—

(1) in subsection (s)—

(A) in paragraph (11), by striking all that follows "(bb))" and inserting a semicolon,

(B) in paragraph (12)(C), by striking all that follows "area)" and inserting "; and", and

(C) by inserting after paragraph (12) the following new paragraph:

"(13) screening mammography (as defined in subsection (jj));"; and

(2) by inserting after subsection (ii) the following new subsection:

"Screening Mammography

"(jj) The term 'screening mammography' means a radiologic procedure provided to a woman for the purpose of early detection of breast cancer and includes a physician's interpretation of the results of the procedure.".

(b) PAYMENT AND COVERAGE.—Section 1834 of such Act (42 U.S.C. 1395m), as restored by the Medicare Catastrophic Coverage Repeal Act of 1989, is amended—

(1) in subsection (b)(1)(B), by inserting "and subject to subsection (c)(1)(A)" after "conversion factors", and

(2) by inserting after subsection (b) the following new subsection:

"(c) PAYMENTS AND STANDARDS FOR SCREENING MAMMOGRAPHY.—

"(1) IN GENERAL.—Notwithstanding any other provision of this part, with respect to expenses incurred for screening mammography (as defined in section 1861(jj))—

"(A) payment may be made only for screening mammography conducted consistent with the frequency permitted under paragraph (2);

"(B) payment may be made only if the screening mammography meets the quality standards established under paragraph (3); and

"(C) the amount of the payment under this part shall, subject to the deductible established under section 1833(b), be equal to 80 percent of the least of—

"(i) the actual charge for the screening,

"(ii) the fee schedule established under subsection (b) with respect to both the professional and technical components of the screening mammography, in the case of screening mammography subject to such schedule but for this paragraph, or

"(iii) the limit established under paragraph (4) for the screening mammography.

"(2) FREQUENCY COVERED.—

"(A) IN GENERAL.—Subject to revision by the Secretary under subparagraph (B)—

"(i) No payment may be made under this part for screening mammography performed on a woman under 35 years of age.

"(ii) Payment may be made under this part for only 1 screening mammography performed on a woman over 34 years of age, but under 40 years of age.

"(iii) In the case of a woman over 39 years of age, but under 50 years of age, who—

"(I) is at a high risk of developing breast cancer (as determined pursuant to factors identified by the Secretary), payment may not be made under this part for a screening mammography performed within the 11 months of a previous screening mammography, or

"(II) is not at a high risk of developing breast cancer, payment may not be made under this part for a screening mammography performed within the 23 months after a previous screening mammography.

"(iv) In the case of a woman over 49 years of age, payment may not be made under this part for screening mammography performed within 11 months after a previous screening mammography.

"(B) REVISION OF FREQUENCY.—

"(i) REVIEW.—The Secretary, in consultation with the Director of the National Cancer Institute, shall review periodically the appropriate frequency for performing screening mammography, based on age and such other factors as the Secretary believes to be pertinent.

"(ii) REVISION OF FREQUENCY.—The Secretary, taking into consideration the review made under clause (i), may revise from time to time the frequency with which screening mammography may be paid for under this subsection, but no such revision shall apply to screening mammography performed before January 1, 1993.

"(3) QUALITY STANDARDS.—The Secretary shall establish standards to assure the safety and accuracy of screening mammography performed under this part. Such standards shall include the requirements that—

"(A) the equipment used to perform the mammography must be specifically designed for mammography and must meet radiologic standards established by the Secretary for mammography;

"(B) the mammography must be performed by an individual who—

"(i) is licensed by a State to perform radiological procedures, or

"(ii) is certified as qualified to perform radiological procedures by such an appropriate organization as the Secretary specifies in regulations;

"(C) the results of the mammography must be interpreted by a physician—

"(i) who is certified as qualified to interpret radiological procedures by such an appropriate board as the Secretary specifies in regulations, or

"(ii) who is certified as qualified to interpret screening mammography procedures by such a program as the Secretary recognizes in regulation as assuring the qualifications of the individual with respect to such interpretation; and

"(D) with respect to the first screening mammography performed on a woman for which payment is made under this part, there are satisfactory assurances that the results of the mammography will be placed in permanent medical records maintained with respect to the woman.

"(4) LIMIT.—

"(A) $60, INDEXED.—Except as provided by the Secretary under subparagraph (B), the limit established under this paragraph—

"(i) for screening mammography performed in 1991, is $60, and

"(ii) for screening mammography performed in a subsequent year is the limit established under this paragraph for the preceding year increased by the percentage increase in the MEI for that subsequent year.

"(B) REDUCTION OF LIMIT.—The Secretary shall review from time to time the appropriateness of the amount of the limit established under this paragraph. The Secretary may, with respect to screening mammography performed in a year after 1992, reduce the amount of such limit as it applies nationally or in any area to the amount that the Secretary estimates is required to assure that screening mammography of an appropriate quality is readily and conveniently available during the year.

"(C) APPLICATION OF LIMIT IN HOSPITAL OUTPATIENT SETTING.—The Secretary shall provide for an appropriate allocation of the limit established under this paragraph between professional and technical components in the case of hospital outpatient screening mammography (and comparable situations) where there is a claim for professional services separate from the claim for the radiologic procedure.

"(5) LIMITING CHARGES OF NONPARTICIPATING PHYSICIANS.—

"(A) IN GENERAL.—In the case of mammography screening performed on or after January 1, 1991, for which payment is made under this subsection, if a nonparticipating physician or supplier provides the screening to an individual entitled to benefits under this part, the physician or supplier may not charge the individual more than the limiting charge (as defined in subparagraph (B), or, if applicable and if less, as defined in subsection (b)(5)(B) or as established under section 1848(g)(2)).

"(B) LIMITING CHARGE DEFINED.—In subparagraph (A), the term 'limiting charge' means, with respect to screening mammography performed—

"(i) in 1991, 125 percent of the limit established under paragraph (4),

"(ii) in 1992, 120 percent of the limit established under paragraph (4), and

"(iii) in 1993, 115 percent of the limit established under paragraph (4).

"(C) ENFORCEMENT.—If a physician or supplier knowing and willfully imposes a charge in violation of subparagraph (A), the Secretary may apply sanctions against such physician or supplier in accordance with section 1842(j)(2).".

(c) CERTIFICATION OF SCREENING MAMMOGRAPHY QUALITY STANDARDS.—

(1) Section 1863 of such Act (42 U.S.C. 1395z), as restored by the Medicare Catastrophic Coverage Repeal Act of 1989, is amended by inserting "or whether screening mammography meets the standards established under section 1834(c)(3)," after "1832(a)(2)(F)(i),".

(2) The first sentence of section 1864(a) of such Act (42 U.S.C. 1395aa(a)), as restored by the Medicare Catastrophic Coverage Repeal Act of 1989, is amended by inserting before the period the following: ", or whether screening mammography meets the standards established under section 1834(c)(3)".

(3) Section 1865(a) of such Act (42 U.S.C. 1395bb(a)), as restored by the Medicare Catastrophic Coverage Repeal Act of 1989, is amended by inserting "1834(c)(3)," after "1832(a)(2)(F)(i),".

(d) CONFORMING AMENDMENTS.—

(1) Section 1833(a)(2)(E) of such Act (42 U.S.C. 1395l(a)(2)(E)), as restored by the Medicare Catastrophic Coverage Repeal Act of 1989, is amended by inserting ", but excluding screening mammography" after "imaging services".

(2) Section 1862(a) of such Act (42 U.S.C. 1395y(a)), as restored by the Medicare Catastrophic Coverage Repeal Act of 1989, is amended—

(A) in paragraph (1)—

(i) in subparagraph (A), by striking "subparagraph (B), (C), (D), or (E)" and inserting "a succeeding subparagraph",

(ii) in subparagraph (D), by striking "and" at the end,

(iii) in subparagraph (E), by striking the semicolon at the end and inserting ", and", and

(iv) by adding at the end the following new subparagraph:

"(F) in the case of screening mammography, which is performed more frequently than is covered under section 1834(c)(2) or which does not meet the standards established under section 1834(c)(3);"; and

(B) in paragraph (7), by inserting "or under paragraph (1)(F)" after "(1)(B)".

(e) EFFECTIVE DATE.—The amendments made by this section shall apply to screening mammography performed on or after January 1, 1991.

Mr. PELL. Mr. President, I am delighted to join my colleague, Senator BARBARA MIKULSKI, in introducing legislation to save the lives of women in Rhode Island and all across this Nation.

The Medicare Screening Mammography Amendments of 1990 provide all women Medicare beneficiaries with coverage for up to one screening mammography per year after the age of 40, with baseline screening at age 35.

The importance of early and regular mammography screening cannot be understated. The cure rate for those who are screened early is over 90 percent. But, as Senator MIKULSKI has so eloquently pointed out, it is estimated that fewer than 10 percent of women over the age of 65 have regular mammograms. The bill we are introducing today will help ensure that no woman will die of breast cancer because, in her most vulnerable years, she could not afford to pay for mammography screening.

As the senior Senator from Rhode Island, I have particularly sad and compelling reasons to join in introducing this important legislation. The Centers for Disease Control has recently reported that Rhode Island has the second highest rate of death from breast cancer of any State in this Nation. It is a statistic we are not proud of; it is a tragedy for the women of Rhode Island and for their husbands, children, parents, and loved ones.

At this time I would like to insert in the RECORD an excellent article by Felice J. Freyer, which appeared in the Providence Journal-Bulletin on September 7, 1989, entitled "Breast Cancer Toll Stirs Alarm in R.I."

Mr. President, journalist Freyer is exactly right. I am alarmed; I am concerned. And I intend to work with Senator MIKULSKI and others who believe that early detection can make a difference in the lives and health of women to pass this important and needed legislation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BREAST CANCER TOLL STIRS ALARM IN R.I.

(By Felice J. Freyer)

Rhode Island has the country's second-highest rate of death from breast cancer, and nationwide the percentage of women who die from the disease is increasing, a recent study has found.

The findings, by the Centers for Disease Control in Atlanta, came as no surprise to Rhode Island health officials, who have long worried about the state's high incidence of several forms of cancer. Instead, it prompted renewed appeals to women and their doctors for physical examinations and X-rays that can detect breast cancer when it is still curable.

"Yes, it can be cured," said Dr. Arvin Glicksman, president of the American Cancer Society in Rhode Island and director of radiation oncology at Roger Williams General Hospital's Cancer Center. "If you find an early lesion, you have a 90 percent or better chance of being cured."

Also, he stressed, breast cancer found early often can be treated without disfigurement.

A report last month from the Centers for Disease Control found that nationwide the death rate from breast cancer increased 5 percent between 1979 and 1986. The 12 states with the highest death rates in 1986 are in the northern half of the country, five of them in the Northeast. Massachusetts ranks seventh, Connecticut eight.

Cancer specialists cannot explain the increase or the regional distribution.

"We really believe that were all women to get screened appropriately, we could bring the death rate down 30 percent," said John

P. Fulton, administrator of Rhode Island's Cancer Registry. Fulton noted, however, that there is no evidence that cancer is being diagnosed at a later stage in Rhode Island than elsewhere. In fact, in terms of the percentage of women screened for breast cancer, Rhode Island ranks in the top third among states.

Dr. Judith Feldman, chief of chronic disease in the Health Department's Division of Disease Control, said one of the chief obstacles in educating women about mammography has been ignorance or confusion among physicians about proper screening procedures. Women often ask their doctors for mammograms, only to be told they don't need them, she said. Only recently, Feldman said, did 11 national organizations reach a consensus on breast cancer screening that urges women 40 and older to have mammograms every other year, and women 50 and older to have them yearly.

POOR LACK MEDICAL ACCESS

Glicksman said the state's high death rate may indicate that many women are not getting adequate treatment. "There are many blue-collar and poor pockets in Rhode Island, where access to the best care isn't available," he said.

According to the Centers for Disease Control, in 1988 breast cancer killed 40,634 women in the United States, or 32.8 per 100,000 women, up 5 percent from 1979. Rhode Island had 30.2 deaths per 100,000—229 in 1980. In Massachusetts the rate was 30.8 per 100,000. The statistics were age-adjusted so the number of elderly people was not a factor.

Robert A. Hahn, a medical epidemiologist with the Atlanta-based centers, said it is probably impossible to explain the regional differences in cancer rates. "Breast cancer develops very slowly. Even if you look at the current rate factors, they would have happened years ago, and people move around," he said.

Fulton, of the Rhode Island Cancer Registry, said the overall cancer rate in Rhode Island tends to be high, and he links it to the state's urban character. "It is well known that cancer rates are high in urban areas," Fulton said. "We don't know what it is about urban places that causes higher breast cancer rates. But Rhode Island is like the quintessential urban place. Rhode Island is basically a city with a state line drawn around it."

ROLE OF URBAN LIFESTYLES

Pollution is probably not the culprit, Fulton added. The cause is more likely to stem from urban lifestyles, including eating habits and late childbearing.

"We don't know what causes breast cancer," Fulton said. "There are cancers—and breast cancer may be one—where you're not going to find an individual cause. There (could be) many causes."

Breast cancer appears to be affected by hormones: Women who start their menstrual periods early and reach menopause late are at greater risk, possibly because of longer exposure to certain female hormones. Also, childless women and women who have their first child after age 30 also are more likely to get breast cancer, possibly because pregnancy changes the hormonal balance.

Genetics may also play a role: Women whose mother or sister had breast cancer face a higher risk. Consumption of alcohol and a diet high in animal fat are also thought to have some effect, although the connection remains unknown.

Except for diet, most of these risk factors cannot be easily controlled, and make only a small difference. Many women with breast cancer had none of these risk factors. Thus doctors see limited possibilities for prevention, focusing instead on early detection and care.

In November 1987, the State Department of Health began a program to encourage breast cancer screening, the only such effort by a state. The department arranges mammograms for women who are 40 or older, have not had a mammogram within the last year, do not have a breast lump or problem and are not pregnant or breast-feeding.

The state schedules an appointment with one of about three dozen radiology labs, which charge $60 per mammogram. (Normally, fees run from $60 to $105.) The results are sent to the woman's doctor, or if she doesn't have one, the department refers her to a doctor. To participate, call 277-3442 or 1-800-762 8088, Ext. 3442.

A state law passed last year requires health insurers to pay for mammograms, and another law passed this year empowers the Health Department to regulate mammography to ensure quality. The regulations are being written.

RESULTS OF PROGRAM

A survey of about 850 Rhode Island women 40 and older found that the program has had some success. In 1989 40 percent reported having a mammogram within the past year, compared with 37 percent in 1987. For women below the poverty level, the increase was from 21 percent in 1987 to 41 percent in 1989.

Still, less than half of women over 40 have had the recommended tests, which can locate otherwise undetectable tumors.

Although little is understood about what causes breast cancer, treatment has made tremendous strides.

WHAT YOU CAN DO

Breast cancer can often be cured if caught in its early stages. Early detection also gives you more treatment choices and if the tumor is small, often the breast is not removed. These early-detection methods are recommended:

Starting at age 20, check your breasts for lumps once a month and have your doctor examine them at each visit. The R.I. Department of Health provides a brochure on breast self-examination which you can obtain by calling 277-3442 or 1-800-762-8088, ext. 3442.

Between ages 36 and 40, have a mammogram to provide a baseline for future comparisons.

Between ages 40 and 49, have your doctor examine your breasts every year, and have a mammogram every other year.

From age 50 on, have a mammogram once a year.

Highest cancer rate deaths per 100,000 women

Delaware	40.6
Rhode Island	39.2
New Jersey	38.1
Vermont	37.9
New York	37.7

By Mr. BINGAMAN (for himself, Mr. MITCHELL, Mr. KENNEDY, and Mr. HARKIN):

S. 2034. A bill to authorize the creation of a National Education Report Card to be published annually to measure educational achievement of both students and schools and to establish a National Council on Educational Goals; to the Committee on Labor and Human Resources.

NATIONAL EDUCATION REPORT CARD ACT

Mr. BINGAMAN. Mr. President, we all recall the education summit this past fall between the President and the Nation's Governors in Charlottesville, VA. Part of what came out of that summit was an agreement to move toward establishing national educational goals for the country. A charter, or a compact, was agreed to between the President and the Governors as to how they would proceed to establish and move forward those goals.

In November, I conducted two hearings in the Subcommittee on Governmental Information and Regulation of the Senate Government Affairs Committee on the Federal Government's ability to carry out its responsibility of moving the country toward these goals. The bill I am introducing today, the National Education Report Card Act, is the result of those hearings and a series of meetings I convened since then.

I want to particularly acknowledge the contribution that Dr. Ernest Boyer of the Carnegie Foundation has made to the development of this bill. Really, much of this legislation is the embodiment of his suggestion, for proceeding and defining the proper role for the Federal Government.

The bill establishes a 12-member National Council on Educational Goals. Nine of those would be voting members, three would be ex officio. The voting members would be appointed by the President, with the approval of the National Governors Association. They would be confirmed by the Senate. The three ex officio members would be the Secretary of the Department of Education, the chairperson of the National Governors Association, and the chairman of the National Assessment Governing Board, which oversees the National Assessment of Educational Progress.

The Council would have two responsibilities. In its first year, it would be responsible for establishing national educational goals, possibly based on the goals that the Governors and the President have agreed upon, analyzing existing information on educational achievement in the country, both of students and schools, and developing a way to monitor progress toward a comprehensive set of national goals that would help ensure excellence in education at all levels by the end of this decade.

Following the first year, the Council would prepare to issue its first annual report card. The legislation's primary purpose is to direct the Council to issue a national report card on educational achievement in the country annually. The report card would assess

the Nation's progress toward achieving the goals during the previous year. The report card would identify gaps in existing data, make recommendations to improve the methods and procedures for assessing educational attainment, and, based on input from knowledgeable people throughout the country, the report card would make revisions in the national educational goals as necessary throughout this decade.

Over the past decade, we have witnessed a growing concern about educational achievement in the United States. We see our elementary and secondary school students falling behind in comparison to their counterparts in other industrial countries, particularly in basic reading and mathematical skills. We hear that our work force is increasingly ill prepared to meet the requirements of the information society we live in today. To ensure our future economic security, we know we must address the crisis in education.

Mr. President, improving the quality of education of U.S. students is appropriately at the top of the public agenda. A growing consensus indicates that education can no longer be treated solely as a local issue. Recent surveys show that, for the first time in our Nation's history, we are less concerned about local control of schools than we are about national results. We must consider the establishment of national goals for education which can provide guideposts to our citizens on what actions are needed at all levels to ensure our security and prosperity in the 21st century.

The importance of establishing national educational goals has been addressed by various high level commissions and study groups. Most recently, as I mentioned earlier. The Nation's Governors and the President met in Charlottesville and agreed to work on developing a set of national educational goals.

While there is widespread agreement on the need for national educational goals, less attention has focused on the mechanisms for adopting national goals and for assessing progress toward their achievement. Realistic assessment of educational quality is heavily dependent on the quality, focus, and availability of U.S. educational statistics and information gathering efforts. The distinguished witnesses at my subcommittee's hearings generally agreed that establishing national goals will have little meaning unless we are able to assess where we currently stand and to measure our progress in attaining such goals.

The subcommittee found that the mechanisms to assess and monitor educational progress and the national information infrastructure to support those mechanisms do not exist. We found major problems with the scope, quality, comparability, and timeliness of data on educational performance currently available from the Department of Education.

Dating back to its first establishment in 1867, a major responsibility of the Federal Department of Education has been "collecting such statistics and facts as shall show the condition and progress of education in the several States and territories, and of diffusing such information respecting the organization and management of schools and school systems, and methods of teaching, as shall aid the people of the United States in the establishment and maintenance of efficient school systems, and otherwise promote the cause of education throughout the country."

The Department of Education has not effectively performed this responsibility in recent years. The National Center for Education Statistics, the primary source of Federal data on American education, is underfunded in comparison to other general purpose statistical agencies. Major reviews conducted by the National Academy of Science and by the General Accounting Office both identified significant problems with the quality of educational information produced by the National Center for Educational Statistics.

While there are encouraging signs of progress at the National Center for Educational Statistics, much remains to be done. There are still a number of critical areas, including some of the goal areas identified at the Charlottesville summit, where we have virtually no information that can be used to measure progress. For example, we have minimal data about education that takes place outside of the K-through-12 public school system. We do not have information about education in preschools, postsecondary schools, private schools, or in the workplace.

Relatedly, the subcommittee heard that the National Assessment of Educational Progress, the major vehicle for assessing the achievement of our Nation's students, "still tells us woefully little about the things that matter most * * * how much and how well our children are learning. * * *" This assessment program is limited in the subjects covered, omitting for example, foreign languages. It is limited in the assessment format, relying too heavily on multiple choice tests. It is limited in the performance comparisons it permits, with comparisons below the State level prohibited. Again, improvements are underway, but more needs to be done.

The subcommittee hearings produced significant support for establishing an independent council of highly respected, bipartisan experts to consider and adopt national goals, capitalizing on the momentum generated by the education summit and other goal setting committees and task forces.

The National Education Report Card Act of 1990, cosponsored by my distinguished colleagues Senator MITCHELL, Senator KENNEDY, and Senator HARKIN reflects the recommendations and concerns raised at my hearings. As I have stated, it establishes a National Council on Educational Goals composed of highly respected, bipartisan experts to study, evaluate, and report on the status of the Nation's educational achievement, from preschool through postsecondary education. During its first year, the council would be charted with two major tasks. It would:

First, analyze existing information on the educational achievement of U.S. students and schools; and

Second, develop and begin monitoring a comprehensive set of national goals that will help ensure excellence in education at all levels by the end of this decade.

Following the initial report, the Council would be required to issue annual report cards on U.S. educational attainment. Each report card would:

First, assess progress toward the national goals;

Second, identify gaps in existing data and make recommendations for improving the methods of assessing educational attainment; and

Third, based on input from interested and knowledgeable parties, make revisions in the national educational goals or identify new educational goals.

I believe that no issue is of greater consequence to our Nation's future than the performance of our educational system. This bill addresses the critical area of how we establish national performance goals for our students and schools and how we assess our progress toward those goals. I urge your consideration and support of the bill, and I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2034

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This bill may be cited as the "National Education Report Card Act of 1990".

SEC. 2. TABLE OF CONTENTS.

The contents of this Act are as follows:

Sec. 1. Short title.
Sec. 2. Table of contents.
Sec. 3. Findings.
Sec. 4. Establishment.
Sec. 5. Membership and appointments.
Sec. 6. Functions.
Sec. 7. Interim Council report.
Sec. 8. Annual report card.
Sec. 9. Powers of the Council.
Sec. 10. Administrative provisions.

Sec. 11. Authorization of appropriations.

SEC. 3. FINDINGS.

The Congress finds that—

(1) the social well-being, economic stability, and national security of the United States depend upon a strong educational system that provides all citizens with the skills necessary to become active members of a productive workforce;

(2) despite the many reforms to our educational system that have been implemented since the National Commission on Excellence in Education declared our Nation "at risk" in 1983, the United States remains at risk of educational failure;

(3) United States children and youth are leaving school unprepared to participate productively in the workforce, such children suffer high rates of functional illiteracy, and such children often display a lack of understanding about this Nation and the world, in both an historical and futuristic context;

(4) United States students currently rank far below students of many other countries in educational achievement, particularly in mathematics and the sciences;

(5) although States and localities bear the primary responsibility for elementary and secondary education, rapidly increasing international competitiveness demands that educational achievement become a national priority;

(6) the Federal Government has played a vital, leading role in funding important educational programs and research activities and should continue to do so;

(7) to ensure that maximum returns are realized on local, State, and Federal investments in education, accurate and reliable mechanisms must be available to assess and monitor educational progress;

(8) the mechanisms to assess and monitor educational progress, and the national information infrastructure needed to support those mechanisms, do not exist;

(9) there should be established an independent council of highly respected, bipartisan, diverse experts to study, make recommendations regarding, and periodically report on, the status of the Nation's educational assessment system; and

(10) the council described in paragraph (10) should have the authority to—

(A) make such recommendations as such council deems necessary to the President, the Congress, and the States, and

(B) issue annual reports in the form of a "national report card".

SEC. 4. ESTABLISHMENT.

There is established a National Council on Educational Goals (hereinafter referred to as the "Council").

SEC. 5. MEMBERSHIP AND APPOINTMENTS.

(a) COUNCIL MEMBERSHIP.—(1) The Council shall be composed of 3 ex officio, nonvoting members, and 9 voting members, as provided in this subsection.

(2) The individuals serving in the following positions shall be ex officio members of the Council while so serving:

(A) The Secretary of Education.

(B) The Chairperson of the National Governor's Association.

(C) The Chairman of the National Assessment Governing Board.

(3) The voting members shall be appointed by the President of the United States, in consultation and upon agreement with the National Governor's Association, from among distinguished individuals of diverse political views, who are widely recognized for their experience in, knowledge of, and commitment to, education and educational excellence.

(4) All appointments of voting members shall be subject to the advice and consent of the Senate.

(5) The Council shall have no more than 5 voting members of the same political party.

(6)(A) The members of the Council shall be appointed under subsection (a)(3) no later than 60 days after the date of enactment of this Act.

(B) The Council shall have its first meeting no later than 60 days after the date of enactment of this Act.

(b) TERMS OF APPOINTMENT.—(1) Except as provided in paragraph (2), members of the Council shall be appointed for terms of 6 years each.

(2) The members of the Council first appointed under subsection (a)(3) shall be divided into 3 classes consisting of 3 Council members per class. Members in the first class shall be appointed for a term of 2 years. Members in the second class shall be appointed for a term of 4 years. Members in the third class shall be appointed for a term of 6 years.

(3) Upon the expiration of each of the terms of members first appointed under subsection (a)(3), or upon any vacancy occurring before the expiration of a member's term, a new member shall be appointed by the majority vote of the remaining members of the Council, from among distinguished individuals of diverse political views, who are widely recognized for their experience in, knowledge of, and commitment to, education and educational excellence.

(c) COMPENSATION AND TRAVEL.—Each member of the Council shall serve without compensation, but shall be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, when engaged in the performance of Council duties.

SEC. 6. FUNCTIONS.

(a) FUNCTIONS.—The Council shall—

(1) compile, inventory, and analyze existing information regarding the educational achievement of United States students and schools, including public and private elementary, secondary, and postsecondary schools.

(2) develop, monitor, and report progress on a comprehensive set of attainable, national goals that will help ensure excellence in education at all levels and, thereby guarantee the continued social well-being, economic stability and national security of the Nation in the 21st century; and

(3) through the interim Council report described in section 7 and the annual report card described in section 8, identify gaps in existing educational data and make recommendations for improvements in the methods and procedures of assessing attainment or realization of goals by the Department of Education and any other Federal governmental entity, including suggestions for such changes in laws and regulations as may be required to improve the assessment process, procedures, and organization of the Federal Government.

(b) PERFORMANCE OF FUNCTIONS.—In carrying out the provisions of subsection (a)(2) the Council shall—

(1) consider the goals already set forth or recommended by the President, the National Governor's Association, and other governmental and nongovernmental organizations;

(2) encourage the States to—

(A) establish similar educational goals aimed at achieving or surpassing the national goals, and

(B) outline their assessment performance;

(3) report on the goals at the national level and for all States and compare the educational achievement of the United States with other nations; and

(4) consider all relevant data in at least the following areas:

(A) school readiness,

(B) student achievement in elementary, secondary, and postsecondary education,

(C) school performance, including—

(i) attendance and completion rates;

(ii) climate (vandalism, crime, and drugs);

(iii) teacher rewards (salary, conditions, and training);

(iv) parent participation; and

(v) school financing; and

(D) workforce literacy and skills.

SEC. 7. INTERIM COUNCIL REPORT.

Not later than 1 year after the Council concludes its first meeting of members, the Council shall submit a report to the President, the Congress, and the Governor of each State, that—

(1) recommends a comprehensive set of national educational goals to be achieved before the year 2000; and

(2) includes a series of reasonable steps for measuring the implementation and success of each recommendation of the Council.

SEC. 8. ANNUAL REPORT CARD.

(a) IN GENERAL.—Not later than 2 years after the Council concludes its first meeting of members, the Council shall submit to the President, the Congress and the Governor of each State a National Report Card, which—

(1) shall set forth an analysis of the Nation's progress toward achieving the Council's recommended goals; and

(2) may, as deemed necessary by the Council based on its findings and an analysis of the views and comments of all interested parties, including all relevant Federal entities, the National Governor's Association, the Congress, and private organizations and citizens—

(A) identify new educational goals,

(B) describe modifications to existing goals,

(C) identify continuing gaps in existing educational data, and

(D) make recommendations for further improvement in the methods and procedures of assessing attainment or realization of goals by the Department of Education and any other Federal governmental entity, including suggestions for such changes in laws and regulations as may be required to improve the assessment process, procedures, and organization of the Federal Government.

(b) CONTINUATION.—The Council shall continue to issue a National Report Card on an annual basis for the duration of the existence of the Council.

SEC. 9. POWERS OF THE COUNCIL.

(a) HEARINGS.—(1) The Council may, for the purpose of carrying out this Act, conduct such hearings, sit and act at such times and places, take such testimony and receive such evidence, as the Council considers appropriate.

(2) In carrying out this subsection the Council shall—

(A) conduct public hearings in different geographic areas of the country, both urban and rural, to receive the reports, views, and analyses of a broad spectrum of experts and the public on the status and goals of the Nation's current educational system, the need to redefine and redirect educational goals, and methods that could be implemented to

foster higher levels of educational attainment in our Nation's schools; and

(B) receive testimony from—

(i) individuals such as educators, business persons, elected and appointed public officials; and

(ii) representatives of public and private organizations and institutions with an expertise or interest in improving the quality of the Nation's educational system.

(b) INFORMATION.—The Council may secure directly from any Federal agency such information as may be necessary to enable the Council to carry out this Act. Upon request of the Chairman of the Council, the head of the agency shall furnish such information to the Council.

(c) GIFTS.—The Council may accept, use, and dispose of gifts or donations of services or property.

(d) POSTAL SERVICES.—The Council may use the United States mail in the same manner and under the same conditions as other departments and agencies of the Federal Government.

(e) ADMINISTRATIVE AND SUPPORT SERVICES.—The Administrator of General Services Administration shall provide to the Council on a reimbursable basis such administrative and support service as the Council may request.

SEC. 10. ADMINISTRATIVE PROVISIONS.

(a) MEETINGS.—The Council shall meet on a regular basis, as necessary, at the call of the Chairman or a majority of its members.

(b) QUORUM.—A majority of the voting members to the Council shall constitute a quorum for the transaction of business.

(c) COMMISSION STAFF.—(1) The Chairman and Vice Chairman of the Council shall be elected by and from the voting members of the Council and shall serve in their elected capacity until the expiration of their appointed terms as members, or until their resignation or removal by a majority of the voting members of the Council.

(2) The Chairman of the Council, in consultation with the Vice Chairman, shall appoint and fix the compensation of a staff administrator and such support personnel as may be reasonable and necessary to enable the Council to carry out its functions without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title, or of any other provision of law, relating to the number, classification, and General Schedule rates.

(d) PERSONNEL DETAIL AUTHORIZED.—Upon request of the Chairman of the Council, the head of any Federal agency is authorized to detail, without reimbursement, any of the personnel of such agency to the Council to assist the Council in carrying out its duties under the Act. Such detail shall be without interruption or loss of civil service status or privilege.

SEC. 11. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this title.

By Mr. BINGAMAN (for himself, Mr. MITCHELL, Mr. KENNEDY, Mr. PELL, Ms. MIKULSKI, Mr. HARKIN, Mr. KOHL, and Mr. HATFIELD):

S. 2035. A bill to establish a Commission to examine the advisability of lengthening the schoolday and school year in U.S. public elementary and secondary schools; to the Committee on Labor and Human Resources.

THE 200-DAY SCHOOL YEAR STUDY ACT

Mr. BINGAMAN. Mr. President, I think all of us have seen the disturbing comparisons between the performance of American students and students in other major industrialized countries, particularly in fields such as math and science, but in other areas of study as well. These comparisons between achievement levels of our students, I believe, fall in line with the comparisons that we all have seen between the length of time our students spend in school and the length of time students spend in school in these other industrialized nations, including European countries, Japan, and other countries in the Far East.

Clearly, the length of time spent in the classroom learning is not the only issue that we must address to improve the U.S. educational system. I do not mean to suggest that in any way. But at the same time, I believe it is a vitally important issue. The need is real, and we must give it attention. We must begin to seriously debate the issue nationally. This legislation attempts to stimulate that debate.

The 200-Day School Year Study Act of 1990, is a straight-forward attempt to help States determine the advisability and feasibility of lengthening school days and years, increasing teacher salaries correspondingly, and thus increasing our children's chances for gaining a quality education. The study mandated under the act could be a first step toward returning to traditional and practical basics of education.

Joining me in sponsoring the 200-Day School Year Study Act of 1990 is my good friend and distinguished colleague, Senator PELL, whose expertise and thoughtful attention have helped craft a practical bill that is long overdue. Also joining us as cosponsors are our distinguished colleagues, Senator MITCHELL, Senator KENNEDY, Senator MIKULSKI, Senator HARKIN and Senator KOHL.

For some time, I and others in the Congress have contemplated introducing legislation that would encourage the adoption of longer academic years in our Nation's elementary and secondary schools. We believe that the length of instruction is a key component of an improved educational system; and as we know all too well, we must make a serious commitment now if we are to achieve educational excellence in the future.

We must make this commitment because, in the words of the 1983 report of the National Commission on Excellence in Education, we are still "A Nation At Risk." The problems plaguing America's educational system were outlined succinctly in that report, which found that American students spent less time on school work than their international counterparts and, as a result, lagged behind them in testing and achievement rates.

Seven years later, as we begin a new decade and prepare for a new millennium, our Nation's schools and students remain at risk. More than one quarter—25 percent—of our high school students are dropping out, and many of those who do graduate never grasp the basic skills and knowledge necessary to succeed in college or the workplace. Yet without their active participation in the U.S. work force, our future social and economic security is at grave risk. The simple fact is that if we are to be a competitive force in the global marketplace of the 21st century, we must work now to improve our children's chances of succeeding and achieving excellence in all that they do.

Two recommendations for improvement made by the National Commission on Excellence in Education were for school districts and State legislatures to adopt 7-hour school days and academic years of 200 to 220 days. In my home State of New Mexico, the average school year lasts about 180 days. In comparison, European students spend up to 230 days a year in class. German and British schools start in early September and extend through mid-July. In South Korea, the school year lasts 220 days. Japanese students attend school 243 days a year.

I believe we must work to close the gaps between these numbers. If we do not, the educational—and competitive—gaps will continue to grow and our children will continue to fall further and further behind their international peers. Under our legislative proposal, a 12-member commission of experts would make specific recommendations to the President, the Congress, and the Nation's Governors regarding:

First, the advisability of establishing a model "length of school day and school year" for U.S. public schools;

Second, the feasibility of determining an appropriate minimum number of hours per day and days per year of instruction for U.S. public schools, and a model plan for reaching those numbers, and compensating teachers accordingly, before the end of the decade; and

Third, an estimate of the average additional costs, including the additional cost in terms of teacher salary enhancement, that states and local districts would incur if longer school days and years are adopted, and a model plan for meeting the additional costs.

The Commission's final report, due 1 year after the date of the Commission's first meeting, would include its recommendations for administrative and legislative action.

I hope all of my colleagues will join Senators PELL, KENNEDY, MITCHELL, MIKULSKI, HARKIN, KOHL, and myself

in working toward the enactment of this legislation. Together, we can make a difference.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2035

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This bill may be cited as the "200-Day School Year Study Act of 1990".

SEC. 2. FINDINGS.

The Congress finds that—

(1) the social and economic well-being and national security of the United States depend upon a strong educational system that provides all citizens with the skills necessary to become active members of a productive workforce;

(2) despite the many reforms to our Nation's educational system that resulted from the 1983 findings of the National Commission on Excellence in Education, our Nation remains at risk of educational failure;

(3) United States children and youth currently drop out of school in large numbers, suffer high rates of functional illiteracy, and often display a lack of understanding about the United States and the world, in both an historical context and a futuristic context;

(4) United States students rank far below students of many other countries in educational achievement, particularly in mathematics and the sciences;

(5) United States students spend less time in school, per day and per year, than do students of many other countries, particularly internationally competitive nations such as Japan, England, Canada, West Germany, and Taiwan;

(6) traditional United States academic years, which average 175 to 180 days, were based on an agrarian society that no longer exists in most United States school districts;

(7) although States and localities bear the primary responsibility for elementary and secondary education, rapidly increasing international competitiveness demands that educational achievement become a national priority;

(8) the Federal Government has played a vital, leading role in funding important educational programs and research activities and should continue to do so; and

(9) there should be established a Commission of experts to study and make recommendations regarding the advisability of establishing a model school day length and school year, possibly 200 days, for United States public elementary and secondary schools.

SEC. 3. ESTABLISHMENT.

There is established a 200-Day School Year Study Commission (hereafter referred to as the "Commission").

SEC. 4. MEMBERSHIP OF THE COMMISSION.

(a) COMMISSION MEMBERSHIP.—The Commission shall consist of 12 members, of whom—

(1) four members shall be appointed by the President;

(2) two members shall be appointed by the Speaker of the House of Representatives;

(3) two members shall be appointed by the Minority Leader of the House of Representatives;

(4) two members shall be appointed by the President pro tempore of the Senate upon the recommendation of the Majority Leader of the Senate; and

(5) two members shall be appointed by the President pro tempore upon the recommendation of the Minority Leader of the Senate.

(b) APPOINTMENTS.—(1) Members of the Commission shall be appointed on the basis of exceptional education, training, or experience from—

(A) individuals who are representatives of non-profit organizations or foundations committed to the improvement of American education;

(B) individuals who are engaged in the professions of teaching;

(C) individuals engaged in school administration, members of school boards, parents or representatives of parents or parent organizations; and

(D) individuals who are State officials directly responsible for education.

(2) The first 12 members of the Commission shall be appointed no later than 60 days after the date of enactment of this Act.

(c) VACANCIES.—A vacancy in the Commission shall not affect its powers, but shall be filled in the same manner as the original appointment was made.

(d) MEMBERSHIP DURATION.—Members of the Commission shall be appointed to serve for the life of the Commission.

(e) COMPENSATION AND TRAVEL.—Each member of the Commission shall serve without compensation, but shall be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, when engaged in the performance of Commission duties.

SEC. 5. FUNCTIONS OF THE COMMISSION.

(a) IN GENERAL.—The Commission shall study and make recommendations regarding the advisability of lengthening the school day to a predetermined minimum number of hours and lengthening the academic year to at least 200 days in all United States public elementary and secondary schools. Such recommendations shall include—

(1) a comparative analysis of the length of academic days and academic years in schools throughout the United States and in schools of other nations;

(2) a recommendation of the appropriate number of hours per day and days per year of instruction for United States public elementary and secondary schools;

(3) an examination as to whether an increase in the length of school days and school years should be accompanied by an appropriate increase in teacher compensation;

(4) a model plan for adopting a longer academic day and academic year in all United States public elementary and secondary schools by the end of this decade, including recommendations regarding mechanisms to assist States, school districts, schools, and parents in transitioning from current academic day and year to an academic day and year of a longer duration;

(5) suggestions for such changes in laws and regulations as may be required to facilitate States, school districts, and schools in adopting longer academic days and years;

(6) an analysis and estimate of the additional costs, including the cost of increased teacher compensation, to States and local school districts if longer academic days and years are adopted; and

(7) a plan to assist States and local districts in meeting all such additional costs.

(b) REPORT.—The Commission shall submit a final report and plan pursuant to section 6.

SEC. 6. COMMISSION REPORT.

(a) IN GENERAL.—Not later than March 1, 1991, or one year after the Commission concludes its first meeting of members, whichever is longer, the Commission shall submit a report to the President, the Congress, and the Governors of all the States, that sets forth specific recommendations regarding—

(1) the advisability of establishing a model minimum number of hours per day and days per year of instruction for public elementary and secondary schools in the United States, which shall include an analysis of the advisability of increasing teacher salaries to appropriate levels;

(2) the appropriate number of hours per day and days per year of instruction for United States public elementary and secondary schools, and a plan for reaching such numbers before the end of the decade, including—

(A) a reasonable date for implementation of the lengthened academic day and year; and

(B) mechanisms for States, school districts, and schools to transition from the present number of hours per day and days per year of instruction to at least the newly established minimums; and

(3) the estimated average additional costs, including the cost of increased teacher compensation, that would be imposed on States and school districts if longer academic days and years are adopted and a plan for meeting any such additional costs.

(b) CONSIDERATION.—The report described in subsection (a) shall consider current educational policies and practices throughout the United States and the world.

SEC. 7. POWERS OF THE COMMISSION.

(a) HEARINGS.—(1) The Commission may, for the purpose of carrying out this Act, conduct such hearings, sit and act at such times and places, take such testimony, and receive such evidence, as the Commission considers appropriate.

(2) In carrying out this subsection, the Commission shall—

(A) conduct public hearings in different geographic areas of the country, both urban and rural, to receive the reports, views, and analyses of a broad spectrum of experts and the public regarding the advisability of lengthened academic day and year; and

(B) receive testimony from—

(i) individuals such as educators, business persons, elected and appointed public officials; and

(ii) representatives of public and private organizations and institutions with an expertise or interest in improving the quality of the Nation's educational system.

(b) INFORMATION.—The Commission may secure directly from any Federal agency such information as may be necessary to enable the Commission to carry out this Act. Upon request of the Chairman of the Commission, the head of the agency shall furnish such information to the Commission.

(c) GIFTS.—The Commission may accept, use, and dispose of gifts or donations of services or property.

(d) POSTAL SERVICE.—The Commission may use the United States mails in the same manner and under the same conditions as the departments and agencies of the United States.

(e) ADMINISTRATIVE AND SUPPORT SERVICES.—The Administrator of the General

Services Administration shall provide to the Commission on a reimbursable basis such administrative and support services as the Commission may request.

SEC. 8. ADMINISTRATIVE PROVISIONS.

(a) MEETINGS.—The Commission shall meet on a regular basis, as necessary, at the call of the Chairman or a majority of its members.

(b) QUORUM.—A majority of the appointed members of the Commission shall constitute a quorum for the transaction of business.

(c) COMMISSION STAFF.—(1) The Chairman and Vice Chairman of the Commission shall be elected by and from the members of the Commission for the life of the Commission.

(2) The Chairman of the Commission, in consultation with the Vice Chairman, shall appoint and fix the compensation of a staff administrator and such support personnel as may be reasonable and necessary to enable the Commission to carry out its functions without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of chapter 53 of such title, or of any other provision of law, relating to the number, classification, and General Schedule rates.

(d) PERSONNEL DETAIL AUTHORIZED.—Upon request of the Chairman of the Commission, the head of any Federal agency is authorized to detail, without reimbursement, any personnel of such agency to the Commission to assist the Commission in carrying out its duties under the Act. Such detail shall be without interruption or loss of civil service status or privilege.

SEC. 9. TERMINATION OF THE COMMISSION.

The Commission shall terminate 90 days after submitting the final report required by section 6.

SEC. 10. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated $1,000,000 to carry out the provisions of this Act.

THE 200-DAY SCHOOL YEAR ACT OF 1990

Mr. PELL. Mr. President, I am pleased to join Senator BINGAMAN in cosponsoring the 200-Day School Year Act of 1990.

For several years I have carried with me a chart showing how the United States ranks with other nations when comparing the length of the school year. We do not fare well in such a comparison. The average length of the school year in the United States is 180 days. In Japan, it is 243. In South Korea, it is 220. In Italy, 216. In the Soviet Union, 210, in Thailand, 200. In the United Kingdom, 196. In Canada, 196. And in France, 190.

I believe deeply that American studenst should be in school for a longer period of the year. In fact, it may well be that the findings of the commission established in the legislation we are introducing would dictate an increase in school days beyond the 200 days mentioned in the title of our bill.

At the same time, I also believe that no study of this kind can proceed without a clear recognition that it is predicated upon an increase in teacher pay. Very simply, we cannot entertain increasing the length of the school year without recognizing up front that this will and must involve a pay increase for teachers. Any commission that went forth without such a recognition would not be "worth its salt."

There are also other costs that are associated with a study of this nature, costs such as administration and service salaries, physical plant costs, and increased costs of books and materials. These too, must be examined.

Mr. President, the need to enhance the education and preparation of our young people is without question. We must seek to achieve an education of excellence for all. How we achieve it is of concern to not only to every Member of the Senate but to every American throughout our land. Most certainly, one of the avenues to which we give careful thought is that of increasing teacher pay in order to accommodate an increased school year.

As we enter this last decade of the 20th century and as we seek to secure a position of leadership in the world economy, we must be willing to examine many different alternatives or ways of strengthening America education. This is surely one of those ways, and one that merits the attention it is given in this important legislation.

By Mr. HEINZ:

S. 2036. A bill to authorize the conveyance to the Columbia Hospital for Women of certain parcels of land in the District of Columbia, and for other purposes; to the Committee on Governmental Affairs.

CONVEYANCE OF CERTAIN LAND

● Mr. HEINZ. Mr. President, as ranking member on the Governmental Affairs Subcommittee on General Services, Federalism and the District of Columbia, I rise today to introduce legislation to permit the Columbia Hospital for Women located in Washington, DC to purchase adjoining property from the General Services Administration [GSA] for the purpose of developing a National Women's Health Resource Center. The establishment of this center will help improve women's health care in the greater Washington area and across the Nation.

Since established by a Congressional Charter in 1866, Columbia Hospital has worked to meet the health care needs of women. Today, Columbia Hospital is the only health care facility in the Washington area specializing in obstetrics, gynecology, and neonatology and last year over 5,000 births occurred at the hospital. That represents approximately one-quarter of the District's total number of births of somewhat over 21,000 in 1989.

The Columbia Hospital for Women is located in the block between L and M Streets and 24th and 25th Streets in northwest Washington, DC. This land was conveyed to the hospital by an act of Congress in 1952—Public Law 82-423. A small portion of this block was not included in the act and is currently the site of a 42,600 square foot building owned by the GSA which is in disrepair and has little usable space.

Over the past 25 years, Columbia Hospital has made several unsuccessful attempts to acquire this adjoining property. Under this legislation, the Columbia Hospital would purchase the land from GSA for $10 million. The lion's share of the purchase price $7 million, would be payable at settlement. The additional $3 million would be due within 15 years of enactment.

The Government of the District of Columbia has also recognized the importance of the Women's Health Resource Center and its Department of Human Services awarded Columbia Hospital a certificate of need for the establishment of the center.

Although this property has been given a higher value by the GSA, my colleagues will no doubt agree that the short- and long-term benefits of the proposed Women's Health Resource Center will far outweigh such a difference and is an equitable amount.

The property will be used for the National Women's Health Resource Center which will make it easier for women in the Washington area to receive health care and will advance women's health nationwide by providing clinical services, preventive medicine and nutritional care, research activities, sociological and psychological support services, educational services, informational services and access to services for uninsured and underinsured women. The center also intends to respond to an area of critical need in the District—infant mortality—by creating a prenatal care clinic. It is my hope that this clinic can assist in lowering the infant mortality rate in the District of Columbia, which is the highest in the Nation, in addition to addressing the District's "crack baby" crisis.

This legislation provides us with a unique opportunity to fully utilize Federal resources and have a direct impact upon the health concerns of the Nation's women and the diverse health care needs of over half our population.

I urge all of my colleagues to support this legislation to help ensure our Federal resources are used in the most responsible way possible.

Thank you, Mr. President, and I ask that the text of the bill be included in the RECORD at this time.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2036

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. CONVEYANCE OF LAND.

(a) ADMINISTRATOR OF GENERAL SERVICES.—Subject to sections 2, 3, and 4, the Adminis-

trator of General Services is directed to convey, for $7,000,000 paid on date of conveyance, to the Columbia Hospital for Women (formerly Columbia Hospital for Women and Lying-in Asylum), Washington, District of Columbia, all right, title, and interest of the United States in and to those pieces or parcels of land in the District of Columbia, described in subsection (b), together with all improvements thereon and appurtenances thereto.

(b) PROPERTY DESCRIPTION.—The land referred to in subsection (a) was conveyed to the United States of America by deed dated May 2, 1988, from David Fergusson, widower, recorded in liber 1314, folio 102, of the land records of the District of Columbia, and is that portion of square numbered 25 in the city of Washington in the District of Columbia which was not previously conveyed to such hospital by the Act of June 28, 1952. Such property is more particularly described as follows: All that piece or parcel of land situated and lying in the city of Washington in the District of Columbia and known as part of square numbered 25, as laid down and distinguished on the plat or plan of said city as follows: Beginning for the same at the northeast corner of square being the corner formed by the intersection of the west line of Twenty-fourth Street West, with the south line of north M Street and running thence south with the line of said Twenty-fourth Street for the distance of two hundred and thirty-one feet ten inches, thence running west and parallel with said M Street for the distance of two hundred and thirty feet six inches and running thence north and parallel with the line of said Twenty-fourth Street for the distance of two hundred and thirty-one feet ten inches to the line of said M Street and running thence east with the line of said M Street to the place of beginning two hundred and thirty feet and six inches together with all the improvements, ways, easements, rights, privileges, and appurtenances to the same belonging or in anywise appertaining.

SEC. 2. AGREEMENT FOR FURTHER PAYMENT.

(a) AGREEMENT FOR FURTHER PAYMENT.—The Administrator of General Services shall enter into an agreement with the Columbia Hospital for Women which shall provide for the payment to the General Services Administration of $3,000,000 on the date which is fifteen years after the date of the conveyance under section 1.

(b) GENERAL SERVICES ADMINISTRATION.—All payments made under this Act shall be paid into, administered, and expended as part of the fund established by section 210(f) of the Federal Property and Administrative Services Act of 1949 (40 U.S.C. 490(f)).

SEC. 3. LIMITATION OF CONVEYANCE.

No part of any land described in section 1 may be used for any purpose other than hospital, clinic, rehabilitation center, medical research institution, medical education institution, and domiciliary care institution purposes unless use for such other purpose is approved by the Administrator of General Services or by Act of Congress.

SEC. 4. USE BY UNITED STATES.

(a) USE BY UNITED STATES.—Subject to subsection (b), the United States shall retain the right to use the office building and parking lot located on lands conveyed pursuant to this Act. The Columbia Hospital for Women shall not be entitled to rent or other compensation from the United States for such use by the United States.

(b) NOTIFICATION AND TERMINATION.—The right to limited use by the United States under subsection (a) shall terminate on a date which is one year after the date of receipt by the Administrator of General Services of written notification that the Columbia Hospital for Women needs such property for hospital, clinic, rehabilitation center, medical research institution, medical education institution, or domiciliary care institution purposes.

SEC. 5. MODIFICATION OF RESTRICTION ON PRIOR CONVEYANCE OF LAND.

The Administrator of General Services is directed to take such actions as are necessary to modify the restriction which requires that lands conveyed by the Act of June 28, 1952 (Public Law 82-423) be used for hospital purposes and to allow such lands to be used only for hospital, clinic, rehabilitation center, medical research institution, medical education institution, and domiciliary care institution purposes, unless use of such lands for a different purpose is approved by the Administrator of General Services or by Act of Congress.●

By Mr. LEVIN:

S. 2037. A bill to prohibit for the purpose of meeting the Gramm-Rudman deficit targets the recognition of shifts in dates of making outlays enacted within the year preceding adoption of a budget; pursuant to the order of August 4, 1977, referred jointly to the Committee on the Budget and the Committee on Governmental Affairs.

BUDGET REFORM LEGISLATION

● Mr. LEVIN. Mr. President, the deliberations on the fiscal year 1991 budget, which are about to begin, will include a number of proposals to reform the budget process itself. Removing the social security trust fund surplus from the calculation of the budget deficit, and switching to a 2-year budget cycle would give the President and the Congress a more accurate picture of the budgetary realities with which we are confronted and would enable us to address those realities in a more efficient manner. Other budgetary reforms also merit consideration.

Some of these proposals will undoubtedly undergo long hours of debate. However, one step which can and should be enacted early enough in the budgetary process to actually effect the fiscal year 1991 budget, is to exclude from being counted as savings for a specific fiscal year, shifts in spending to a prior or subsequent fiscal year. Such shifts may have the effect of reducing the deficit on paper for a specific fiscal year, but, in reality, have no effect on the amount of Federal spending and no effect on reducing the deficit that jeopardizes the Nation's long-term prosperity.

Although not having any lasting effect on the deficit, this budgetary shell game does threaten to make a lasting contribution to erosion of confidence that the American people have in the ability of the President and the Congress to forthrightly confront the Nation's budgetary challenges. And, it will require an abiding public confidence if we as a Nation are going to take and accept the steps necessary for substantial deficit reduction.

The legislation which I am introducing today will prohibit shifts in spending from a specific fiscal year into another fiscal year from being counted as savings for the purposes of meeting the Gramm-Rudman deficit reduction targets. We have seen too many proposals during the consideration of past budgets to legislate savings through spending shifts and not spending reductions. A step toward honest deficit reduction is to stop that practice. The legislation which I am introducing will accomplish that goal.

Mr. President, I ask unanimous consent that a copy of this legislation be printed following my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2037

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. AMENDMENT OF TITLE 31, UNITED STATES CODE.

Section 301(a) of the Congressional Budget Act of 1974 is amended by adding at the end thereof the following:

"If, during the fiscal year preceding the fiscal year for which a concurrent resolution under this section or a revised concurrent resolution under section 304 is adopted, legislation has been enacted to advance or postpone the date of the making of outlays from a date in that fiscal year to a date in the preceding fiscal year or in the subsequent fiscal year, the total budget outlays described in paragraph (1) shall be computed as though the outlays were to be made in the fiscal year in which they were to have been made prior to the enactment of such legislation.".

SEC. 2. AMENDMENT OF THE BALANCED BUDGET AND EMERGENCY DEFICIT CONTROL ACT OF 1985.

Section 251(a)(1) of the Balanced Budget and Emergency Deficit Control Act of 1985 (2 U.S.C. 901) is amended by adding at the end thereof the following new sentence:

"If, during the fiscal year preceding the fiscal year for which the Directors make the estimate of budget levels of outlays pursuant to subparagraph (A), legislation has been enacted to advance or postpone the date of the making of outlays from a date in that fiscal year to a date in the preceding fiscal year or in the subsequent fiscal year, the estimated budget levels of outlays described in paragraph (1) shall be computed as though the outlays were to be made in the fiscal year in which they were to have been made prior to the enactment of such legislation.".●

By Mr. McCONNELL:

S. 2038. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to require a 20-percent reduction in certain assistance under such act to a law enforcement agency unless such agency has in effect a binding law enforcement officers' bill of rights; to the Committee on the Judiciary.

LAW ENFORCEMENT OFFICERS' BILL OF RIGHTS

● Mr. McCONNELL. Mr. President, the cold war between our Nation and the Soviet Union appears to be abating, and there is talk of bringing our servicemen and women home. Ironically, those men and women will be coming back to a nation engaged in an escalating domestic war: the war against crime.

This war is being fought by our Nation's law enforcement officers. These brave men and women risk their lives every day to protect citizens. They literally are caught in the crossfire amidst an epidemic of violence fueled by drugs. The casualties are mounting. Officers and bystanders are being killed, and neighborhoods are ravaged. There is no peace summit in sight. There is no negotiating with an enemy motivated by greed, and drugs.

While we should be fighting an all-out war against these criminals and accommodating our law enforcement forces, police officers are required to work extremely long hours and risk their lives, for modest compensation. Other unique circumstances detract from their primary duties and threaten morale as well.

My bill, the law enforcement officers' bill of rights, addresses some of the concerns of our Nation's police officers. Basically, it protects rights that most of us take for granted. It allows police officers to engage in, or refrain from, political activity. It protects officers from abusive investigations and interrogations. And it provides officers certain essential rights in connection with disciplinary actions. At a minimum, law enforcement officers ought to be entitled to the same rights we all cherish, particularly the right of due process.

My remarks on the law enforcement officers' bill of rights would not be complete without an explanation of the role played by the Jefferson County and Louisville lodges of the Fraternal Order of Police in securing my Senate introduction of this measure.

The Kentucky FOP Lodge, and in particular lodges 6 and 14, have been tremendously active in advancing the legislative agenda of the National Fraternal Order of Police. Each year, during the occasion of the annual Peace Officers' Memorial Day, the national trustee of the Kentucky FOP visits my Washington, DC, office, together with a delegation of officers from throughout my State.

The Kentucky national trustees always are among the best informed, best prepared advocates I have encountered on Capitol Hill. They know the concerns of the man and woman on the beat, because they are police officers themselves. Further, they are familiar with each item on their legislative agenda, and their presentations always are to the point. Finally, they understand the limitations and delays of the legislative process, and try to work with their elected representatives in Washington.

When the leaders of the Jefferson County and Louisville FOP lodges approached me about the Law Enforcement Officers' Bill of Rights, they presented it in such a way that I was compelled to introduce a companion Senate bill. It meant a lot to me that these police officers were speaking from experience when they explained the need for such legislation. They worked with me in refining the language, and have offered to help me get this bill passed into law, where it belongs.

All the police officers in this country who care about this legislation owe a debt of thanks to these FOP lodges, for their tireless and skillful promotion of the national FOP agenda.●

By Mr. COCHRAN (for himself, Mr. PELL, Mrs. KASSEBAUM, Mr. HEINZ, Mr. LOTT, Mr. DOLE, Mr. WILSON, Mr. MCCAIN, Mr. CRANSTON, and Mr. HATFIELD):

S. 2039. A bill to improve the quality of student writing and learning, and the teaching of writing as a learning process in the Nation's classrooms; to the Committee on Labor and Human Resources.

IMPROVING THE TEACHING OF WRITING SKILLS

Mr. COCHRAN. Mr. President, the United States faces a writing crisis in our schools and in the workplace. The Writing Report Card, an assessment of student writing ability conducted by the U.S. Department of Education, recently reported that fewer than 25 percent of our high school juniors can write an adequate letter. Universities and colleges across the country report increasing numbers of entering freshmen unable to meet the writing demands of college work. Lack of writing skill contributes to unfavorable comparisons of American students with those in other countries in many academic subjects. In testimony before the Labor and Human Resources Committee, business leaders express serious concern about the basic skills of entry level workers. These are indications that the lack of writing ability is a key element in our national illiteracy problem.

I am today introducing a bill to improve the quality of student writing and learning, and the teaching of writing in the classroom. This legislation authorizes $10 million for the national writing project, which currently provides training to teachers to enhance the teaching of writing at 141 sites in 43 States, mostly associated with universities. Last year, 87,000 teachers sought training in one of the national writing project intensive summer and school-year workshops.

The national writing project is a "teacher-teaching-teachers" program that identifies and promotes techniques that are working in the classrooms of the best teachers. It is a positive program that celebrates good teaching and increases the Nation's corps of successful classroom teachers. When the project was funded for an unprecedented 10th year by the National Endowment for the Humanities, a spokesman said:

> I have no hesitation in saying that the National Writing Project has been by far the most effective and "cost effective" project in the history of the Endowment's support for elementary and secondary education programs.

In Mississippi, national writing project sites have made remarkable progress in improving the quality of teaching. Program participants include not only English instructors but also teachers in history, geography, math, reading, science, and elementary schools. The result has been a measurable improvement in student performance and a rekindling of teacher enthusiasm and confidence.

Over the past 17 years the national writing project has received numerous awards and has been generously funded by private foundations such as the Carnegie and Mellon foundations, as well as State and local agencies. However, program needs have far exceeded the funding potential of these organizations. Each year more and more teachers seek training from one of the existing sites. Teachers are eager to be selected for the project's workshops because they hear from previous participants that the program significantly enhances their teaching. In light of this success and the need for approximately 250 regional sites to establish a network that could serve all the Nation's teachers, it is discouraging to note that 13 sites in eight States have been forced to become inactive within the past year because of inadequate funding.

This legislation would authorize the funding of 50 percent of the cost of existing sites and 50 percent of the cost of establishing new sites, with a maximum of $40,000 per site on a dollar-for-dollar matching basis. It would fund matching grants to teachers to conduct research on effective classroom practices and to the national writing project to disseminate information on the effective teaching of writing. The Office of Educational Research and Information in the U.S. Department of Education would receive $500,000 to conduct research on the teaching of writing and on methods to use writing as a learning tool to improve the quality of education.

In light of the widespread problems described in the Writing Report Card, this legislation is timely. As Union Carbide warned in its report, Undereducated, Undercompetitive USA, "Without improvement, we have, at best, an

undereducated population which keeps this Nation from reaching its highest economic potential." Since the ability to put thoughts into words is fundamental to learning, it is unfortunate that many teachers are no longer taught that writing is part of a basic education and consequently fail to concentrate on their students' writing abilities. By improving writing as a part of basic education, I believe this legislation will provide a very high return on a modest investment and will take us further toward our goal of improving the quality of education in the Nation's classrooms.

Senator PELL, chairman of the Education Subcommittee and Senator KASSEBAUM, ranking minority member of the subcommittee, are cosponsors of this legislation. Other distinguished Senators have also joined us in the bill today, and I thank them all for this important support. The other cosponsors are: Mr. CRANSTON, Mr. DOLE, Mr. HATFIELD, Mr. HEINZ, Mr. LOTT, Mr. MCCAIN, and Mr. WILSON.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2039

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—NATIONAL WRITING PROGRAM

SEC. 101. FINDINGS.

The Congress finds that—

(1) the United States faces a crisis in writing in schools and in the workplace;

(2) only 25 percent of 11th grade students have adequate analytical writing skills;

(3) over the past two decades, universities and colleges across the country have reported increasing numbers of entering freshmen who are unable to write at a level equal to the demands of college work;

(4) American businesses and corporations are concerned about the limited writing skills of entry-level workers, and a growing number of executives are reporting that advancement was denied to them due to inadequate writing abilities;

(5) the writing problem has been magnified by the rapidly changing student populations in the nation's schools and the growing number of students who are at risk because of limited English proficiency;

(6) most teachers in the United States elementary schools, secondary schools, and colleges, have not been trained to teach writing;

(7) since 1973, the only national program to address the writing problem in the Nation's schools has been the National Writing Project, a network of collabrative university-school programs whose goal is to improve the quality of student writing and the teaching of writing at all grade levels and to extend the uses of writing as a learning process through all disciplines;

(8) the National Writing Project offers summer and school year inservice teacher training programs and a dissemination network to inform and teach teachers of developments in the field of writing;

(9) the National Writing Project is a nationally recognized and honored nonprofit organization that recognizes that there are teachers in every region of the country who have developed successful methods for teaching writing and that such teachers can be trained and encouraged to train other teachers;

(10) the National Writing Project has become a model for programs in other academic fields;

(11) the National Writing Project teacher-teaching-teachers program identifies and promotes what is working in the classrooms of the Nation's best teachers;

(12) the National Writing Project teacher-teaching-teachers project is a positive program that celebrates good teaching practices and good teachers and through its work with schools increases the Nation's corps of successful classroom teachers;

(13) evaluations of the National Writing Project document the positive impact the project has had on improving the teaching of writing, student performance, and student thinking and learning ability;

(14) the National Writing Project programs offer career-long education to teachers, and teachers participating in the National Writing Project receive graduate academic credit;

(15) each year approximately 85,000 teachers voluntarily seek training through word of mouth endorsements from other teachers in National Writing Project intensive summer workshops and school-year inservice programs through one of the 141 regional sites located in 43 States, and in 4 sites that serve United States teachers teaching overseas;

(16) 250 National Writing Project sites are needed to establish regional sites to serve all teachers;

(17) 13 National Writing Project sites in 8 different States have been discontinued in 1988 due to lack of funding; and

(18) private foundation resources, although generous in the past, are inadequate to fund all of the National Writing Project sites needed and the future of the program is in jeopardy without secure financial support.

SEC. 102. NATIONAL WRITING PROGRAM.

(a) AUTHORIZATION.—The Secretary is authorized to enter into a contract with the National Writing Project (hereafter in this section referred to as the "contractor"), a nonprofit educational organization which has as its primary purpose the improvement of the quality of student writing and learning, and the teaching of writing as a learning process in the Nation's classrooms—

(1) to support and promote the establishment of teacher training programs, including the dissemination of effective practices and research findings regarding the teaching of writing and administrative activities;

(2) to support classroom research on effective teaching practice and to document student performance; and

(3) to pay the Federal share of the cost of such programs.

(b) REQUIREMENTS OF CONTRACT.—The contract shall provide that—

(1) the contractor will enter into subcontracts with institutions of higher education or other non-profit educational providers (hereinafter referred to as "subcontractors") under which the subcontractors will agree to establish, operate, and provide the non-Federal share of the cost of teacher training programs in effective approaches and processes for the teaching of writing;

(2) funds made available by the Secretary to the contractor pursuant to any contract entered into under this section will be used to pay the Federal share of the cost of establishing and operating teacher training programs as provided in paragraph (1); and

(3) the contractor will meet such other conditions and standards as the Secretary determines to be necessary to assure compliance with the provisions of this title and will provide such technical assistance as may be necessary to carry out the provisions of this title.

SEC. 103. TEACHER TRAINING PROGRAMS.

The teacher training programs authorized in section 102(a) shall—

(1) be conducted during the school year and during the summer months;

(2) train teachers who teach grades kindergarten through college;

(3) select teachers to become members of a National Writing Project teacher corps whose members will conduct writing workshops for other teachers in the area served by each National Writing Project site; and

(4) encourage teachers from all disciplines to participate in such teacher training programs.

SEC. 104. FEDERAL SHARE.

(a) IN GENERAL.—(1) Except as provided in paragraph (2) and for purposes of section 102 the term "Federal share" means with respect to the costs of teacher training programs authorized in section 102, 50 percent of such costs to the subcontractor.

(2) The Federal share of the costs of teacher training programs conducted pursuant to section 102 may not exceed $40,000 for any one subcontractor.

(b) SPECIAL RULE.—For the purposes of subsection (a) the costs of teacher programs do not include the administrative costs, publication cost or the cost of providing technical assistance, to the contractor.

SEC. 105. CLASSROOM TEACHER GRANTS.

(a) GRANT AUTHORITY.—(1) The National Writing Project may reserve an amount not to exceed 5 percent of the amount authorized to be appropriated in section 301(a) to make grants, on a competitive basis, to elementary and secondary school teachers to enable such teachers to—

(A) conduct classroom research;

(B) publish models of student writing;

(C) conduct research regarding effective practices to improve the teaching of writing; and

(D) conduct other activities to improve the teaching and uses of writing.

(b) SUPPLEMENTATION OF FUNDING.—(1) Grants awarded pursuant to subsection (a) shall be used to supplement and not supplant State and local funds available for the purposes set forth in subsection (a).

(2) Each grant awarded pursuant to this section shall not exceed $2,000.

SEC. 106. NATIONAL ADVISORY BOARD.

(a) BOARD AUTHORIZED.—The National Writing Project shall establish and operate a National Advisory Board.

(b) COMPOSITION.—The National Advisory Board established pursuant to subsection (a) shall consist of—

(1) national educational leaders;

(2) leaders in the field of writing;

(3) such other individuals as the National Writing Project deems necessary.

(c) DUTIES OF THE BOARD.—The National Advisory Board established pursuant to subsection (a) shall—

(1) advise the National Writing Project on national issues related to student writing and the teaching of writing;

(2) review the activities and programs of the National Writing Project; and

(3) support the continued development of the National Writing Project.

SEC. 107. EVALUATION.

The National Writing Project may reserve up to $100,000 from the amount authorized to be appropriated pursuant to section 301(a) to evaluate the teacher training programs conducted pursuant to this Act. The results of such evaluation shall be made available to the appropriate committees of the Congress.

SEC. 108. DEFINITIONS.

As used in this Act—

(1) the term "institution of higher education" has the same meaning given such term in section 1201(a) of the Higher Education Act of 1965;

(2) the term "junior researcher" means a researcher at the assistant professor rank or the equivalent who has not previously received a Federal research grant; and

(3) the term "Secretary" means the Secretary of Education.

TITLE II—RESEARCH AND DEVELOPMENT

SEC. 201. RESEARCH ACTIVITIES.

(a) GRANT AUTHORITY.—From amounts available to carry out the provisions of this title, the Secretary, through the Office of Educational Research and Improvement, shall make grants to individuals and institutions of higher education to conduct research activities involving the teaching of writing.

(b) PRIORITY AND RESERVATION.—(1) In awarding grants pursuant to subsection (a), the Secretary shall give priority to junior researchers.

(2) The Secretary shall award not less than 25 percent of the funds received pursuant to section 301(b) to junior researchers.

(c) The Secretary shall make available to the National Writing Project and other national information dissemination networks the findings of the research conducted pursuant to the authority of subsection (a).

TITLE III—AUTHORIZATION OF APPROPRIATIONS

SEC. 301. AUTHORIZATION OF APPROPRIATIONS.

(a) TITLE I.—There are authorized to be appropriated to the National Writing project $10,000,000 for fiscal year 1991 and such sums as may be necessary for each of the fiscal years 1992, 1993, 1994, 1995, and 1996 to carry out the provisions of title I of this Act.

(b) TITLE II.—There are authorized to be appropriated $500,000 for fiscal year 1991 and such sums as may be necessary for each of the fiscal years 1992, 1993, 1994, 1995, and 1996 to carry out the provisions of title II of this Act.

Mr. PELL. Mr. President, over and over again we hear of today's students' lack of basic skills. Numerous studies report that large numbers of our high school graduates cannot write a decent sentence. This is a most disturbing message, particularly when one considers the countless numbers of illiterate adults and high school dropouts we already have in this Nation.

It is easy to be critical of this condition. It is easy to condemn schools and teachers for their apparent inability to prepare our children in the most basic skill—to communicate in our native language. Yet if we reflect more carefully on the situation, the causes of such a condition become understandable. First, writing is not an easy thing. Each of us in this Chamber can remember some experience from his or her own past to illustrate this point—struggling some evening in school over a paper in which what we wanted to say was evident, but putting that thought into the written word was a frustrating and difficult experience.

If composing the written word is so difficult, how much more so must be the process of teaching someone else to write. Particularly if someone's training as a teacher is in such diverse fields as math, science, or business. Yet we all know that mathematicians, scientists, and business people will all be expected to communicate effectively in their jobs.

The national writing project has taken on the difficult task of helping teachers to improve the quality of their students' writing skills with great success for many years. Currently there are 141 regional sites in 43 States serving 85,000 teachers a year. I am particularly proud to note that one of these sites is in my home State of Rhode Island.

The purpose of the legislation we have before us is to expand this effort to reach more teachers and their students. With a maximum grant of $40,000 per site, such a plan is a cost-effective approach to improving the language skills of millions of American students. I am extremely pleased to join Senator COCHRAN in introducing this legislation, and in giving it careful consideration in Education Subcommittee deliberations. As chairman of the Education Subcommittee, I also look forward to pushing this legislation along toward passage.

Mr. HEINZ. Mr. President, writing is visual thinking. And the importance of writing in our schools, places of work, and in our personal day-to-day experiences is a driving force behind legislation calling for Federal support of the national writing project introduced today by Senator THAD COCHRAN.

I am pleased to join with my distinguished colleague from Mississippi as an original cosponsor of this legislation, which responds to the increasing need to enhance and improve the teaching and learning of writing in classrooms across the country.

The national writing project seeks to improve student literacy and learning by concentrating on preparing their teachers to do a better job of developing their writing skills. The success this approach has had thus far can be easily seen in its results.

A writing evaluation of more than 400 elementary and secondary Pennsylvania students in classes taught by writing project teachers demonstrates an overall improvement of writing skills of more than 10 percent. Rarely does a single initiative have such a measurable effect.

In my home State, Pennsylvanians started benefiting from the national writing project when it was implemented at West Chester University of Pennsylvania in 1979. Since that time, the national writing project has reached out to five additional sites involving Gannon University, Penn State/Harrisburg, the University of Pennsylvania, the University of Pittsburgh, and Wilkes College.

Dr. Robert H. Weiss, professor of English at West Chester University of Pennsylvania and director of the Pennsylvania Writing Project [PAWP] shared with me experiences of teachers participating in PAWP, and their students.

Two students of a high school teacher who participated in a summer institute reflected enthusiastically on their new attitude: "We are more and more starting to enjoy writing * * *. With this process, you are guaranteed completeness of ideas and expression, plus good grammar." They and their classmates, observed their principal, "write more frequently," and "the quality of their writing is improving."

As mentioned earlier, a 1983 study of the writing performance of students, taught by teachers in PAWP summer institutes, evaluated pre- and post-test writing samples of several hundred students from grades three through the university level. The results were positive for both younger and older students, showing statistically significant growth in overall writing quality over a 3-month period.

During this 3-month period, elementary students, taught by PAWP teachers, increased their writing performance by 16.5 percent. Secondary students, during the same period of time increased their writing performance by 4.5 percent. This PAWP evaluation demonstrates that the writing project works, and that it is best to capture the energies of young students from the start to shape good learning/literacy habits.

One writing project peaked my interest because of its cooperative interstate structure. The northwest inland writing project [NIWP] sponsored by the two Palouse universities.

The NIWP captures the resources and talents of the University of Idaho and Washington State University serving to improve the educational climate in both States.

Jaclyn Seward, a high school teacher from Bonners Ferry, ID participated in the NIWP in 1987. "Real writing to real people for real reasons" is a quip she picked up through her NIWP experience and has integrated into class studies. During a study of human rights, Ms. Seward challenged her students to write to the late Dr. Andrei Sakharov, Soviet physicist and human rights crusader. Nearly 100 letters were written and the students selected the best ones to be sent to Dr Sakharov. After months of patient wait-

ing, the students received a response from Dr. Sakharov—bringing to life their classroom studies on human rights. Through this experience, the students in this class learned how to shape and express their opinion.

The national writing project is a collaborative university-school staff development program operating in 43 States at 141 regional writing project sites. To put it quite simply, the national writing project is a teachers teaching teachers experience during summer institutes as well as school-year in-service activities. Last year approximately 87,000 teachers took part in regional writing projects.

A report card grading the writing skills of our Nation's students released on January 9, 1990, by the Department of Education provides us with an educational challenge—one the national writing project take an active role in meeting.

"The Writing Report Card, 1984–88," found little change in the writing skills of students. Imaginative, informative, and persuasive writing proficiency of students in grades 4, 8, and 11 is regularly measured by the national assessment of educational progress. The average scores of participating students in grades 8 and 11 declined between 1984 and 1988. During the same period of time the average scores for fourth grade students rose slightly.

These findings are extremely alarming. Without basic literacy skills—reading and writing—future gains in disciplines, like history, literature, math, and science will be negligible. I submit it is time for the Federal Government to lend its support to improve the writing skills of learners of all ages by becoming an active partner in the national writing project.

Upon enactment of this initiative, Federal funds would provide: First, assistance to each of the regional writing project sites on a dollar-for-dollar match, up to $40,000 per site; second, assistance to establish new regional project sites; third, the national writing project with funds for additional writing research efforts, and information dissemination; and fourth, funds for research on the teaching of writing by the Departmnent of Education's Office of Educational Research and Improvement.

In closing, Mr. President, I want to commend the fine efforts of the innovators of the national writing project on college and university campuses and the dedicated teachers in our local schools who actively participate in regional writing project activities. I am pleased to work with Senator COCHRAN toward the enactment of this responsive education initiative and urge my colleagues to join with us.

By Mr. PELL (for himself, Mr. BIDEN, Mr. CRANSTON, Mr. DODD, Mr. KERRY, Mr. SIMON, and Mr. MOYNIHAN):

S. 2040. A bill to expand the size and scope of the Support for East European Democracy [SEED] Program; to the Committee on Foreign Relations.

SUPPORT FOR EAST EUROPEAN DEMOCRACY ACT

● Mr. PELL. Mr. President, today, with the cosponsorship of six of my colleagues on the Foreign Relations Committee—Senators BIDEN, CRANSTON, DODD, KERRY, SIMON, and MOYNIHAN—I am introducing legislation that will expand the size and scope of the SEED Program—Support for East European Democracy—enacted in November 1989. I regard this SEED II legislation as timely and necessary if the United States is to respond effectively to revolutionary developments in Eastern Europe.

Most significantly, the bill expands the scope of the SEED Program from Hungary and Poland to include Czechoslovakia, East Germany, Romania, Bulgaria, and Yugoslavia.

The bill also creates a process for including the Soviet Union in aspects of the program that would promote the development of free political and economic institutions in that country. It does so by requiring the President to examine which elements of the program would serve that purpose, to report on that analysis by May 1, and—if he finds that the Soviet Union should be included—to exercise authority to that effect provided in this bill.

In this regard, I should stress that no one anticipates or advocates extensive economic aid to the Soviet Union, but several elements of the SEED Program involve either no money or relatively small amounts. Here I refer to trade provisions and exchange and training activities that can serve to promote free institutions and the overall process of exposing Communist societies to Western political and economic practices.

As to the level of funds involved, the SEED II legislation builds on the SEED I Program by adding an additional $511 million to the $738 million program originally approved. While this is theoretically a 3-year program, I anticipate that the program will be adjusted several times along the way. The funding breakdown is detailed in a table that I ask unanimous consent be printed following my remarks.

This $511 million figure, I should point out, exceeds the $300 million figure for assistance to Eastern Europe presented yesterday in the President's budget. Frankly, in view of the profound interest of the United States in supporting positive developments in Eastern Europe, I will not be surprised if the $511 million figure is raised to some extent before this legislation is enacted. This kind of action is clearly our most cost-effective form of defense spending, and should take priority over the further acquisition of marginal military weapons.

Briefly, I will highlight specific elements of the bill:

First, in the area of multilateral action:

The bill provides for U.S. participation in the new European Bank for Reconstruction and Development and an initial U.S. contribution of $250 million. This contribution is contingent upon agreement among donor countries on a fair sharing of burdens and responsibilities in the new bank, rules for lending, and so on. That is now under negotiation.

Also under this heading, the bill mandates a United States contribution of at least $80 million in emergency multilateral food assistance to Romania, a truly urgent need arising from the civil war there.

Next, under private sector development:

The bill provides for a dramatic extension of Peace Corps activities into Eastern Europe—an additional $44 million, bringing the new Peace Corps Program in that region to $50 million—primarily in order to provide English teaching. If these nations are to enter the world economy, they will require people who can speak a world language. Of course, an increase in English language capabilities in those countries will assist the competitiveness of U.S. firms in doing business there.

The bill also provides for an increased role for the International Executive Service Corps—$5 million is earmarked—in order to promote the involvement of these 10,000 retired-executive volunteers, who have already demonstrated their effectiveness elsewhere, in advising East Europeans on the subject of enterprise management.

Further, the bill provides for expanded labor training by the Department of Labor—an additional $5 million—and expanded technical training by AID—an additional $10 million.

Third, in the area of trade and investment:

The bill mandates the President to confer full MFN status on all SEED countries at the earliest possible date in accord with Jackson-Vanik criteria and procedures concerning free emigration. A number of the East European countries have adopted a practice of full and free emigration, and the bill declares it to be U.S. policy not to delay but to confer nondiscriminatory trade treatment just as soon as that is done.

In addition, the bill confers eligibility for all SEED Program countries in the generalized system of preferences, OPIC programs, and Export-Import Bank programs.

All of these are procedures for opening the avenues of trade with the newly liberated SEED countries.

For the same reason, the bill mandates the President to pursue a maximum reduction in COCOM controls for SEED countries, to undertake the negotiation of bilateral investment treaties, and to expand AID's trade and development program—with an additional $6 million.

Under the title of educational, cultural, and scientific activities:

The bill sharply increases USIA funds for educational exchanges—the original SEED Program is expanded from $12 million to $40 million—and AID funds for scholarship assistance—for which the SEED Program is expanded from $10 million to $30 million. Again, as with the Peace Corps, such action represents not just altruism, but also the effective pursuit of U.S. economic interests.

Next, under the heading of environmental assistance:

The bill takes cognizance of the interrelation between economic development in Eastern Europe and the near-catastrophic environmental conditions in some locations there. It does so by broadening the environmental study required by the SEED Act so as to include all SEED countries. The bill authorizes an increase in the EPA Environmental Assistance Program for Eastern Europe from $40 million to $60 million.

Finally, in the crucial area of democractic institution-building: In title 5, which is an area of particular interest to Senator BIDEN, the bill provides a sharp increase in funds—from $12 million to $55 million—with $10 million to be available through reprogramming immediately upon enactment, so as to permit urgent assistance to SEED Program countries in support of forthcoming elections.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

SUPPORT FOR EAST EUROPEAN DEMOCRACY [SEED] ACT AND PROPOSED SEED II LEVELS

[3-yr in millions of dollars]

	SEED I	SEED II	Total
Food Aid:			
Poland	125		125
Romania		80	80
Currency stabilization (Poland)	200		200
Enterprise funds (240 Poland, 60 Hungary)	300		300
European Bank for Reconstruction and Development		250	250
Labor (Poland 4, Hungary 1, others 5)	5	5	10
Technical training	10	10	20
Peace Corps	6	44	50
Trade/Development Program	6	6	12
International Executive Service Corps		5	5
Education exchanges	12	28	40
Science/Tech exchange (5.5 Poland, 2.5 Hungary)	8		8
Scholarships	10	20	30
Democratic institutions ($10 million immediately)	12	43	55
Environment (Poland 30, Hungary 10, others 2G)	40	20	60
Medical aid (Poland)	4		4
Spending	738	511	1,249
Trade credit insurance [1] (Poland)	200		200
Total package	[2] 938	511	1,449

[1] Insurance is unlikely to require spending.

[2] Approximate allocation: Poland $838,000,000, Hungary $100,000,000.●

Mr. CRANSTON. Mr. President, as we begin to face a new decade and to tackle the problems that so urgently need to be addressed, we are facing the birth of a new world. It is a very different world from the one that confronted us in 1950, far different even, from that which existed in 1989. It is a more hopeful world. The toppling of Communist dictatorships throughout Eastern Europe holds the prospect of a safer, more prosperous future.

The United States has an urgent need—a compelling national interest—to promote the process of peaceful change underway today in Eastern Europe.

U.S. spending priorities must reflect this need. I am disappointed that the President's budget message and his State of the Union Address, fail to reflect this urgency.

For decades now we have poured literally trillions of dollars into stemming the tide of communism with tanks and bombs and fighter planes. While we must maintain a stable conventional and nuclear deterrent, new global realities oblige us to shift our priorities. We need, too, to use our dollars to nurture the seeds of democracy, help to provide the support that it so desperately needs to survive. For just a fraction of the cost of confronting communism militarily, we could complement our military efforts with other more productive initiatives.

We need a comprehensive plan to promote and secure democracy in Eastern Europe. I believe the timidity of the Bush administration's approach is unacceptable.

I am therefore today calling for new initiatives patterned after the Marshall plan to aid Eastern Europe. These countries were originally included in that 1947 plan that fueled the recovery of Western Europe, making the Common Market nations a bastion of democracy and economic success. Because of the intervention of the Soviet Union, Eastern European countries were excluded from the Marshall plan at that time. It is now long past time for them to join their Western neighbors in a comprehensive effort to build a more peaceful, more democratic, less confrontational Europe.

Congress has already taken a solid first step in setting forth the blueprint for such a program. Last November, we passed the landmark Support for Eastern European Democracy Act of 1989 [SEED]. This legislation provided some assistance—currency stabilization, food aid, investment funds—for Poland and Hungary as they embarked on the initial stages of reform. Now we need to look beyond. We must prepare ourselves for changes throughout Eastern Europe, and in other areas of the world, as communist regimes continue to fail.

I am therefore pleased to join today with Senator PELL to introduce a SEED II bill designed to expand last year's measure to cover all of Eastern Europe. I would propose to finance this increased foreign aid through commensurate reductions in function 050—Defense in the budget resolution.

When Senator SIMON, Senator PELL, and I worked together in drafting the SEED legislation last fall, only Poland and Hungary had yet thrown off the yoke of communism. Now, Rumania, Czechoslavakia, Bulgaria, Yugoslavia, and East Germany have all made significant strides in ending Communist domination and in taking steps toward greater democracy in their countries. We must have the foresight and determination to match the people of Eastern Europe and join with them in turning a hopeful vision into a prosperous, democratic reality.

The pace of reform in Eastern Europe over the past few months has been overwhelming. While these countries struggle to reshape their economic and political institutions, their Western neighbors struggle with them to formulate a vision of the future and to determine what their own role should be. One thing is clear: Communism is a bankrupt philosophy. There can be no turning back to the repressive policies of totalitarian communism in Eastern Europe. Yet there remain a host of questions to be answered, difficulties to be overcome, and decisions to be made.

The issues facing Eastern Europe are extraordinarily divisive. The question is no longer how to reform, it is how much to reform, how soon to reform, and in what manner and order to proceed. These questions will not be answered quickly or painlessly, for reshaping a society and an economic system requires consensus as well as determination and skills—and consensus is still extremely elusive.

The erosion of Communist control has revealed another set of unresolved conflicts. Ethnic tensions in Bulgaria, Hungary, and Romania—indeed throughout the Eastern bloc—threaten to weaken the nascent democracy movements. Nationalist sentiments revive old territorial claims and fears of renewed militarism. The change in governments is necessarily accomplished by the uncertainties surrounding the fate of the Warsaw Pact and the security of the Soviet Union. These issues not only make change more difficult, but they can potentially destabilize all of Europe.

Such questions obviously concern NATO and the West as much as they concern Moscow and the Eastern bloc. What role should the Western countries be playing—both vis-a-vis Eastern Europe and the Soviet Union? At what point should our support extend beyond warm rhetoric? Should our

support be aimed at providing only political assistance or should we also be investing our resources in newly liberalized economies?

Let me take this opportunity to propose some parameters for the coming debate.

Our goal must be the development of democratic societies with market-oriented economies in a stable environment. Our policy, therefore must be both broad and flexible. It must be broad enough to provide for all countries shrugging off the Communist yoke—we must reject a piecemeal approach that would stumble forward on a case-by-case basis. Yet our approach must be flexible enough to respond quickly to needs and events as they arise.

To these ends I suggest the following:

First, we should give active support to those East European nations aspiring to establish free and pluralistic governments—and who have declared their intentions to hold fair elections. Merely conveying our congratulations is insufficient: we need to provide electoral and educational assistance in an efficient and timely fashion. This means now. We do not have the luxury of time. Elections in Poland are scheduled for the spring; Hungary will soon follow. We should be channeling funds through experienced operations such as the National Endowment for Democracy "NED" that are already on the ground and running. We cannot afford to nickel-and-dime these newly liberated countries. Successful elections are the first and necessary step to any future progress in democratization. We gave $9 million to tiny Nicaragua for electoral support. Surely we can find more than the $3 million already authorized for Eastern European countries.

Second, we need to participate with our allies in a comprehensive and concerted effort to assist countries in making crucial economic reform. There have been many suggestions on how to best aid in economic revitalization—including the Marshall plan approach which I favor—and an Eastern Europe development bank proposed by President Mitterand of France. U.S. initiatives require multilateral cooperation and comprehensive application. The United States alone clearly cannot provide for the economic recovery of Eastern Europe as it did for Western Europe after World War II. Western Europe and Japan themselves now have considerable resources and must take leading roles. But it is incumbent on the United States to help lead. A united democractic Europe has been one of our primary foreign policy goals for the past 40 years; we should not let recent initial successes founder on the shoals of economic chaos and abject poverty. Additionally, working closely with our allies will help ensure that our efforts and resources are not wasted in needless duplication and inefficiency.

Third, I believe we should work promptly through a Helsinki II format to address the sensitive security and trade issues arising as a result of the collapse of the Warsaw Pact. Such a forum could help manage the transformations already underway, reducing the tensions brought by instability and uncertainty. A Helsinki II conference should include both Western and Eastern European nations, as well as the United States and the Soviet Union. Such a conference would not be a threat to NATO, the Warsaw Pact or the European Community. Rather, it could provide a more broad structure for negotiation and consultation.

Tremendous challenges and opportunities confront us in Eastern Europe. The peoples of that region must take a great deal of the credit for making these opportunities possible. Their courage and determination to shape for themselves a better life has created the prospect for all of us to enjoy a more secure, more prosperous world. But they cannot do it alone. They need political and economic assistance, and they need it quickly.

By Mr. SYMMS (for himself, Mr. CHAFEE, Mr. DASCHLE, Mr. MATSUNAGA, and Mr. MCCLURE):

S. 2041. A bill to amend title XVIII of the Social Security Act to provide uniform national conversion factors for services of certified registered nurse anesthetists; to the Committee on Finance.

CRNA PAYMENT AMENDMENTS

Mr. SYMMS. Mr. President, today I am introducing legislation to create a national reimbursement rate for nurse anesthetists under Medicare.

In the Omnibus Budget Reconciliation Act of 1986, Congress directed the Health Care Financing Administration [HCFA] to establish a fee schedule for CRNA's, effective January 1, 1989. The fee schedule contains two separate rates—one for CRNA services which are medically directed by a doctor, and another for services which the CRNA is personally responsible.

While the fee schedule system is desirable for CRNA's, the schedule drafted by HCFA is far below the actual cost of these services. The variation from State to State is extreme; there is a 70-percent difference from the lowest rate to the highest.

This is because the data which HCFA used to calculate the schedule was from 1986 salaries, using a 6-percent annual update when actually the update was 12 percent. The overhead costs were also underestimated, resulting in a clearly inequitable fee schedule.

Obviously, our CRNA's cannot operate at such a reimbursement level, especially in my State of Idaho which has the lowest reimbursement rate on the schedule. Idaho must still compete with bordering States for CRNA services and with the current schedule, it will be unlikely if any CRNA's remain in the State. Since Idaho has relatively few anesthesiologists, this will create serious problems in Idaho's health care.

The bill I am introducing will establish a national rate for all CRNA's. For medically directed CRNA services the rate will be set at $14 per unit; for nonmedically directed services the rate will be $21 per unit. These rates will be adjusted annually.

This provision was included in the Finance Committee's budget reconciliation bill for fiscal year 1990 and had wide support among Members before it was stripped out as extraneous.

While Idaho's current reimbursement rate is completely unacceptable, I know that CRNA's in most other States are experiencing problems as well. I encourage my colleagues to support this legislation and to bring some equity back into the system.

Mr. President, I ask unanimous consent that the text of the bill be printed in RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2041

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "CRNA Payment Amendments of 1990".

SEC. 2. UNIFORM NATIONAL CONVERSION FACTORS PROVIDED.

Section 1833(I) of the Social Security Act (42 U.S.C. 1395(I)) is amended—

(1) in paragraph (3)—

(A) by striking "and 1990" in subparagraph (B): and

(B) by adding at the end thereof, the following new subparagraph:

"(C)(i) In establishing fee schedules under this subsection for services furnished in 1990 and thereafter, subject to clause (ii), the Secretary shall establish uniform national conversion factors which shall be $14 for services furnished under the medical direction of a physician and $21 for services that are not medically directed. The conversion factors shall be adjusted annually in 1991 and thereafter by the percentage increase in the MEI referred to in paragraph (2).

"(ii) The conversion factors described in clause (i) as applied to services furnished in any locality shall not exceed the conversion factor applied to anesthesiologists' services furnished in the same locality, except that this clause shall not apply in the case of services furnished in a facility in which there is no anesthesiologist furnishing anesthesia services."; and

(2) in paragraph (4)—

(A) by striking "or any appropriate methodology" in the first sentence; and

(B) by striking all of the second sentence.

By Mr. MOYNIHAN:

S. 2042. A bill to establish the Thomas Cole National Historic Site in the State of New York; to the Committee on Energy and Natural Resources.

THOMAS COLE NATIONAL HISTORIC SITE

● Mr. MOYNIHAN. Mr. President, I rise to introduce a bill that would place the home and studio of Thomas Cole under the care of the National Park Service as a national historic site. Thomas Cole founded the American artistic tradition known as the Hudson River School. He painted landscapes of the American wilderness as it never had been depicted, untamed and majestic, the way Americans saw it in the 1830's and 1840's. His followers included Frederick Church, Alfred Bierstadt, Thomas Moran, and John Frederick Kensett.

Any description of Cole's works would not do them justice, but their moody, dramatic style and subject matter were in sharp contrast to the pastoral European landscapes that Americans had previously admired. The new country was just settled enough that some people had the time and resources to devote to collecting art. Cole's new style coincided with this growing interest, to the benefit of both.

Cole had begun his painting career in Manhattan, but one day took a steamboat ride up the Hudson River for inspiration. It worked. The landscapes he saw set him on the artistic course that became his life's work. He eventually moved to a house up the river in Catskill, where he boarded, lived, married, and raised his family. That house, called Cedar Grove, remained in the Cole family until 1979, when it was put up for sale. Three art collectors saved it from developers, and now the Thomas Cole Foundation is offering to donate the house to the Park Service.

Mr. President, the home of one of the most influential 19th century American painters is being offered as a donation. I believe we owe it to him, and to the many people who admire the Hudson River School and explore its origins, to accept this offer and designate it a national historic landmark.

I regret that none of Thomas Cole's work hangs in the Capitol, although two works by Bierstadt can be found in the stairwell outside the Speaker's Lobby. Perhaps Cole's greatest work in the four-part Voyage of Life, an allegorical series that depicts man in the four stages of life. It can be found in the National Gallery of Art, Washington, along with two other Cole paintings. The National Gallery currently has a major exhibition of works by Church, who was Cole's first student.

I urge my colleagues to seek out these and other works from the Hudson River School. They are proof enough of Cole's importance and the need to add his home to the list of national historic landmarks.

Mr. President, I ask unanimous consent that the text of the measure be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2042

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. PURPOSE.

The purpose of this Act is to preserve and interpret, for the benefit, inspiration, and education of the American people, the unique American artistic tradition known as the Hudson River School, which was founded by Thomas Cole and characterized by a group of nineteenth century landscape artists who attempted to record and celebrate the landscape and wilderness of America, particularly in the Hudson River Valley in the State of New York.

SEC. 2. ESTABLISHMENT.

In order to carry out the purpose of this Act, as described in section 1, there is established the Thomas Cole National Historic Site in Catskill, New York.

SEC. 3. DESCRIPTION OF THE HISTORICAL SITE

The Site referred to in section 2 is the home and studio of Thomas Cole and shall consist of the 3.4 acre site and improvements thereon located at 218 Spring Street, City of Catskill, State of New York, as generally depicted on the map entitled "Thomas Cole National Historic Site Boundary Map", numbered ————, and dated ————. The map shall be on file and available for public inspection at appropriate offices of the National Park Service.

SEC. 4. ACQUISITION OF REAL AND PERSONAL PROPERTY.

(a) REAL PROPERTY.—The Secretary may acquire, by donation only, the land and improvements described in section 2. The Secretary may also acquire lands and improvements necessary for the management and operation of the site in Catskill, New York.

(b) PERSONAL PROPERTY.—The Secretary may acquire, for purposes of the Site, paintings, historic objects and artifacts, and other personal property associated with Thomas Cole and the Hudson River School by donation or purchase with donated or appropriated funds.

SEC. 5. ADMINISTRATION OF SITE.

(a) IN GENERAL.—The Secretary shall administer the Site in accordance with—

(1) the provisions of this Act; and

(2) the provisions of law generally applicable to national historic sites, including the Acts entitled—

(A) "An Act to establish a National Park Service, and for other purposes", approved August 25, 1916 (16 U.S.C. 1 and following); and

(B) "An Act to provide for the preservation of historic American sites, buildings, objects and antiquities of national historic significance, and for other purposes", approved August 21, 1935 (16 U.S.C. 461 and following, popularly known as the "Historic Sites, Buildings, and Antiquities Act").

(b) PRESERVATION AND INTERPRETATION OF SITE.—In administering the Site, the Secretary shall—

(1) preserve and interpret the home and studio of Thomas Cole, as described in section 3, as a national historic site;

(2) preserve and perpetuate knowledge and understanding, and provide for public understanding and enjoyment, of life and work of Thomas Cole and the Hudson River School;

(3) provide assistance to public and private entities in the interpretation of the Hudson River artists, their houses and studios, and the vistas depicted by Hudson River artists throughout the Hudson River Valley region; and

(4) encourage an appreciation of the scenic and artistic tradition inspired by the Hudson River artists.

The Secretary shall, at his discretion, provide technical assistance to further the purposes of this Act.

(c) COOPERATION WITH STATE OF NEW YORK AND OTHER ENTITIES.—The Secretary may enter into cooperative agreements with the State of New York and other public and private entities to further the purposes of this Act.

(d) REPORT.—As soon as practicable after the date of enactment of this Act, the Secretary shall prepare a report in consultation with the Thomas Cole Foundation and nationally recognized historians, scholars, and other experts concerning the interpretation, preservation, and tourism of, and other issues related to, the Site and other sites in the Hudson River Valley region of related historical significance. This report shall be submitted to the Committee on Interior and Insular Affairs of the United States House of Representatives and the Committee on Energy and Natural Resources of the United States Senate not later than one year after the date of enactment of this Act.

(e) DONATIONS.—The Secretary may accept and use donated funds, property, and services to carry out the purposes of this Act.

SEC. 6. MANAGEMENT PLAN.

(a) IN GENERAL.—Not later than 3 years after the date of enactment of this Act, the Secretary shall develop and submit to the Committee on Interior and Insular Affairs of the United States House of Representatives and the Committee on Energy and Natural Resources of the United States Senate a general management plan for the preservation, interpretation, use, and development of the Site.

(b) PLAN REQUIREMENTS.—The management plan required by subsection (a) shall—

(1) be based on the report prepared pursuant to section 5(d);

(2) be prepared in accordance with section 12(b) of the Act entitled "An Act to improve the administration of the national park system, and to clarify the authorities applicable to the system, and for other purposes", approved August 18, 1970 (16 U.S.C. 1a-7(b)); and

(3) include recommendations and cost estimates for the identification, marking, interpretation, and preservation of properties and landscapes associated with the Hudson River School and located throughout the Hudson River Valley region, identified through cooperative agreements and other means deemed appropriate, feasible, and practicable.

SEC. 7. DEFINITIONS.

As used in this Act, the term—

(1) "Hudson River Valley region" means the counties of Albany, Columbia, Dutchess, Greene, Orange, Putnam, Rockland, Ulster, Rensselaer, Washington, and Westchester in the State of New York;

(2) "Secretary" means the Secretary of the Interior; and

(3) "Site" means the Thomas Cole National Historic Site created by section 2.

SEC. 8. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated such sums as may be necessary to carry out this Act.●

By Mr. HOLLINGS:

S. 2043. A bill to establish a reforestation program for timber lands suffering damages from natural disasters; to the Committee on Agriculture, Nutrition, and Forestry.

EMERGENCY REFORESTATION PROGRAM

● Mr. HOLLINGS. Mr. President, I rise today to introduce legislation to address a previously unrecognized form of disaster assistance. This bill would establish an Emergency Reforestation Program to provide for the reforestation of timber lands that are damaged by natural disasters. Enactment of this legislation will provide necessary assistance for the timber owners who suffered damages from Hurricane Hugo and will create a program to help landowners who suffer similar natural disasters in the future.

In his fiscal year 1991 budget, President Bush has proposed a $175 million tree planting program to mitigate the effects of global warming. This proposal makes sense only if we have a program which will give priority to the timber lands which are the most in need. My bill would establish such a program.

At the end of the last session, the administration objected to using the Federal Emergency Management Agency to reforest private lands and has reiterated this objection in a recent letter to me. If we cannot use FEMA for this purpose, I believe we must have an Emergency Reforestation Program.

This bill would establish a cost sharing program to pay 75 percent of reforestation costs for owners of timber stands which suffer damages resulting from conditions which qualify as a major disaster under the Robert T. Stafford Disaster Relief and Emergency Assistance Act.

The bill would provide for a careful implementation of the program by requiring the Secretary of Agriculture to consult with an Emergency Reforestation Committee in drawing up the regulations. This committee would be comprised of at least five State foresters or equivalent State officials from around the country. Participation of the committee would ensure that State level officials would have a voice in the Emergency Reforestation Program.

On September 21 and 22, 1989, Hurricane Hugo levelled 6.7 billion board feet of timber in South Carolina—enough timber to rebuild the city of Charleston 10 times over. This loss, at an estimated $1.04 billion, represents a severe financial blow to the private timber owners, who own almost 70 percent of South Carolina's forests. These individuals and families saw Hugo wipe away their nest eggs in the course of a few hours. The acres of splintered and shattered trees are the most persuasive testimony to Hugo's brute force, and to the fact that it will be a full generation before the land fully recovers.

The enormous amount of wood on the ground also represents the grim possibility of another huge natural disaster in South Carolina: Specifically, an uncontrollable forest fire that could feed on the downed timber unless the land is cleaned up. We simply don't have the manpower, rail access, or mill capacity to salvage all the timber, which is subject to rapid deterioration.

Reforestation of the land will also solve several environmental problems. The decomposing wood has been under swift attack of blue stain fungi as well as Southern pine beetles and other insects which create health threats. The soil is in danger of extensive erosion, and the wildlife habitats of several endangered species, including the red-cockaded woodpecker, have been virtually demolished.

I hope that the Senate will act quickly on this bill. The timber owners of South Carolina need Federal assistance immediately, and we must establish a program which will ease similar problems for victims of future natural disasters.●

By Mr. BIDEN (for himself, Mr. LIEBERMAN, Mr. JEFFORDS, Mr. WIRTH, Mr. MOYNIHAN, Mr. PELL, and Mr. SIMON):

S. 2044. A bill to require tuna products to be labeled respecting the method used to catch the tuna, and for other purposes; to the Committee on Commerce, Science, and Transportation.

DOLPHIN PROTECTION CONSUMER INFORMATION ACT OF 1990

Mr. BIDEN. Mr. President, 18 years ago, the Marine Mammal Protection Act was signed into law. One of the major purposes of that law was to reduce the number of dolphins killed as a result of tuna fishing operations. A goal of zero mortality was established.

We have failed to achieve that goal. The tuna industry has changed some of its practices in attempts to reduce the number of dolphin deaths, but they remain unacceptably high. The reductions managed by our domestic fleet have been offset by the growth of the foreign fleet. One hundred thousand dolphins continue to be killed each year as a result of tuna fishing operations.

Changes in the world's tuna fleet have led many of us to question whether the approach developed in the early 1970's has any chance of success under today's conditions. The goals expressed by the tuna industry and the Federal Government may simply be beyond reach using the tools at hand. It is time to look at additional efforts that will put us back on the path to zero mortality.

That is why I am joined today by a number of my colleagues in introducing a bill to provide consumers with the information on how the tuna they are purchasing was caught. The bill I am introducing with Senators LIEBERMAN, JEFFORDS, WIRTH, MOYNIHAN, PELL, and SIMON requires the labeling of tuna products that are caught using methods known to kill dolphins. Tuna products not caught in association with dolphin, the vast majority of the world's catch, can be labeled "dolphin safe." The bill will add consumer information to the effort to cut these unnecessary deaths.

Passage of the Marine Mammal Protection Act nearly two decades ago represented a milestone in wildlife legislation. At the time, the United States' fleet accounted for an estimated 90 percent of the dolphins killed in tuna fishing operations. The law made clear that our Nation was willing to bear the burden of reducing those mortalities.

But as that law was implemented, two changes occurred. First, the goal of zero mortality was pushed further and further into the future. Exemptions and delays were granted to an industry that promised solutions were just around the corner. The industry modified its practices, but the new methods have not proven to be adequate to the task.

Progress toward the goal of zero mortality has halted. In 1972, the U.S. fleet was responsible for 200,000 dolphin deaths. That figure dropped by 90 percent in the 6 years after enactment of the MMPA, but failed to continue its downward trend. For the past several years, the U.S. tuna fleet's permit for allowed dolphin kills has remained at 20,500. There is little expectation that the level of dolphin kills permitted under Federal regulations will drop dramatically in the foreseeable future. With the limit on dolphin kills fixed, industry has no reason to make the changes required to bring down the number of actual dolphin kills.

Second, the foreign fleet's role grew, accounting for an ever greater proportion of the dolphin deaths. Foreign boats now account for roughly 80 percent of annual dolphin deaths from tuna fishing operations. In 1972, the United States fleet could make a huge difference in the number of dolphins killed through unilateral reductions. Today, the United States fleet is a declining portion of the total. Ratcheting down on the domestic fleet will help, but not solve the problem.

Attempts have been made to adjust the MMPA to this situation by requiring countries exporting fishery products to the United States to have dol-

phin protection programs comparable to ours. The Secretary of Commerce is to certify that each country meets comparable standards. Import bans on fishery products could be imposed on countries that are found to have inadequate programs.

As straightforward and encompassing as this approach sounds, it has not worked. Certification of countries for failing to establish comparable programs is the exception, rather than the rule. Threats of imports restrictions have failed to be effectively used.

A supplement to the certification process, the observer program, is supposed to increase assurances that foreign fleets implemented those programs at sea, not just on paper. Observers are sent on foreign tuna fishing boat trips to verify the crew's operations are consistent with the programs. But observers cover only about one-third of the foreign fleet's trips.

So we have in place a system that, if fully and forcefully implemented, might return us to a downward trend in dolphin mortality. But the program has too many flaws, too many loopholes to be completely effective. The U.S. fleet has little reason to fear it; the foreign fleet, even less.

And the program, is based on a premise that is quickly becoming outdated—that a Federal program was the only means to bring down dolphin deaths. Events have overtaken that assumption.

Consumers have indicated that they are willing to put their pocketbook decisions to work for the environment. This week's Fortune magazine cover story documents that rise in environmental considerations in purchasing decisions. Fortune's headline calls it "the biggest business issue of the 1990s." A public policy expert quoted in the article calls environmental purchasing factors "the most important issue for businesses." Clearly, we have a tool available today which was unavailable and unthought of in 1972. It is time to modernize the existing program.

Labeling tuna cans will not be an unduly complex operation. Industry already numbers each can of tuna, to facilitate tracking when problem shipments occur. Arguments that labeling the cans is impossible or too burdensome do not wash. In fact, one analysis of the impact of the labeling proposal estimated that it would require the tracking of the equivalent of only 220 tuna fishing boat trips. That is well within our capability.

Industry supports an increase in research on the problem. But surely after 18 years of experience with this issue we have to recognize that a more fundamental change is needed. That is what this bill represents.

The labeling of tuna will enable consumers to express their support for the national goal of reducing dolphin mortalities. There is no inherent reason to keep our Nation's dolphin conservation program locked in the shadows of a federal bureaucracy when an alternative exists. Our Nation's and the world's tuna fishing industry has changed dramatically since the MMPA was originally developed. This bill reflects some of those changes. I urge my colleagues to join me and Senators LIEBERMAN, JEFFORDS, WIRTH, MOYNIHAN, PELL, and SIMON in supporting their initiative.

I ask unanimous consent that the text of the bill be printed in the RECORD following my remarks.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2044

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Dolphin Protection Consumer Information Act of 1990".

SEC. 2. FINDINGS.

The Congress finds that—

(1) there is an existing threat to dolphins, porpoises, and whales in the form of purse seine netting of these species and through driftnets and other methods and technologies;

(2) consumers have the right to know whether the tuna that they purchase were procured through methods or technologies which kill, harass, or endanger these species; and

(3) a requirement of labeling of tuna products would provide that information to consumers.

SEC. 3. LABEL REQUIREMENT.

(a) IN GENERAL.—

(1) The label of all tuna products containing tuna which are, in whole or in part, caught with—

(A) drift gill nets of more than one and one-half miles in total length;

(B) purse seine nets in the Eastern Tropical Pacific Ocean, unless certified as "Dolphin Safe" under subsection (b) of this section;

(C) any purse seine nets set on dolphin in other marine areas; or

(D) other methods or technologies as the Secretary may find that kill, harass, or endanger these species (except that tuna caught with staked gill nets less than 1.5 miles, and technologies and methods in use as of the date of enactment of this Act, other than those enumerated in clauses (A) through (C), are not subject to this labeling requirement);

and which are processed, sold, imported, exported, or otherwise placed into commerce in the United States shall, regardless of the country of origin, bear the following statement: "The Tuna in This Product Was Caught with Methods That Kill Dolphins".

(2) Other tuna products processed, sold, imported, exported, or otherwise placed into commerce in the United States may bear the following statement: "Dolphin Safe".

(3) The statement required by paragraph (1) shall be located in a conspicuous place on the label of every can, box, or other package containing any tuna product sold for consumption or other use; shall be as proximate as possible to the name of such product; and shall appear in conspicuous and legible type no smaller than 4 millimeters in height, contrasting in typography, layout, and color with other printed matter on such label.

(4) The importer of consumer-ready imported tuna products shall be liable for the label and recordkeeping requirements of paragraph (1). The processor of all other tuna products shall be liable for such requirements.

(b) CERTIFICATION.—The Secretaries of Commerce and of Health and Human Services shall prescribe recordkeeping requirements that will facilitate verification of information needed to enforce this section, including the form of "Dolphin Safe" certification which shall—

(1) include a statement that the trip to or through the Eastern Tropical Pacific Ocean did or did not include use of purse seine nets deployed on or around dolphin;

(2) be executed by the vessel captain and by an independent on-board compliance observer approved by the Secretary of Commerce or by the Inter-American Tropical Tuna Commission; and

(3) be endorsed by each exporter, importer, and processor of tuna or products containing tuna caught as described in subsection (a)(1) of this section.

(c) MISLEADING LABEL.—A can, box, or package containing any tuna product will be deemed to be mislabeled—

(1) if it is not labeled in accordance with subsection (a); or

(2) if its label contains any false or misleading information pertaining to dolphins, porpoises, or whales.

(d) It is unlawful for any person to sell, or to advertise, market, offer for sale, or place into commerce in, or export from, the United States any tuna product that is not in compliance with the recordkeeping and labeling requirements of this section.

SEC. 4. ENFORCEMENT.

(a) IN GENERAL.—The Secretary of Health and Human Services, acting through the Food and Drug Administration, and the Secretary of Commerce shall implement this Act through a program that shall include but not be limited to frequent inspections to determine whether records required by this Act are being accurately maintained and whether tuna products are being labeled in accordance with section 3, and that any other requirements of this Act or regulations adopted pursuant to it are being met.

(b) CITIZEN SUIT.—Any person may commence a civil action seeking injunctive or other relief against any other person, including the Secretary, who is alleged to be in violation of this Act or regulations promulgated thereunder, or to compel the Secretary to perform any duty required by the Act.

SEC. 5. JURISDICTION OF THE COURTS.

(a) IN GENERAL.—The district courts of the United States and United States courts of the territories shall have jurisdiction over any action arising under this Act.

(b) COSTS.—In issuing any final order in an action brought pursuant to this Act, the court shall award all reasonable costs of litigation (including, but not limited to, reasonable attorney, investigative, and expert witness fees) to any party unless the court determines the award is not appropriate.

SEC. 6. PENALTIES.

(a) CRIMINAL.—Any person who violates section 3 or regulations promulgated pursuant to section 3, or an injunction or restraining order issued pursuant to this Act shall be imprisoned for not more than one year or

fined a minimum of two times the fair market value of the tuna product that is the subject of the violation and an additional fine of no more than $100,000, or both fined and imprisoned, except that if any person commits such a violation after a conviction of that person becomes final, or commits such a violation with the intent to defraud or mislead, such person shall be imprisoned for not more than 3 years, or fined four times the fair market value of the tuna product that is the subject of the violation and an additional $300,000, or both fined and imprisoned. The Secretary of Commerce shall also cancel, or suspend for a period of up to one year, any certificates of inclusion under the Marine Mammal Protection Act of 1972 or other Federal fishing certificates or permits issued to any person who is convicted of a criminal violation of any provision of this Act.

(b) CIVIL PENALTIES.—Any person who violates any provision of this Act or any regulation promulgated pursuant to it, may be assessed a civil penalty by the Secretary or the courts, of up to $100,000 or twice the fair market value of the tuna product that is the subject of the violation, or both.

(c) DISPOSITION OF FINES.—Fines and proceeds from the sale of confiscated goods received as a result of violations of this Act shall be retained by the Secretary of Health and Human Services and by the Secretary of Commerce in equal amounts, subject to appropriations, and be allocated within 2 fiscal years, in consultation with the Marine Mammal Commission, to the implementation of dolphin conservation programs and protection regulations.

SEC. 8. DEFINITIONS.

For the purposes of this Act—

(1) the term "Eastern Tropical Pacific Ocean" or "ETP" means that area of the Pacific Ocean bounded by 40 degrees N. Latitude, 40 degrees S. latitude, 160 degrees W. longitude, and the coastline of North, Central, and South America, or as otherwise expanded in area by the Secretary of Commerce under 50 Code of Federal Regulations 216.24(e)(9)(ii)(C).

(2) the term "label" means a display of written, printed, or graphic matter upon or affixed to the immediate container of any article.

(3) the term "tuna product" means any food or non-food goods which contain tuna, except perishable sandwiches, salads, or other products with a shelf life of less than 3 days.

SEC. 9. PROMULGATION OF REGULATIONS.

Within 180 days of the date of the enactment of this Act, the Secretaries of Commerce and of Health and Human Services, after consultation with the Marine Mammal Commission established by section 201 of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1401), shall conclude a memorandum of understanding and publish proposed regulations for the implementation of this Act. Such regulations shall be promulgated in accordance with section 553 of title 5, United States Code, except that each such Secretary shall provide no more than 90 days for the submission of data, views, or arguments on the proposed regulations.

SEC. 10. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated—

(1) not to exceed $4,000,000 for fiscal years 1991, 1992, 1993, 1994, and 1995 to enable the Department of Commerce to carry out such functions and responsibilities as it may have been given under this Act; and

(2) not to exceed $2,000,000 for fiscal years 1991, 1992, 1993, 1994, and 1995 to enable the Department of Health and Human Services to carry out such functions and responsibilities as it may have been given under this Act.

Mr. LIEBERMAN. Mr. President, I rise today to support Senator BIDEN as a cosponsor of his legislation to give consumers of tuna a choice: Do we want to buy tuna which has been caught using methods known to cruelly maim or kill dolphin? Or would we rather buy tuna labeled "Dolphin-safe"?

The answer is easy: The majority of Americans in general support greater environmental protection, and the majority is in favor of labeling which would let us know which products we buy are harmful to the environment and which are benign.

The United States is the world's largest consumer of tuna—over 75 percent of its households buy tuna regularly, and a 1979 survey showed that even at that time over 70 percent of those consumers were aware of and concerned about the killing of dolphin by some tuna fishing practices. Perhaps more importantly, these same consumers said they would be willing to pay more to prevent it.

The fishing practices in question are those which rely on the purse-seine net. Although less than 10 percent of all tuna harvested worldwide are caught using this method, it kills more than 100,000 dolphins each year.

The purse seine is a mile-long stretch of net held up by floats and hanging several hundred feet deep. It is used primarily in the eastern tropical Pacific where, for reasons unknown, yellowfin tuna often swim below schools of dolphin. In order to catch the tuna, the net is dropped to intentionally encircle the dolphin. When the net is pulled tight, the dolphin either suffocate of drown, that is if they are not maimed or killed as a result of being caught up in the power blocks which rein in the net cables.

Where this method is used in the eastern tropical Pacific, dolphin have been disappearing at the rate of one every 2½ minutes for the last 30 years. It is the leading cause of dolphin death.

I urge my colleagues to carefully review and support The Dolphin Protection Consumer Information Act which would give the public the information necessary to make the choice to protect dolphin and to let the marketplace render their verdict.

By Mr. LAUTENBERG (for himself and Mr. SPECTER):

S.J. Res. 243. Joint resolution to designate March 25, 1990, as "Greek Independence Day: A National Day of Celebration of Greek and American Democracy"; to the Committee on the Judiciary.

GREEK INDEPENDENCE DAY

Mr. LAUTENBERG. Mr. President, I rise to introduce a joint resolution to designate March 25, 1990, as "Greek Independence Day: A National Day of Celebration of Greek and American Democracy." The joint resolution also asks the President to issue a proclamation calling upon the people of the United States to observe the designated day with appropriate ceremonies and activities.

This joint resolution is identical to one that Senator SPECTER and I introduced in the last Congress, Senate Joint Resolution 64. That joint resolution, which had 58 cosponsors, was approved unanimously by the Senate and became law on March 21, 1989.

March 25, 1990 marks the 169th anniversary of the beginning of the revolution which freed the Greek people from the Ottoman Empire. It is fitting that we celebrate this day together with Greece in order to reaffirm the common democratic heritage of Americans and Greeks.

The ancient Greeks forged the very notion of democracy, placing the ultimate power to govern in the people. As Aristotle said,

> If liberty and equality, as is thought by some, are chiefly to be found in democracy, they will best be attained when all persons alike share in the government to the utmost.

The notion of democracy was born 2,500 years ago in the public squares of Athens. America's Founding Fathers drew heavily upon the political and philosophical experience of ancient Greece in forming our Government.

The common heritage which we share has forged a close bond between Greece and the United States and between our peoples. But the bond between our two countries does not end with the contributions of democracy, freedom, and liberty. It is also reflected in the contributions Greek immigrants and their American-born children have made in New Jersey and across the country. They have enriched our culture and made strides in many areas of our society—the arts and humanities, science, business, and government.

I urge my colleagues to support this joint resolution as a tribute to these contributions, past and present, which have greatly enriched American life.

Mr. President, I ask unanimous consent that the text of this joint resolution appear in the RECORD.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

S.J. RES. 243

Whereas the ancient Greeks developed the concept of democracy, in which the supreme power to govern was vested in the people;

Whereas 1990 marks the 2,500th anniversary of the birth of democracy;

Whereas the Founding Fathers of the United States drew heavily upon the political and philosophical experience of ancient Greece in forming our representative democracy;

Whereas March 25, 1990, marks the 169th anniversary of the beginning of the revolution that freed the Greek people from the Ottoman Empire;

Whereas democratic ideals have forged a close bond between our two nations and their peoples; and

Whereas it is proper and desirable to celebrate our ideals with the Greek people, and to reaffirm the democratic principles from which our two great nations sprang: Now therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That March 25, 1990, is designated as "Greek Independence Day: A National Day of Celebration of Greek and American Democracy", and the President is authorized and requested to issue a proclamation calling upon the people of the United States to observe that day with appropriate ceremonies and activities.

Mr. SPECTER. Mr. President, today I join my colleague Senator LAUTENBERG in introducing a joint resolution to designate March 25, 1990, as "Greek Independence Day: A Celebration of Greek and American Democracy."

One hundred and sixty-nine years ago the Greeks began the revolution that would free them from the Ottoman Empire and return Greece to its democratic heritage. It was, of course, the ancient Greeks who developed the concept of democracy in which the supreme power to govern was vested in the people. Our Founding Fathers drew heavily upon the political and philosophical experience of ancient Greece in forming our representative democracy. How fitting, then, that we should recognize the anniversary of the beginning of their effort to return to that democratic tradition.

This democratic form of government is one of the most obvious of the many benefits we gained from the Greek people. The ancient Greeks contributed a great deal to the modern world and particularly to the United States of America, including art and philosophy, science, and law. Today, Greek Americans continue to enrich our culture and to make valuable contributions to American society, business, and government.

It is my hope that the strong support for this joint resolution in Congress will serve as a clear good will gesture to the people of Greece with whom we have enjoyed such a close bond throughout history. Accordingly, I urge my colleagues to join us in supporting this important resolution.

By Mr. HOLLINGS (for himself and Mr. RUDMAN):

S.J. Res. 244. Joint resolution to repeal section 614 of the Department of Commerce, Justice, and State, the Judiciary, and Related Agencies Appropriations Act, 1990, and section 302 of the Foreign Relations Authorization Act, fiscal years 1990 and 1991; to the Committee on Appropriations.

REPEAL OF CERTAIN APPROPRIATIONS AND AUTHORIZATION PROVISIONS

● Mr. HOLLINGS. Mr. President, as I indicated yesterday, we need to repeal section 302 of the Foreign Relations Authorization Act for fiscal years 1990 and 1991 as well as section 614 of the Commerce, Justice, State, the Judiciary and Related Agencies Appropriations Act for fiscal year 1990. On behalf of myself and the distinguished junior Senator from New Hampshire [Mr. RUDMAN], I am introducing a joint resolution to make those repeals.

Section 302 of the pending Foreign Relations Authorization Act, that President Bush is expected to approve, would require the appropriations to the Board for International Broadcasting to be authorized in law before they would be available for obligation and expenditure. This is similar to the requirements of section 15 of the State Department Basic Authorities Act and section 701 of the United States Information and Educational Exchange Act. The distinguished chairman and the ranking minority member of the Committee on Foreign Relations, as well as the chairman of the Committee on Foreign Affairs of the other body have all agreed that section 302 is unnecessary. We all want to repeal it at the earliest possible date.

As part of the joint resolution I also provide for repeal of section 614. This section limits the Department of State and the U.S. Information Agency to the 1989 levels instead of the 1990 levels already approved in the 1990 Appropriations Act, which President Bush signed into law on November 21, 1989 as Public Law 101-162. Repeal of section 614 was included as a 1990 supplemental request on the President's budget transmitted to the Congress yesterday. This will make available an additional $173,750,000 to the Department and $44,496,000 to USIA.

Mr. President, repeal of these two sections should be accomplished as soon as possible. The Secretary of State and Director of the USIA need to get on with the full programs we approved. This joint resolution will get everything shipshape. I urge that consideration of this joint resolution be expedited as it now appears that the emergency supplemental appropriations bill for Panama, which is the other vehicle that we talked of using to make these repeals, will not be coming up from the administration as quickly as had been anticipated.●

ADDITIONAL COSPONSORS

S. 16

At the request of Mr. CRANSTON, the name of the Senator from Minnesota [Mr. DURENBERGER] was added as a cosponsor of S. 16, a bill to require the executive branch to gather and disseminate information regarding, and to promote techniques to eliminate, discriminatory wage-setting practices and discriminatory wage disparities which are based on sex, race, or national origin.

S. 466

At the request of Mr. LEVIN, his name was added as a cosponsor of S. 466, a bill to amend title 18 of the United States Code to prohibit the use of the mails to sell or solicit the sale of anabolic steroids.

S. 1000

At the request of Mr. MCCLURE, the name of the Senator from Montana [Mr. BURNS] was added as a cosponsor of S. 1000, a bill to amend the Agricultural Act of 1949 to require the Secretary of Agriculture to exclude the malting barley price from the national weighted market price for barley in determining the payment rate used to calculate deficiency payments for the 1989 and 1990 crops of barley, and for other purposes.

S. 1142

At the request of Mr. LEVIN, his name was added as a cosponsor of S. 1142, a bill to establish and evaluate four military-style boot camp prisons within the Federal prison system as a 4-year demonstration program.

S. 1254

At the request of Ms. MIKULSKI, the names of the Senator from Connecticut [Mr. LIEBERMAN] and the Senator from Maine [Mr. MITCHELL] were added as cosponsors of S. 1254, a bill to authorize the Secretary of Labor to make grants to public housing agencies for the provision of literacy training, training in basic and employment skills and support services and to establish the Gateway Task Force.

S. 1310

At the request of Mr. SIMON, the name of the Senator from Louisiana [Mr. JOHNSTON] was added as a cosponsor of S. 1310, a bill to eliminate illiteracy by the year 2000, to strengthen and coordinate literacy programs, and for other purposes.

S. 1560

At the request of Mr. BURNS, the name of the Senator from Minnesota [Mr. BOSCHWITZ] was added as a cosponsor of S. 1560, a bill to suspend the enforcement of certain regulations relating to underground storage tanks, and for other purposes.

S. 1698

At the request of Mr. GORE, the name of the Senator from West Virginia [Mr. ROCKEFELLER] was added as a cosponsor of S. 1698, a bill to amend the Communications Act of 1934 to provide for fair marketing practices for certain encrypted satellite communications.

S. 1791

At the request of Mr. ROCKEFELLER, the name of the Senator from Utah [Mr. GARN] was added as a cosponsor of S. 1791, a bill to amend the International Travel Act of 1961 to assist in the growth of international travel and tourism into the United States, and for other purposes.

S. 1874

At the request of Mrs. KASSEBAUM, the name of the Senator from Rhode Island [Mr. PELL] was added as a cosponsor of S. 1874, a bill to amend the Public Health Service Act to provide for the establishment of a national program for tropical medicine and infectious disease, and for other purposes.

S. 1942

At the request of Mr. ROCKEFELLER, the names of the Senator from Iowa [Mr. HARKIN] and the Senator from West Virginia [Mr. BYRD] were added as cosponsors of S. 1942, a bill to provide for home and community care as optional statewide service, and for other purposes.

S. 1971

At the request of Mr. THURMOND, the names of the Senator from Utah [Mr. HATCH], the Senator from Iowa [Mr. GRASSLEY], the Senator from California [Mr. WILSON], the Senator from New Mexico [Mr. DOMENICI], the Senator from Mississippi [Mr. LOTT], the Senator from Missouri [Mr. BOND], the Senator from Indiana [Mr. COATS], the Senator from Montana [Mr. BURNS], and the Senator from Kentucky [Mr. MCCONNELL] were added as cosponsors of S. 1971, a bill to establish a constitutional death penalty and strengthen and improve Federal criminal penalties and procedures.

S. 1977

At the request of Mr. DASCHLE, the name of the Senator from Nebraska [Mr. EXON] was added as a cosponsor of S. 1977, a bill to amend the U.S. Grain Standards Act to improve the competitive position of U.S. grain in international and domestic markets, to facilitate the communication of quality characteristics that final buyers of grain desire, to provide certain incentives to producers of high-quality grain, and to improve the quality of farm-owned and federally owned reserve grain stocks, and for other purposes.

S. 2015

At the request of Mr. DODD, the name of the Senator from South Dakota [Mr. PRESSLER] was added as a cosponsor of S. 2015, a bill to amend the Ethics in Government Act of 1978 and the Ethics Reform Act of 1989 to apply the same honoraria provisions to Senators and officers and employees of the Senate as apply to Members of the House of Representatives and other officers and employees of the Government, and for other purposes.

S. 2024

At the request of Mr. DASCHLE, the name of the Senator from Nebraska [Mr. KERRY] was added as a cosponsor of S. 2024, a bill to provide for the coordination of ground water policy within the Department of Agriculture, and for other purposes.

SENATE JOINT RESOLUTION 227

At the request of Mr. KASTEN, the names of the Senator from Connecticut [Mr. DODD] and the Senator from Alabama [Mr. HEFLIN] were added as cosponsors of Senate Joint Resolution 227, a joint resolution to designate March 11, through March 17, 1990, as "Deaf Awareness Week."

SENATE JOINT RESOLUTION 229

At the request of Mr. CRANSTON, the names of the Senator from North Carolina [Mr. HELMS], the Senator from Nebraska [Mr. EXON], the Senator from North Dakota [Mr. BURDICK], the Senator from Minnesota [Mr. DURENBERGER], the Senator from North Dakota [Mr. CONRAD], the Senator from Connecticut [Mr. DODD], the Senator from California [Mr. WILSON], and the Senator from Arkansas [Mr. PRYOR] were added as cosponsors of Senate Joint Resolution 229, a joint resolution to designate April 1990 as "National Prevent-A-Litter Month."

SENATE JOINT RESOLUTION 235

At the request of Mr. HUMPHREY, the name of the Senator from South Dakota [Mr. PRESSLER] was added as a cosponsor of Senate Joint Resolution 235, a joint resolution proposing a constitutional amendment to limit congressional terms.

SENATE JOINT RESOLUTION 241

At the request of Mr. D'AMATO, the names of the Senator from Tennessee [Mr. GORE], the Senator from Hawaii [Mr. MATSUNAGA], the Senator from Nevada [Mr. REID], the Senator from Virginia [Mr. WARNER], the Senator from New Jersey [Mr. LAUTENBERG], the Senator from Georgia [Mr. FOWLER], the Senator from Illinois [Mr. SIMON], the Senator from South Carolina [Mr. HOLLINGS], the Senator from Connecticut [Mr. DODD], the Senator from Texas [Mr. GRAMM], the Senator from Utah [Mr. GARN], the Senator from Illinois [Mr. DIXON], the Senator from Rhode Island [Mr. PELL], the Senator from North Dakota [Mr. BURDICK], the Senator from Montana [Mr. BURNS], and the Senator from Kentucky [Mr. FORD] were added as cosponsors of Senate Joint Resolution 241, a joint resolution to designate the week of April 29, 1990, through May 5, 1990, as "Jewish Heritage Week."

SENATE CONCURRENT RESOLUTION 87

At the request of Mr. KENNEDY, the name of the Senator from New Jersey [Mr. LAUTENBERG] was added as a cosponsor of Senate Concurrent Resolution 87, a concurrent resolution in support of the United Nations Secretary General's current efforts regarding Cyprus.

SENATE RESOLUTION 231

At the request of Mr. BRADLEY, the names of the Senator from Vermont [Mr. LEAHY] and the Senator from Wisconsin, [Mr. KOHL] were added as cosponsors of Senate Resolution 231, a resolution urging the submission of the Convention on the Rights of the Child to the Senate for its advice and consent to ratification.

SENATE RESOLUTION 235—COMMENDING THE PRESIDENT AND THE SERVICEMEN AND WOMEN WHO PARTICIPATED IN "OPERATION JUST CAUSE" IN PANAMA

Mr. SYMMS submitted the following resolution; which was referred to the Committee on Armed Services:

S. RES. 235

Whereas Manuel Antonio Noriega was indicted in United States Federal Court on multiple counts of drug trafficking;

Whereas the international community has decried the loss of basic human freedom in Panama and the subversion of Panama's constitutional government;

Whereas the May 1989 Presidential election in Panama was marred by fraud, abuse, and a failure to follow the expressed voice of the Panamanian people;

Whereas Manuel Noriega declared himself "maximum leader" of Panama and declared Panama to be in a "state of war" with the United States;

Whereas the armed forces and criminal elements in Panama under Noriega's control were encouraged to harass, intimidate, assault, and kill Panamanian and American citizens and threatened the peaceful operation of the Panama Canal;

Whereas long and exhaustive diplomatic efforts on the part of the United States were unable to resolve the Panamanian situation directly with Manuel Noriega;

Whereas the Organization of American States found itself unable to resolve the increasingly dangerous and disruptive activities of Manuel Noriega;

Whereas the United States has a special bond of friendship with the Panamanian people;

Whereas the United States has national interests in protecting its citizens abroad and ensuring hemispheric stability;

Whereas under the Panama Canal Treaty of 1977 and associated documents, the United States has a major responsibility in the protection and continued operation of the Panama Canal;

Whereas the Panamanian people overwhelmingly supported the decisive U.S. action against Noriega;

Whereas President Guillermo Endara and his Ministers of Government, speaking for the Panamanian people, have expressed the desire to issue a Panamanian "Liberation Medal" to recognize the courage and sacrifice of the American servicemen and women who participated in the freeing of Panama from a military dictatorship: Now, therefore, be it

Resolved by the Senate, That the President is to be commended for his action in protecting American interests and lives in

Panama and assisting the Panamanian people in restoring representative government to their country; and that the American servicemen and women who participated in the planning and execution of "Operation Just Cause" merit the gratitude and appreciation of the United States for their selfless service to the cause of peace and freedom.

Mr. SYMMS. Mr. President, on another subject I would ask to print in the RECORD, and refer to the appropriate committee, a resolution that I have drafted which would express the sense of the Senate that the President of the United States be commended for his actions toward Panama and that the American servicemen and women who participated in "Operation Just Cause" merit the gratitude and appreciation of the Nation for their services to the cause of peace and freedom.

Madam President, this resolution has several whereas clauses in it. It covers the things that I think most Senators would expect. But I submit it to be printed in the RECORD tonight.

The resolving clause is that the President is to be commended for protecting American interests and that the servicemen that participated did an outstanding job and so forth.

Madam President, I hope that the Republican leader, the majority leader and the appropriate committee would be able to act on this soon so that the Senate could say our thank you to those brave men and women of the U.S. Armed Forces for their bold and very professional action that took place.

I have had the opportunity to talk to some people who participated in it. My former administrative assistant was recalled to active duty and participated in it. He reports to me that we in the House and Senate can be very proud of the professionalism that the young soldiers, sailors, marines, and airmen demonstrated, proud of their professionalism, proud of their concern that they took to the Panamanian people.

SENATE RESOLUTION 236—AMENDING THE STANDING RULES OF THE SENATE

Mr. MITCHELL (for Mr. FORD) submitted the following resolution; which was considered and agreed to:

S. RES. 236

Resolved,

SECTION 1. GIFTS AND TRAVEL.

(a) GIFTS.—Paragraph 1(a) of rule XXXV of the Standing Rules of the Senate is amended by—

(1) inserting "(1)" before "No Member" in the first sentence;

(2) adding the following new paragraph after the first sentence:

"(2) No Member, officer, or employee of the Senate, or the spouse or dependent thereof, shall knowingly accept, directly or indirectly, any gift or gifts having an aggregate value exceeding $300 during a calendar year from any person, organization, or corporation unless, in an unusual case, a waiver is granted by the Select Committee on Ethics.";

(3) inserting "(3)" before "In determining";

(4) striking "whether an individual has accepted any gift or gifts having an aggregate value exceeding $100" and inserting "the aggregate value of any gift or gifts accepted by an individual"; and

(b) CHANGE OF DOLLAR AMOUNTS.—Paragraph 1(c)(2) of rule XXXV is amended by striking "$35" and inserting "$75".

(c) INCLUSION OF ENTERTAINMENT WITHIN THE DEFINITION OF A GIFT.—Paragraph 2(a)(6) of rule XXXV of the Standing Rules of the Senate is amended by striking "meals, beverages, or entertainment" both places it appears and inserting "meals or beverages".

(d) LIMITS ON DOMESTIC AND FOREIGN TRAVEL BY MEMBERS AND STAFF OF THE SENATE.—Paragraph 2 of rule XXXV of the Standing Rules of the Senate is amended by—

(1) striking "and" at the end of subparagraph (a);

(2) striking the period at the end of subparagraph (b); and

(3) adding at the end thereof the following:

"(c) the term 'necessary expenses' means reasonable expenses for food, lodging, or transportation which are incurred by a Member, officer, or employee of the Senate in connection with services provided to (or participation in an event sponsored by) the organization which provides reimbursement for such expenses or which provides the food, lodging, or transportation directly, however necessary expenses do not include—

"(1) the provision of food, lodging, or transportation, or the payment of such expenses, for a continuous period in excess of 3 days (and 2 nights) exclusive of travel time within the United States or 7 days (and 6 nights) exclusive of travel time outside of the United States unless such travel is approved by the Committee on Ethics as necessary for participation in a conference, seminar, meeting or similar matter, and

"(2) the provision of food, lodging, or transportation, or the payment for such expenses, for anyone accompanying a Member, officer, or employee of the Senate, other than the spouse of a Member, officer, or employee of the Senate or one Senate employee acting as an aide to a Member.".

SEC. 2. TRANSMITTAL OF FINANCIAL DISCLOSURE REPORTS.

Rule XXXIV of the Standing Rules of the Senate is amended—

(1) by inserting "1." before "For purposes of this rule"; and

(2) by adding at the end thereof the following:

"2. (a) The Select Committee on Ethics shall transmit a copy of each report filed with it under title I of the Ethics in Government Act of 1978 (other than a report filed by a Member of Congress) to the head of the employing office of the individual filing the report.

"(b) For purposes of this rule, the head of the employing office shall be—

"(1) in the case of an employee of a Member, the Member by whom that person is employed;

"(2) in the case of an employee of a Committee, the chairman and ranking minority member of such Committee;

"(3) in the case of an employee on the leadership staff, the Member of the leadership on whose staff such person serves; and

"(4) in the case of any other employee of the legislative branch, the head of the office in which such individual serves.".

SEC. 3. AMENDMENT TO SENATE CONFLICT OF INTEREST RULE.

Rule XXXVII of the Standing Rules of the Senate is amended by—

(1) redesignating paragraphs (10) and (11) as paragraphs (11) and (12) respectively; and

(2) inserting after paragraph (9) the following:

"10. (a) Except as provided by subparagraph (b), any employee of the Senate who is required to file a report pursuant to rule XXXIV shall refrain from participating personally and substantially as an employee of the Senate in any contact with any agency of the executive or judicial branch of Government with respect to non-legislative matters affecting any non-governmental person in which the employee has a significant financial interest.

"(b) Subparagraph (a) shall not apply if an employee first advises his supervisor authority of his significant financial interest and obtains from his employing authority a written waiver stating that the participation of the employee is necessary. A copy of each such waiver shall be filed with the Select Committee.".

SEC. 4. LEADERSHIP STAFF.

Paragraph 1 of rule XLI of the Standing Rules of the Senate is amended by adding after the second sentence the following: "The Majority Leader and the Minority Leader may each designate an employee of their respective leadership office staff as one of the 3 designees referred to in the second sentence.".

SENATE RESOLUTION 237—DIRECTING AN APPEARANCE BY THE SENATE LEGAL COUNSEL

Mr. MITCHELL (for himself and Mr. DOLE) submitted the following resolution; which was considered and agreed to:

S. RES. 237

Whereas, in *Walter L. Nixon, Jr.* v. *United States et al.*, C.A. No. 89-3154, pending in the United States District Court for the District of Columbia, the constitutional powers and responsibilities of the Senate in impeachment proceedings have been placed in issue;

Whereas, pursuant to sections 703(c), 706(a), and 713(a) of the Ethics in Government Act of 1978, 2 U.S.C. §§ 288b(c), 288e(a), and 288l(a) (1988), the Senate may direct its Counsel to appear as amicus curiae in the name of the Senate in any legal action in which the powers and responsibilities of Congress under the Constitution are placed in issue: Now, therefore be it

Resolved, that the Senate Legal Counsel is directed to appear as amicus curiae in the name of the Senate in *Walter L. Nixon, Jr.* v. *United States et al.*

AMENDMENTS SUBMITTED

CLEAN AIR ACT AMENDMENTS

GLENN AMENDMENTS NOS. 1220 THROUGH 1222

(Ordered to lie on the table.)

Mr. GLENN submitted three amendments intended to be proposed by him to the bill (S. 1630) to amend the Clean Air Act to provide for attainment and maintenance of health protective national ambient air quality standards, and for other purposes, as follows:

AMENDMENT No. 1220

On page 378, beginning with line 13, strike out all through line 21.

AMENDMENT No. 1221

On page 381, beginning with line 10, strike out all through line 2 on page 382.

AMENDMENT No. 1222

On page 381, line 14, immediately after "excluding" insert "emissions into the ambient air of".

On page 381, line 22, immediately after "excluding" insert "emissions into the ambient air of".

On page 382, between lines 2 and 3, insert the following:

(d) Notwithstanding any other provision of the Clean Air Act, or any other law, the regulation by the Nuclear Regulatory Commission of radioactive pollutant emissions into the ambient air shall not affect, modify, or preclude the authority of any State or political subdivision thereof to adopt or enforce any requirement respecting the control of such emissions.

NOTICES OF HEARINGS

COMMITTEE ON AGRICULTURE, NUTRITION, AND FORESTRY

Mr. LEAHY, Mr. President, I would like to announce a partial list of hearings that the Committee on Agriculture, Nutrition, and Forestry plans to hold for the 1990 farm bill:

February 1: Subcommittee on Agriculture and Stabilization of Prices. Hearing in preparation for 1990 farm bill: soybeans. SR332. 9:30 a.m.

February 6: Subcommittee on Agricultural Production and Stabilization of Prices. Hearing in preparation for 1990 farm bill: crop insurance. SR332. 9:30 a.m.

February 6: Subcommittee on Domestic and Foreign Marketing and Product Promotion. Hearing in preparation for 1990 farm bill: Export and Market Development Programs. SR332. 2:00 p.m.

February 7: Full Committee. Hearing in preparation for 1990 farm bill: the Administration's views. SR332. 9:30 a.m.

February 8: Subcommittee on Agricultural Research and General Legislation. Hearing in preparation for 1990 farm bill: grain quality enhancement. SR332. 9:30 a.m.

February 8: Subcommittee on Agricultural Credit. Hearing in preparation for 1990 farm bill: agricultural credit. SR332. 2:00 p.m.

February 20: Subcommittee on Agricultural Credit. Hearing in preparation for 1990 farm bill: agricultural credit. SR332. 2:30 p.m.

February 21: Full Committee. Hearing in preparation for 1990 farm bill: trade. SR332. 9:30 a.m.

February 22: Subcommittee on Agricultural Research and General Legislation. Hearing in preparation for 1990 farm bill: grain quality enhancement. SR332. 9:30 a.m.

February 27: Full Committee. Hearing in preparation for 1990 farm bill: "Hunger in America." SD G-50. 9:30 a.m.

March 1: Subcommittee on Agricultural Production and Stabilization of Prices. Hearing in preparation for 1990 farm bill: cotton. SR332. 9:30 a.m.

March 1: Subcommittee on Conservation and Forestry. Oversight hearing on the forestry title of the 1990 farm bill. SR332. 2:00 p.m.

March 2: Subcommittee on Agricultural Production and Stabilization of Prices. Hearing in preparation for 1990 farm bill: wool and honey. SR332. 10:00 a.m.

March 5: Subcommittee on Agricultural Production and Stabilization of Prices. Hearing in preparation for 1990 farm bill: rice. SR332. 9:30 a.m.

March 5: Subcommittee on Agricultural Credit. Hearing in preparation for 1990 farm bill: agricultural credit. SR332. 2:00 p.m.

March 6: Subcommittee on Agricultural Production and Stabilization of Prices. Hearing in preparation for 1990 farm bill: sugar. SR332. 10:00 a.m.

March 7: Full Committee. Hearing in preparation for 1990 farm bill: dairy. SR332. 9:30 a.m.

March 8: Subcommittee on Conservation and Forestry. Hearing in preparation for 1990 farm bill: conservation issues. SR332. 9:30 a.m.

March 8: Subcommittee on Agricultural Production and Stabilization of Prices. Hearing in preparation for 1990 farm bill: wheat. SR332. 2:00 p.m.

March 9: Subcommittee on Agricultural Research and General Legislation. Hearing in preparation for 1990 farm bill: noxious weeds. SR332. 9:30 a.m.

For further information, please call the committee at 224-2035.

COMMITTEE ON SMALL BUSINESS

Mr. BUMPERS. Mr. President, I would like to announce that the Small Business Committee has rescheduled its hearing on technology transfer and small business from February 22, 1990, to March 8, 1990. The hearing will be held in room 428A of the Russell Senate Office Building and will commence at 9:30 a.m. For further information, please call Joan Bready at 224-2016 or Scott Varady at 224-3052.

AUTHORITY FOR COMMITTEES TO MEET

COMMITTEE ON COMMERCE, SCIENCE AND TRANSPORTATION

Mr. BAUCUS. Mr. President, I ask unanimous consent that the Committee on Commerce, Science, and Transportation, be authorized to meet during the session of the Senate on January 30, 1990, at 9:30 a.m., to hold a hearing on the nominations of James Kolstad, of Colorado, to be Chairman, and Susan Coughlin, of Pennsylvania, to be a member of the National Transportation Safety Board; and Barry L. Harris, of Maine, to be Deputy Administrator of the Federal Aviation Administration.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON ARMED SERVICES

Mr. BAUCUS. Mr. President, I ask unanimous consent that the Committee on Armed Services be authorized to meet in open session on Tuesday, January 30, 1990, at 2 p.m. to receive testimony on the implications of changes in the Soviet Union and Eastern Europe for Western Security.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON LABOR AND HUMAN RESOURCES

Mr. BAUCUS. Mr. President, I ask unanimous consent that the Committee on Labor and Human Resources be authorized to meet during the session of the Senate on Tuesday, January 30, 1990, at 9:15 a.m. for a hearing on "Teacher Excellence: Recruitment and Training."

The PRESIDING OFFICER. Without objection, it is so ordered.

SUBCOMMITTEE ON MOD REHAB/HUD INVESTIGATIONS

Mr. BAUCUS. Mr. President, I ask unanimous consent that the MOD Rehab/HUD Investigations Subcommittee of the Committee on Banking, Housing, and Urban Affairs be allowed to meet during the session of the Senate, Tuesday, January 30, 1990, at 9:30 a.m. to conduct hearings on the mission of HUD.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMITTEE ON FOREIGN RELATIONS

Mr. BAUCUS. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be authorized to meet during the session of the Senate on Tuesday, January 30, at 10 a.m. to hold a hearing on the Convention Against Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment. Treaty Doc. 100-20.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL STATEMENTS

DRUG-EXPOSED INFANTS

● Mr. INOUYE. Mr. President, yesterday at a luncheon sponsored by the Consortium on Children, Families and the Law, Dr. Theo Sonderegger and Prof. Josephine Gittler delivered a briefing on the issue of drug-exposed infants.

The consortium, comprised of the University of Hawaii, the University of Nebraska-Lincoln, State University of New York at Buffalo, University of Michigan, University of Virginia, and University of Pittsburgh, coordinates the network of participating institu-

tions to facilitate independent and collaborative research on social, psychological, educational, economic, and legal issues affecting families. It disseminates the information in forms that will allow policymakers, governmental decisionmakers, and practitioners to take appropriate action.

Mr. President, I ask that the text of this briefing be printed in the RECORD.

The briefing follows:

DRUG EXPOSED INFANTS: SUMMARY OF REMARKS OF THEO SONDEREGGER, PH.D. AND JOSEPHINE GITTLER, J.D.

The real victims in the war against drugs, tragic though they may be, are not the well-publicized drug-users and drug-dealers; the real victims are the children born to today's drug-users and who, tomorrow, will constitute a large percentage of the members of our society. The infants being born today that endure the perinatal trauma induced by their parents' drug addictions, may experience throughout their lives the effects of their early drug exposure; the potential costs are incalculable to society. We, particularly members of the scientific, medical, social service, and legal professions, are beginning to work together with you, the policymakers, to recognize, treat, and prevent insofar as possible, the complex array of problems that arise when babies are born addicted or exposed in utero to drugs. Preventing maternal drug abuse is even more imperative when one recognizes that a large number of the perinatal AIDS cases in this country are the offspring of women who were intravenous drug users or had sexual partners who injected drugs.

MAGNITUDE OF THE PROBLEM

Over 5 million (9 percent) of the nearly 60 million women of childbearing age (15–44 years of age) in the United States have used an illicit drug in the past month. Almost 1 million (2 percent) have used cocaine and 3.8 million (6 percent) have used marijuana in the past month. The extent of the use of drugs during pregnancy is not fully known, but one estimate based upon a pilot study of 36 urban hospitals in 1988, is that 375,000 infants each year may be affected by in utero drug exposure. Another alarming statistic was provided by an eight-week survey of eight hospitals in Philadelphia. More than 16 percent of the women who delivered at the hospitals used cocaine. In the latter study, 15% of the users had sexually-transmitted diseases vs. 7 percent in the non-user population; 71 percent of the users had no or poor prenatal care vs. 7 percent in the non-user population. In Kansas City in the city hospitals that care for the indigent cases, currently 50 percent of the infants in the intensive care units have either a positive urine screen or else have a mother with a positive urine screen test for cocaine.

EFFECTS OF PRE/PERINATAL DRUG EXPOSURE

At one time we believed that the placenta was a barrier that protected the fetus from drugs the mother took; this is not so. Heroin, cocaine, methadone, PCP, marijuana and other drugs readily pass through the placenta into the fetus. Cocaine, for example, has been found in the mother's breast milk as long as 48 hours after she took it.

What happens to the developing organism exposed to drugs in utero? It depends upon a variety of factors: the chemical nature of the drug, the mode of administration, the dose of the drug, the duration of drug administration, the developmental stage of the organism at the time of exposure, as well as the susceptibility of the species and individual to the particular drug. Drugs taken very early in the pregnancy are more likely to produce physical malformations; those later in pregnancy, neurobehavioral dysfunctions.

So far perinatal research has focused on the effects produced on the developing organism by maternal ingestion of such illicit drugs as marijuana, cocaine, heroin, and phencyclidine (PCP) and the licit drugs alcohol and tobacco. Not only may the drug affect the fetus, it may also affect the birth process, e.g., may produce spontaneous abortions or, particularly in the case of cocaine, abruptio placentae (tearing away of the placenta).

One consequence produced by almost all of the illicit (and some licit) drugs is intrauterine growth retardation which results in infants of low birth weight. These babies, particularly if born premature, have a poorer chance for survival. The one factor most closely associated with infant mortality is low birthweight: such a baby will be 40 times more likely to die during its first four weeks of life than a normal infant. Many of those who live require costly custodial care, estimated at $100,000 or more in 1989. The infant mortality rate in this country is already one of the highest among wealthy industrialized nations and drug addiction is driving it up.

Some drug-affected babies are born with physical malformations such as a smaller head circumference or malformations of the genitoruinary tract. Infants born to addicted mothers may themselves be born addicted and if not treated, may go into withdrawal at birth and die. If recognized, the newborn addict can be treated, but health care professionals must be trained to recognize such infants and their drug-using mothers. Underreporting occurs frequently in the perinatal drug abuse area with the result that sufficient resources are not being allocated in this problem area and clinical treatment of the drug-addicted pregnant woman often is inadequate.

It is much less widely known that the father, too, if a drug-user, contributes, to the drug-related problems of his offspring. We have good evidence from work with animals and we suspect that further studies with human males will corroborate the deleterious effects of sperm from drug-using fathers. In two animal studies, male rats given morphine or methadone prior to mating produced affected offspring. In another study, male mice that were perinatally exposed to one of the metabolites of marijuana were mated as adults with non-drug-exposed females and the litters that were produced were smaller in size than normal.

LONG-TERM EFFECTS

Effects of early exposure to drugs may not be apparent at birth but may be subtle and delayed, particularly if the drug impairs learning or coping skills or impairs the responses to stress. The few longitudinal studies available show that effects such as hyperactivity in infants exposed prenatally to heroin or to methadone persist as long as early school age (the present age of the children). In some instances, early effects seem to disappear as the child matures, but we have few studies with drugs other than alcohol that report on children older than 5–6 years of age. Some data from animal work suggest that certain long-term consequences of drug exposure early in life may not manifest themselves until adulthood. Treatment of pregnant female mice with marijuana, for example, may affect the adult sexual behavior of their male offspring. In the urgency of our problem, we can't afford to wait twenty years for results from long-term studies with drug-affected human infants. We need information now to plan intervention strategies and ways to ameliorate drug effects; we need data that can be obtained only from controlled studies using animal models. There is no substitute for this information. Tissue culture or computer simulation methodology, useful for other things, does not provide the knowledge of how the developing neural system may be damaged.

RESPONSE OF STATE CRIMINAL JUSTICE SYSTEMS TO PROBLEM

In response to the problem of drug abuse, particularly crack/cocaine abuse, by women during pregnancy, a few state criminal prosecutions of such women have been attempted. However, criminal prosecution of such women has proved difficult under existing state criminal laws. As a result, there is a growing debate as to whether new state laws specifically criminalizing drug abuse during pregnancy that is harmful to the fetus should be enacted.

Supporters of criminalization take the position that since parents may be criminally liable for abusing their children, pregnant women should be subject to criminal liability for conduct during pregnancy that harms the fetus. They argue that whatever interests or rights the mother has is outweighed by the child's interests or rights. Opponents of criminalization assert that it would be counterproductive because pregnant women would be deterred from seeking prenatal care because of fear of being prosecuted and that it would be particularly unfair to low-income and minority women who often do not have access to needed drug abuse treatment services and prenatal care. They oppose criminalization on the ground that it would subordinate a woman's civil rights and personal autonomy to the state's interest in her fetus and that it raises specter of "pregnancy police" controlling a woman's activities during pregnancy.

It should be noted that criminalization raises complex federal constitutional issues that have yet to be resolved by the U.S. Supreme Court, and criminal statutes would be subject to challenge on the ground that they violate a pregnant woman's constitutionally-protected right to privacy.

RESPONSE OF STATE JUVENILE JUSTICE SYSTEM TO PROBLEM

Drug-exposed newborns and children whose families are involved with drug abuse are increasingly being brought to the attention of juvenile and family courts. All states have laws giving juvenile or family courts jurisdiction over abused and neglected children. Although abuse, neglect and dependency are defined in various ways, these terms generally refer to children who are not receiving proper parental care and protection. In addition, all states have child abuse reporting laws requiring the reporting of suspected cases of abuse or neglect to child welfare authorities or other designated public agencies. Once a case is reported to the child welfare authorities, they conduct an investigation and determine whether to file a petition with the juvenile or family court which may ultimately result in removal of the child from parental custody and termination of parental rights.

The number of child abuse and neglect cases involving parental drug abuse, reported to child welfare agencies is growing dramatically. Likewise, the number of child abuse and neglect cases, involving parental drug abuse handled by juvenile and family

courts is growing dramatically. For example, in New York City, Human Resources Administration, the number of reported child abuse and neglect cases involving parental drug abuse more than tripled from 2,627 cases to 8,521 cases from 1986 to 1988, and this rise is attributable to the prevalence of cocaine/crack abuse. And in Los Angeles County between 1981 and 1987 the number of petitions filed with the Juvenile Dependency Court, alleging parental drug abuse, quintupled. At the present time 50 percent of child abuse cases in Los Angeles Juvenile Dependency Courts involve some type of substance abuse, most frequently cocaine abuse.

There are several important issues relating to the application of child abuse, neglect and dependency laws of drug-exposed newborns. They include: whether juvenile and family courts should be authorized to intervene prior to birth to restrict use of drugs by a pregnant woman that harms or poses a risk of harm to the fetus; whether the fact that an infant is born drug dependent, standing alone, is or should be sufficient for a finding of abuse, neglect or dependency under state juvenile or family court acts, and whether reporting of drug dependency at birth is or should be made mandatory under state child abuse reporting statutes.

DELIVERY OF NEEDED SERVICES

Women with drug abuse problems need a variety of services both during pregnancy and after delivery. Drug treatment services are of particular importance in order to prevent babies from being born drug dependent and to prevent the removal of infants and children from the custody of their mothers for placement in foster care. However, there are long waiting lists for admission to publicly funded drug treatment programs and even when places are available in such programs, they often refuse to take pregnant women. For example, in New York City about 54% of drug treatment programs refuse to give treatment to pregnant women and about 67 percent deny treatment to pregnant women on Medicaid. Health services including good pre-natal and postpartum care, nutritional services, social services, mental health services and educational services including parenting education are also of importance.

As it has been pointed out, drug-exposed newborns run an increased risk of mortality and morbidity. Since babies who are drug-exposed are often premature or low birth weight and suffer from what appear to be drug-withdrawal symptoms, they typically require care in an intensive care nursery and tend to stay longer in the hospital than healthy babies. The case of large numbers of drug-exposed newborns is straining the resources of hospitals serving poor inner city neighborhoods and is very costly. For example, in Los Angeles County during 1986, it is estimated that 915 drug-exposed infants incurred hospital care costs of $32 million because of extended hospital stays.

A drug-exposed newborn may also need an out-of-home placement and a variety of social services. When drug-exposed newborns are medically ready to be discharged from the hospital they may nevertheless remain in the hospital because of parental abandonment, delays in abuse and neglect investigations by the child welfare authorities and lack of available and appropriate foster care. The already over-burdened foster care system is having difficulty coping with the expanding population of drug-exposed babies pouring into the system. For example, in California up to 60 percent of drug-exposed babies are placed in foster care. While foster home placements are expanding, this expansion has not kept pace with the rise of drug-exposed babies needing such placements. Thus in the last two years, the foster care population rose 28 percent while the number of foster family homes rose only 11 percent. Moreover, these babies may need specialized foster care because of problems stemming from parental drug abuse and such specialized foster care is in short supply.

Finally the population of infants, toddlers and young children who were exposed to drugs during their mother's pregnancy may need early intervention services to deal with active or potential developmental and behavioral problems. As they reach school age, they may need special education services.

In short, pregnant women and mothers with a drug abuse problem and infants and children exposed to drugs during the pregnancy of their mothers need multiple services from multiple providers of different disciplines associated with multiple agencies, organizations, and institutions in both the public and private sectors. At the present time the services needed by this population are often unavailable, inaccessible and highly fragmented. What is required to truly serve this population is the development of community-based systems of services that are comprehensive and coordinated.

At the federal level Congress can and should play an important role in assuring that the many federal and federal-state health, human services and educational programs effectively and efficiently meet the service needs of the population of pregnant women and mothers with a drug abuse problem and the infants and children exposed to drugs during the pregnancy of their mothers. Among the programs particularly deserving of a Congressional attention in this regard are the Title XIX Medical Assistance (Medicaid) Program, the Title V Maternal and Child Health Services Block Grant Programs, the Foster Care and Adoption Assistance Program and the Special Education and Early Intervention Programs instituted under the Education for All Handicapped Children Act.●

WEEKEND IN WASHINGTON

● Mr. McCONNELL. Mr. President, I was not in Washington DC three weekends ago, but I happen to have copies of the Washington Post. As I flipped through the pages of the "Metro Section," I was stunned to read of Washington's latest casualties. In one weekend—from a Friday to a Monday—12 citizens were murdered in the District. Most were drug-related shootings.

While those 12 victims lay dying in our Nation's Capital, a narcotics investigation in Kentucky was coming to an end. On January 17, Mr. President, 11 people were arrested for the first organized distribution of crack cocaine in Louisville. Like a slap in the face, crack houses have come to Kentucky. How long will it be, Mr. President, before crack violence will hit Louisville streets?

To my colleagues who say "it will never happen in my State," I ask them to be prepared for the worst. Cocaine and crack use is found in all levels of society: from the back streets of city ghettos to prominent business and political offices. It may interest my colleagues to know that in Kentucky, the former sheriff of Christian County was arrested 2 weeks ago for conspiring to distribute cocaine. A few days later, Mayor Marion Barry—Washington, DC's leader—was arrested for possessing and smoking crack.

Mr. President, we cannot deny that America has a serious narcotics problem. It eats at the core of our communities, and lures our young into a web of violence and death. As the events of the past few weeks indicate, the danger from illegal drugs lurks silently in American streets, homes, and bodies. I ask my colleagues to continue to work together to find solutions to this dilemma—it is not a regional problem, it is a national crisis.●

HELSINKI COMMISSION NOMINATES VACLAV HAVEL FOR 1990 NOBEL PEACE PRIZE

● Mr. DECONCINI. Mr. President, this January, Representative STENY H. HOYER and I, as Cochairman and Chairman of the U.S. Helsinki Commission, had the privilege of submitting our nomination for the 1990 Nobel Peace Prize. This year, like last, we nominated Vaclav Havel, of Czechoslovakia.

When we first nominated Vaclav Havel for this unique honor, he was a prisoner in his own land; his plays and essays, which have won worldwide acclaim, were banned in Czechoslovakia; and his government was engaged in a widespread crackdown on human rights and fundamental freedoms.

Since then, Vaclav Havel has been swept into the Presidency of his country in a remarkable manifestation of the will of the Czechoslovak people. Without question, the alacrity and certainty of Havel's political rise was due to the singular role he has played over the last 20 years as a voice of great moral authority. Throughout that time, Havel has been a persistent and eloquent—at tremendous personal sacrifice—for the very rights which the Helsinki process embodies. The ideals he espoused were those that have given courage to freedom loving men and women for generations; the peaceful methods he sought to achieve his goals are those which will inspire generations to come.

Vaclav Havel's selfless dedication exemplifies the contribution to humanity that one person can make. Recent events in Eastern Europe have proven the wisdom and value of this pursuit. Yet the challenges which remain are as great as those which have already been met, and Havel's visionary leadership will continue to play a critical

role as he guides his country to free elections and on to genuine democracy.

Mr. President, in honor of all that President Havel has achieved, and all that I believe he will yet achieve, the Helsinki Commission nominates him for the 1990 Nobel Peace Prize.●

TRIBUTE TO WALTER D. CHARLES

● Mr. WILSON. Mr. President, it is with great pleasure and admiration for a fellow Californian, Walter D. Charles, that I rise today to publicly commend his devoted service to the U.S. Navy aboard U.S.S. *New Mexico* in World War I.

Mr. Charles is the oldest surviving member of the U.S. battleship's commissioning crew. He is a member of the "Plank Owner's" which is composed of the oldest three surviving members of the ship.

In addition to serving his country, Mr. Charles is a respected businessman in San Diego. A true family man, he has just celebrated his 70th wedding anniversary this last September. He will be 95 on April 14, 1990.

It is my privilege to publicly honor this exceptionally devoted Navy officer, Walter Charles, for his inspirational leadership and uncommon loyalty to his shipmates and his Nation.●

NOTICE OF DETERMINATION BY THE SELECT COMMITTEE ON ETHICS UNDER RULE 35, PARAGRAPH 4, PERMITTING ACCEPTANCE OF A GIFT OF EDUCATIONAL TRAVEL FROM A FOREIGN ORGANIZATION

● Mr. HEFLIN. Mr. President, it is required by paragraph 4 of rule 35 that I place in the CONGRESSIONAL RECORD notices of Senate employees who participate in programs, the principal objective of which is educational, sponsored by a foreign government or a foreign educational or charitable organization involving travel to a foreign country paid for by that foreign government or organization.

The select committee has received a request for a determination under rule 35 for Ms. Ann Harkins, a member of the staff of Senator LEAHY, to participate in a program in the People's Republic of China, sponsored by the Chinese People's Institute of Foreign Affairs and the Far East Studies Institute, from February 11 to 17, 1990.

The committee has determined that participation by Ms. Harkins in the program in China, at the expense of the Chinese People's Institute of Foreign Affairs, is in the interest of the Senate and the United States.

The select committee has received a request for a determination under rule 35 for Ms. Laura Hudson, a member of the staff of Senator JOHNSTON, to participate in a program in Austria, sponsored by the Austrian Federal Economic Chamber, from February 11 to 17, 1990.

The committee has determined that participation by Ms. Hudson in the program in Austria, at the expense of the Austrian Federal Economic Chamber, is in the interest of the Senate and the United States.●

CELEBRATING BLACK HISTORY MONTH

● Mr. RIEGLE. Mr. President, each February, during the celebration of Black History Month, our Nation commemorates the contributions of African-Americans to our country and the world.

As we enter the 1990's, 25 years after the passage of the Civil Rights Act, we can indeed look back on advancements that have been attained. This past year in particular, we have witnessed achievements by African-Americans that were unimaginable only a few decades ago.

New York City, one of our Nation's largest urban centers, recently elected David Dinkins as its first African-American mayor. The State of Virginia, once the capital of the Confederacy, elected Douglas Wilder to its highest office, making him the first elected State Governor of African-American ancestry in our Nation's history. African-American mayors were also elected for the first time in cities as diverse as Cleveland, OH; Durham, NC; New Haven, CT; and Seattle, WA. These are powerful indicators of progress and change.

In another series of "firsts", Ronald Brown was the first African-American named as Chairman of the Democratic National Committee; General Colin Powell was named Chairman of the Joint Chiefs of Staff, the President's chief military adviser; and Dr. Mae Jemison, the first Black female astronaut, was named mission specialist for the June 1991 flight of the space shuttle *Discovery*. The achievements of these and other Americans are true milestones and will open new paths of opportunity others may follow. These are only some of the historic achievements we can celebrate this month.

Despite these and other monumental accomplishments, this year has also seen evidence which reminds us that too many African-Americans are relegated to lives far removed from the successes of Ron Brown or Doug Wilder. Recent incidents of racial bigotry, harassment and denied access are cause for grave concern. We have witnessed an alarming increase in race based killings and terrorism such as in the Bensonhurst and Howard Beach murders and the anonymous bombings of civil rights judges and activists. These events, coupled with other increasing incidents of racism, particularly on college campuses, are signs that attitudes of intolerance may be growing throughout the nation.

There are a host of other disturbing trends confronting our Nation. The life expectancy of African-Americans males is decreasing and the primary cause of death among young African-American males is homicide. African-Americans earn 10 percent to 26 percent less than whites with similar educational backgrounds; and the Supreme Court has passed a major decision which makes it more difficult for minorities to prove charges of job discrimination.

As chairman of the Senate Committee on Banking, Housing, and Urban Affairs, I am concerned about another form of bias. Although it has been 20 years since the enactment of the Fair Housing Act and 15 years since the enactment of the Equal Credit Opportunity Act, there are still many accounts of discrimination in credit lending and housing. Home ownership is the cornerstone of the American dream and must be accessible to all Americans. I am pleased that the savings and loan legislation that we passed this year amends the Home Mortgage Disclosure Act to require lenders to disclose the race, sex, and income levels of loan applicants and recipients in order to combat discrimination in mortgage lending. It also amends the Community Reinvestment Act to require Federal regulators to disclose their evaluations and ratings of institutions covered under the act. These reforms will enable regulators to better detect and end biased lending patterns.

While great strides toward racial equity have been made over the last few decades, we must continue to press for equal rights for all people. In addition, we must be concerned about racist attitudes that emerge from a lack of knowledge, misunderstanding, or unfair stereotypes and generalizations. We must be on guard against backsliding or undermining the progress we have made.

One of the important purposes of Black History Month is to educate all Americans through public forums, seminars, and other special events, on the contributions that African-Americans have made to our Nation. Increased education and dialog will help foster awareness of and sensitivity to the efforts and concerns of African-Americans. Through these efforts, I hope that we will engender a more informed society which permits men and women of color to enjoy professional success, housing opportunity, and other basic rights on a nondiscriminatory basis.

Mr. President, it must be the goal of a free and civilized society to protect these basic rights for all its citizens. I strongly support the goals of Black History Month and will continue to do

all that I can to promote the ideas of equal opportunity for all Americans.●

TRIBUTE TO MARTIN LUTHER KING, JR.

● Mr. SIMON. Mr. President, in all the tributes to Martin Luther King, Jr., there is one unusual one written by Larry A. Still for the Chicago Metro News, talking about Martin Luther King, Jr., as a college student.

I had the privilege of working a little with Dr. King. As a young State legislator, Dr. King asked me to come and speak at the second anniversary of the bus boycott in Montgomery, AL, at the Bodextra Avenue Baptist Church. I had the opportunity of spending 2 days with him at that point, and to join in the early efforts for civil rights in this Nation.

But, too often, perhaps, we focus on Martin Luther King, Jr., as an already emerged national leader. He did not emerge overnight, and the column by Larry Still should be encouragement to students around the Nation.

I ask to insert this article into the RECORD at this point.

The material is as follows:

[From the Chicago Metro News, Jan. 20, 1990]

MARTIN LUTHER KING, JR., THE COLLEGE STUDENT

(By Larry A. Still)

1989–90 could possibly be the second genesis of when the spirit of Dr. Martin Luther King, Jr. connects with college students.

For me however, the greatness of Dr. King grows stronger each year. Maybe this is because I have continued to be drawn to his life as doer, as well as dreamer.

Some veteran civil rights activists have said that King was not a saint, but a human being. Yes, he was human, but what a human being he was for all times.

Not every student will receive a Ph.D. in Systematic Theology from Boston University as he did. Or graduate from Morehouse College at the age of 19. But there are enough parallels in Dr. King's collegiate experience and that of many college students today.

In an earlier column, I spoke of the importance of new student orientations.

I mention this for two reasons; 1) at his orientation/convocation, Martin King met Dr. Benjamin Mays, one of this nation's greatest educators and 2) like most freshmen, young Martin wasn't sure what he would do career wise.

He participated in extracurricular activities; the glee club, the Young Men's Christian Association, the NAACP, the student-faculty discipline committee.

Today, many multi-cultural students like Martin, do become standouts with their schools' newspapers, radio stations, student governments and other social and academic organizations.

Martin was a commuter student. He lived at home. Today, the number of commuter students, part time students and other non-traditional students in higher education have completely changed the face of American colleges and universities.

After Morehouse, he won a scholarship to Crozer Theological Seminary in Chester, Pennsylvania. While there, he enjoyed the social life in nearby Philadelphia, attending parties and making friends. Always the scholar he read Henry David Thoreau, Karl Marx, Mahatma Gandhi, to name a few.

He next attended Boston University. Like many students, he met a special friend, a talented and pretty young woman in Boston, who later became his wife and confidant.

On August 28, 1955, Emmett Till, a 14 year old Chicago boy visiting relatives in Mississippi, was kidnapped and lynched. Two months earlier, Martin Luther King, Jr. was awarded his Ph.D. from Boston University.

Today, racism continues to impact on college students. It is partly up to students and officials to turn these negatives into motivators and positive reinforcers.

The bonding between Dr. King and today's students is coming about via the demystification of this great world teacher-preacher (cut in the mold of Dr. Mays).

Dr. King, the dreamer, may be a pretty tough act for young people to follow, but Dr. King, the college student doer, may touch more student scholars during this crucial developmental stage.●

INDEPENDENCE ANNIVERSARY OF THE FREE UKRAINIAN REPUBLIC

● Mr. SIMON. Mr. President, on January 22 we celebrated the 72d anniversary of the proclamation of independence of the free Ukrainian Republic. As I have done in the past, I would like to pay tribute to the short-lived Ukrainian state, and to those brave Ukrainians who still struggle every day against Soviet occupation of their homeland.

That first attempt at freedom lasted just 3 years before Red army troops snuffed out independent Ukraine. The ideals of social justice and human rights were set forth during those 3 years. Freedom of speech, movement, religion, and press were guaranteed. But Ukraine was quickly incorporated into the Soviet Union, and political independence and basic human rights were denied.

Today we are encouraged by the dramatic changes in the Soviet Union and by the policies of glasnost and perestroika. But there is a troubling discrepancy between the rhetoric and reality of Mr. Gorbachev's policies regarding Ukraine. As nationalism in Ukraine has grown, Soviet authorities have continued to harass Ukrainian activists who nonviolently campaign for human, religious, cultural, and national rights.

Equally difficult to bear has been the continued oppression of the Ukrainian Catholic Church. This kind of intolerance and hostility is terribly painful for the deeply religious people of Ukraine. Yet despite being forcibly incorporated into the Russian Orthodox Church in 1946, the Ukrainian Catholics have not forgotten their spiritual ties. They have recently been able to meet more freely than ever before, and their representatives have even met with members of the Council of Religious Affairs. Mr. Gorbachev's historic 1989 meeting with the Pope represented the kind of openness that must spread throughout the Soviet Union so that religious tolerance might flourish.

I commend Mr. Gorbachev for his efforts and for the reforms that he has already implemented. But I hope that he will demonstrate his respect for human, religious, cultural, and national rights by legalizing the Ukrainian Catholic Church, ending human rights abuses, and fully extending the fruits of democracy to the Ukraine.●

THE NATIONAL STUDENT/PARENT MOCK ELECTION

● Mr. HATCH. Mr. President, as 1990 began, oppressed peoples all over the world were exulting in their newfound opportunity to establish democracy. But here in America, in the world's longest lasting democracy, one of every two eligible voters did not bother to go to the polls in the last election. One of every two 17-year-olds does not know there are two Senators from every State. One of every two believes the President can appoint Members of Congress. In the last congressional elections 4 out of 5 eligible voters under 30 did not bother to vote. Our American democracy cannot long survive if those to whom we must pass the torch carry it in careless hands.

I ask my colleagues to actively support what is perhaps the Nation's most successful voter education effort.

Over 3½ million students and parents in all 50 States and around the world participated in the national student/parent mock election on November 3, 1988. They met all across the country and, through the Department of Defense dependents' schools, from Okinawa to Iceland, to cast their votes on who would win the national elections and vote their recommendations on key national issues. Mary Alice Williams, now with NBC, hosted a 90-minute National Election Headquarters Program on C-SPAN with satellite pickups from Florida to Alaska as the votes came in.

Time magazine's publisher's letter called it, "the largest voter education project ever."

The project won for Time, its principal 1988 sponsor, the Silver Anvil Award of the Public Relations Society of America for the "Best Program by a Business in Public Service" nationwide, and the Big Apple Award of the Public Relations Society of New York for the best community relations in the New York area. It has also won awards for COMSAT and CONUS Communications.

In 1989 the Time/National Association of State Boards of Education [NASBE] and the Time/American As-

sociation of School Administrators [AASA] awards for creative leadership in voter education in conjunction with the national student/parent mock election were formally presented at State school board meetings all across the country and at the American Association of School Administrators convention in Orlando. In 1990, these NASBE and AASA awards will be given for creative leadership in using the national student/parent mock election to teach the fourth R—responsibility.

President George Bush has written to participants in the 1990 mock election:

> Your participation holds benefits for our entire country, because an educated and informed public is the lifeblood of self-government. If we are to keep the hard-won blessing of peace and freedom, we must not only understand but also uphold the principles upon which our Nation was founded.

Mr. Frank J. Fahrenkopf, Jr., and Mr. Paul G. Kirk, Jr., former chairmen of America's two major political parties, now co-chair the national student/parent mock election. At a time when all Americans are concerned about our competitive position in a global economy, and the Business Roundtable has said, "business means business about education," I hope business and government leaders alike will play a strong role in the 1990 national student/parent mock election.

Time magazine has already made a commitment to provide teachers guides to the key national issues to every high school principal and superintendent in the country for the 1990 mock election, as they did in 1988. In addition, Time will provide ads in all Time, Inc., publications—92 million readers—to invite all of America's students, teachers, parents, and grandparents to participate. Time magazine has expressed its hope of helping the mock election build to 7-to-10 million participants in 1992.

Mock election projects are run by volunteers.

In Utah and Connecticut, the League of Women Voters led the way; in New York and California, the school boards associations; in the State of Washington, it was KING Broadcasting; in New Jersey, the department of education; in Louisiana, Your Metropolitian Business Civic Club of New Orleans.

Senator BOB PACKWOOD joined young students here in Washington, DC, on mock election night. Senators TED STEVENS and FRANK MURKOWSKI participated at Alaska's mock election headquarters and cosponsored the most successful essay contest Alaska ever had, a contest to write a speech for a Senator on the Constitution and the right to vote. Senator JAKE GARN and I, Senator FRANK LAUTENBERG, and many other Members of Congress wrote to school superintendents in their State encouraging them to involve their school districts in this massive voter education effort. Many Governors contacted their local superintendents as well.

Youngsters who participated in past national student/parent mock elections have gone on to play leadership roles in government:

In Oregon, Hance Haney, who introduced Senator PACKWOOD as keynote speaker on mock election night in 1980, represented the Senator as a member of his staff on the 1988 Oregon Mock Election Committee.

In Texas, George Rodriguez and Donny Alexander, who chaired the group of students who wrote an election handbook for the Dallas public schools, went on to become campaign managers for a State legislator's and judge's election campaign.

In Alabama, Donnie McPherson, a mock election graduate, now handles youth affairs for Gov. Guy Hunt.

I urge all Americans—students, teachers, parents grandparents, business leaders, government leaders to participate in the national student/parent mock election. I urge the business community to play a leadership role. And I urge my colleagues, once again, to write to their local school superintendents and encourage them to encourage all the teachers and students in their district to participate.

The education of tomorrow's voters cannot be the responsibility of the Nation's social studies teachers alone. We are all responsible when the generation that must lead the Nation tomorrow is ignorant of the democratic process today.

There is no greater legacy any of us can leave than the legacy of democracy.●

EXTENSION OF TARGETED JOBS TAX CREDIT

● Mr. BOREN. Mr. President, last April 6, along with my colleagues Senators HEINZ, MOYNIHAN, SYMMS, DANFORTH, PRYOR, and DURENBURGER, and I introduced S. 720, a bill to extend for 3 years the targeted jobs tax credit [TJTC], and to restore TJTC eligibility to 23- and 24-year-old economically disadvantaged youths. In my statement of introduction, I pointed out that "TJTC is not only the most cost-effective program we have enacted, but it has also been responsible for inducing employers to hire over 4¼ million structurally unemployed Americans once its inception in the fall of 1978." I am grateful that 40 of my distinguished colleagues agreed to cosponsor the legislation.

As you are aware, when we agreed to budget reconciliation under considerable time pressure at the end of the last session instead of adopting the provisions of S. 720, in the interest of expedience, we adopted instead only a 9-month extension of TJTC and did not extend the program to 23- and 24-year-olds. As a result, unless we act soon, we will be faced once again with a potentially tragic result, the expiration of the TJTC program, in this case on September 30, 1990.

I rise today not to introduce new legislation to extend TJTC, but instead, to urge the enactment of S. 720, now pending before the Finance Committee, to extend the TJTC for 3-full years. Our decision of last year, to extend TJTC only for 9 months, while keeping the program alive, has created inefficiencies which threaten the effective administration of this important national economic development program.

For example, the U.S. Department of Labor, the agency charged with the primary responsibility to administer TJTC, apparently has concluded not to issue formal regulations implementing the extension and the various technical modifications which we enacted last year. Their decision, although unfortunate, is understandable, given the fact that under formal administrative law procedures, it could take longer than 9 months for regulations to be proposed and adopted.

In addition to creating instability at the Federal level, short-term TJTC extensions create confusion within the State agencies which administer TJTC jointly with the Department of Labor. It has come to my attention that many of the State agencies have either stopped or drastically curtailed their TJTC administration functions beginning in late November pending offical notification by the Federal Government that the President has signed the extension, and did not fully gear up to process TJTC documents until after the first of the year, even though the President signed the measure on December 19.

Mr. President, it is a shame that when we enact short-term extensions of TJTC, we place obstacles in the way of the most successful job program that exists today, a program which on the average, facilitates the hiring of over half a million individuals every year, who lack basic work skills off of the welfare rolls and placing them in stable jobs where they have the opportunity to acquire skills and to advance. The enactment of a 3-year extension would go a long way to alleviate these inefficiencies by giving the agencies which administer TJTC sufficient time to craft comprehensive rules and to implement them without the constant threat that the program will go out of existence.

Mr. President, there is yet another compelling reason for Congress this year to adopt a 3-year extension besides the need for efficient administration of TJTC. Since I introduced S. 720 in the spring of 1989, the world

drastically has changed. The triumph of democratic ideals in Eastern Europe and elsewhere compels us to shift our national focus, at least in part, away form a reliance on military power to a renewed focus on education, training, and economic self-reliance both at home and with respect to our participation in the international economy. Now more than ever before, we must do everything we can in Congress to strengthen the foundations upon which the American economy can better compete overseas.

The TJTC program, by introducing to the job market individuals who might otherwise have been considered unemployable, and by giving them training opportunities, is just the kind of program which we need to meet the new economic challenges of the 1990's and beyond. This is not the time for Congress to enact another short-term extension, but instead, this is the time for us to make a major commitment to this important program, by enacting a 3-year extension.

On behalf of myself and my 40 colleagues who cosponsored S. 720, I ask those Senators who have not already joined us for your cosponsorship and your support.●

AMERICA'S HOUSING NEEDS

● Mr. BOSCHWITZ. Mr. President, I would like to take a few minutes today to applaud President Bush and Housing Secretary Jack Kemp on the administration's forthcoming housing initiative. The proposal, appropriately named HOPE [homeownership and opportunity for people everywhere], addresses America's housing needs in a sound and responsible manner, by emphasizing home ownership opportunities for low- and moderate-income families, and creating jobs and entrepreneurial activity in the Nation's distressed urban and rural communities.

The President's plan contains several features that will help alleviate the shortage of affordable housing in many parts of our Nation, including resident ownership of low-income housing, a program to combine housing resources with supportive services for the long-term homeless, and a proposal to allow the use of tax-deferred individual retirement accounts [IRA's] as downpayments by first-time homebuyers.

One part of the HOPE initiative that I am particularly impressed by is the effort to create housing opportunity zones. This is a major new proposal that gets at the roots of the housing affordability problem.

Recent studies suggest that in some parts of the Nation as much as one-third of the price of a new home is attributable to regulatory restraints imposed by four or five layers of government. These regulations include exclusive zoning restrictions, overly complex building codes, regressive property taxes, rent controls, and several others. These restrictions add tens of thousands of dollars to the cost of housing and create incentives that allow existing buildings to deteriorate.

Unfortunately, the bulk of the restraints on new home construction originate at the State and local levels and cannot be reached by Federal agencies directly. That's where housing opportunity zones come in. These zones are designed to pump money into urban and rural areas where the housing stock is deteriorating, yet local regulatory and tax barriers are stopping rehabilitation and new constructions.

Cities and towns competing to be designated a housing opportunity zone will be required to offer a plan to eliminate barriers to home construction and improvement. In addition to bringing down the barriers I mentioned, the applicants could also offer low priced land, vacant city-owned property, low-interest loans, and real estate tax abatements.

Once designated a housing opportunity zone, the local incentives will be boosted by a series of Federal incentives. These would include targeted FHA insurance, the elimination of capital gains taxes, and targeted rental rehabilitation funds. I am convinced that improvements in housing quality and affordability will result from the freer markets in the housing opportunity zones.

The housing opportunity zones concept springs from the idea behind enterprise zones. That is the notion that bringing down Government barriers to entrepreneurship, and offering tax and regulatory incentives, can revitalize distressed areas.

Ten years ago I introduced the Urban Jobs and Enterprise Zone Act of 1980. This bill, along with the House companion bill introduced by my good friend, then-Congressman, Jack Kemp, was the seed from which the enterprise zone idea grew. While the Congress has been very slow to approve enterprise zone incentives at the Federal level, many State and local governments have shown remarkable enthusiasm for this concept, and have implemented enterprise zone programs that have created thousands of new jobs in the Nation's most economically hard-hit regions.

Now, 10 years after I introduced the first enterprise zone legislation in Congress, the time has come to expand the scope of this idea to encompass the needs of low- and moderate-income Americans in the vitally important area of housing.

I will be introducing legislation shortly that will create 50 housing opportunity zones, along the lines of the President's proposal.

I am confident that the principles behind the enterprise zone concept can be applied to spur the construction of housing in many inner city and rural areas which have large amounts of poor housing, limited homeownership, vacant land, and vacant, substandard housing.

Housing opportunity zones provide a means for removing regulatory and other barriers in order to create affordable housing, while better targeting assistance to people in need.

Again, I would like to commend the President on his HOPE initiative. And I look forward to working with the administration and my Senate colleagues on passing housing opportunity zone legislation as a part of the larger effort to form a new and constructive approach to solving the housing and economic needs of our Nation.●

AMENDMENTS TO THE SENATE RULES

Mr. MITCHELL. Mr. President, on behalf of Senator FORD, I send a resolution to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The bill clerk read as follows:

A resolution (S. Res. 236) to make amendments to the Senate rules with respect to gifts and travel, financial disclosure, and conflict of interest.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the Senate resolution?

There being no objection, the Senate proceeded to consider the resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 236) was agreed to.

The resolution is as follows:

S. RES. 236

Resolved,

SECTION 1. GIFTS AND TRAVEL.

(a) GIFTS.—Paragraph 1(a) of rule XXXV of the Standing Rules of the Senate is amended by—

(1) inserting "(1)" before "No Member" in the first sentence;

(2) adding the following new paragraph after the first sentence:

"(2) No Member, officer, or employee of the Senate, or the spouse or dependent thereof, shall knowingly accept, directly or indirectly, any gift or gifts having an aggregate value exceeding $300 during a calendar year from any person, organization, or corporation unless, in an unusual case, a waiver is granted by the Select Committee on Ethics.";

(3) inserting "(3)" before "In determining";

(4) striking "whether an individual has accepted any gift or gifts having an aggregate value exceeding $100" and inserting "the aggregate value of any gift or gifts accepted by an individual"; and

(b) CHANGE OF DOLLAR AMOUNTS.—Paragraph 1(c)(2) of rule XXXV is amended by striking "$35" and inserting "$75".

(c) INCLUSION OF ENTERTAINMENT WITHIN THE DEFINITION OF A GIFT.—Paragraph

2(a)(6) of rule XXXV of the Standing Rules of the Senate is amended by striking "meals, beverages, or entertainment" both places it appears and inserting "meals or beverages".

(d) LIMITS ON DOMESTIC AND FOREIGN TRAVEL BY MEMBERS AND STAFF OF THE SENATE.—Paragraph 2 of rule XXXV of the Standing Rules of the Senate is amended by—

(1) striking "and" at the end of subparagraph (a);

(2) striking the period at the end of subparagraph (b); and

(3) adding at the end thereof the following:

"(c) the term 'necessary expenses' means reasonable expenses for food, lodging, or transportation which are incurred by a Member, officer, or employee of the Senate in connection with services provided to (or participation in an event sponsored by) the organization which provides reimbursement for such expenses or which provides the food, lodging, or transportation directly, however necessary expenses do not include—

"(1) the provision of food, lodging, or transportation, or the payment for such expenses, for a continuous period in excess of 3 days (and 2 nights) exclusive of travel time within the United States or 7 days (and 6 nights) exclusive of travel time outside of the United States unless such travel is approved by the Committee on Ethics as necessary for participation in a conference, seminar, meeting or similar matter, and

"(2) the provision of food, lodging, or transportation, or the payment for such expenses, for anyone accompanying a Member, officer, or employee of the Senate, other than the spouse of a Member, officer, or employee of the Senate or one Senate employee acting as an aide to a Member.".

SEC. 2. TRANSMITTAL OF FINANCIAL DISCLOSURE REPORTS.

Rule XXXIV of the Standing Rules of the Senate is amended—

(1) by inserting "1." before "For purposes of this rule"; and

(2) by adding at the end thereof the following:

"2. (a) The Select Committee on Ethics shall transmit a copy of each report filed with it under title I of the Ethics in Government Act of 1978 (other than a report filed by a Member of Congress) to the head of the employing office of the individual filing the report.

"(b) For purposes of this rule, the head of the employing office shall be—

"(1) in the case of an employee of a Member, the Member by whom that person is employed;

"(2) in the case of an employee of a Committee, the chairman and ranking minority member of such Committee;

"(3) in the case of an employee on the leadership staff, the Member of the leadership on whose staff such person serves; and

"(4) in the case of any other employee of the legislative branch, the head of the office in which such individual serves.".

SEC. 3. AMENDMENT TO SENATE CONFLICT OF INTEREST RULE.

Rule XXXVII of the Standing Rules of the Senate is amended by—

(1) redesignating paragraphs (10) and (11) as paragraphs (11) and (12) respectively; and

(2) inserting after paragraph (9) the following:

"10. (a) Except as provided by subparagraph (b), any employee of the Senate who is required to file a report pursuant to rule XXXIV shall refrain from participating personally and substantially as an employee of the Senate in any contact with any agency of the executive or judicial branch of Government with respect to non-legislative matters affecting any non-governmental person in which the employee has a significant financial interest.

"(b) Subparagraph (a) shall not apply if an employee first advises his supervisor authority of his significant financial interest and obtains from his employing authority a written waiver stating that the participation of the employee is necessary. A copy of each such waiver shall be filed with the Select Committee.".

SEC. 4. LEADERSHIP STAFF.

Paragraph 1 of rule XLI of the Standing Rules of the Senate is amended by adding after the second sentence the following: "The Marjority Leader and the Minority Leader may each designate an employee of their respective leadership office staff as one of the 3 designees referred to in the second sentence.".

Mr. MITCHELL. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. SYMMS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

"NATIONAL VISITING NURSE ASSOCIATIONS WEEK" AND "LITHUANIAN INDEPENDENCE DAY"

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Judiciary Committee be discharged from further consideration of the following joint resolutions: Senate Joint Resolution 103, "National Visiting Nurse Associations Week," and House Joint Resolution 149, "Lithuanian Independence Day"; that the Senate proceed to their immediate consideration en bloc, that they be read a third time and passed, and that the motion to reconsider the votes by which they were passed be laid on the table, and that their preambles be agreed to en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

There being no objection, the Senate proceeded to consider the joint resolutions.

The joint resolution (S.J. Res. 103) was ordered to a third reading, read the third time, and passed.

The preamble was agreed to.

The joint resolution, with its preamble, reads as follows:

S.J. RES. 103

Whereas Visiting Nurse Associations have served homebound Americans since 1885;

Whereas such Associations annually provide home care and support services to nearly 1,000,000 men, women, children, and infants;

Whereas such Associations serve 504 urban and rural communities in 47 States;

Whereas such Associations adhere to high standards of quality and provide personalized and cost-effective home health care and support regardless of an individual's ability to pay;

Whereas such Associations are voluntary in nature; independently owned and community-based;

Whereas such Associations ensure the quality of care through oversight provided by professional advisory committees composed of local physicians and nurses;

Whereas such Associations enable hundreds of thousands of Americans to recover from illness and injury in the comfort and security of their homes;

Whereas such Associations ensure that individuals who are chronically ill or who have physical and mental handicaps receive the therapeutic benefits of care and support services provided in the home;

Whereas, in the absence of such Associations, thousands of patients with mental or physical handicaps or chronically disabling illnesses would have to be institutionalized;

Whereas such Associations provide a wide range of services, including (where appropriate) health care, hospice care, personal care, homemaking, occupational, physical, and speech therapy, "friendly visiting services", social services, nutritional counseling, specialized nursing services, and meals on wheels;

Whereas such Associations offer nursing care provided by registered nurses, homemaking, therapy, and social services by qualified specialists, and "friendly visiting services" by volunteers;

Whereas in each community served by such an Association, local volunteers support the Association by serving on the board of directors, raising funds, visiting patients in their homes, assisting patients and nurses at wellness clinics, delivering meals on wheels to patients, running errands for patients, working in the Association's office, and providing tender loving care; and

Whereas the need for home health care for young and old alike continues to grow annually: Now therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the period commencing February 18, 1990, and ending February 24, 1990, is designated as "National Visiting Nurse Associations Week", and the President is authorized and requested to issue a proclamation calling upon the people of the United States to observe such week with appropriate programs, ceremonies, and activities.

LITHUANIAN INDEPENDENCE DAY

The Senate proceeded to consider the joint resolution (H.J. Res. 149) designating February 16, 1990, as "Lithuanian Independence Day."

Mr. PELL. I would like to state my strong support for House Joint Resolution 149 commemorating February 16, 1990, as Lithuanian Independence Day. This year the date has very special meaning as Lithuania moves to reestablish its national independence after nearly 50 years of brutal foreign rule. For 50 years Lithuanians have kept alive the hope of freedom as have their Lithuanian-American compatriots in the United States. Today, the yellow-green-red flag of independent Lithuania flies in Vilnius and the other cities of the country. What seemed just a short while ago an impossible dream, now seems quite possi-

ble. As a cosponsor of the Senate companion, Senate Joint Resolution 208, I commend the Lithuanian people for having kept the flame of freedom burning and hope our next resolution will be one of congratulation on the restoration of their national independence.

The joint resolution (H.J. Res. 149) was ordered to a third reading, read the third time and passed.

The preamble was agreed to.

MEASURE INDEFINITELY POSTPONED

Mr. MITCHELL. Mr. President, I further ask unanimous consent that the Judiciary Committee be discharged from further consideration of Senate Joint Resolution 208, designating "Lithuanian Independence Day," and that the measure then be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE LEGAL COUNSEL TO APPEAR AS AMICUS CURIAE

Mr. MITCHELL. Mr. President, on behalf of myself and the distinguished Republican leader, Senator DOLE, I send to the desk a resolution directing Senate legal counsel to appear as amicus curiae in the name of the Senate and in the pending action of the U.S. District Court for the District of Columbia, and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report.

The assistant legislative clerk read as follows:

A resolution (S. Res. 237) to direct the Senate Legal Counsel to appear as amicus curiae in *Walter L. Nixon, Jr.* v. *United States et al.*

The PRESIDING OFFICER. Is there objection to the immediate consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. MITCHELL. Mr. President, Walter L. Nixon, Jr., who was removed from Federal judicial office last November as the result of his conviction by the Senate on two articles of impeachment, has filed a lawsuit in the U.S. District Court for the District of Columbia challenging the constitutionality of the Senate's use of an impeachment trial committee to compile an evidentiary record for the trial of the charges against him. Earlier last year, while the Senate's impeachment proceedings were underway, Judge Nixon intervened in a lawsuit filed by Judge Alcee L. Hastings, and both judges challenged the Senate's impeachment procedures. The district court rejected both judges' claims and held that it was not the judiciary's role to second guess or monitor the Senate's decision to use a committee to receive evidence in an impeachment trial. The court of appeals affirmed the district court's dismissal of Hastings' and Nixon's lawsuits, but it did so on the narrower ground that the actions were premature until the Senate had completed action on the impeachment matters.

Following the Senate's conviction of Judge Nixon, Nixon initiated this challenge to the validity of his conviction in light of the Senate's use of a committee. Nixon is seeking a declaration that the conviction was unconstitutional and that he is entitled to continue to receive his salary as a Federal judge. Nixon has sued the United States, the Secretary of State, and the Director of the Administrative Office of the Courts for their roles in paying judicial compensation and, in the case of the Secretary of State, for his receipt of certified copies of the Senate's impeachment judgments. These defendants are being represented by the Department of Justice, which will be moving to dismiss the suit on their behalf.

This resolution would authorize the Senate legal counsel to appear as amicus curiae on behalf of the Senate to join the Department in defending the Senate's constitutional responsibility to structure its impeachment proceedings and the constitutionality of the procedures that the Senate used to try this impeachment.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution was agreed to.

The preamble was agreed to.

The resolution (S. Res. 237), with its preamble, is as follows:

S. RES. 237

Whereas in Walter L. Nixon, Jr. v. United States, et al., C.A. No. 89-3154, pending in the United States District Court for the District of Columbia, the constitutional powers and responsibilities of the Senate in impeachment proceedings have been placed in issue;

Whereas pursuant to sections 703(c), 706(a), and 713(a) of the Ethics in Government Act of 1978, 2 U.S.C. §§ 288b(c), 288e(a), and 288l(a) (1988), the Senate may direct its Counsel to appear as amicus curiae in the name of the Senate in any legal action in which the powers and responsibilities of Congress under the Constitution are placed in issue: Now, therefore be it

Resolved, That the Senate Legal Counsel is directed to appear as amicus curiae in the name of the Senate in Walter L. Nixon, Jr. v. United States, et al.

Mr. MITCHELL. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. SYMMS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

APPOINTMENT BY THE PRESIDENT OF THE SENATE

Mr. MITCHELL. Mr. President, I ask unanimous consent that the President of the Senate be authorized to appoint a committee on the part of the Senate to join with a like committee on the part of the House of Representatives to escort the President of the United States into the House Chamber for the joint session to be held at 9 p.m. on Wednesday, January 31, 1990.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDERS FOR WEDNESDAY

RECESS UNTIL 10 A.M. TOMORROW; MORNING BUSINESS

Mr. MITCHELL. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 10 a.m. Wednesday, January 31, and that following the time for the two leaders there be a period for morning business until 10:30 a.m. with Senators permitted to speak therein for up to 5 minutes each.

The PRESIDING OFFICER. Without objection, it is so ordered.

SCHEDULE

Mr. MITCHELL. Mr. President, at 10:30 tomorrow morning, the Senate will resume debate on S. 1630, the clean air bill. I alert the Senators to the likelihood of votes occurring during tomorrow's session. As Senators are aware, tomorrow evening we will join our House colleagues in the House Chamber to hear the President's State of the Union Address.

RECESS UNTIL TOMORROW AT 10 A.M.

Mr. MITCHELL. Mr. President, if the distinguished acting Republican leader has no further business, and if no other Senator is seeking recognition, I now ask unanimous consent that the Senate stand in recess under the previous order until 10 a.m., Wednesday, January 31.

There being no objection, the Senate, at 6:25 p.m., recessed until Wednesday, January 31, 1990, at 10 a.m.

NOMINATIONS

Executive nominations received by the Senate, January 30, 1990:

DEPARTMENT OF DEFENSE

GERALD A. CANN, OF MARYLAND, TO BE AN ASSISTANT SECRETARY OF THE NAVY, VICE THOMAS F. FAUGHT, JR., RESIGNED.

JACQUELINE E. SCHAFER, OF VIRGINIA, TO BE AN ASSISTANT SECRETARY OF THE NAVY, VICE EVERETT PYATT, RESIGNED.

DEPARTMENT ON HEALTH AND HUMAN SERVICES

JOYCE T. BERRY, OF THE DISTRICT OF COLUMBIA, TO BE COMMISSIONER ON AGING, VICE CAROL FRASER FISK, RESIGNED.

NATIONAL SCIENCE FOUNDATION

FREDERICK M. BERNTHAL, OF TENNESSEE, TO BE DEPUTY DIRECTOR OF THE NATIONAL SCIENCE FOUNDATION, VICE JOHN H. MOORE, RESIGNED.

SECURITIES AND EXCHANGE COMMISSION

PHILIP R. LOCHNER, JR., OF CONNECTICUT, TO BE A MEMBER OF THE SECURITIES AND EXCHANGE COMMISSION FOR THE REMAINDER OF THE TERM EXPIRING JUNE 5, 1991, VICE DAVID S. RUDER, RESIGNED.

IN THE AIR FORCE

THE FOLLOWING-NAMED OFFICER FOR APPOINTMENT TO THE GRADE OF GENERAL ON THE RETIRED LIST PURSUANT TO THE PROVISIONS OF TITLE 10, UNITED STATES CODE, SECTION 1370:

To be general

GEN. JOHN L. PIOTROWSKI, xxx-xx-xxxx U.S. AIR FORCE.

THE FOLLOWING-NAMED OFFICER FOR APPOINTMENT TO THE GRADE OF GENERAL WHILE ASSIGNED TO A POSITION OF IMPORTANCE AND RESPONSIBILITY UNDER TITLE 10, UNITED STATES CODE, SECTION 601:

To be general

LT. GEN. DONALD J. KUTYNA, xxx-xx-xxxx U.S. AIR FORCE.

THE FOLLOWING-NAMED OFFICER FOR APPOINTMENT TO THE GRADE OF LIEUTENANT GENERAL ON THE RETIRED LIST PURSUANT TO THE PROVISIONS OF TITLE 10, UNITED STATES CODE, SECTION 1370:

To be lieutenant general

LT. GEN. EDWARD J. HEINZ, xxx-xx-xxxx U.S. AIR FORCE.

THE FOLLOWING-NAMED OFFICER FOR APPOINTMENT TO THE GRADE OF LIEUTENANT GENERAL WHILE ASSIGNED TO A POSITION OF IMPORTANCE AND RESPONSIBILITY UNDER TITLE 10, UNITED STATES CODE, SECTION 601:

To be lieutenant general

MAJ. GEN. THOMAS S. MOORMAN, xxx-xx-xxxx U.S. AIR FORCE.

THE FOLLOWING-NAMED OFFICER FOR APPOINTMENT TO THE GRADE OF LIEUTENANT GENERAL WHILE ASSIGNED TO A POSITION OF IMPORTANCE AND RESPONSIBILITY UNDER TITLE 10, UNITED STATES CODE, SECTION 601:

To be lieutenant general

MAJ. GEN. C. NORMAN WOOD, xxx-xx-xxxx U.S. AIR FORCE.

IN THE NAVY

THE FOLLOWING-NAMED READ ADMIRALS (LOWER HALF) IN THE LINE OF THE U.S. NAVY FOR PROMOTION TO THE PERMANENT GRADE OF REAR ADMIRAL, PURSUANT TO TITLE 10, UNITED STATES CODE, SECTION 624, SUBJECT TO QUALIFICATIONS THEREFOR AS PROVIDED BY LAW:

UNRESTRICTED LINE OFFICER

To be rear admiral

REAR ADM. (LH) RICHARD CHARLES ALLEN, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) DONALD VAUX BOECKER, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) ARLINGTON FICHTNER CAMPBELL, xxx-xx-xxxx, U.S. NAVY.
REAR ADM. (LH) GEOFFREY LYNN CHESBROUGH, xxx-xx-xxxx, U.S. NAVY.
REAR ADM. (LH) GEORGE NICHOLAS GEE, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) RAYMOND GEORGE JONES, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) IRVE CHARLES LEMOYNE, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) FREDERICK LANCE LEWIS, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) THOMAS CHARLES LYNCH, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) DANIEL PETER MARCH, xxx-xx-xxxx, U.S. NAVY.
REAR ADM. (LH) WILLIAM CHARLES MILLER, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) RILEY DEWITT MIXSON xxx-xx-xxxx, U.S. NAVY.
REAR ADM. (LH) DAVID ROLAND MORRIS, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) PAUL DAVIS MOSES, xxx-xx-xxxx, U.S. NAVY.
REAR ADM. (LH) DAVID ROGERS OLIVER, xxx-xx-xxxx, U.S. NAVY.
REAR ADM. (LH) WILLIAM ARTHUR OWENS, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) THOMAS DEAN PAULSEN, xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) JOSEPH CHARLES STRASSER, xx... xxx-x... U.S. NAVY.
REAR ADM. (LH) BYRON EUGENE TOBIN, JR., xxx-x... xx... U.S. NAVY.
REAR ADM. (LH) JERRY LEE UNRUH, xxx-xx- xx... U.S. NAVY.

SPECIAL DUTY OFFICER (INTELLIGENCE)

To be rear admiral

REAR ADM. (LH) EDWARD DAVID SCHEAFER, JR., xxx-xx-xxxx, U.S. NAVY.

CONFIRMATIONS

Executive nominations confirmed by the Senate January 30, 1990:

DEPARTMENT OF THE TREASURY

ABRAHAM N.M. SHASHY, JR., OF TEXAS, TO BE AN ASSISTANT GENERAL COUNSEL IN THE DEPARTMENT OF THE TREASURY (CHIEF COUNSEL FOR THE INTERNAL REVENUE SERVICE).

DEPARTMENT OF HEALTH AND HUMAN SERVICES

MARTIN H. GERRY, OF CALIFORNIA, TO BE AN ASSISTANT SECRETARY OF HEALTH AND HUMAN SERVICES.

THE ABOVE NOMINATIONS WERE APPROVED SUBJECT TO THE NOMINEES' COMMITMENT TO RESPOND TO REQUESTS TO APPEAR AND TESTIFY BEFORE ANY DULY CONSTITUTED COMMITTEE OF THE SENATE.

EXTENSIONS OF REMARKS

CAMPAIGN FINANCE REFORM

HON. PAUL E. KANJORSKI
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. KANJORSKI. Mr. Speaker, the leadership of both parties in the House of Representatives has made enactment of a meaningful campaign finance reform law a top priority for 1990, the second session of the 101st Congress. I share your belief that we owe it to the American people to clean up our campaign finance morass, in a bipartisan fashion, before we adjourn for the year in October.

The American people are understandably fed up with the cost of elections, the perceived advantages of incumbents under the current financing process, and the perceived influence of large contributors. There is an overwhelming desire to democratize our campaign finance system by increasing the impact of small contributors, and reducing the impact of the so-called fat cats.

Norman J. Ornstein, resident scholar at the American Enterprise Institute for Public Policy Research, and a well-known and respected observer of U.S. elections, has prepared a very thoughtful analysis of our campaign finance system.

His analysis, which first appeared in Roll Call, carefully dissects both past efforts to revise our campaign finance system and current proposals for improvement. He concludes by offering a major five-point plan for reform.

I would like to share his insight with my colleagues and announce that I will use his proposal as the basis for a new, comprehensive, campaign finance reform bill. In addition to addressing the issues raised in Mr. Ornstein's article, my bill will also deal with the problem of candidates pouring millions of dollars from their own pockets into elections, and the problem of so-called independent groups spending large sums of money to defeat or elect a specific candidate.

What makes these proposals unique, is that they are positive and focus on providing incentives to encourage actions we desire, small contributions by many people, rather than focusing on actions we are trying to discourage.

The article follows:

[From Roll Call, Jan. 8, 1990]

THE ORNSTEIN PLAN FOR CAMPAIGN FINANCE REFORM: TAX CREDITS, SEED MONEY, PAC CUTS

(By Norman J. Ornstein)

The Keating Five story and the stubborn refusal of the Senate to eliminate honoraria in return for a pay raise mean that political ethics will continue to be a big issue in 1990.

That's bad news for Senators, but it could be good news for campaign finance reformers. Campaign finance is the one remaining piece of major reform in the political process that remains unaddressed. Now, however—especially given the active involvement by Charles Keating in the campaign funding process—it is clearly going to be a priority.

The odds for success have increased in the past several months, for other reasons as well. The longstanding impasse between the political parties shows signs of being broken, especially because of the encouraging movement towards sensible change being made by House Republicans.

The recommendations of the GOP members of the Task Force on Campaign Finance Reform were largely reasonable and constructive, and the recent comments by House Republican Leader Bob Michel (R-Ill) provide a genuine opening for compromise.

But success in the campaign finance arena will be judged not just by whether a political compromise can be cobbled together in a political atmosphere demanding ethics reform; we have had several campaign finance "reforms" enacted in the past two decades under similar circumstances—creating the mess we have today.

This time, a higher standard must be applied. And now is the time to step back and put some cool and objective common sense into the process.

REASONS FOR CHANGE

The best place to start is by reviewing our conceptions—and misconceptions—about what is wrong with the campaign finance system, and why we want to clean it up. There are clearly three major reasons for change:

1. We are uneasy about special interest influence in the political process. From the Keating Five to the listings in the Washington Post of all Congressional speech honoraria, it's evident that the ever-acute societal sensitivity to special interests in politics and policy has been ratcheted higher.

Washington is awash in lobbyists, and the most observable, reportable, and quantifiable evidence of their influence is campaign contributions. These donations may be legal, but their growing size and role in campaigns has led to an overwhelming desire to change the laws, to reduce this special interest presence.

2. Politicians have become obsessed with money. The pay raise issue, the chasing of honoraria, the petty business deals of ethics code violations are examples of this phenomenon, but so too is the obsession with campaign money.

Challengers can't run effectively without money—lots of it. Incumbents can't be assured of keeping effective challenges away, or of surviving reappointments, redistricting, or gerrymandering, without having large nest eggs.

From regular phone calls to faithful contributors to constant appearances at Washington fundraisers, politicians spend enormous amounts of time raising money for campaigns, plotting ways to raise money, and thinking about how much money they need to raise.

This is time that would be better spent worrying about public policy, or relating to representatives or constituents on a more open and less venal basis.

3. In a world of big-money campaigns, challengers are left out, and incumbents have unfair advantages. To run a competitive campaign for the House these days takes roughly $400,000. Few challengers have the wherewithal or the access to resources to raise anywhere near that sum.

Incumbents increasingly have monopolized political action committee (PAC) contributions, worsening the financing problems of challengers.

Add to this the other advantages of incumbents—mailing privileges, staff, sheer name recognition—and the obstacles to challengers become insurmountable. Hence, the 98 percent reelection rates for incumbents in 1986 and 1988.

Real campaign finance reform would "level the playing field" by making it easier for challengers to get into the game. And, ideally, it would transform a system that now discourages experienced and able candidates because of the daunting task of raising money, while encouraging the ideologues and multi-millionaires who can hack it under the current rules.

THE FATAL MISCONCEPTION

Nearly everyone connected with the political process from journalists to politicians to academics, understands these problems. But most move from them to a fatal misconception about their roots—and to faulty assumptions about what would cure them.

The fatal misconception? That the problem is too much money. The most common complaint about the campaign finance system is that it is awash in money—especially, of course, special interest money.

The most common solution offered by reformers is to remove as much money as possible from the system. Common Cause and many Republicans want to accomplish this end by eliminating PACs. Many Democrats want to do it by putting spending caps on campaigns. Each solution solves the wrong problem and creates a bigger one.

In a vast and heterogeneous society like the United States, elections cost a lot of money—and should. There is no way to communicate effectively and fully with the 550,000 people who make up a Congressional constituency, or the tens of millions of Americans affected in many Senate elections, without spending a lot of money.

McDonald's spends more money advertising its hamburgers than we do on our federal campaigns. As scholar Howard Penniman points out, contrary to conventional wisdom, the per-voter costs for campaigning in the US are about the same as the average for Western democracies.

We happen to have a lot of voters, spread out over huge geographical expanses. This means that American elections are expensive—and have to be. Candidates need to raise lots of money to run effective campaigns—campaigns, in other words, that adequately reach voters.

But the current system, designed in considerable part by the same reformers who decry it, makes raising money in any form especially difficult. Under current law, Congressional candidates, whether incumbents

● This "bullet" symbol identifies statements or insertions which are not spoken by a Member of the Senate on the floor.
Matter set in this typeface indicates words inserted or appended, rather than spoken, by a Member of the House on the floor.

or challengers, have to become obsessed with raising money.

The single largest reason for the sharp growth in PACs has been previous "reforms" that cut the amount of money in campaigns (restricting the size of individual contributions), for example, and made it more difficult for candidates to raise money from small individual donors (eliminating the tax break for small campaign donations.)

For candidates needing to raise the $400,000 or so required for an average competitive House campaign, or the several million necessary for a Senate race, PACs—easily accessible in Washington, in business specifically to give money, and with much higher limits than individuals—have become increasingly attractive.

ELIMINATE PAC'S?

Eliminating or sharply reducing the role of PACS may well be desirable, given our concern with special interest influence. But to eliminate PACs without freeing up other sources of money would create a bigger problem, without solving the old one.

All candidates, not just incumbents, would have a much larger burden raising the large sums of money needed to communicate effectively with voters. Either they would become even more preoccupied with raising money, spending more time and energy on it than they do now (a frightening prospect) or they would raise, and spend, less money, narrowing the ability of candidates to reach voters.

Neither would eliminating PACs erase special interest influence. Long before the creation of PACs, interests had access and influence in Washington—indeed, much greater influence than they have now. But that was in a pre-reform era, before disclosure of contributions enabled us to detail systematically and quantitatively their cash contributions to Washington.

Long after the elimination of PACs, special interests will continue to have access and influence. As James Madison noted in Federalist 10 (a document that seems to have escaped the scrutiny of many erstwhle reformers), special interests are a part of American democracy's genetic code.

That is not to argue that we should simply throw up our hands and accept any system of overt influence peddling. It is to say that since we cannot erase the influence or role of special interests in our democracy, reforms must be designed with a different goal in mind.

We need to channel that influence in a more balanced way, creating more avenues for rank-and-file voters and broader interests to tilt the playing field away from an overreliance on narrow special interests and their money.

But simply eliminating PACs without creating compensating changes to loosen restrictions on other kinds of money will be counterproductive. The compelling need candidates have for campaign resources would increase, not abate.

Without other and better outlets, they would still turn to special interests—but in other ways. Interests would find plenty of backdoor means to play a role in elections, from indirect or in-kind contributions to independent expenditures.

Many of those methods would not be disclosed as direct campaign contributions now are. The influence would still be there, and perhaps even greater—we would just know less about.

SPENDING CAPS?

What about capping campaign spending? Reformers who favor this approach believe it would reduce the obsession with money, give challengers more opportunity by reducing the huge leads that well-off incumbents have, and trim special interest influence by cutting the overall money in the process.

A cap on spending might reduce a candidate's ability to communicate with voters, but it would not reduce special interest influence—just rechannel, it. And it would have the opposite effect of its intentions on incumbents and challengers.

Think of a Congressional election as the political equivalent of a 100-yard dash. Currently, most incumbents start out on the 50-yard line, with their challengers back in the starting blocks.

Capping campaign expenditures is like shortening the race to 80 yards—but leaving the candidates where they were to start with.

This obviously would not make for a more competitive race; it would simply make it even more difficult for a challenger to find the wherewithal to overcome a huge incumbent lead.

Put another way, the problem for most challengers has not been how much an incumbent has, but rather how little the challenger can raise to overcome the overwhelming threshold of name recognition and issue communication required to reach a huge constituency.

Consider two alternatives: 1) Incumbent and challenger are each limited to $100,000, or 2) incumbent gets $1,000,000 and challenger gets $400,000. Every savvy challenger would choose the second.

A FEW SIMPLE STEPS

How then can we achieve genuine campaign finance reform, that is, reform that would reduce special interest influence, reduce the intense preoccupation with raising money, and open to doors to quality challengers to make elections more competitive?

What we need to do is provide easier paths to the "right" kind of money (the kind that no reasonable person would call tainted) for all candidates, easier access to "seed money" for new candidates to get a Congressional campaign under way, and methods to reduce the cost burdens of campaigns without restricting the communications vital to democratic elections. All of those goals are achievable, with a few simple steps:

1. Enact a full tax credit for small, in-state Congressional contributions. The best kind of money to have in campaigns is small contributions from individual citizens from a candidate's state—contributions that one would be hard-pressed to call special-interest payoffs.

A 100 percent tax credit for in-state contributions of $200 or less (indexed to inflation) woud make it easy for candidates to solicit money from average citizens, and would add considerably to the incentive for citizens to contribute to campaigns—a nice way to get them involved with democracy. At the same time we should. . . .

2. Enact a matching fund process for these small in-state contributions. The goal, remember, is to tilt the system heavily in the direction of major incentives for candidates to raise "good" money.

Create a threshold—say, $25,000 in in-state contributions of $200 or less—to weed out non-serious candidates. Once over that limit, candidates would get federal matching funds for every contribution of this sort.

With these two reforms, Congressional candidates would suddenly have a major incentive to raise money in small individual contributions from their own state's voters—tilting the playing field sharply away from PACs and toward "average" people. For a further tilt. . . .

3. Cut allowable PAC contributions. PACs can currently contribute up to $5,000 per election (primary or general) to a candidate. Cut the limit to $2,000 and you have greatly altered incentives for candidates—while at the same time opening up a major new (and better) flow of funds into campaigns.

Reducing PAC contributions to individual campaigns would not eliminate PAC influence; no doubt, many interests would try to find other ways to enhance their clout in politics, perhaps by manipulating or "bundling" individual contributions from employees or directors.

But enhanced disclosure (a provision mentioned below) would help to counter that tendency. So, too, would a beefed-up enforcement arm for the now-toothless Federal Election Commission.

More importantly, keeping PACs alive but reducing their clout would keep most interest involvement in campaigns channeled into observable and legitimate routes—but routes with a much lower volume of traffic.

4. Enact a "seed money" mechanism. Raise individual contribution limits to $10,000, with some restrictions and allow candidates to raise up to $100,000 in early contributions of $1,000 or more.

One of the goals of campaign finance reform has to be to enable challengers to "get over the hump"—to raise start-up funds to create an organization, do some polling and advertising, and build some momentum.

That is very hard to do without a "seed money" mechanism.

Under current law individuals are limited to $1,000 contributions. Candidates have been unable to finance more than a small portion of their campaigns with $1000 individual contributions; realistically, few individuals have the means to write $1,000 campaign checks (most who do could easily add a zero).

Sharply raising the limit would enable challengers especially, to turn to a small number of well-heeled individuals to get campaigns under way.

This change should only be effected with several safeguards. The overall sum that a candidate can raise in this fashion should be limited, to keep the "seed money" principle in place. Every contribution of more than $1,000 should be accompanied by extensive disclosure from the donor—besides name and address, job positions, corporate and other board memberships, and any direct legislative interests—released within 48 hours of the contribution to both the Federal Election Commission and to major journalistic organizations in the state.

And to prevent a candidate from sandbagging an opponent, contributions over $1,000 should be restricted to the early stages of a campaign.

There is a danger here, of course, in letting a cadre of wealthy people have overweening influence on campaigns. But with the limits I suggest, and with the extensive publicity the disclosure provisions would ensure, the public would have a full opportunity to weigh the appropriateness and impact of the contributions during the campaign.

In fact, these contributions would have the ironic benefit of providing non-wealthy

candidates with a counter to the unlimited spending allowed by independently wealthy candidates.

5. Require television and radio stations to provide the lowest-cost commercial ad rates for political ads of at least one minute in length for qualified Congressional candidates.

The largest and fastest growing expense in House and Senate campaigns is TV advertising. This is one area where we can find a reform to reduce the costs of campaigning for candidates and parties.

Doing so simply by requiring free time would be a mistake.

Imagine the nightmare of allocating time for the literally hundreds of candidates from major and minor parties with districts or states affected by New York City radio and television stations.

But there is no reason why stations, granted valuable licenses by the government to dominate public airwaves, should be able to take advantage of democracy by charging higher prices to candidates then they do to commercial advertisers.

At the same time, by targeting the lowest rates to commercials of one minute or more, we would discourage candidates from relying ever more heavily on the 15- or 30-second "hit-and-run" spots that have become so popular—and so negative.

SMALL PRICE TO PAY

Enacting this series of reforms would address every one of the concerns we now have about the campaign finance system.

We would tilt the system away from an increasingly heavy reliance on special interest money, restoring more balance to the policy process and more of a role for rank-and-file voters.

We would make it easier for politicians—challengers and incumbents—to raise the money necessary to run effective campaigns in our large and diverse democracy, without having to demean or prostitute themselves in the process, or to turn their attention unduly away from policymaking concerns.

We would break the logjam of noncompetitiveness in campaigns, by giving solid and promising challengers more opportunities to raise the money necessary to get their messages across but still avoiding the creation of the kinds of restrictions on incumbents that are unrealistic or counter-productive.

True, to do all of this requires public money, perhaps as much as $150 million a year. In other words, to create a better and healthier political system, with better candidates and adequate communications with voters, might cost one-three hundredth of one percent of the Gross National Product, or one-seventy fifth of one percent of the federal budget.

But there is no effective way to create a more robust and legitimate election process without this modest investment. It is a small price to pay for cleaning up the campaign mess.

IN MEMORY OF ANDREI SAKHAROV

HON. STENY H. HOYER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. HOYER. Mr. Speaker, while the Congress was out of session recently, the Soviet Union and indeed the entire world lost one of its finest citizens. Dr. Andrei Sakharov, world famous scientist, Nobel Peace Prize winner, and tireless struggler for peace and human rights, died on December 14, 1989, at the age of 68.

Dr. Andrei Sakharov gave up a life of privilege and status to struggle for peace and human rights. A highly decorated and respected member of the Soviet scientific establishment, Dr. Sakharov first incurred the displeasure of the Soviet Government when he protested against his government's nuclear testing policy in the 1950's. By the 1960's, Sakharov "[had] became interested in an ever-expanding circle of questions," as he himself modestly put it, speaking out on such diverse issues as the industrial pollution of Lake Baikal, drafting students to work in fields and factories, and the conviction of writers Yuri Daniel and Andrei Sinyavsky in 1966 for "anti-Soviet agitation and propaganda."

In 1968, Dr. Sakharov gained the world's attention and increased respect with a series of bold essays collected and published in the West under the title, "Reflections on Progress, Coexistence, and Intellectual Freedom." In these essays, Dr. Sakharov addressed numerous problems facing the world and called for international cooperation in resolving them, through "scientific methodology and democratic spirit." Precisely this lack of democratic spirit in the Soviet Union prompted him to denounce the abuse of civil rights and intellectual freedom in the Soviet Union.

Henceforth, Dr. Sakharov was a marked man in the eyes of the authorities. His top-secret clearance was revoked and he was denied access to further weapons research. The Soviet press, after an initial silence during which it was probably waiting for instructions, criticized "Progress, Coexistence, and Intellectual Freedom." Many of his erstwhile friends and colleagues turned on him, rather than risk their material and professional well-being.

But Sakharov did not retreat. By 1970, he and a handful of other brave dissidents had formed Moscow Human Rights Committee to defend victims of Soviet repression. In 1975, he was awarded the Nobel Peace Prize, but was prevented by Soviet authorities from going traveling to Stockholm to accept the award. Dr. Elena Bonner, wife of Dr. Sakharov, and herself a prominent human rights activist, accepted the Nobel Peace Prize on her husband's behalf and delivered his acceptance speech.

In late December 1979, Soviet paratroopers landed in Kabul, Afghanistan. Dr. Sakharov, naturally, immediately condemned Moscow's flagrant violation of international law. Less than a month later, he was forcibly and illegally banished to the city of Gorky, about 150 kilometers east of Moscow. For 6½ long years he was held under house arrest, isolated from friends and loved ones. His only regular contact with the outside world was Elena Bonner, until she too, was arrested in 1984 and sentenced to join her husband in exile. Dr. Sakharov's sojourn in Gorky was a bitter experience, marked by KGB harassment thugs and long, debilitating hunger strikes undertaken by Dr. Sakharov to protest the mistreatment of his family and himself.

Finally, in December 1986, the world cheered as Dr. Sakharov made his triumphant return to Moscow, having been freed from his latter-day Babylonian captivity by General Secretary Gorbachev.

Andrei Sakharov might have retired, or devoted himself entirely to scientific work, and let a younger generation take up the human rights struggle that a handful of his generation had begun. But, instead, he threw himself back into the fray, campaigning for, and winning a seat in the newly established Congress of Peoples Deputies, from which tribune he continued to press for genuine parliamentary democracy and lasting reforms. And he was still tirelessly working for those goals when he was felled by a sudden heart attack.

Mr. Speaker, when I learned of Andrei Sakharov's death, I could not help but think of another crusader for human rights in another era. Former President John Quincy Adams, returned to the Congress by his fellow citizens of Massachusetts, tirelessly campaigned against the evil of human slavery. He was stricken on the floor of Congress in 1848 after delivering one of his many fervent speeches against that shameful institution, and a few days thereafter expired. Andrei Sakharov's last speech was a condemnation of the monopoly of the Communist Party over the political process in the Soviet Union. He died a few days later.

President Adams died protesting slavery of the body in our country, Dr. Sakharov died protesting Communism's slavery of the mind in his country.

Such voices may be stilled, but their memory and their noble labors continue.

EVELYN AUDREY REEVES, BUSINESSWOMAN AND PIONEER

HON. EDOLPHUS TOWNS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. TOWNS. Mr. Speaker, it is my distinct honor to congratulate Evelyn Audrey Reeves of Los Angeles, CA for her outstanding and groundbreaking achievements in business, her personal pursuit of excellence and her dedication to assuring that all Americans obtain quality housing.

Ms. Reeves is the 16th president and chief executive officer of the National Association of Real Estate Brokers, Inc., one of the Nation's largest minority trade organizations. As a national organization of real estate professionals with headquarters in Washington, DC, the NAREB is dedicated to achieving democracy in housing by working to provide equal housing opportunities for all people without limitation or restriction.

Prior to her historic election as the first woman to hold the office of president of the National Association of Real Estate Brokers, Inc., in August 1989, Ms. Reeves had served as the group's first, second, and third vice presidents. During the span of her 17 years membership, Ms. Reeves has distinguished herself by holding various positions within the organization, including, chairwoman of annual convention, national chair of the membership committee, officer on the board of directors, adviser to the national convention and

member of the national constitution and bylaws committee.

Reeves is broker/officer and property manager for the First Security Investment Co. She is the president of ReHom Corp., which is currently completing the development of the Los Angeles Century Freeway Condominium Housing Project. In addition to the responsibility of overseeing her own enterprises, she is the exclusive consultant broker for the Founders Savings and Loan Association.

Among her many activities and achievements, Reeves was honored by the National Business League with the Frederick Douglas Award, 1989; the Los Angeles Sentinel's Most Out-Standing Woman of the Year, 1985; and numerous other awards from local, State, and national realtists organizations in recognition of her service to the community in her quest to provide not only quality housing for all but a more democratic social and economic environment with equal opportunities for all.

She serves on the Los Angeles Mayor Tom Bradley's Special Housing Task Force for South Central Los Angeles, the State of California's Housing Advisory Committee, a consultant to the real estate testing division of the Educational Testing Services, and an adviser to the Los Angeles Southwest College Real Estate Advisory.

She is a member of numerous civic organizations including the National Business League; the Urban League and the Los Angeles branch of National Association for the Advancement of Colored People [NAACP].

Reeves received her associate of arts degree in business administration from Los Angeles City College, and a bachelor of arts degree in business administration from California State University and her California real estate certificate from Los Angeles City College.

It is a great pleasure that I rise to pay tribute to this woman who personifies the virtues of commitment, diligence and service to others.

CELEBRATING THE ANNIVERSARY OF LITHUANIAN INDEPENDENCE

HON. BRIAN J. DONNELLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. DONNELLY. Mr. Speaker, I rise today to mark the establishment of the Independent Republic of Lithuania and to salute the Lithuanian people, who continue their brave struggle for freedom.

This year commemorates the 72d anniversary of Lithuanian independence. The Council of Lithuania declared the country to be an independent republic in the days following the Russian Civil War. The fledgling nation later joined the League of Nations and proceeded to initiate land reform, educational progress, and industrialization in a rich cultural climate highlighted by participation in the Catholic Church.

However, the independence of the Lithuanian people was to be short-lived. Secretly annexed by the Soviet Union in the Nazi-Soviet Pact and subsequently invaded and occupied by Red Army troops, the sovereign nation of Lithuania was turned over to the Soviet Government, in whose hands it remains today.

The United States has never recognized the incorporation of Lithuania into the Soviet Union, and continues to maintain diplomatic relations with representatives of the independent Lithuanian Government. It is especially vital in these times of rapid democratic change throughout Eastern Europe that we continue to keep the plight of the Lithuanians in the forefront of the world's issues.

At present, Lithuania is leading the charge toward independence for the Baltic Republics. In December, the local Communist leaders proclaimed their independence from the Soviet Communist Party and legalized rival political parties. Even Mikhail Gorbachev's recent visit to Lithuania failed to stem the rising tide of freedom.

Today I am pleased to recognize the contributions of many Americans of Lithuanian descent, including a very active Lithuanian community in my district. The Lithuanian Club of Montello in Brockton, MA will be celebrating Lithuanian Independence Week from Saturday, February 10 to Sunday, February 18. Activities throughout the week will reflect the spirit and culture of a people who continue to yearn for the day when the Republic of Lithuania will again know the freedom which we Americans cherish.

I wish to take this opportunity to pay tribute to all Lithuanian people who share in the common goals of liberty and self-determination for their nation. In this era of democratic progress, we must reaffirm our support for Lithuanians everywhere in their ongoing quest for independence.

H.R. 3906

HON. RICHARD J. DURBIN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. DURBIN. Mr. Speaker, yesterday I introduced legislation along with 15 of my colleagues, including Mr. MADIGAN, Mr. DORGAN, and Mr. LEACH, to expand the use of our Nation's foremost renewable motor fuel—ethanol.

H.R. 3906, the Energy and Environmental Security Act of 1990, will expand the use of clean-burning, ethanol-based fuels by extending and clarifying existing tax incentives for ethanol use, and by establishing fuel standards that will lead to increased use of ethanol for environmental purposes.

In the past decade, ethanol blends have grown in importance as a component of our Nation's motor fuel. Last year, more than 7 percent of the U.S. motor fuel supply contained ethanol in a 10 percent blend with gasoline, as ethanol production reached a total of nearly 900 million gallons.

If Federal policies send the right signals, ethanol use will continue to expand. In addition, a new ethanol derivative, ethyl tertiary butyl ether [ETBE], can increase the options available to those who want to sell clean-burning fuels.

Further growth in the use of ethanol fuels would help us to address a variety of national problems, because ethanol:

Improves air quality by reducing carbon monoxide emissions by as much as 25 percent, providing CO nonattainment areas with a simple way to move toward compliance with Federal clean air standards.

Reduces the need for gasoline components such as the aromatics, which can produce emissions of benzene as a by-product of combustion as well as increasing ozone formation.

Reduces our dependence on foreign crude oil, which has reached dangerously high levels, and lowers the trade deficit by replacing imported petroleum products in the Nation's motor fuel supply.

Boosts farm income and reduces farmers' reliance on Federal farm programs by increasing the demand for agricultural products, while creating jobs as new production facilities are brought on line.

Reduces the budget deficit as new demand for agricultural products translates into lower Federal farm program costs.

Ethanol's contribution to our Nation's energy and environmental security can grow significantly if our legislation is enacted. The bill will:

Extend the current federal tax incentives for domestic ethanol use to the year 2002, so that businesses will have an adequate timeframe in which to plan investments in new facilities.

Clarify the tax status of ETBE so that this product will begin to take its place as one of the renewable alternative fuels eligible for the existing tax incentives.

Require a 3.1 percent oxygen content in carbon monoxide nonattainment areas so that the most environmentally beneficial fuels will be used.

Direct EPA to report to Congress on the environmental impacts of aromatic compounds and the benefits of replacing them with ethanol or ETBE, and limit aromatic levels accordingly.

Mr. Speaker, the Energy and Environmental Security Act of 1990 will expand the use of domestically produced, renewable, clean-burning ethanol fuels. I urge my colleagues to join me in cosponsoring this legislation, a more complete summary of which will appear in the RECORD following my statement.

H.R. 3906—THE ENERGY AND ENVIRONMENTAL SECURITY ACT OF 1990

Tax Provisions:

1. Extend the excise tax exemption and blender's tax credit for alcohol fuels to the year 2002.

2. Clarify the blender's tax credit to include ethyl tertiary butyl ether (ETBE).

3. Extend the ethanol import tariff to the year 2002.

4. Clarify customs law to treat ETBE imports the same as ethanol imports.

5. Direct GAO to prepare a report discussing options for reimbursing the Highway Trust Fund for tax revenues foregone because of the excise tax exemption.

Environmental Provisions:

6. Require 3.1 percent oxygen content in all motor fuel sold in carbon monoxide nonattainment areas, with an oxygen credits trading program to promote a mix of fuels and maximum flexibility.

7. Direct EPA to report to Congress on the environmental impacts of aromatic compounds in gasoline and the benefits of replacing them with ethanol or ETBE, and to limit aromatic levels accordingly.

Energy Provisions:

8. Direct DOE to give priority to funding ethanol development projects that have high potential for immediate benefits, such as reducing the cost of converting grain to ethanol, and to establish a program to encourage ethanol production and use.

HONORING LARRY REICH

HON. BENJAMIN L. CARDIN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. CARDIN. Mr. Speaker, on February 8, 1990, Mr. Larry Reich will be honored for his distinguished career as Baltimore City's Director of Planning on the occasion of his retirement.

Mr. Reich has been instrumental in the renaissance of Baltimore City. Among the many far-reaching projects which flourished under Mr. Reich's leadership are the Capital Improvement Program process, full-service community planning initiatives Metro Center plans in downtown Baltimore, and the 1986 Harbor Book—the landmark policy document of the city's waterfront.

Larry Reich has been director of the department of planning since 1966. He brought his talent to Baltimore after receiving his bachelor's degree from Harvard University and his master's degree in city and regional planning from the Harvard Graduate School of Design. Mr. Reich has been serving Baltimore as director of the department of planning and as the Mayor's representative to the Baltimore Regional Planning Council, but his efforts have reached beyond the Baltimore City border to have an influence on both national and international planning. Mr. Reich has long been active in the American Planning Association and the American Institute of Certified Planners. His work has reached Philadelphia, Chicago, New York, Milwaukee County, Tennessee Valley, Honduras, and El Salvador. Mr. Reich has shared his experience and wisdom with students at the Johns Hopkins University, Morgan State University, the University of Virginia, and Virginia Polytechnic.

I urge my colleagues to join the many voices who are anxious to thank Mr. Larry Reich for his many years of commitment to the Baltimore metropolitan area.

ENVIRONMENTAL LINKAGE TO NATIONAL SECURITY

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. GILMAN. Mr. Speaker, today I am introducing House Concurrent Resolution 248, which states that the Secretary of State and the Administrator of the Agency for International Development should give increasing attention to the linkage between problems which stem from political unrest and deteriorating environmental conditions. This emerging issue which concerns problems of the environment and problems with national security should become a focus of a significant portion of U.S. foreign assistance efforts in struggling countries.

The deepening and widening global hunger and environmental crises presents a threat to national security—and even survival—that may be greater than well-armed, ill-disposed neighbors and unfriendly alliances. Already in parts of Latin America, Asia, the Middle East, Eastern Europe, and Africa, hunger and environmental decline is becoming a source of political unrest and international tension. The recent destruction of much of Africa's dry land agricultural production was more severe than if an invading army had pursued a scorched-earth policy.

Presently our Government tends to base its approach to security on traditional definitions. And arms production—in all parts of the world—preempts resources that might be used more productively to diminish the security threats created by hunger and environmental degradation and resentments that are refueled by widespread proverty.

In a number of Third World countries that suffer from deforestation, desertification, soil erosion, and other environmental stresses, People are faced with chronic food shortages, resulting in political instability. On many occasions, this leads to armed conflicts that involve other nations in terms of emergency relief and military assistance. Such destabilizing actions leave local government prey to hostile takeovers and the geopolitical landscape can drastically shift overnight. In addition to the Third World, the eastern bloc nations struggling with their newfound freedoms have suffered from seriously critical environmental problems.

For these reasons, I am introducing House Concurrent Resolution 248 and I urge my colleagues to support the bill.

THOMAS J. STANTON, JR. HONORED

HON. FRANK J. GUARINI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. GUARINI. Mr. Speaker, on February 8, 1990 a truly outstanding individual will be honored by the people of New Jersey for his countless contributions to the business and civic world. Thomas J. Stanton, Jr., chairman emeritus of the National Westminster Bank, will be honored by the Hudson County Chamber of Commerce and Industry at a dinner to be held at the Newark Airport Marriott.

Thomas Stanton is a man of tremendous energy, talent and compassion. Throughout his lifetime he has been at the forefront of the development of New Jersey and especially the Hudson County area.

Despite a very active and successful banking career, Tom Stanton has found the time to actively participate in community improvement programs, bringing educational, social, and cultural enrichment events to our area.

Dominick D'Agosta, executive director of the Hudson County Chamber of Commerce and Industry, is a member of the dinner committee, along with Gloria Esposito, Terry Frick, and William Scheyer. They describe Tom Stanton as:

A man of thoughts. A man of words. A man of deeds. In a banking career that has spanned 36 years, Tom Stanton made a mark on New Jersey and particularly on Hudson County, that will continue to expand and deepen as time goes on. His style was not to offer surface solutions to deep-seated problems, nor was it to shy away from uncomfortable situations. Rather, Tom embraced challenges. He thought about them, talked about them, and met them with actions that were practical, humane and visionary. His influence touched every important facet of community life—economic development, education, the arts and sciences, religion and civil rights. Now, at the end of his first career, we wish him well as he embarks on his second, that of a private citizen still carrying the banner of commitment to improve life in his home town and his home state.

Born in Jersey City, Tom Stanton is a graduate of prestigious St. Peter's Prep in Jersey City. He received his bachelor's degree from Georgetown University in 1952, and attended New York University Graduate School of Business Administration for 4 years. He has received honorary doctorates from St. Peter's College, Jersey City State College, and Stevens Institute of Technology.

Tom Stanton began his career at the First Jersey National Bank in 1954. Within 2 years he was named assistant cashier. He was designated assistant vice president in 1957.

In 1960, he was appointed vice president. He was promoted to executive vice president 6 years later when he became a member of the board of directors in 1966. In 1967, he was elected president and chief executive officer and, in 1975, was elected chairman. Mr. Stanton continued as chief executive officer, after First Jersey National Bank was acquired by National Westminster Bank and became National Westminster Bank, NJ. In September 1988 Mr. Stanton announced his retirement, effective February 1, 1990, and was elected chairman emeritus until that time.

Stanton's philanthropic benevolence is well known for aiding community and religious groups of all denominations and ethnic groups. While businesses large and small have been assisted by Tom Stanton's leadership, so have many individuals been aided by his kindness and generosity.

His activities read as a litany of accomplishments:

Outside memberships and directorates:

Director: Loral Corporation; New Jersey Bell Telephone Company; Reliance Group Holdings, Inc., Reliance Insurance Company, Philadelphia; American Bankers Association; Hudson County Chamber of Commerce & Industry; National Conference of Christians and Jews.

Director and Treasurer: New Jersey State Chamber of Commerce.

Member: The American Bankers Association Council; New Jersey Bankers Association—Executive Committee; Board of Regents—Saint Peter's College; Partnership for New Jersey.

Vice Chairman: Regional Plan Association—New York.

Chairman: Regional Plan Association—New Jersey Committee.

Chairman: Hudson County Tax Research Council Executive Committee.

Trustee: Greater Newark Hospital Development Fund; Montclair Museum; Liberty Science Center; St. Peter's Prep; Stevens Institute of Technology, Hoboken.

Trustee and Treasurer: Foundation of the University of Medicine and Dentistry of New Jersey.

Past memberships:

Regional chairman: National Alliance of Business.

Chairman: Annual Business Conference at Rutgers University; New Jersey Bankers Association; New Jersey State Chamber of Commerce; Commission on Budget Priorities—State of New Jersey; Urban Development Committee—American Bankers Association.

Director: Minbanc Capital Corporation; American Bankers Association.

Member: Commission on Government Costs and Tax Policy for the State of New Jersey; Commission on the Future of Independent; Higher Education in New Jersey.

President: Jersey City Chamber of Commerce.

Club Memberships: Baltusrol Golf Club, Springfield, New Jersey; Bergen Carteret Club, Jersey City, N.J.; Essex Club, Newark, N.J.; Essex Fells Country Club, Essex Fells, N.J.; Seaview Country Club, Absecon, N.J.; The Club at the World Trade Center, N.Y.C.; 200 Club of Newark; 200 Club of Hudson County.

During World War II, Mr. Stanton served in the Far East as a first lieutenant, Field Artillery, in the 24th Infantry Division. In the Korean conflict, he held the rank of captain in the 43d Infantry Division.

Tom Stanton is married to the former Jane E. Maloney of Philadelphia, PA, together they have eight children.

Tom Stanton is a giant of a man who has accepted many challenges. New Jersey indeed is fortunate to have had his input for the last 35 years.

I am sure that my colleagues here in the House of Representatives wish to join me in this well-deserved salute to a truly outstanding friend and deeply concerned citizen.

REPEAL OF THE GRAMM-RUDMAN-HOLLINGS ACT

HON. JAMES A. TRAFICANT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. TRAFICANT. Mr. Speaker, the Gramm-Rudman-Hollings Act [GRH] is a sham and is only masking the deficit with gimmicks and shields. It is time for Congress to repeal this act and start all over with an approach that does not hide the deficit's size. When the act was initially created, it was a good idea that actually reduced the deficit. Now GRH has lost its effectiveness while the deficit has actually gone up and not down for the second consecutive year. The Gramm-Rudman-Hollings Act has become a lameduck that needs to be put out of its misery. The budget process has become analogous to a house of mirrors at a carnival. Like the mirrors that deceive, GRH and its gimmicks fool the American public into believing the deficit is less than it really is. In ordrer to resolve the budget crisis, we must be able to see the real deficit instead of the one projected by the tricks of GRH.

It seems as if Congress and the administration have spent more time trying to get around the targets GRH set with accounting gimmicks than actually reducing the debt. The administration craftily moved the 1990 Pentagon expenses by pushing a payday from October 1 to September 29. This move saved over $2.9 billion to OMB's calculation of the deficit. Likewise, farm payments of almost $1 billion were expediated. Over $1.7 billion was simply erased from the deficit calculations by moving the U.S. Postal Service off budget. Almost all of the $20 billion that was used to finance the savings and loan bailout was credited to 1989.

The most outrageous gimmick is the use of trust funds to finance the deficit. The Social Security trust fund is responsible for masking over $65 billion from the deficit target. Without the use of the Social Security surplus, the actual Federal budget deficit would topple $206 billion. I agree with Senator MOYNIHAN that we can no longer tolerate the funding of Government programs by the use of Social Security surpluses. This money is only being used to mask deficit spending so we can buy more B–2 bombers.

It is time to start over. The Gramm-Rudman-Hollings Act is ineffective. If we are going to effectively attack the rising levels of the Federal deficit, then Congress will have to look for alternative methods to correctly solve the debt crisis. While the United States is facing a Federal deficit of more than $3 trillion, it is time that Congress took steps to correct our past mistakes before it is too late. The time will come when the deficit will be so out of hand that no trick in the book will hide the high levels. To start solving the problem practically, Congress needs to start dealing with more accurate numbers. Once Congress starts to do that, it can accurately deal with the situation.

PUBLIC WORKS OPTIMISM

HON. WILLIAM F. CLINGER, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. CLINGER. Mr. Speaker, I would like to take the opportunity to bring to the attention of my colleagues an article by Mr. Cy Malloy, of the American Concrete Pipe Association. Mr. Malloy's article is timely, and, after examining it, I believe it accurately assesses the infrastructure needs of our Nation and the use of our Federal programs.

PUBLIC WORKS OPTIMISM

(By Cy Malloy)

The first session of the 101st Congress is history. World communism is shrinking in linkage. Secretary Cheney sent President Bush a requested proposal to cut $180 billion from the Pentagon's budget. Democracy and free enterprise are respected words voiced by hardened rivals. Change is fomenting. The concept of a global economy is being accelerated by global communications. Satellites once used to study space and spy are now transmitting the needs of a world economy. Technology blossoms for the betterment of human-kind. Lasers for destruction now align pipelines, improve CD sound systems, and correct medical maladies. Although the seeds of change circulate within our global jet-stream, our President has wisely kept our guard up to perceive what is reality before promising concessions. It is one thing for east-block countries to concede free elections, but quite another for example for Gorbachev to announce a future withdrawal of the existing 350,000 Soviet troops and military hardware from East Germany. Perestroika does not necessarily mean glasnost. Times of change demand pondering and positioning. Principles should remain carved in the granite of our minds, but global tactics and strategies require think-tank discussions and if needed the connection of future action versus reactive plans. What does this all mean to the public works construction market? At least four markets will be impacted now and in the near future; namely:

(1) U.S. ENVIRONMENTAL PROTECTION AGENCY (EPA)

With the help of our involvement in the Clean Water Coalition and the Water Infrastructure Forum, for the first time since creation of the Clean Water program in 1970, Congress has increased federal funding to help construct wastewater treatment plants that include collector, interceptor and outfall pipelines. For fiscal year 1990 (Sept. 30, 1989 thru Oct. 1, 1990) over $2 billion has been appropriated and divided equally for federal grant projects and seed monies for the new state revolving loan clean water funds known as SRF's. The fiscal 1989 level was $941 million for each. More funding is important, but during fiscal 1990 we must exert our influence and amend the 1986 Tax Code Act to reduce current restrictions and better leverage the new SRF seed funds including a special program for small communities who can't afford even zero interest SRF loans. In addition the coalition needs a new public relations effort to educate tax payers about the success stories created by this program, and emphasize future needs as illustrated in this U.S. EPA chart:

WASTEWATER TREATMENT PROJECT NEEDS

[In millions]

(2) FEDERAL HIGHWAY ADMINISTRATION (FHWA), U.S. DOT

The highway market annually in the U.S. is about $60 billion of which $13 to 14 billion is federal-aid funding. On September 30, 1991 the current federal authorizations will expire. Between now and then highway interest groups must unite behind the HUF's Transportation 2020 program to agree on a future Federal-aid highway program and a new funding level. Current proposals range from the existing level of $13 to $14 billion to an AASHTO proposed high of $26 billion per fiscal year to ARTBA's goal of around $40 billion. We have been told that FHWA has had a series of fiscal meetings with the Office of Management and Budget (OMB) of the White House and the future federal funding level being debated is about $20 to $21 billion per fiscal year. Based on proposal levels and the FHWA/OMB negotiations, the federal-aid highway program's future funding level could be minimum 50 percent increase over the current level plus a possible needed draw-down on the Highway Trust Fund balance. Current highway and bridge needs are demonstrated in the following charts:

THE NATION'S DETERIORATING HIGHWAYS

(3) FEDERAL AVIATION ADMINISTRATION (FAA), U.S. DOT

Future airport construction that includes federal funds can be substantially increased if we presuade Congress to draw-down the balance existing in the Aviation Trust Fund and preserve its original user fee source which is a percentage of each flight ticket purchased. The following charts illustrate documented airport construction needs:

Airports: Congestion Causes Delays

[Increase in time spent on runway over last 10 years]	*Percent*
Dallas/Ft. Worth	+104.4
Washington Dulles	+97.9
San Francisco	+95.6
Minneapolis/St. Paul	+87.1
Raleigh/Durham	+86.8
Phoenix	+82.1
Cincinnati	+60.0
Los Angeles	+58.1
Seattle	+52.9
Baltimore	+52.5

(4) INFRASTRUCTURE NEEDS

Various industry organizations, congressional committees, and federal agencies have well documented the infrastructure needs of our nation with the high estimate of $3.3 trillion. Over the last few years federal legislation has been introduced in Congress and hearings have addressed these public work needs. The basic barrier has

been the lack of funding because of the existing federal deficit.

If communism is truly converting to democratic-capitalism, the President and Congress might agree on proper cuts in our Pentagon defense budget. These cut funds could be transferred to the domestic sector, to reduce the federal budget deficit, and include a percentage of these funds to begin the reconstruction our infrastructure needs. This approach helds everyone since all citizens need and use public works systems as opposed to congressional suggestions that pit interest-groups against each other. In other words, divide defense budget cuts into percentages for the deficit, infrastructure needs, and left over funds for responsible domestic programs. A tax reduction might be a dream unless a presidential election promotes it as an issue. This effect would kick-in after bailing-out the S&L's. Everyone needs public works plus their construction helps the economy and increases employment. Hopefully, in our lifetime, we will begin to benefit from peace dividends—maybe this is our legacy.

VIOLENT CRIME CONTROL AND CRIMINAL REFORM ACT

HON. DENNY SMITH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. DENNY SMITH. Mr. Speaker, today I am pleased to introduce the "Violent Crime Control and Criminal Procedures Reform Act" which establishes a constitutionally sound death penalty and strengthens and improves Federal criminal penalties and procedures.

Title I of this legislation establishes a constitutional framework for the implementation of the Federal death penalty. It authorizes the death penalty for, among other things, murder, espionage, treason, murder for hire, and certain attempts to assassinate the President. It is a balanced approach that provides constitutional, streamlined procedures for imposition of the death penalty.

Included as title 2 is language to reform current habeas corpus procedures which will minimize Federal judicial interference with State criminal convictions. Finality of litigation, and the elimination of the habeas abuse, which currently surrounds State death penalty convictions is critical.

This package also includes as title 3, a codification of the good faith exception to the exclusionary rule that has been recognized by the Supreme Court. In violent crime and drug cases, vital evidence is often excluded at trial simply because the law enforcement officer unknowingly violated search and seizure rules. However, the Supreme Court has recognized that the exclusionary rule should not be used when the police officer has acted in good faith. This provision addresses a legal loophole which has allowed drug offenders and violent criminals to go free. This proposed reform furthers the truth-seeking goals of our criminal justice system.

Title 4 addresses the need to punish those who commit drug-related and other violent crimes with firearms. Title 4 permits consideration of pretrial detention for certain firearms and explosive offenses, requires mandatory revocation of supervised release for possession of a firearm, and increases penalties for giving false information in connection with the acquisition of a firearm. Enhanced and mandatory penalties for those who commit and provide the means for others to commit violent crime must be key components of any anti-crime legislation.

Title 5 provides for mandatory drug testing of drug-related and firearms-related defendants on post-conviction release. This includes probation, parole, and post-imprisonment supervised release.

Title 6 restores Federal jurisdiction over public corruption cases and extends Federal jurisdiction over all drug-related bribery of public officials.

Title 7 provides for authorization of officially sanctioned undercover sting operations to combat crimes of trafficking in, or receiving, stolen or counterfeited property.

CONGRATULATIONS ARMY PVT. ABEL VELASCO

HON. DUNCAN HUNTER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. HUNTER. Mr. Speaker, I would like to take this time to congratulate a constituent of mine, Army Pvt. Abel Velasco. Private Velasco participated in the successful "Operation Just Cause" in Panama.

Abel, stationed at Fort Ord, had planned to spend Christmas with his family in Brawley. On December 20 he was deployed to Panama. Private Velasco's mission while in Panama was to confiscate weapons and capture anyone linked to General Noriega.

For his service in Panama, Abel was awarded the Army Commendation Medal, which recognizes "superior judgment and tactical expertise far superior to his contemporaries."

I am including for the RECORD an article that appeared in the Imperial Valley Press regarding Private Abel's experience. I know my colleagues join me in saying "Thank you for a job well done."

[From the Imperial Valley Press, Jan. 24, 1990]

LATE CHRISTMAS FOR VELASCO

(By Lori Johnson)

Christmas came a month late but with extra joy when Army Private Abel Velasco came home to Brawley Saturday after participating in the United States invasion of Panama.

On Dec. 20 the Velasco family's traditional Christmas plans were dashed when 19-year-old Abel Velasco was shipped out as part of the force sent to Panama to capture Manuel Noriega and free Panama of his control.

He was deployed the day before he was to come home for Christmas on such short notice he did not have time to tell his family.

"I had no warning at all," said Velasco. "It was like 'pack your bags and go.'"

"It was scary. I didn't know what to expect," he said.

Instead of tamales and a joyous family reunion, Velasco found himself on Christmas day in the midst of combat in Panama City, working as an Army translator.

Velasco said there were so few bilingual soldiers that he was taken from his platoon to work directly with his captain.

"My job was to find out information on key personnel in the Noriega forces," said Velasco.

Armed with a M16 rifle, Velasco said he accompanied officers as they stormed buildings and homes of apparent Noriega associates. He said their mission was to confiscate weapons and, if possible, capture anyone linked to Noriega.

He said he also helped to restore order in the streets that was plagued with looting.

"It's hard to explain," said Velasco. "You have to be there to know what happen. Picture L.A. with no law and throw a little jungle in there. Everyone was doing what they wanted to do."

But Velasco was reminded often of the danger. "There was sniper fire," he recalled.

When asked if anyone close to him was wounded or killed in combat he declined to comment. He said he was told by his superiors not to talk about it.

Of the experience, Velasco said, "You don't really appreciate what life is about until you are put into this type of situation. You learn to value life. You learn to appreciate everything; a shower, a bed."

Velasco had also been sent to Panama last spring to restore order after riots started when Noriega overturned the elections.

Valasco was awarded "The Army Commendation Medal" for his participation in "Operation Just Cause." He was chosen from his company of 125 to receive the medal. The certificate accompanying the medal stated, "During this combat action, (Velasco) demonstrated super judgement, initiative and tactical expertise far superior to his contemporaries."

Velasco, a native of Brawley, entered the Army after he graduated from Brawley Union High School in 1988. He now is stationed in Fort Ord in Monterey.

The mission in Panama wasn't easy for his mother and father Richard and Rachel Velasco of Brawley.

His mother recalled what she told her son on the phone, "As long as I hear your voice, everything is OK.'

Although his mother spoke to him about four times when he was in Panama, she still worried.

"Sometimes I would look at the news and start crying," she said.

She said Christmas was especially hard. "We always make a wish on Christmas night," said Mrs. Velasco. "We always have a toast. But someone was missing."

Mrs. Velasco recalled a telephone conversation with her son. He asked her if they were going to have a Christmas dinner when he returned. She answered, "Yes mijo. We are."

RAOUL WALLENBERG: 45 YEARS SINCE HIS TRAGIC ABDUCTION

HON. TOM LANTOS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. LANTOS. Mr. Speaker, January 17 of this year marks the 45th anniversary of the abduction of Raoul Wallenberg by Soviet troops in Hungary in 1945. The dramatic changes that have taken place in Eastern Europe in the last few months underline the

tragedy of his disappearance. The collapse after four decades of Soviet dominance in Eastern Europe emphasizes the power of the ideals of freedom and democracy for the millions of men and women in Hungary, Poland, Czechoslovakia, East Germany, Bulgaria, and Romania. As we mark the 45th anniversary of Wallenberg's disappearance into the Soviet gulag, our commemoration of that misfortune also emphasizes the magnitude of what one single individual did against the forces of evil, repression, and tyranny.

Those of us who have worked for many years to free Raoul Wallenberg from the Soviet gulag again mark this day with sorrow and frustration. Another year has gone by and still he is not free. Another year has passed and still Soviet authorities have not given the true story of his imprisonment.

Raoul Wallenberg, a Swedish diplomat, went to Budapest in the dark years of 1944 to save the lives of Hungarians who were threatened with annihilation by the Nazi extermination machine. He saved 100,000 men, women, and children, my wife, Annette, and I are two of those who owe our lives to this great hero of the Holocaust.

After the Soviet Army expelled the Nazi forces from Budapest in January 1945, Wallenberg went to meet the commander of the Soviet Army in northeastern Hungary. On January 17, he drove off in the custody of the Soviet military, and he has not been seen outside Soviet prisons since that time. At first, Soviet officials denied that he was in their custody. In 1957, they admitted that he had been there, but claimed he died of a heart attack 10 years earlier at age 35. We know from the many credible reports of former prisoners that Wallenberg was alive long after 1947, but the Soviets continue to claim that he died at that time.

With the exciting changes in the Soviet Union and Eastern Europe that we have witnessed in recent months, I hoped that the new spirit of glastnost would finally lead to freedom of Wallenberg. I was particularly encouraged earlier this year when officials of the Soviet Government invited Nina Lagergren and Guy von Dardel, Wallenberg's half-sister and half-brother, to visit the Soviet Union along with Per Anger, a former Swedish ambassador who as a young man worked in Budapest with Wallenberg, and Sonja Sonnenfeld, secretary of the Swedish Raoul Wallenberg Association.

Although Soviet officials gave a number of Wallenberg's personal belongings to the family delegation, they again repeated the story that Wallenberg died in 1947—a claim that no one accepts. While the delegation appreciated the invitation and openness, they were disappointed that Soviet officials did not give the full truth about Wallenberg. But there remains a glimmer of hope for resolving this case since the Soviet Government has extended an open invitation for the family to make return visits.

Mr. Speaker, many people throughout our country and thousands more around the world join us in our pleas to Soviet officials to let the story finally be told and to permit Wallenberg to go free. I thank my colleagues who have joined me in writing to Soviet officials and to our own Government urging action to resolve this tragic disappearance.

Numerous editorials and newspaper articles have been written to call the attention of American people to the unresolved tragedy of Raoul Wallenberg. Mr. Speaker, an excellent editorial appeared in the San Francisco Examiner during the congressional recess. I insert it in the CONGRESSIONAL RECORD since many of my colleagues may not have had the opportunity to read it. This fine editorial eloquently joins us in calling for a resolution of this matter.

[San Francisco Examiner, Nov. 14, 1989]

WHAT HAPPENED TO WALLENBERG?

The Soviet Union's explanation of its role in the death of Raoul Wallenberg, the Swede who helped rescue thousands of Jews in Nazi-occupied Hungary during World War II, is far from acceptable. By comparison with its recent admissions that it violated an arms pact with the United States and illegally invaded Afghanistan, Moscow's recent disclosures concerning Wallenberg were equivocal. If glasnost is to prove itself, it cannot be open on one occasion and closed on another.

Since 1945, when friends of Wallenberg saw him in the custody of Soviet authorities, the latter have had little to say about Wallenberg. At first Soviet officials maintained that he died shortly after World War II in Hungary. Then they said he had died in the Soviet Union.

But assertions that Wallenberg was still alive began to surface. Friends and relatives of the Swedish diplomat said former Soviet prisoners had encountered Wallenberg. Soviet authorities stood by their story that Wallenberg was long dead.

Then Soviet officials agreed to meet with Wallenberg's relatives. Again, however, Soviet officals asserted that Wallenberg had died—of heart failure in Moscow's Lubyanka prison in 1947, at the age of 35. They produced his passport, money and notebooks—but no death certificate. The meeting left many questions unanswered.

Why was Wallenberg arrested? Why did Soviet officials wait until 1957 to announce his arrest? Why has it taken nearly 45 years to return Wallenberg's personal effects? What is the Soviet explanation for the reports that Wallenberg has been seen alive many times—once as recently as 1980?

The Wallenberg case will not go away. It is obvious that the Soviets bungled it from start to end, but that is no reason why—even this late—his family and the world cannot be told the truth. Moscow must pursue the Wallenberg inquiry with the same zeal it now pursues Western aid and technology, if glasnost is not just a mask.

UKRAINIAN INDEPENDENCE DAY

HON. STENY H. HOYER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. HOYER. Mr. Speaker, this year's 72d anniversary of the January 22, 1918 Declaration of Ukrainian Independence comes at a time of interesting and meaningful developments in Ukraine. We are now seeing serious, albeit prudent, moves to advance self-determination in Ukraine.

The growth and development of numerous independent groups, and especially that of the popular movement in Ukraine for perebudova—"rukh", and the numerous demonstrations where Ukrainian national symbols are displayed are important examples of the growing assertiveness on the part of the Ukrainian people. Just last week, on January 22, hundreds of thousands in Ukraine formed a human chain between Kiev and Lviv in commemoration of the anniversary of Ukrainian independence.

We are witnessing the beginnings of the reversal of the stifling effects of russification, and a rapidly growing pride in Ukrainian culture. And we are seeing the gradual removal of some of the "blank spots" of Ukrainian history such as the 1932–33 Stalin-engineered famine.

Significantly, the Ukrainian Catholic and Ukrainian Autocephalous Orthodox churches are reasserting themselves, and Soviet Ukrainian authorities have stated that they will permit the registration of Ukrainian Catholic congregations. This is an important step for the Ukrainian Catholic Church and we await the full recognition of both the Ukrainian Catholic and Ukrainian Orthodox Churches.

All of these developments testify to the Ukrainian people's deep and abiding concern for their religious and cultural heritage, and their enduring commitment to democracy and freedom. They testify to the fact that despite tremendous suppression and incredible sacrifices, the Ukrainian people have an indomitable will to survive and to maintain their identity.

Mr. Speaker, just as the Ukrainian National Republic 72 years ago, in 1918, was established on a democratic, constitutional basis, there is the recognition in Ukraine today that genuine self-determination can best be achieved through democratic, peaceful means. Clearly, this will not be an easy process, and considerable efforts will be required for the Ukrainian people to reach their goals.

The Helsinki Commission, of which I serve as cochairman, has been in the forefront of calling for greater respect for human rights and self-determination. Last June, during the Paris meeting of the 35-nation CSCE Conference on the human dimension, I introduced a proposal which would commit the participating states to respect the right of all people, in full freedom, to determine when and as they wish, their internal and external political, economic, social and cultural development. The proposal addresses how self-determination could be achieved in practice, including by genuine and contested elections. To this end, the Commission will be watching closely the elections March 4 for the Ukrainian SSR Supreme Soviet. These elections can represent an important stepping-stone for the Ukrainian people in their efforts to determine their own destiny.

Only the peoples of the Soviet Union themselves, including the Ukrainian people, have the right to freely and democratically choose their own system of government. It is our obligation, consistent with our commitments under the Helsinki Final Act, to support their right to do so.

EDNA LEWIS, PREEMINENT AMERICAN CHEF

HON. EDOLPHUS TOWNS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. TOWNS. Mr. Speaker, today it is an honor for me to pay tribute to a woman who has raised the chore of cooking to a culinary calling and the necessity of eating to an exercise in appreciation.

In her devotion to pursue her gastronomic gift, she has brought pleasure to the palates of people the world over. Edna Lewis is a preeminent American chef who has devoted her career to the enrichment of the American cultural milieu by blending the unique flavors of the South to appeal to a wider and more diverse audience. This uncanny ability led Gormet magazine to call her "the dean of Southern Cooks."

Edna Lewis began her career as a chef at Cafe Nicholson with John Nicholson on Manhattan's east side. In her never-ending effort to bring the joy of Southern cooking to the North, she has taught cooking classes and worked as a caterer.

Ms. Lewis' culinary masterpieces have been featured in numerous magazines including, Gourmet, Food and Wine, House & Garden, House Beautiful, Essence, Redbook, New York Magazine, Ladies' Home Journal, New York Woman and Connoisseur.

In addition to sharing her talent and time-honored recipes with a wide reading audience, she has been recognized by her peers as an extraordinary chef. She has received numerous honors acknowledging her substantial contributions. Cook's magazine listed her in their Who's Who in American Cooking—1986; the Chicago Roundtable honored her as outstanding woman chef; Berenger's Vineyard honored her as a one of twelve in the great womens' chefs series, and in 1988, the New York Cooking Teacher's Association named her cook of the year. She has made several appearances as a guest/lecturer at Robert Mondavi Vineyards great chefs of France series and the Macy's DeGustibus lecture series. In addition, Ms. Lewis has appeared on several television programs, including NBC Television's "Sunday Today."

For over 5 years, Ms. Lewis has contributed to the community by sharing her considerable talents with those who would not otherwise experience her work by serving as one of the host chefs of the James Beard tribute to City Meals on Wheels.

This year, Ms. Lewis is expected to appear as a guest chef at Bloomingdales' Great New York Restaurant series and a guest lecturer at a cultural seminar at Duke University. In February, Ms. Lewis will be one of nine distinguished American chefs featured in a Smithsonian Institution program on new directions in American cuisine. As a guest lecturer in the Smithsonian's resident associate program, she will discuss the origin of her cuisine, reveal sources of inspiration and explore the creative process.

Ms. Lewis is the author of three cookbooks—The Edna Lewis Cookbook, The Taste of Country Cooking and In Pursuit of Flavor. She is now chef at Gage & Tollner's, a landmark restaurant in Brooklyn, NY.

I am happy to pay homage to this great woman and master chef.

HOSPITAL CAPITAL PAYMENTS

HON. BRIAN J. DONNELLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. DONNELLY. Mr. Speaker, I am submitting for the RECORD an excellent article from the Wednesday, January 10, Wall Street Journal concerning hospital expansion in this country. The article points out the huge increase in hospital construction projects over the past several years, as hospital occupancy rates have consistently declined.

Mr. Speaker, this issue should be of interest to all Members of the House as we debate the constant increases in Medicare spending to hospitals. President Bush has recently proposed a reduction in the rate of increase in Medicare spending as part of the fiscal year 1991 budget proposal which the Committee on Ways and Means will begin considering shortly.

It is not clear to me why Congress should continue to allow a direct passthrough of hospital capital costs under the Medicare program as hospital occupancy rates continue to decline. The President's budget suggests that Congress may wish to consider linking capital reimbursement to occupancy, and I fully support this recommendation. The following article shows the merit of this position.

MEDICAL WASTE—HOSPITAL CONSTRUCTION BOOMS, DRIVING COST OF HEALTH CARE UP

(By Kenneth H. Bacon)

FORT WAYNE, IND.—Frederick Kerr peers into what he calls "the biggest hole in Fort Wayne" and describes the five-story hospital being built there.

Due to open in 1992, the $91.2 million building on the outskirts of town will supplant an aging downtown hospital and offer the newest of equipment and amenities, says Mr. Kerr, the president of Lutheran Hospital. A new hospital would seem to be a welcome addition: It might attract doctors and patients, provide jobs and, many people believe, help bring in industry.

But in fact, many businesses in this industrial city fear that the new hospital will accelerate the health-cost spiral and hamper their ability to compete at home and abroad. They warn that Lutheran's expense of servicing its debt for the hospital will add at least $75 a day to the $750 it currently costs for an average day of care there. And they fear that the city's two other hospitals, seeking to keep up, will undertake costly remodelings and raise their rates, too.

A RIVAL RESPONDS

Sure enough, rooms at Parkview Memorial, the city's biggest hospital, "are going to have to have some of the amenities that the new hospital has. That's just part of the cost of doing business," says Lavon Miller, Parkview's vice president for facilities. "Our doctors are going to have to have a parking lot as close to the building as we can make it. The carpet in the lobby is going to have to be replaced. The patients and physicians demand it."

The fuss in Fort Wayne is anything but unusual. It is a microcosm of a growing debate nationwide. Hospital construction is booming despite anguish other rising health-care costs and despite the fact that far more hospitals have empty beds than waiting lists. Although some hospitals in urban areas, especially New York City, have extremely high occupancy rates, more than one-third of the nation's 947,000 community-hospital beds are empty.

"There is, without a doubt, excess capacity in the system that we can't afford," says Louis Sullivan, the secretary of Health and Human Services.

The cost of completed hospital-construction projects totaled $14.9 billion in 1988, up 17.9% from 1987, according to a survey by Modern Healthcare magazine. And taxpayers are footing much of the bill, primarily through tax-exempt bonds—$11.4 billion of such hospital securities were issued in 1988 and through $5.8 billion of largely unmonitored federal subsidies.

As a group, hospitals are good credit risks. But the combination of low occupancy, attempts to control health-care costs and debt burdens approaching $93,000 a bed has produced a wave of credit-rating reductions in hospital bonds, according to Health Care Investment Analysts Inc., a Baltimore research firm. The ratio between downgrades in ratings and upgrades rose to 12-to-1 last year from 2-to-1 in 1983, the government calculates.

ADDING SERVICES

Instead of building new facilities, many hospitals are adding services and modernizing as a marketing strategy to attract patients from competing institutions. But in the health business, unlike most others, competition drives prices up, not down. Research by HCIA finds prices generally higher in competitive, multihospital markets than in single-hospital areas.

"Hospitals don't compete on price; they compete on services," explains Carl Schramm, the president of the Health Insurance Association of America. With occupancy low, "the pure economic response is that you develop things to fill your hospital." Aside from offering new, expensive technology, hospitals have set up centers for diet control, sports medicine, drug and alcohol treatment and psychiatry to attract patients to empty beds.

But the cost of excess capacity goes beyond higher prices. "More capacity to provide more services . . . simply raises volume and expenditures," contends Rep. Fortney Stark, a California Democrat who heads a House Ways and Means health subcommittee. "Therefore, the high rate of excess capacity in beds and services leads directly to unnecessary admissions and procedures."

He adds: "There's nobody in the American Hospital Association whose mother has ever told him that enough is enough."

The cost of this kind of competition is at the heart of the debate in Fort Wayne. The Northern Indiana Business Group on Health, a coalition of 16 companies employing 32,000 workers in the Fort Wayne metropolitan area of 300,000 people, unsuccessfully challenged Lutheran's project, in a public statement, as "inadvisable at this time." The coalition, which includes Lincoln National Corp., the large insurance company based here, and units of General Electric, General Motors and Motorola, argues that, to hold down costs, the area's three hospitals—Lutheran, Parkview and St.

Joseph Medical Center—should instead be reducing duplicative services.

In this case, Lutheran Hospital isn't expanding. It currently operates 447 beds and bassinets; the new hospital will have 390. At its old facility, Lutheran will continue to operate 57 psychiatric and drug and alcohol treatment beds and run a senior service center. And at 77.3%, Lutheran's occupancy rate is well above the national average. But Mr. Kerr says he hopes that the new facility will help Lutheran expand its market share by drawing patients from competing local hospitals.

Costly competition already plagues Fort Wayne. Parkview, with 632 beds and an occupancy rate of 68.8%, recently opened a $9 million maternity wing with a neonatal center and 40 birthing units, where a woman stays in one room for labor, delivery and recovery.

Everybody agrees that this is the newest, largest maternity center in Fort Wayne, but Lutheran's Mr. Kerr boasts that "we did renovation on our existing space to beat them to the punch with single room birthing." Actually, St. Joseph's was first with single-room birthing, says John Farrell, the chief operating officer at the city's smallest hospital, with 328 beds and an occupancy rate of 47.4%. "We had it before they did; we just didn't market it," he says. And with the new competition expected from Parkview, "I'm redoing mine a little right now—a $300,000 to $400,000 facelift," he adds.

COMPETITION IN MACHINERY

Fort Wayne's hospitals compete in other apparently redundant ways. All three perform open-heart surgery and operate magnetic-resonance imaging machines, which cost more than $1 million apiece. Two have lithotripter machines (Lutheran's cost $850,000), which destroy gall and kidney stones without surgery.

Competition also involves expanding to new locations. St. Joseph's started by opening a medical office building in a high-growth area several miles north of its downtown location. Lutheran has also opened, on the site of its new hospital, a new office building with an active outpatient surgery center. So far, Parkview hasn't branched out from its extensive campus, but Mr. Miller is thinking about it. A big map in his office shows possible satellite locations near suburban highway intersections. Such facilities may be necessary to promote "bonding" with Parkview's doctors, he says.

"It's an extremely competitive town in terms of health care," St. Joseph's, Mr. Farrell explains, with the competition centering on services and location. "We have found that there's not a lot of price sensitivity here," he says.

That may be changing, both here and around the nation. Fort Wayne businesses are beginning to negotiate with hospitals and doctors for price breaks. The Northeast Indiana Business Group is working to set up a purchase plan that should increase companies' bargaining power. One company in the group complains that the cost of an average hospital stay for its employees rose 35% between 1986 and 1988.

Nationally, the number of hospital beds is shrinking, but not fast enough. "I don't think anybody anticipated the tremendous diversification of services" that have attracted new patients and helped hospitals postpone the pressures to close that they would otherwise feel from falling hospital admissions and shorter lengths of stay, says Daniel Dragalin, Prudential Insurance Co.'s vice president for medical services. "But I think we're going to go through a period of pain."

FEDERAL FINANCING PROGRAMS

The current building boom is very much a product of the enactment of Medicare for the elderly and Medicaid for the poor nearly 25 years ago. The new coverage provided a steady flow of federal funds to hospitals. In addition, Medicare agreed to reimburse hospitals for reasonable capital costs incurred to provide care to the elderly. With guaranteed federal funding, hospital could easily borrow money.

Before Medicare, hospitals raised most of their money through charitable contributions. "An ethic of penurious management of resources pervaded most hospitals," according to a study by Mr. Schramm and George Pillari, HCIA's president. "Because the sources of capital in the past were individual contributors, the hospital was careful in developing building plans, erecting only physical plant that appeared necessary at the time." But the switch to public financing made it easier to finance expansion and led to overcapitalization in the industry, they argue.

Medicare reimburses hospitals for part of their capital costs on a pass-through basis. The money can support expenditures ranging from the purchase of magnetic/resonance imaging machines to construction of parking garages; Medicare doesn't try to determine whether the projects are necessary to provide medical services in a particular area.

The program bases capital payments on the percentage of a hospital's patients on Medicare rather than on its occupancy rate. So, a hospital with an occupancy rate of only 40% but with 80% of its patients on Medicare can get a larger reimbursement on a given investment than a hospital with an 80% occupancy rate but only 40% of its patients on Medicare.

In 1991, however, the government is scheduled to link reimbursements more closely to the services that hospitals actually provide Medicare patients—a move expected to reduce the capital subsidies and perhaps slow the building binge.

Parkview's Mr. Miller believes that with both government and business fighting to hold down health-care costs, the demand for Fort Wayne's nearly 1,400 hospital beds is likely to fall further. "We'll probably need half the beds we currently have by the year 2000," he says. "We could probably get by with two hospitals."

THE VISION CLINIC OF SPRINGFIELD

HON. RICHARD J. DURBIN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. DURBIN. Mr. Speaker, I rise to call my colleagues' attention to a new program serving the working poor that has been established by a hospital in my congressional district.

The Vision Clinic in St. John's Hospital Convenient Care Center in Springfield, IL, now provides free eye care to working low-income parents and their children. Seven optometrists in the Springfield area have offered to provide free examinations and eyeglasses at cost to families who cannot obtain care without forgoing necessities such as food or rent. Workers affiliated with the local Catholic Charities will screen participants for income eligibility and make appointments at the clinic.

Mr. Speaker, some of the people who work the hardest in this country do not have access to adequate medical care because they fall through the gaps in our Nation's health care system. Although they may work full time year-round, their employers do not provide health insurance for them and their families and they are unable to afford the high cost of private health insurance. At the same time, their incomes make them ineligible for Medicaid or other Government-funded health assistance.

I applaud the optometrists and other people who have made the vision clinic in Springfield a reality. Their efforts do not eliminate the need for a more comprehensive approach to health care in America, but they are providing a valuable service in the meantime. Now, hard-working, low-income families in Springfield will be able to get the eye care they need and see the world around them in a new light, because of the willingness of these health care professionals to provide this service free to those who otherwise could not obtain it.

IN HONOR OF UKRAINIAN INDEPENDENCE DAY

HON. BENJAMIN L. CARDIN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. CARDIN. Mr. Speaker, January 22 of this year marked the 72d annivesary of Ukrainian Independence Day. The 101st Congress joins over 1½ million Ukrainian Americans in celebrating the spirit of freedom within the Ukraine.

The declaration of Ukrainian independence in 1918 brought about a short-lived but significant turn of events in the region's history. Perpetually undermined by surrounding territories, this distinctive group of Slavs has struggled to maintain its unique cultural identity.

Amidst the dynamic changes occurring in Eastern Europe, Ukrainian Independence Day is a particularly important occasion. A variety of forces are gaining increased attention in their attempts to express their political and cultural identities. Perestroika and glasnost have promoted freedom and openness toward diverse ethnic, cultural, and political viewpoints. Changes in Poland, Czechoslovakia, and Hungary have demonstrated a new flexibility in the once immovable Iron Curtain. The tumbling of the Berlin Wall has sent reverberations throughout the world. President Mikhail Gorbachev's historic audience with Pope John Paul II sends a positive signal to all of the citizens of the Soviet Union, saying that freedom of expression and cultural identity may be consistent with the future of the Soviet Union.

The unique cultural identity of the Ukraine is a source of pride to the more than 50 million Ukrainians all over the world. On January 22 we extended best wishes and thanks to the Ukraine for its important contributions to the world in the visual arts, folk music, religion, world view, literature, physical sciences, archi-

tecture—but above all the Ukraine's greatest contribution: her people.

THE EFFORTS OF ANNETTE AND TOM LANTOS TO FREE RAOUL WALLENBERG

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. GILMAN. Mr. Speaker, January 17 of this year was the 45th anniversary of the abduction by Soviet military authorities of Raoul Wallenberg. Through the efforts of this Swedish diplomat, who voluntarily went to Budapest at the height of the Nazi effort to destroy the Jews, 100,000 Hungarians were saved from extermination camps and death marches. Among those saved by this noble Swede are our distinguished colleague from California, TOM LANTOS, and his wife, Annette.

Mr. Speaker, a recent Jack Anderson column reminds us of the tireless efforts of Annette and TOM LANTOS to repay that debt by seeking the release of Raoul Wallenberg from Soviet prison. I request that this article be placed in the CONGRESSIONAL RECORD at this point so that my colleagues may have the opportunity to read it. The efforts of Annette and TOM LANTOS to secure the release of Wallenberg deserve our serious attention and support.

(By Jack Anderson and Dale Van Atta)

THE SEARCH FOR RAOUL WALLENBERG GOES ON

Annette and Tom Lantos were childhood sweethearts, but their childhood was not the stuff of fairy tales. They were Hungarian Jews who both managed to escape the gas chamber because an obscure Swedish diplomat based in Budapest plucked as many Jews as he could from the grasp of the Nazis.

Today, Rep. Tom Lantos (D-Calif.) is earning marks as the chairman of the House committee exposing the Housing and Urban Development scandal. But Annette Lantos has a scandal of her own to expose: Has that Swedish diplomat, Raoul Wallenberg, spent the last 45 years in a Soviet prison because of what he did to help the Jews?

For nearly 15 years, Annette Lantos has made it her work to find Wallenberg. The Soviet secret police snatched him from a street in Budapest on Jan. 17, 1945. The Soviets were liberating Budapest from the Nazis, and Wallenberg was on his way to talk to the Soviet overseers and explain his plan for the Jews. Wallenberg had managed to outwit the Nazis, but the Russians had no patience with him. It's not clear whether they thought he was a spy or whether Wallenberg was just a victim of someone's stupidity.

Last October, for the first time, the Soviets apologized for kidnapping Wallenberg and letting him die in prison. The apology was nice, but Annette Lantos refuses to believe Wallenberg is dead, and she wants Mikhail Gorbachev to produce proof, or produce the living Wallenberg.

As children in Budapest, Annette and Tom Lantos heard talk about a very powerful Swede who was saving Jews. Tom survived in a house of refuge set up by Wallenberg. Annette and her mother managed to escape using Portuguese passports because Wallenberg had set a precedent of getting the Nazis to honor the foreign diplomatic passports he issued to Jews.

They found each other after the war, married and moved to San Francisco. In 1956, the Soviets admitted that they had taken Wallenberg, but said he died of a heart attack in 1947.

Annette Lantos went about the business of raising her children, but whenever she had the chance to talk to others about the Holocaust, she would tell the story of Raoul Wallenberg—how one person stood up to the Nazis and saved 100,000 lives and then paid with his own life.

Then in 1979, Nazi hunter Simon Wiesenthal claimed that Wallenberg was alive in a Soviet mental ward in Siberia. "After a sleepless night, I decided I would have to devote my life to saving Wallenberg, and all I had was a Xerox machine," Annette Lantos told our associate Daryl Gibson.

She contacted the Swedish Embassy in Washington, and they told her to find another outlet for her do-gooder tendencies.

Luck brought her to President Jimmy Carter. In October of 1979, she and 24,000 other Americans put their names in a hopper, and 10 were selected at random to ask Carter any question they wanted in a nationally broadcast radio call-in program. One of the 10 was Annette Lantos, and she asked Carter what he could do to help Wallenberg. The president said Wallenberg had not been forgotten.

It wasn't much of an answer, but it was enough to bring the press to the Lantos doorstep. The attention led to five books about Wallenberg and eventually a TV miniseries, starring Richard Chamberlain.

In her spare time, Annette Lantos helped get her husband elected to Congress, and in 1981 she was in the Rose Garden when his first piece of legislation was signed by Ronald Reagan—an act making Raoul Wallenberg an honorary American citizen. It was prestigious—Winston Churchill is the only other honorary U.S. citizen—but that was not what motivated Annette Lantos. If Wallenberg was alive, then the Soviets had an American citizen in prison, and the U.S. government was obligated to get him out.

Eight years later, Annette Lantos and Raoul Wallenberg are still waiting. In October, when the Soviets issued their glasnost-inspired apology, it was accompanied with the same old story that Wallenberg died of a heart attack in 1947. But there have been many Wallenberg "sightings" since then—prisoners who said they shared a cell with him, a doctor who examined him in 1961, a refusenik who met him in a prison hospital in 1975, a secret informant who told a Swedish businessman that Wallenberg was alive in a Soviet prison camp near the Chinese border in 1986. Many who have told of seeing Wallenberg have disappeared soon after speaking up or have died of "heart attacks"—the ailment that plagues many enemies of the Soviet state.

Does Annette Lantos think Wallenberg is alive? "I don't want to deal with the issue until I know the truth," she says, with an edge that implies that the quesiton is irrelevant. "It's going to be dirty, the truth, very dirty."

The story that Wallenberg died of a heart attack was perpetuated by Andrei Gromyko, who took the truth to his grave. Glasnost recently allowed Soviet television to broadcast pictures of Wallenberg and a phone number to call with information on his whereabouts. That's a remarkable gesture for the Soviet Union, but Annette Lantos says Gorbachev has to put more into the search than good intentions.

Whether Wallenberg is dead or alive, Annette Lantos think he is entitled to have the world know what happened to him at the hands of the Soviets. She calls that "the only tribunal for victims of governments."

A TRIBUTE TO JOSEPH CORY

HON. FRANK J. GUARINI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. GUARINI. Mr. Speaker, a dedicated civic leader in the 14th District in New Jersey is being honored for his contributions in the philanthropic area. The individual I speak of is Joseph Cory, who on February 2, 1990 will receive the Distinguished Service Award from the Hudson County Council on Alcoholism and Drug Abuse at a dinner to be held at the Casino in the Park, Jersey City.

Joseph Cory is a leader in the transportation industry and has employed up to 1,000 individuals as chairman of the board and chief executive officer of the Joseph Cory Warehouses, Inc., and of Joseph Cory Delivery Services, Inc.

Cory's work in the substance abuse area as chairman of Intervention Strategies, Inc., is a unique approach, bringing education, information and counseling services into the work place. The Hudson County Council on Alcoholism and Drug Abuse is honoring him for his work in the substance abuse area, and I am pleased to join in their salute.

Educated at James Madison High School in Brooklyn, NY, the University of Miami, Fairleigh Dickinson University in New Jersey, and New York University, Cory is chairman of the board of Meadowlands Hospital in Secaucus, and a trustee of the Franciscan Health Systems of New Jersey, which operates St. Francis Hospital, Jersey City, and St. Mary Hospital, Hoboken.

In 1989 he was honored by the Dante Alighieri Society of Jersey City as their "Man of the Year." In 1987 he received the Distinguished Citizen Award from the Hudson-Hamilton Council of the Boy Scouts of America.

The Italian-American League of Hudson County saluted him in 1983, and the Greater New York Home Furnishings Industry made him their "Man of the Year" the same year.

An avid sportsman, he was honored as "Rookie Driver of the Year" in 1985 by the NEPA Sports Car Club of America.

Born in Brooklyn, his parents were the late Grace (nee BenFante) and Joseph Cory, Sr. His maternal grandparents were from Palermo, Italy, and his paternal grandparents were from the Corigliano region of Ruggerio de Calabria, Italy. In 1938, Joe's father shortened the family name, Corigiano, to Cory for business reasons.

Joe played football while attending James Madison High School in Brooklyn. After completing his education he joined the businesses founded by his father. The Cory companies specialize in the warehousing and delivery of residential furniture. They serve leading retail-

ers in New Jersey, New York, Connecticut, Pennsylvania, and Florida. In his association with his brother, James and uncle John, the Cory companies have steadily grown. Today, they are the Nation's largest furniture distribution network. From modest beginning 54 years ago, Cory now operates 2 million square feet of warehouse space and a fleet of 170 vehicles.

A member of the New Jersey Motor Truck Association, he also has served many business, civic, and charitable organizations such as the Hudson County Chamber of Commerce and Industry; the Hudson-Hamilton Council of the Boy Scouts of America; the Anti-Defamation League of B'nai B'rith; the National Conference of Christians and Jews, and the Hudson County Council on Alcoholism and Drug Abuse. Joe is also a member of the American Trucking Association, New Jersey Home Furnishing Association, Greater New York Home Furnishing Association, Florida Home Furnishing Association, Sports Car Club of America, Falcon Racing Service, Inc., Elizabeth Corporate Leadership Group, Elizabeth Mayor's Advisory Cabinet, New Jersey Chamber of Commerce, 200 Club of Hudson County, Dante Alighieri Association, National Furniture Traffic Conference, and Specialized Furniture Carriers Association.

Joe resides in Bergen County, NJ and is the father of five children and six grandchildren. He is an avid yacthsman and trophy-winning off-shore fisherman. On land, he enjoys membership in the Porsche Club of America and participates in several road racing events annually.

The Hudson County Council on Alcoholism and Drug Abuse has been working in my district to alleviate the plague of addiction. I must commend them on their wise choice, spotlighting the efforts of Joseph Cory, and granting him their annual award.

I am sure that my colleagues in the House of Representatives wish to join me in this tribute to Joseph Cory for a job well done.

TRIBUTE TO EDWARD J. DeBARTOLO AND THE SAN FRANCISCO 49'ERS

HON. JAMES A. TRAFICANT, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. TRAFICANT. Mr. Speaker, I rise today to pay tribute to Edward J. DeBartolo, Jr., and the San Francisco 49'ers for their overwhelming defeat of the Denver Broncos in Super Bowl XXIV.

The city of Youngstown, as well as San Francisco, is proud of the NFL champions. Youngstown is home to both team owner Edward J. DeBartolo, Jr. and 49'ers executive vice president and general counsel, Carmen Policy. Edward Jr. is the son of the well-known land developer Edward DeBartolo, Sr.

Edward DeBartolo, Jr., is the man responsible for the 49'ers rise to fame. Since purchasing the 49'ers in 1977, his keen eye for talent, outstanding organizational skills, and careful attention to detail have led his team to four stellar Super Bowl victories in less than a decade.

Successful organizations start with inspiring leadership at the top; and the San Francisco 49'ers are no exception to this rule. The 49'ers are being hailed the team of the decade. Edward's caring professionalism reaches beyond the realm of athletics. His work in charitable organizations in Youngstown and San Francisco is well documented.

Above all, it is Edward's love and respect for his players individually that has built a team of champions. His unwaivering confidence in fellow Notre Dame alumnus Joe Montana, who after undergoing back surgery was a testament to Edward's faith and loyalty. Joe Montana rewarded Edward for his patience and confidence with back-to-back Super Bowl victories and a most valuable player performance. It is this type of close-knit, family atmosphere that has made the 49'ers organization a winner!

Mr. Speaker, I would like to take this opportunity to congratulate Edward J. DeBartolo, Jr., Carmen Policy, and the San Francisco 49'ers on being recognized as the team of the 1980's and for kicking off the 1990's in a super fashion. I am honored to represent these outstanding individuals.

UNIVERSITY OF MIAMI HURRICANES

HON. BOB McEWEN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. McEWEN. Mr. Speaker, today I want to recognize the University of Miami and its Hurricanes football team for winning the 1989 national championship. The Hurricanes are truly the "Team of the Decade" having won the national championship three times during the 1980's, in 1983, 1987 and now this year. No other college football team comes close to the record they have amassed.

Now there are those who will argue that the Hurricanes were declared national champions at the end of the season by mere consensus since there is no national championship game. But what a consensus. Every major sports poll was unanimous in ranking the Hurricanes No. 1: AP, UPI, CNN-USA Today, Sporting News and the New York Times Computer. There can be no doubts of who is No. 1.

The Hurricanes won the championship on the strength of their 11-1 season. In one of their toughest games, they defeated Notre Dame by a score of 27-10 on November 25. They capped their season with a 33-25 defeat of Alabama in the Sugar Bowl on January 1. In addition, the 1989 Hurricanes' defense led by first-team All-American defensive end captain Greg Mark were also ranked No. 1. The defense gave up only 9.3 points per game.

There was that one defeat. As an alumna, it hurts to know that the Hurricanes' only loss came at the hands of State rival Florida State 24-10 on October 28. To their credit, the team led by head coach Dennis Erickson regrouped and redoubled their efforts to win their remaining games. The championship is of special significance for coach Erickson because he is only the second coach in college football history to win the national championship in his first year as head coach.

I join with the university's other 95,000 alumni in congratulating the entire team for their success this year. They set the highest goal, applied themselves and achieved it. The effort and teamwork they exhibited will serve them well in their future endeavors.

While the Hurricanes' football team has captured national attention during the 1980's, the University as a whole has also experienced phenomenal growth. Only 64 years old, the changes of the last decade have brought the University of Miami into the ranks of the most selective private research universities in the southeast United States.

A snapshot of statistics from the decade are illustrative. Annual research funding has doubled. Fundraising has more than tripled. The endowment fund has nearly quadrupled. The university budget has increased 2½ times. At the same time, the faculty has gotten larger with a sevenfold increase in endowed chairs while the student body has become smaller and better. In just the past 2 years, the applicant pool has grown 69 percent.

Under the leadership of Edward T. Foote II, the university initiated an innovative strategic planning process 6 years ago which has contributed greatly to this explosive growth. During the 1980's the university and its Hurricanes dedicated themselves to achieving excellence and they did. Both are prepared and poised to continue his effort and reap more success during the decade of the 1990's.

COLA FAIRNESS FOR OUR RETIREES—AGAIN

HON. MARY ROSE OAKAR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Ms. OAKAR. Mr. Speaker, once again, the President wants to balance the Federal budget on the backs of Federal retirees. In the President's fiscal year 1991 budget, Federal retirees are not scheduled to receive a well-deserved cost-of-living adjustment [COLA]. This is an all too familiar pattern of executive disdain for civil service. As you will remember, the Balanced Budget and Emergency Deficit Control Act of 1986 eliminated fiscal year 1986 COLA's for civil service, military, and railroad and disability annuitants while guaranteeing a COLA for social security and veterans' benefit recipients. This decision to differentiate between annuitants with respect to COLA's was contrary to policy decisions made by the U.S. Congress and any measure of fairness.

Last year it was the same story. President Reagan, in submitting his final budget, called for the elimination of COLA's for Federal retirees in 1990, and the new Bush administration followed his lead. Last year I was joined by over 280 of our colleagues in sponsoring legislation guaranteeing a COLA for all nonsocial security recipients. Subsequently, this language was included in the budget reconciliation enacted last fall to insure that all military, tier II railroad retirement, CIA, foreign service and certain FECA beneficiaries also receive

their COLA's on time. I am now introducing this same legislation for fiscal year 1991.

It is important that we treat all of our Nation's retirees fairly. However, the administration seems intent on breaking that promise. Federal budget cuts during the last years have already fallen heavily on Federal workers and annuitants. Reductions fall especially hard on Federal retirees, whose average pensions are $1,146 per month and their survivors, whose average benefit is $552 per month.

We cannot undo events of the past. However, we can prevent the perpetuation of inequitable treatment of our senior citizens, who performed the tasks so essential to making our Government function. My legislation simply provides that these retirees be treated the same as social security beneficiaries. I am also introducing a sense of Congress resolution that expresses the unfairness of the administration's arbitrary treatment of certain Federal annuitants' COLA's. Increases in the cost-of-living affect all retirees equally and all COLA's should reflect this reality. Indeed, civil servants are not immune from the effects of inflation felt by all Americans.

Mr. Speaker, I am very confused by President Bush's rhetoric regarding civil service. The President has repeatedly stated that serving one's country or community through loyal Government service is, in spite of numerous hardships and sacrifices, one of the most important jobs in the world. I completely agree with this sentiment, but I question how the President can offer these ennobling thoughts one minute and pull the retirement income rug out from under civil service retirees the next minute. At best, it seems President Bush is not speaking sincerely when he idolizes public service. At worst, he may harbor the same extreme anticivil service tendencies as President Reagan. I sincerely hope this is not the case.

As a measure of support for some of the hardest working, most loyal employees in the world, I strongly urge all of my colleagues to cosponsor my legislation.

APPLAUDING THE VALIANT SERVICE OF COL. GEORGE F. HENNRIKUS, JR.

HON. BEVERLY B. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mrs. BYRON. Mr. Speaker, I rise to offer a tribute to a man who has served his country long and faithfully during not one, but two distinguished careers. On January 31, Col. George F. Hennrikus, Jr., USAF (Ret.) will retire from his posts as director of legislative affairs for the Retired Officers Association and as chairman of military coalition.

Colonel Hennrikus started his military career as a 17-year-old bombardier-navigator in 1942, completing 35 combat missions over Germany in a B–17. After the war, he earned his bachelor's degree at Boston University and started in business. However, as happened to so many young men of that era, along came the Korean conflict and Colonel Hennrikus found himself back in uniform. It was not until 1974, after some 32 years of active service, spanning three decades and three wars, that he finally left the Air Force. At the time of his retirement he was most admirably representing the Air Force as the Assistant Director of Information.

Upon his retirement from the Air Force, Colonel Hennrikus began his second career as director of legislative affairs for the Retired Officers Association. For almost 17 years he has toiled long and hard to preserve and defend the rights of uniformed service retirees and their families. His retirement at the end of the month will create a vacuum, but the legacy he leaves will live long into the future.

Colonel Hennrikus is, in every sense of the word, an institution in this town. His reputation as a forthright and honest champion of those who have faithfully served their country, as well as their widows and widowers, is legend. His influence on those of us he has advised, be they individual Members or committees, has been immense because Colonel Hennrikus has credibility.

He is a font of knowledge on each and every issue affecting uniformed services retirees. He has been willing to explore all sides on an issue and, where appropriate, propose compromise positions. This characteristic, perhaps more than any other, has resulted in his ability to shape policy in a direction that is most beneficial to retirees and their families.

The leadership of Colonel Hennrikus is, perhaps, best demonstrated, by his impact on those affiliated associations comprising the Military Coalition. Made up of some 22 military oriented associations with a combined membership of 1.3 million active, Reserves and retired members of the seven uniformed services, under his chairmanship the coalition has become a force to be reckoned with. A strong advocate of the philosophy that in unity there is strength, he has been able to meld the coalition's sometimes diverse opinions into cohesive positions which then are skillfully presented to Congress. His record of success speaks for itself. One need only look at his effort to improve such areas as cost-of-living adjustments, military commissaries, military pay, and catastrophic health care to realize how effective he has been.

However, the ultimate reward for George Hennrikus for his years of dedicated and distinguished service is the mark he has left on those very same retirees. That is the bottom line. That is final mark of success. Uniformed services retirees are better off today financially than they have ever been. Their well-being has been the singular, overriding concern of Colonel Hennrikus: and their well-being could not have been in better hands.

Few retirees know Colonel Hennrikus; not many recognize the debt of gratitude they owe him. He is an unsung hero, and an untiring and faithful servant to their causes. His retirement highlights an era of enlightened leadership that will be extremely difficult to maintain. George Hennrikus is a hard act to follow; he has, however, set in place the necessary framework to carry on his work, and we expect that his influence will continue to be felt for many years.

Mr. Speaker, we wish Col. George F. Hennrikus, Jr., the best in the future; he has unquestionably and unselfishly given all retirees his best in the past.

CONVENTION ON THE RIGHTS OF CHILDREN

HON. DOUG BEREUTER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. BEREUTER. Mr. Speaker, today I am extraordinarily pleased to introduce, together with the distinguished chairman of the Subcommittee on Human Rights and International Organizations, Mr. YATRON, and my distinguished colleagues on the subcommittee, Mr. CHRIS SMITH and Mr. OWENS, a resolution urging the President to submit the Convention on the Rights of the Children to the Senate for its advice and consent to ratification. This convention was endorsed by the United States and other members of the United Nations at the General Assembly on November 20, 1989. Attached are excerpts from the address given by my distinguished colleague, Mr. CHRIS SMITH, serving as representative of the U.S. delegation to the United Nations before the Third Committee of the U.N. General Assembly, in support of adoption of the convention. Now the stage is set for ratification by the United States, which will ensure that the convention can become a major force for improving the lot of children worldwide.

DEFINING THE RIGHTS OF CHILDREN

(By Christopher H. Smith)

After 10 years of constructive dialogue, seemingly endless consultations, and finally an agreement, the Commission on Human Rights has presented the Convention on the Rights of the Children to the UN General Assembly for adoption. The United States participate actively in the drafting of the convention. We believe that it represents a notable step forward in the needed promotion and protection of the rights of children. Although the convention is far from perfect—no agreement ever is—the United States strongly believes in the enumerated commitments and goals of the convention, and it is our hope that the General Assembly will adopt the text without change.

The Government of Poland deserves much of the credit for the conclusion of this convention. The version we have before us today represents many years of debate and revisions to the Government of Poland's first draft.

The United States also recognizes the valuable contribution made by many nongovernmental organizations during the drafting process. The promotion of human rights standards inevitably creates a certain tension between what might be best in an ideal world and what governments are prepared to accept today. Although in the end it is governments that are bound to uphold human rights standards, the participation of nongovernmental organizations in the drafting of these conventions—and in the United Nations generally—serves to push us to higher standards over and above our parochial interests. In addition, it prevents us from being content to settle for the lowest common denominator.

The Convention on the Rights of the Children grapples with many difficult issues and rests on several hard-fought compromises. A number of these compromises were necessitated by the differing cultural, legal, and religious views of the unique relationship between the rights of the children, the

rights and responsibilities of parents, and the state's obligations of legal and moral protection. Other concessions were necessary on other matters. My government, like many others, is not completely satisfied with some of these compromises. But because we recognize the importance and desirability of adopting the convention without further delay, we do not wish to reopen negotiation on any part of the text.

For the record, I would like to make a brief statement of my government's views on several aspects of the convention.

The United States fully supports the inclusion within the preamble of the convention language from the 1959 Declaration of the Rights of the Children confirming that "the child, by reason of his physical and mental immaturity, needs special safeguards and care, including appropriate legal protection, before as well as after birth."

Comprehensive research and experience, domestically and internationally—through organizations such as the World Health Organization—have proven that proper prenatal and neonatal care spell the difference between a healthy or health-threatened mother, and between a strong or vulnerable child. Healthy babies, right from the start, will help provide brighter futures for all of our children, who represent our own future and our legacy for the next generation.

My government concurs fully and is pleased that the convention reaffirms "the right of the child to freedom of thought, conscience and religion." Although parents or guardians must, of course, offer guidance and assist young children in the exercise of their right to freedom of conscience, we must recognize that this inherent and inalienable right of religious freedom is a precious right of each individual, including children.

The United States firmly believes that the costs of the Committee on the Rights of the Children that will be established by the convention should be borne exclusively by the states that ratify the convention. In our view, the committee established by the convention is not a UN body, but an instrument of the states parties to the convention.

The current draft of the Convention on the Rights of the Children addresses many of the social concerns facing the children of the world. I would like to highlight a number of the key elements that the U.S. Government supports.

Family Reunification. We are particularly concerned about the reunification of families so that children and parents can live together.

Abuse and Neglect. The prevention of physical and mental abuse against children demands constant vigilance, a moral and ethical consciousness throughout our society. Governments must be committed to providing legal and administrative protection to children.

Adoption. With a strong and active encouragement of President Bush, the U.S. Government has promoted the adoption of children by loving and caring families. Through legal safeguards and constructive adopting agencies, governments can help ensure that eligible children or orphaned children enjoy the love and nurture of a family.

Disabled Children. The United States is keenly aware of the special needs of mentally or physically disabled children, and we fully support the convention's call for a "full and decent life" for these children.

As I made clear at the outset, the United States is satisfied that the working group which drafted the Convention on the Rights of the Children made such progress and achieved consensus on all substantive issues. We sincerely hope that the General Assembly will adopt the convention without a vote and without changing a vote and without changing any of the test.

The United States does believe, however, that we must view the convention in a sober, realistic light. It is not a perfect document, and its entry into force will not solve all problems and all threats for all children. Only by recognizing this can the international community work together to make the best possible use of the convention. Necessary protection for our societies' vulnerable and helpless will, ultimately, have to be demanded by the moral commitment of men and women throughout the world and will have to be guaranteed by member states.

INTRODUCTION OF CONCURRENT RESOLUTION ON "BIRMINGHAM SIX" CASE

HON. BRIAN J. DONNELLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. DONNELLY. Mr. Speaker, I am introducing a sense-of-the-Congress resolution today on behalf of myself and several members of the Congressional Friends of Ireland concerning the case of the "Birmingham Six" prisoners. This case arose from a series of bombings in Birmingham, England in 1974, for which six individuals were convicted and have been imprisoned, under life sentences, since 1975.

Since then, numerous allegations of police beatings of the prisoners, unreliable forensic evidence, and allegations of perjury on the part of police officers at the trial have given rise to grave concerns about the credibility of those convictions. My own examination of the facts—including a recent visit to one of the prisoners—has convinced me of their innocence. This case must be reopened immediately, and the convictions of the Birmingham six quashed. Quite simply, they were in the wrong place, at the wrong time, and of the wrong religion.

This resolution calls for the reopening of the case, the quashing of the convictions, and calls on the President to raise with the British Prime Minister the serious human rights questions arising from the continued incarceration of the Birmingham six. The six prisoners are: Patrick Hill, Robert Hunter, John Walker, Richard McIlkenny, William Power, and Hugh Callahan.

Mr. Speaker, there is growing international support for a complete, top to bottom, thorough review of this case. The City Council of Birmingham and its Lord Mayor, the bishops of Birmingham, many members of the British Parliament, the European Parliament, and Amnesty International have all gone on record in support of a total review. This broad spectrum of concern reflects the increasing conviction that an injustice has been done.

The bombings in 1974 resulted in the deaths of 21 people and scores of injuries. All right-minded people condemn and deplore such violence, and it is imperative that those guilty of this crime are punished. But the central issue remains that the facts did not support the convictions of the Birmingham six. The continued imprisonment of these men is a fundamental, gross abuse of human rights.

Last year, the British Government released four other prisoners—the Guilford four—who were convicted on similar unreliable evidence for a crime they did not commit. That the British Government was prepared to admit there was a serious miscarrage of justice in the case of the Guilford four clearly casts fresh doubts on the validity of the convictions of the Birmingham six and reinforces the need to carry out an immediate review.

Mr. Speaker, I urge all of my colleagues to review the issues in this case carefully and closely, and to support our resolution. Furthermore, I urge prompt action on it by the Committee on Foreign Affairs.

TRIBUTE TO THE LATE DR. MARK "MAX" LOTKIN

HON. JULIAN C. DIXON

OF CALIFORNIA

HON. JOHN T. MYERS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. DIXON. Mr. Speaker, Mr. MYERS and I would like to pay special tribute to Dr. Max Lotkin—mathematician, rocket scientist, husband, father, and friend. Dr. Max Lotkin passed away on Monday, November 20, 1989 in Coconut Creek, FL. Dr. Lotkin, who died of cancer, was 78 and succumbed just one day shy of his 45th wedding anniversary.

Born in Copenhagen, Denmark, Dr. Lotkin attended Berlin's University of Kiel during Nazi rule, and in 1937, earned a doctorate in mathematics. In 1939, he immigrated to the United States where he would later make great contributions to the scientific community. Working on both Government and private industry projects, Dr. Lotkin labored to develop rockets and computers—helping to design the first multistage rocket-firing table.

Dr. Lotkin was a member of the American Math Society, National Academy of Sciences, and the Society of Industrial and Applied Mathematics.

In addition to Edith, his lovely wife of nearly 45 years, Dr. Lotkin is survived by two sons Ralph and Stephen; a sister, Rae Ross; and four grandchildren. His son Ralph Lotkin is Chief Counsel to the Committee on Standards of Official Conduct.

We offer our sincerest condolences to Ralph and his family, and a host of Dr. Lotkin's friends.

SOVIET/AMERICAN PEACE WALK EXPERIENCES

HON. BILL RICHARDSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. RICHARDSON. Mr. Speaker, two of my constituents, Miel Castagna and Johanna

Payton of Llano and Taos, are back in the United States after a 2-month journey through the Soviet Union. They took part this past fall in the Soviet/American Peace Walk which allowed them the unique opportunity of living and traveling with the Soviet people.

This past December, I had the good fortune of meeting with Miss Castagna and Miss Payton at which time they shared with me their views about the Soviet Union and their thoughts about what must be done to ensure continued peace between our two great nations.

It is with great pleasure that I share with my colleagues the views of these two New Mexican teenagers. Their observations are included in the following summary submitted to me by Miss Castagna and Miss Payton:

LLANO NM,
January 15, 1990.

In October and November of '89, we attended the Soviet/American Peace Walk through the Soviet Union. The month long venture brought together 85 Americans and 70 Soviets to live, walk, and travel across 146 kilometers of the Ukraine.

The Walk was a large and complex citizen diplomacy project, Americans and Soviets, together, in a powerful effort to lessen the arms race. This was a grave responsibility for us, two 18 years olds from Llano, and Taos, small towns in rural New Mexico. We were citizen diplomats representing our towns on the Walk.

The purpose of the Walk was an exercise in co-existence with the Soviet people, as an example for ourselves and others. We found that the Soviets are working for peace. People from villages, cities, farms and forests, in the U.S. and U.S.S.R. alike want to end the arms race.

The Walk was successful and we have come up with some suggestions to slow down on arms production. These suggestions are from both the citizens of the Ukraine, and of New Mexico and the U.S.

1. We must stop producing plutonium and tritium for nuclear weapons.
2. We must press immediately and tirelessly for agreements with the Soviet Union that would eliminate the need to generate new plutonium and tritium, and any new arms.
3. We must begin to disassemble all short range and long range nuclear missiles.
4. We must educate the public to the horrors of a nuclear war.
5. We must continue to share with the citizens of the USSR in exchange programs and friendship of our two peoples.
6. We must support and lend a hand to the Soviet Union NOW, in such a time of change, and truly END the cold war.
7. We must spend our valuable tax dollars on feeding the hungry and poor in our own country, and spend less on weapons of destruction.

MIEL CASTAGNA.
JOHANNA PAYTON.

VETERANS' DAY SPEECH BY MR. SAM BRENNER

HON. ILEANA ROS-LEHTINEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Ms. ROS-LEHTINEN. Mr. Speaker, I am pleased to share with all my colleagues a speech given by my constituent, Mr. Sam Brenner, during a special Veterans' Day ceremony, in Surfside, FL, which I had the honor to attend.

Yesterday, as I lay upon the rocks that jut out into the sea, the beauty of our world captivated me. In awe, I listened to the waves. Whether they come in a roar and a thud upon the shore, or in sea whispers when the tide is low, I hear within their tones, particularly on Veterans' Day, the many muffled moans and cries of millions who prematurely died in war and genocide.

It is for them that we are here today, we are lucky to be alive. They wanted to live and enjoy a full life. They won the "War to End All Wars", and we lost the peace. We are conscience-stricken, and to vindicate ourselves, we must create a world where "nation cannot lift sword against nation".

For many years on nations couldn't stop World War II. The inadequate United Nations will never be able to stop World War III. While nations have access to nuclear and capital arms, our planet is in jeopardy. To what can I liken our plight? To a tragedy like a plane crash where investigators comb the site to find out what went wrong? "The evil that men do lives after them", Shakespeare said, and much evil will live after us. It will be traced back to us that we were the guilty ones because we did not safeguard the sacred ship of Mother Earth. If a child cuts its finger it can run to its mother for help. An individual who is violated can go to the government for redress of grievance, but to whom can a nation go if it is attacked by another? It is outrageous that here in our time there is no impartial adequate father protector for the nations:

Oh, today there are small United Nations peacekeeping forces and the United Nations is helpful in many ways. But what would happen in a major confrontation of more powerful nations? That is our grave concern.

Nations must share their sovereignty to wage war by pooling their military, internationally, into a reformed and restructured world order and world peacekeeping force.

We hail the freedoms being gained by many suppressed nations, and the coming down of the Berlin Wall. But like "Humpty Dumpty sat on the wall, had a great fall, and all the king's horses and all the king's men couldn't put Humpty Dumpty together again", there will be chaos there. In the chaos of the present lies the order of the future and we must not relax our vigilance.

We will best serve all veterans by bettering our world. As the Berlin Wall comes down, I hope it foretells the coming down of many walls and barriers. Like "Joshua who fought the Battle of Jericho and the walls came tumbling down", all our walls and barriers must come tumbling down—the barrier of poverty, the barrier of homelessness, the barrier of war, drugs, and crime and every other barrier that stymies us.

Mr. Speaker, I think that we can all learn much from veterans like Mr. Brenner and we should all feel proud that we have such fine individuals like him in our south Florida community.

HONORING CHIEF CRAIG MEACHAM, WEST COVINA CITIZEN OF THE YEAR

HON. ESTEBAN EDWARD TORRES

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. TORRES. Mr. Speaker, I rise today to recognize a very special individual, Craig L. Meacham, public safety division manager and chief of police, city of West Covina. Chief Meacham will be honored by the West Covina Chamber of Commerce as the 1989 West Covina Citizen of the Year at a special dinner on Friday, February 2, 1990.

Chief Meacham was born in Pasadena, CA where he attended local schools. He is married to the former Carolyn Stentz and together they have five children, Craig, Alan, Cynthia, Pamela, and Janelle. They have 13 grandchildren.

Chief Meacham has served the city of West Covina over 19 years. He was appointed chief of police and public safety division manager on January 1, 1979. Prior to his appointment as chief, he served as the city's deputy chief of police since 1970. He has been a dedicated member of law enforcement service for over 35 years serving as a criminal justice consultant to the Governor's office (1968–69). In addition, he served as a police officer, sergeant, and Lieutenant in the Whittier, CA Police Department. He was recently nominated by President George Bush to serve as U.S. Marshal of California's Central District.

Chief Meacham is active in many civic and professional organizations, past president, California Police Chief's Association; member, California Council of Criminal Justice—appointed by Governor George Deukmejian—member, U.S. Attorneys Law Enforcement Coordinating Committee; Member, board of directors, National Criminal Justice Association; member, Police Science Advisory Committee, Rio Hondo College, chairman, 1984; member Attorney General's Advisory Committee—CAL–ID fingerprint system; member, Los Angeles County CAL—ID fingerprint system board of directors; member, advisory board, Community Health Projects, Inc.; member, Los Angeles County Peace Officers Association, president, 1986; member, Los Angeles County Police Chiefs Association, president, 1981; member, San Gabriel Valley Police Chief's Association, president, 1982; Member, San Gabriel Valley Peace Officers Association, president, 1983; member, West Covina Lions Club, president, 1974; member, Goals Committee, West Covina Unified School District; cochairman, West Covina Bicentennial Commission; chairman, ad hoc committee to revise juvenile traffic court procedures, Los Angeles County Juvenile Court; member, West Covina Unified School District School Attendance Review Board, [SARB]; member, Faculty of Cerritos College-Norwalk and Rio Hondo College, Whittier; nominee, West Covina Citizen of the Year, 1977; member, board of trustees, Santa Anita Church; member, Los Angeles County Criminal Justice Coordinating Committee; and member, California Youth Authority Advisory Board.

Mr. Speaker, on February 2, 1990, the West Covina Chamber of Commerce will honor Craig L. Meacham fo his tremendous contributions to the residents of this community. I ask my colleagues to join me in saluting my friend, Craig L. Meacham for his outstanding record of service to the people of southern California and to the community of West Covina.

CEO OF GIRL SCOUTS OF USA TO RESIGN AFTER 12 YEARS OF DEDICATED SERVICE

HON. OLYMPIA J. SNOWE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Ms. SNOWE. Mr. Speaker, I would like to take this opportunity to recognize the contributions of Frances Hesselbein, national executive director for Girl Scouts of the USA. After 12 years of service, Frances is retiring at the end of this month.

In her many years of service to the Girl Scouts, Mrs. Hesselbein contributed greatly to the growth of the organization, including recruitment of adult volunteers and increasing membership of racial and ethnic minorities. She also revised program materials for all Girl Scout age levels, to include such contemporary issues as teen pregnancy, youth suicide, and substance abuse.

Frances Hesselbein was recently appointed to President Bush's advisory Committee on the Points of Light Initiative Foundation. Of the five distinguished Americans to serve on the committee, Mrs. Hesselbein is the only woman and the only representative of the human service sector.

It is my hope that my colleagues will join me in recognizing Frances Hesselbein's significant contributions to the Girl Scouts and to wish her well in her future endeavors.

KENNESAW COLLEGE'S FIRST PRESIDENT DIES AT AGE 77

HON. GEORGE (BUDDY) DARDEN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. DARDEN. Mr. Speaker, Cobb County and all Georgians lost a great leader in the field of higher education when Dr. Horace Sturgis, founding president of what is now Kennesaw State College, died earlier this year. Dr. Sturgis was a man of vision and commitment in his role as president of Kennesaw Junior College. His direction has helped make Kennesaw State College into the great institution it is today. He will be missed, but his efforts live on as young people continue to benefit from the institution into which he poured so much of his devotion. Following is an article from the Marietta Daily Journal regarding Dr. Sturgis that I request to be included in the RECORD.

[From the Marietta Daily Journal]

KENNESAW COLLEGE'S FIRST PRESIDENT DIES AT AGE 77

(By Peggie R. Elgin)

Dr. Horace Sturgis, 77, founding president of Kennesaw Junior College, now Kennesaw State College, and who was named President Emeritus upon his retirement, died Tuesday.

Funeral arrangements will be announced later by the Mayes Ward-Dobbins Funeral Home of Marietta. The family has requested donations be made to the Kennesaw State College library in lieu of flowers. He is survived by his wife, Sue Cowan Sturgis.

A campus memorial service also is planned, with details to be announced later.

Reacting to the announcement of Dr. Sturgis' death was Dr. H. Dean Propst, chancellor of the University System of Georgia Board of Regents.

"I am deeply distressed at the news of Dr. Sturgis' death," said Dr. Propst. "During his time in the university system, he served as an example of the attempt to achieve the best. The history of Kennesaw State College will be rich with the remembrance of him."

Dr. Betty Siegel, president of KSC, also commented on the death of the former president.

"I am deeply saddened to hear of Dr. Sturgis' death and my heart goes out to Mrs. Sturgis and his family and to his many, many friends," she said. "Dr. Sturgis' vision, wisdom, strength of charactor and limitless energy made this college what it is today. We are all diminished by his loss but will always remember him with admiration and deep affection."

A native of Pennsylvania, Dr. Sturgis graduated from Piedmont College with a bachelor's degree in chemistry in 1935 and earned a master's degree in education from the University of Georgia in 1939, and a doctorate in higher education from New York University in 1958.

He served as principal, teacher and coach at Fayetteville and Eatonton high schools, and as a teacher at North Fulton High School in Atlanta.

Just prior to World War II, he served as instructor at the War Training Program at Georgia Tech and later took a temporary assignment as director of the Ground School of Aviation at the University of Georgia. He also was an instructor of physics at Georgia Tech. In 1945, he served in the U.S. Navy.

Prior to his appointment at Kennesaw, Dr. Sturgis was an assistant professor of physics at Georgia Tech, and later was an associate professor and served as assistant registrar and associate registrar.

He was named president of Kennesaw Junior College in 1965, at the founding of the institution, and served the local college as its president until 1981 when he retired. In 1980, he conferred the first baccalaureate degrees from Kennesaw College at June commencement ceremonies.

He had dedicated 46 years of his life to education at the time of his retirement.

Honors awarded to the founding president included being named Cobb County Citizen of the Year in 1975 by the Marietta Daily Journal and recipient of the Cobb County Bar Association Liberty Bell Award.

MR. PRESIDENT: EXERCISE YOUR POWER—USE THE LINE-ITEM VETO

HON. DANA ROHRABACHER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. ROHRABACHER. Mr. Speaker, President Bush recently announced that he was searching for the proper legislative vehicle to test whether the Constitution grants the President line-item veto authority. It is my hope that President Bush finds the vehicle he's looking for and takes this brave and principled stand.

Opponents of the line-item veto claim that the President's veto authority extends only to entire bills and thus he cannot veto only part of a bill. They argue that the words "line-item veto" do not appear in the Constitution. It is clear, however, that article I, section 7, clause 3 of the Constitution says that whether it's called an "Order, Resolution, or Vote" or anything else, Presidents must have the chance to veto. The framers deliberately chose language granting the President broad veto powers as to allow the President flexibility in setting budget priorities. Labeling an omnibus budget a "bill" cannot deprive the President of his power to veto items.

James Madison noted that the veto language in article I, section 7, clause 2 might not be sufficently clear. Article I, section 7, clause 2 states:

Every bill which shall have passed the House of Representatives and the Senate, shall, before it become a Law, be presented to the President of the United States; If he approves he shall sign it, but if not he shall return it, with his Objections to that House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a law.

In a journal published on August 15, 1797, which described the debate at the Constitutional Convention on the President's veto power, Madison wrote that "if the negative of the President was confined to bills, it would be evaded by acts under the form or names of Resolutions, votes, et cetera—proposed that 'or resolve' should be after bill." After hearing Madison's concerns, clause 3 was then added. Clause 3 states:

Every Order, Resolution, or Vote to which the Concurrence of the Senate and House of Representatives may be necessary (except on the question of Adjournment) shall be presented to the President of the United States; and before the Same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two-thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill.

The framers clearly worried that the Congress would begin to usurp Presidential authority by changing the names, titles, and definitions of a bill. As James Madison observed, Congress is "everywhere extending the

39-059 O-91-28 (Pt. 1)

sphere of its activity and drawing all power into its impetuous vortex." Therefore, Madison argued, legislative excesses must be decisively checked. So although the words "line-item veto" is not mentioned in the Constitution, the framers of the Constitution appeared to have intended the President to review all legislation and to hold the balance of power in determining whether a bill, resolution, order, vote, or whatever a congressional measure was labeled, ultimately became law. It appears the framers understood the language of the Constitution as implicitly granting the President that authority.

The constitutional authority idea, though always assumed to exist, has not been tried, because until 1974, the impoundment process basically served as a line item veto. Historian Forrest McDonald has pointed out that beginning in 1789, Congress made their appropriations, based on expected revenues, under general headings and left it to the executive branch to allocate the funds. If the President believed Congress was spending too much on a specific program, he simply refused to allocate funds. This impoundment process, used by many Presidents, was more than successful in controlling spending. During that year however, Congress passed the Impoundment Control Act, removing the functional substitute. It is important to note that our huge budget deficits began soon after.

Mr. Speaker, the congressional budget process continues to stumble. For the seventh time in the last 8 years, Congress has failed to complete its work on the following year's budget before October 1, the start of the new fiscal year. This past year for instance, as my colleague from California, Mr. COX has pointed out, Congress was late with the Senate Budget Committee report on the concurrent resolution. Congress by law must clear the concurrent resolution on budget by April 15. Last year the concurrent resolution was cleared on May 18. On May 15, appropriations bills are allowed in the House. As of June 23, only one committee markup was complete. Congress should complete action on 13 annual appropriations bills by June 30, but as of October 20, only one had been signed, two had been cleared for signature, three conference reports had passed the House, four were still in conference or pending floor action and three had no scheduled conference.

When Congress misses its deadlines, the threat of a massive omnibus spending measure becomes greater. The President is then given a choice—sign the bill with its dozens of pork barrel projects or veto it—shutting down most of the Government in the process.

In his 1988 state of the Union address, President Reagan dramatized why the President needs the line item veto. He lifted a 43 pound omnibus spending measure that had been sent to him by the Congress. He described the fact that Congress had given him less than 1 day to review the 3,296 pages before deciding to sign or veto the measure. Weeks after the measure became law, the White House discovered various wasteful spending projects such as millions of dollars for blueberry and cranberry research, as well as the commercialization of wildflowers and $6.4 million for a ski resort.

The President should quickly find his legislative vehicle, an upcoming appropriations bill for instance, and search through it, vetoing pork barrel projects and other sort of wasteful spending. The President, by exercising his proper authority and vetoing certain portions of bills, will focus public attention on wasteful Government spending and bring accountability back to the budget process. In an age where we have piled up billions of dollars worth of debt, the line item veto is needed more than ever.

A YOUNG PENNSYLVANIAN ATTAINS EAGLE SCOUT RANK

HON. GEORGE W. GEKAS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. GEKAS. Mr. Speaker, I would like my colleagues to join me in recognizing a young man from my congressional district in Pennsylvania who has embodied many of the best qualities of America's youth.

On Sunday, February 18, Bart Jeffrey Slough II will be awarded the rank of Eagle Scout, the highest rank in the Boy Scouts of America. Less than 2 percent of boys in Scouting reach this rank.

Bart, a resident in Sunbury, is a band member at Shikellamy High School, where he is a freshman. He is also a member of the golf team and has received numerous skill awards. He has held the offices of assistant patrol leader, patrol leader, assistant senior patrol leader, and is currently the senior patrol leader.

The Award of Eagle Scout represents years of effort and dedication on Bart's part. Only those who demonstrate leadership, perseverance, integrity, enthusiasm, concern for the community, and solid values can be eligible for this honor. Bart has demonstrated these qualities—and he has done so exceptionally well.

TRIBUTE TO JAMES B. SIMMONS, JR.

HON. MARCY KAPTUR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Ms. KAPTUR. Mr. Speaker, it is an honor to pay tribute to an outstanding young man of 91 years of age that has made history in Ohio's Ninth Congressional District. He is a man for all seasons. James B. Simmons, Jr., is a man whose intelligence, composure and dignity positively influenced all those, whose lives he has touched. His lifelong devotion to his wife Isabelle marks him as a man of love and valor. J.B. grew up in Georgia in the early part of this century. His entire life demonstrates a commitment to people, to human development, and service to his community. J.B. Simmons began his career beating the odds in pre-civil rights days when he achieved two positions in Toledo that had never been held before by blacks. The values of commitment and service were instilled in him at a young age and guided his life thereafter.

J.B., as his friends call him, began his learning process with his father who taught him carpentry. His educational attainment in the post-World War I years set a pace for others to follow. He attended Tuskegee Institute, graduating in 1921 with a degree in printing. He furthered his education by attending Lincoln University, where he obtained a pre-law degree in 1925. Later, he received Lincoln's alumni award as a distinguished graduate. In 1935 he moved to Toledo. His desire was to do advanced study in law school but he was hindered by lack of financial resources. However, he persevered and was able to attend night school at the University of Toledo's law program. He graduated with a law degree in 1945. In 1950, his zeal for education was recognized by former Ohio Governor Frank J. Lausche, who appointed him to the board of trustees for the College of Education and Industrial Arts at Wilberforce University.

In 1944, after 9 years as a resident of Toledo, he began serving the Toledo community. J.B. decided to pursue a seat on the Toledo City Council. His ninth place finish earned him a place in the history books of the 20th century. He holds the distinction of being the first black in the history of our community to be elected to that body. The next election in 1947 brought much more favorable results; he finished fourth. Still better, in 1949, Mr. Simmons finished third. You can't help but know J.B. and come to respect him more and more.

Mr. Simmons also worked for the community by being an active member in many service-oriented organizations such as Ohio Welfare Council, Federal Housing and Rent Control Board, Selective Service Advisory Board, the Planning Committee for the YMCA's town meetings and grand master of the Free and Accepted Masons. Mr. Simmons is held in the highest regard throughout our community.

In 1959, he achieved the distinguished position of vice mayor, again a first time achievement for a black in our community. At his victory rally he stated, "Sometimes they will understand me, sometimes they won't agree with me, and sometimes they will wish they had not elected me, but I promise not to forget that I represent the people." And Mr. Simmons kept his word. He spent 7 terms, 14 years serving the people of Toledo. It was during this period, that I remember my own father paying him the highest compliment my father could pay any person, "J.B. Simmons is an honest man."

J.B. was also a key figure in civil rights activities throughout his life. He was instrumental in integrating plants in Toledo and opening new avenues for blacks in many facets of life. He was a forefather of the Mass Movement League, which brought blacks together for the purpose of pursuing civil rights. He was also a member of the NAACP and a patron of Eastern Star, a women's group similar to the Masons. As Mamie Williams, the first black deputy registrar for this area stated, "Everyone looked up to him as a father; he has been a leader of blacks for the last half century."

Mr. Speaker, I am honored to be able to recognize James B. Simmons today. He has

moved this country forward by his vision, strength, and determination to move history, beginning here in our own city. He has done this always with such aplomb and goodwill. I do not believe there is a single person who does not hold him in the highest esteem. His life honestly made a difference in Toledo, in Ohio, and in our Nation. It gives me great pleasure to share with my colleagues in the U.S. House of Representatives a glimpse at the life of my dear friend J.B. Simmons, Jr., for whom I hold the deepest respect and admiration. May he and his wife be blessed always for what they have done for others. J.B. has lived the words that were stated by Robert Kennedy in 1969, "Some men see things as they are and say why? I dream of things that never were and say why not?"

TRIBUTE TO CYNTHIA ANN BROAD

HON. DAVID E. BONIOR

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. BONIOR. Mr. Speaker, I rise today to pay tribute to an outstanding teacher and a truly inspiring individual, Ms. Cynthia Ann Broad. Ms. Broad, a teacher in the L'Anse Creuse Public Schools of Macomb County, MI, is the Michigan Teacher of the Year.

As Ms. Broad herself tells it, she decided to enter the teaching profession while in the seventh grade. Since that decision in 1959, Ms. Broad went on to receive her bachelor of science in education from Bowling Green State University in 1969. In 1970, she received her master of education from the same institution.

Ms. Broad began her tenure with L'Anse Creuse Public Schools in 1970. Since then accolades and honors seemed to have draped her commitment to educational excellence. She was named Outstanding Teacher of America in 1972, profiled as an outstanding educator in 1978, recognized for her volunteer service to special education staff and students in 1985, named L'Anse Creuse, MEA-NEA Outstanding Educator also in 1985 and given the Computer Based Instruction Committee Honor Award in 1987. Now Ms. Broad is Michigan State Teacher of the Year. She is being recognized by her peers today, January 25, 1990, "Cynthia Ann Broad Day," for this outstanding achievement.

Ms. Broad's professional achievements are matched in stature by her community contributions. She worked hard to help the Autistic Community of Northwest Ohio, Inc., purchase land and successfully build a home for autistic adolescents and adults. From 1978 to 1981 she served on the board of directors for CLEAVE, Inc., a community organization promoting housing, education, and social acceptance of the handicapped. She has served on the auction committee for the Center for Creative Studies Institute of Music and Dance in Detroit. Last summer, Ms. Broad was organizing and sponsoring activities as part of the cultural exchange program for Chinese educators visiting in Michigan.

Ms. Broad has worked hard to meet the high standards set not only by her profession, but by herself. She has set a solid foundation for the building of tomorrow's world in each student she has touched. The youth of this Nation are our future. As Ms. Broad would tell you, educators and elected officials alike must work together to pursue excellence in education. She has set a fine example for the rest of us to follow.

I commend Ms. Broad on her commitment to educational excellence and her exceptional community involvement. She will long be remembered as a true friend of Macomb County.

H.R. 3913

HON. AUSTIN J. MURPHY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. MURPHY. Mr. Speaker, today I am introducing H.R. 3913, which would amend title 46, of the United States Code, relating to the civil penalty for operating a vessel in a negligent manner.

If enacted by Congress, the fine associated with simple negligence in regard to unsafe operating of a vessel would be raised from $1,000 to $5,000.

I submit this in response to a recent accident that occurred on the Monongahela River in southwestern Pennsylvania—62 barges broke loose from their moorings, and blocked the waterway. In addition, the barges which were jarred loose by the thawing ice in the river, jammed locks and dams along the way.

Just before the accident, the Coast Guard issued warnings about the possibility for high water and heavy ice flows. Despite the warning, many barges were able to slip away.

Though precautions were taken in the wake of the warning, whether they were adhered to as strictly as they should have been remains to be seen. Because some of these barges contained gasoline, and some of this toxic substance spilled into the river, it seems to me that a small $1,000 fine is not enough to ensure that a vessel operator is following safety procedures thoroughly.

Hopefully, increasing the fine to $5,000 for simple negligence will aid in the prevention of similar accidents in the future.

TRIBUTE TO MARIO MARTINO

HON. DOUG WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. WALGREN. Mr. Speaker, I want to pay tribute to a special friend, Mario Martino of West Deer Township, Allegheny County, who is concluding a distinguished term of service as a member of the board of the Deer Creek Drainage Basin Authority, a municipal body serving the public within West Deer and Indiana Townships in Allegheny County.

I have known Mario Martino for a number of years and admire his extensive record of public service to the community both as a former member and past president of the board of the Deer Lake School District on which he served for a number of years; as chairman of the Democratic Committee for over 10 years in West Deer Township and as a long-term member of the Allegheny County Democratic Committee.

Mr. Martino is concluding a term of service on the board of the Deer Creek Drainage Basin Authority which began in January, 1985. He served on the board with distinction and dedication for the entire term of office.

As a veteran of the U.S. Army during the Korean conflict, a dedicated public servant, active member of his community and the husband of Angeline and father of Chris, he has unselfishly given of his time to his community and his family. He sets a fine example for all of us to follow.

I want to join his family, neighbors and fellow authority board members in recognizing with gratitude his service and I wish him health and success.

NATIONAL ASSESSMENT OF CHAPTER 1

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. HAWKINS. Mr. Speaker, today, Congressman GOODLING and I are introducing legislation to require the Secretary of Education to conduct a comprehensive national assessment of programs under chapter 1 which will continue and expand this Nation's successful effort, begun 25 years ago, to meet the special educational needs of disadvantaged children.

This legislation is designed to provide for an objective and fair analysis and evaluation of the effects of the Chapter 1 Program.

The Hawkins-Stafford School Improvement Amendments, Public Law 100-297, which included the reauthorization of the Chapter 1 Program through 1993, were enacted into law April 28, 1988.

We found the last national assessment to be very helpful as we reauthorized chapter 1, and therefore, believe that the provisions as set forth in the legislation introduced today will be of invaluable assistance as we prepare for the 1993 reauthorization.

Specifically, we need to assess State and local accountability for the use of chapter 1 funds.

Some of the new provisions in the Hawkins-Stafford School Improvement Amendments require that local school districts, and then, if necessary, State educational agencies, provide technical assistance to schools which show a continued decline in the achievement of their chapter 1 children.

In addition, we need an evaluation of the new schoolwide projects provisions of the law which are designed to improve the educational climate in schools with large numbers of disadvantaged children.

We are optimistic that our bipartisan sponsorship of this national assessment will ensure broad support and swift consideration of this much needed and vital piece of legislation.

We urge our colleagues to support this national assessment of the Chapter 1 Program,

and to move forward with its enactment as soon as possible.

FIREFIGHTERS: HEROES ON AVIANCA FLIGHT 52 TRAGEDY

HON. GEORGE J. HOCHBRUECKNER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. HOCHBRUECKNER. Mr. Speaker, last Thursday evening, January 25, Avianca Flight 52 crashed near Cove Neck in Nassau County, Long Island, NY. While the cause of this crash is still under investigation, it is already clear that the quick response of hundreds of volunteer firefighters, ambulance crews, and other volunteers played a vital role in helping to minimize the number of fatalities from this flight.

Within 25 minutes of the crash, rescue crews from Nassau and Suffolk counties were helping to pull 89 survivors from the plane and provide them with the necessary medical care. As the Washington Post has stated, "this massive volunteer effort clearly minimized the dimensions of the tragedy."

Mr. Speaker, I am proud of the work performed by Long Island's emergency rescue volunteers. Once again, they have come to the aid of their community in a time of crisis. I appreciate this opportunity to publicly thank them and congratulate them on another job well done.

TRIBUTE TO PATSY CORNS

HON. LARRY J. HOPKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. HOPKINS. Mr. Speaker, we have just witnessed a decade in which millions of people who had long suffered under repressive governments toppled those regimes in their quest for freedom and democracy.

We who have benefited from the longest lasting constitutional democracy wish the people of these nations well in the difficult tasks that lie ahead and pledge our support for their endeavors to establish governments based upon the principles of freedom, justice, and autonomy.

At the same time, we must not neglect to pass on to our own youth the understanding of the fundamental principles and values of our representative form of Government, an understanding which will lead to a reasoned commitment to its preservation and improvement.

In this regard, I am pleased to commend the efforts of Patsy Corns, an education academic program manager with the Kentucky Department of Education in Frankfort, whose dedication to the improvement of the civic education of our students has been exemplary. Ms. Corns coordinates the "We the People . . . Bicentennial Programs on the Constitution and Bill of Rights," which includes the National Bicentennial Competition, its noncompetitive companion program, and the National Historical Pictorial Map Contest, in the Sixth District of Kentucky.

Through the dedicated and voluntary efforts of Ms. Corns, thousands of upper elementary, middle, and high school students have studied the program's curriculum, which introduces students to the philosophical ideas of the founders, the historical background of the Philadelphia Convention, and the issues and debates that shaped our Constitution. Students learn how our Government is organized and how it protects the rights and liberties of all citizens, and study the responsibilities which accompany the rights of citizenship in a democracy.

I am pleased to offer my personal congratulations and express my admiration and appreciation to Ms. Corns for her impressive contributions to the development of competent and responsible citizenship.

TRIBUTE TO STEVEN M. NAPOLIELLO

HON. JIM SAXTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. SAXTON. Mr. Speaker, I rise today to pay tribute to Steven M. Napoliello who is being honored this week for his dedication of more than 35 years of service in the grassroots of the political process.

Steve Napoliello has had a most distinguished career. Born and raised in New Jersey, he graduated from Rutgers University with a Bachelor of Science degree and he served two tours in the U.S. Army Air Corps.

He was, and remains, very involved in the political campaign process: in 1967, 1968 and 1969 Steve was the Cinnaminson campaign manager, in 1970 a coordinator for the Walt Smith campaigns for Congress, and for 2 years he worked on the New Jersey Senate campaigns.

In addition to being a member of the county committee in 1970 through 1984, he was the county committee municipal chairman, guiding the township government during the Watergate years of the 1970's. In recognition of his leadership, he received the outstanding GOP Municipal Leadership Award. He returned as county committee chairman in 1985 and retired from active leadership in June 1988.

Steven also had dedicated his life to helping the community directly by serving as the deputy mayor for 2 years. He was offered the job of mayor twice, but decided that he could be more effective in other positions and declined each time. He acted as the director of parks, recreation and franchised services for 2 years. Steven involved himself directly with the residents as well as visiting foreigners.

Some of his many accomplishments include coordinating a hot meals on wheels program for Cinnamnson Township and creating various clean-up programs while getting the citizens to participate. For visiting foreign students and dignitaries, he developed the outstanding local citizenship awards program and the honorary citizenship award. He currently is a member of the mayor's advisory environmental committee.

Steven also found time to spend with the Boy Scouts of America. For 6 years he served as adult scout leader and assistant scout master in Troop 70, the Covenent Presbyterian Church. He received the Christ the King Award from the Catholic Diocese of Trenton for his great role in the spiritual development of the scouts, and the Norman Rockwell Award for exemplary scout leadership from the troop 70. He was and still is a merit badge counselor.

Mr. Speaker, Steve Napoliello truly exemplifies the meaning of the phrase "public servant." I ask my colleagues to join me in giving Steve the recognition he deserves for his outstanding devotion to the political process and his service to the community.

TRIBUTE TO JUNE V. BULMAN

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. MILLER of California. Mr. Speaker, I want to take a few moments to share with you the outstanding public service career of an individual who has provided almost 20 years of service to the residents of Contra Costa County, CA.

June V. Bulman has proven herself to be a most distinguished citizen in my district through her commitment to the betterment of her community. June's public service career dates back to 1971, when she chaired the Concord Community Forum. From there she has served the city of Concord in a wide range of leadership roles including planning commissioner, councilmember, vice mayor, and mayor.

In addition to her responsibilities to Concord, June has been active with a number of county and State organizations. She has balanced her time between positions with the Redevelopment Agency, the Association of Bay Area Governments, the League of California Cities, the National League of Cities, the Central Contra Costa Transit Authority, the Alameda-Contra Costa Health Systems Agency, the Contra Costa County Solid Waste Management Commission, and the Contra Costa County Hazardous Waste Commission.

Mr. Speaker, I ask that my colleagues in the House of Representatives join with me in acknowledging the long hours and many years of public service that June Bulman has worked on behalf of the people in my district. I would like to thank her for her devoted service to Contra Costa County and to California, and to congratulate her on many jobs well done.

BPW CLUB CELEBRATES ITS 50TH ANNIVERSARY

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. LENT. Mr. Speaker, on February 17, the Business and Professional Women's [BPW]

Club of Nassau County will be celebrating its 50th anniversary. In honor of this historic occasion, I'd like to congratulate the organization and its members for their outstanding record of public service benefiting working women on Long Island and throughout the Nation.

Since its founding in 1919, the BPW has been an outspoken advocate of legislation and programs to achieve social and economic equity in the workplace. The organization has set an ambitious agenda to promote its goals through a number of worthwhile projects.

For example, the BPW Foundation is a nonprofit education organization which offers financial support to women seeking to improve themselves through higher education. Its council on the Future of Women in the Workplace studies the implications of new technologies in the business environment and how they impact women. The BPW provides a network of encouragement and support among professional women, which is vital to the exchange of ideas and helping women advance in their fields. Finally, the BPW has been an effective voice at the local, State and National levels of government by working to elect men and women to public office who share a commitment to the organization's goals.

Throughout my years in government, I've had the pleasure of working with the BPW's Nassau County Club. Its members are highly respected, successful business and professional leaders who've had a tremendous influence in creating an environment where women can effectively contribute and achieve their fullest potential. That's an objective that benefits everyone.

In closing, I'd like to take this opportunity to congratulate the Business and Professional Women's Club of Nassau County for 50 years of service to our local communities, and offer my best wishes for 50 more.

UNCERTAIN FUNDING JEOPARDIZES FUTURE INTERNATIONAL COOPERATIVE AGREEMENTS

HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. ROE. Mr. Speaker, today the Committee on Science, Space, and Technology is pleased to hear testimony from several distinguished representatives of America's partner nations in the international Space Station Freedom Program. The committee's objective in this hearing is to review the impact of the National Aeronautics and Space Administration's proposal to rephase the Space Station Freedom on the international partners' political support, programs, and funding commitments. The Committee on Science, Space, and Technology fully understands the import of the international space agreement which sets the precedents and foundation for negotiating and implementing other international cooperative agreements on future important science issues such as the Moon-Mars exploration initiative and the superconducting supercollider.

The Committee on Science, Space, and Technology has held numerous hearings on the Space Station Freedom Program over the past 5 years. Today's hearing, however, is the first time in which we have invited our international partners to express their views on this most important international collaborative space mission. We look forward to gaining the benefits of their insight on this important issue.

After 3 years of vigorous international negotiations, 18 months ago, the United States and the international partners—Canada, Japan, and the European Space Agency, comprised of the following: the Federal Republic of Germany, France, Italy, United Kingdom, the Netherlands, Belgium, Denmark, Norway, Spain, Ireland—reached an unprecedented international agreement to pursue a joint venture in science and exploration aboard the Space Station Freedom. The final agreement is a most complex network of commitments and understandings in which each nation relinquished a portion of its autonomy and control in exchange for reaching a mutually desirable goal. The accord represents a delicate balance of provisions and powers which we hope can serve as a model for future international cooperative undertakings in science and technology.

Article 23 of the international agreement, in title "Consultation" under sections 1 and 2 states the following:

1. The partners, acting through their cooperating agencies, may consult with each other on any matter arising out of space station cooperation. The partners shall exert their best efforts to settle such matters through consultation between or among their cooperating agencies in accordance with procedures provided in the MOU.

2. Any partner may request that government-level consultations be held with another partner on any matter arising out of space station cooperation. The requested partner shall accede to such request promptly. If the requesting partner notifies the United States that the subject of such consultations is appropriate for consideration by all the partners, the United States shall convene multilateral consultations at the earliest practicable time, to which it shall invite all the partners.

In a previous hearing of the Committee on Science, Space, and Technology, NASA reported that a prospect of uncertain funding led NASA to rephase the space station last fall. The process began in what is now known as the Langley Exercise, an internal NASA study. Regrettably, this committee learned of this exercise from media reports and was not directly consulted. The Committee on Science, Space, and Technology has already stated its deep concern and strong views regarding the approach that has been taken toward this rephasing exercise.

Many capabilities and features of the station which we regard as essential to the future U.S. space program have been placed in jeopardy. In addition, the rephasing imposes several significant changes on our partners. First, the launches of both the Japanese experiment module and the European Space Agency's attached pressurized module have been delayed as much as a year. Second, important capabilities such as satellite servicing, and advanced space suits have been either deferred or eliminated.

The Committee on Science, Space, and Technology has made it perfectly clear time and time again that the success of this program is contingent on funding stability. The Committee on Science, Space, and Technology took an important first step toward providing this stability when it authorized multiyear funding for Space Station Freedom. What is also needed, however, is a clear unambiguous long-term financial commitment by the administration and by Congress. Otherwise, we will be subject to continual rephasing, rebaselining, and finally, a loss of future opportunities to cooperate with other nations on other science and technology projects.

U.N. CONVENTION ON CHILDREN'S RIGHTS

HON. CHRISTOPHER H. SMITH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. SMITH of New Jersey. Mr. Speaker, I am honored to join my colleagues, Congressmen GUS YATRON and DOUG BEREUTER, as an original sponsor of a resolution calling for the timely consideration of the Convention on the Rights of the Child. The convention was adopted by the 44th General Assembly of the United Nations on November 20, 1989, and must now be ratified by the Member States—at least 20 in order to make it binding. The U.S. Government is currently involved in an interagency review of the convention.

The convention, hammered out after a decade of debate by the international community, enumerates many of the legal and moral protections which should be guaranteed by the State. A number of the protections do not go far enough and the document certainly is not absolutely perfect but, for the first time, nations would commit themselves to protecting a broad range of rights for children.

As Congressional Representative of the United States Delegation to the United Nations, Mr. Speaker, I had the opportunity to present the U.S. statement on adoption of the convention on November 10, 1989, in New York.

For consideration by my colleagues, I include my speech at this point in the RECORD.

DEFINING THE RIGHTS OF CHILDREN

After 10 years of constructive dialogue, seemingly endless consultations, and finally an agreement, the Commission on Human Rights has presented the Convention on the Rights of the Child to the UN General Assembly for adoption. The United States participated actively in the drafting of the convention. We believe that it represents a notable step forward in the needed promotion and protection of the rights of children. Although the convention is far from perfect—no agreement ever is—the United States strongly believes in the enumerated commitments and goals of the convention, and it is our hope that the General Assembly will adopt the text without change.

The Government of Poland deserves much of the credit for the conclusion of this convention. The version we have before us today represents many years of debate and revisions to the Government of Poland's first draft; but if it were not for the initial

effort over 10 years ago, we might not be considering adoption of a Convention on the Rights of the Child during the 44th session of the General Assembly. We must also make special mention of Professor Adam Lopatka of Poland, who served with distinction as chairman of the working group established to draft the convention.

The United States also recognizes the valuable contribution made by many nongovernmental organizations during the drafting process. The promotion of human rights standards inevitably creates a certain tension between what might be best in an ideal world and what governments are prepared to accept today. Although in the end it is governments that are bound to uphold human rights standards, the participation of nongovernmental organizations in the drafting of these conventions—and in the United Nations generally—serves to push us to higher standards over and above our parochial interests. In addition, it prevents us from being content to settle for the lowest common denominator.

The Convention on the Rights of the Child grapples with many difficult issues and rests on several hard-fought compromises. A number of these compromises were necessitated by the differing cultural, legal, and religious views of the unique relationship between the rights of the child, the rights and responsibilities of parents, and the state's obligations of legal and moral protection. Other concessions were necessary on other matters. My government, like many others, is not completely satisfied with some of these compromises. But because we recognize the importance and desirability of adopting the convention without further delay, we do not wish to reopen negotiation on any part of the text.

For the record, I would like to make a brief statement of my government's views on several aspects of the convention.

PROTECTION OF THE UNBORN

The United States fully supports the inclusion within the preamble of the convention language from the 1959 Declaration of the Rights of the Child confirming that "the child by reason of his physical and mental immaturity, needs special safeguards and care, including appropriate legal protection, before as well as after birth."

Children—born and unborn—are precious and extremely vulnerable. Governments have a duty and sacred obligation to protect these children to the maximum extent possible.

Birth is an event which happens to each of us. The most tender, formative 9 months prior to this great event will forecast the healthiness of the child after birth. One of the most positive protections for a healthy childhood—after life itself—is proper prenatal care.

We in the United States are just now fully recognizing the positive effects of basic maternal and prenatal care. This does not demand elaborate, expensive medical facilities; the basics cost little but are extremely effective. For instance, sound nutritional education and tetanus toxoid inoculation for mothers produce resounding positive effects. Neonatal tetanus is the single most important identifiable cause of infant mortality in the developing world. This threat can be wiped out if the child inherits the benefits of his or her mother's tetanus inoculation.

The U.S. Agency for International Development has launched a new project for maternal and neonatal health and nutrition in developing countries. Comprehensive research and experience, domestically and internationally—through organizations such as the World Health Organization—have proven that proper prenatal and neonatal care spell the difference between a healthy or health-threatened mother, and between a strong or vulnerable child. Healthy babies, right from the start, will help provide brighter futures for all of our children, who represent our own future and our legacy for the next generation.

RELIGIOUS RIGHTS AND FREEDOM OF CONSCIENCE

My government concurs fully and is pleased that the convention reaffirms "the right of the child to freedom of thought, conscience and religion." The international community has long agreed that all people, including children, must be guaranteed religious rights. As early as 1948, when the General Assembly adopted the Universal Declaration of Human Rights (the one document which was deposited with the UN Charter in the cornerstone of this building), the General Assembly declared that "Everyone"—and I wish to emphasize the word everyone—"has the right to freedom to change his religion or belief, and freedom, either alone or in community with others and in public or private, to manifest his religion or belief in teaching, practice, worship and observance" (Article 18).

Although parents or guardians must, of course, offer guidance and assist young children in the exercise of their right to freedom of conscience, we must recognize that this inherent and inalienable right of religious freedom is a precious right of each individual, including children. If possible, the United States would have wished for a stronger reaffirmation of this in the convention.

In particular, we would have liked to specify that children continue to have such supplementary rights as the freedom to have or to change a religion, the right to worship according to their beliefs alone or with others, and the right to teach, learn, and practice their religion in public and in private. The Universal Declaration of Human Rights and other international instruments including references to such supplementary rights, and the United States continues to believe that they apply to everyone, including children.

FUNDING

The United States firmly believes that the costs of the Committee on the Rights of the Child that will be established by the convention should be borne exclusively by the states that ratify the convention. In our view, the committee established by the convention is not a UN body, but an instrument of the states parties to the convention. Only those states may nominate and elect members of the committee; only those states submit reports to it. Moreover, the convention will enter into force when only 20 states have ratified it. We believe that it would be inappropriate for the entire membership of the United Nations to bear the expenses of a body created to serve so small a number of states, at least initially.

In any event, UN financing is no guarantee of full financing for committees such as this one. In times of budgetary constraint, the members of the United Nations can and very well may decide which functions the committee will have to forgo. The United States believes that state-party financing is more likely to preserve the independence of the Committee on the Rights of the Child, for that financing method would give the committee complete power to decide how to use its funds.

KEY ELEMENTS OF U.S. POLICY

The current draft of the Convention on the Rights of the Child addresses many of the social concerns facing the children of the world. I would like to highlight a number of the key elements that the U.S. Government supports.

Family Reunification. We are particularly concerned about the reunification of families so that children and parents can live together. Families have been torn apart by wars, restrictive borders, and indiscriminate limits on emigration rights. This disruption in cohesive family ties is especially detrimental to the lives of children, who are generally the ones who suffer the most from forced separations. The convention obligates the states parties to address reunification applications by children or their parents "in a positive, humane, and expeditious manner." This is an easily obtainable goal, and governments should not have difficulty in doing this.

Abuse and Neglect. The prevention of physical and mental abuse against children demands constant vigilance, a moral and ethical consciousness throughout our society—from government agencies to churches, synagogues, and mosques, to local community awareness efforts, to neighbors and families. The scourge of child abuse—whether physical or sexual abuse, whether negligence, neglect, or other forms of exploitation—is all too prevalent throughout the world. Governments must be committed to providing legal and administrative protection to children, as well as supporting social and educational programs that help prevent this gross scourge which has infected many of our communities.

Adoption. With the strong and active encouragement of President Bush, the U.S. Governnment has promoted the adoption of children by loving and caring families. Through legal safeguards and constructive adopting agencies, governments can help ensure that eligible children or orphaned children enjoy the love and nurture of a family. As an example of how a government can promote adoption, President Bush is scheduled to sign into law a bill which will designate the last week of this month as "National Adoption Week" in the United States.

This initiative of the Congress and the President of the United States will help bring attention to the rewards of adoption, both for children and for parents. A specific commemorative week will help promote legal adoption, and it will call special attention to the needs of children with mental and physical handicaps who do not have a family to care for their special requirements. This brings to mind Article 23 of the convention, which deals with disabled children.

Disabled Children. The United States is keenly aware of the special needs of mentally or physically disabled children, and we fully support the convention's call for a "full and decent life" for these children.

The world has come a long way from the days when the handicapped were locked away far from the support base of their family and the loving care of those who are able to help rehabilitate, train, and educate these children with special needs. Recognition of the rights of the handicapped has been slow. We hope that there will be a strong commitment to this particular goal in helping ensure that children with special

needs receive proper guidance, so that they may "achieve the fullest possible social integration and individual development."

CONCLUSION

As I made clear at the outset, the United States is satisfied that the working group which drafted the Convention on the Rights of the Child made such progress and achieved consensus on all substantive issues. We sincerely hope that the General Assembly will adopt the convention without a vote and without changing any of the text.

The United States does believe, however, that we must view the convention in a sober, realistic light. It is not a perfect document, and its entry into force will not solve all problems and all threats for all children. Only by recognizing this can the international community work together to make the best possible use of the convention. Necessary protection for our societies' vulnerable and helpless will, ultimately, have to be demanded by the moral commitment of men and women throughout the world and will have to be guaranteed by member states.

To borrow from the teachings recorded in the Book of Luke, "he who is the least among you all—he is the greatest." Our children are the greatest hope among our generation. They deserve our protection, our loving care, and the opportunity to achieve their best with their talents. The adoption of the Convention on the Rights of the Child will serve as a starting point—a launching pad—for improving the status and situation of all children of all nationalities, creeds, and social status.

A TRIBUTE TO JUDGE GREG DONAT ON HIS CONTRIBUTION TO THE NATIONAL BICENTENNIAL COMPETITION ON THE CONSTITUTION AND BILL OF RIGHTS

HON. JOHN T. MYERS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. MYERS of Indiana. Mr. Speaker, as you know, for the last 3 years this country has been celebrating the bicentennial of the U.S. Constitution. As a country which has benefited from the longest lasting constitutional democracy in history, we should rejoice in our blessings of freedom from tyranny and oppression. As we see other countries just now struggling for these opportunities, we have much to celebrate.

Today I would like to honor Judge Greg Donat, my district coordinator for the National Bicentennial Competition on the Constitution and Bill of Rights. He has been responsible for bringing this great celebration to the schools in the Seventh Congressional District, Indiana. It is through his efforts that hundreds of students have been able to study the program's curriculum.

The bicentennial curriculum introduces students to the philosophical ideas of our Founders, the historical background of the Philadelphia convention, and the issues and debates that shaped the writing of our Constitution. It is not just a curriculum of dates and events but one which considers the profound forces that shaped this great land, the same forces that are needed to keep it strong in a changing world. Some principles and values should not change and it is only through efforts such as Judge Donat's and the teachers of this land that we can preserve our heritage of freedom and democracy.

I commend Judge Donat and all teachers who have caught the spirit of America and are sharing it with the growing minds of our youth.

WORKING PEOPLE HAVE A RIGHT TO UNIVERSAL HEALTH INSURANCE

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1990

Mr. OBEY. Mr. Speaker, one of the key jobs of government is to help build the kind of economic conditions that enable American families to enjoy a decent and rising standard of living. But over the past decade or more, American families have not encountered that kind of economic environment. Millions of working families have had to struggle to simply stay even. For many families, two workers are required to produce the same standard of living produced by one worker per family just a generation ago.

One of the strains on American families has been the exploding cost of health care. I have been told on a number of occasions by workers in my district that the main reason a second person in the family has gone to work is simply to make enough money after taxes to pay for decent health insurance.

Mr. Speaker, for more than 40 years, the United States has been stalled in a rigid debate about whether we should have national health insurance. But even though the costs of health care in this country have doubled as a proportion of our total output during the last quarter century, we are no closer to a solution.

We spend 12 percent of our gross national product on health care, far more than any other civilized society, yet 30 million Americans still are not covered by health insurance and millions more have inadequate coverage. Along with South Africa, the United States stands as the only industrial democracy which does not provide universal health insurance for its citizens.

The problem is not just confined to families who have no health insurance. Millions of working Americans who do have such insurance are afraid they will lose it when they lose their jobs or have it taken away or weakened by take-aways at the bargaining table.

Mr. Speaker, medical care is not merely a fringe benefit, it's not something that should be provided through charity—it is a basic human right. Every American—especially those who work for a living—have the right to the security that comes from the knowledge that if they or members of their families are hit by an expensive medical setback their basic needs will be met. That is why I am today introducing the Universal Health Coverage Act of 1990.

This bill will require that every State in the Union have in place by 1995 an operating program that provides basic health coverage for every human being living in that State. States which do not comply would face the potential loss of Federal Medicaid payments starting the first quarter of 1995.

States would be allowed wide latitude in designing the kind of plan which best fits their situation, but they would have to meet minimum Federal standards for coverage. States would rely primarily on the private sector. They would have the authority to require large employers to provide health insurance coverage for both full- and part-time employees and their dependents Medical assistance—title 19—would provide coverage for the poor and disabled who are eligible for that program.

State programs such as "risk sharing pools" would become available for those who are unemployed, for small business which are unable to find adequate and affordable health plans, and for those "high risk" individuals who are unable to purchase health insurance from a regular insurance carrier.

The details of each State's program would be designed by each State. They certainly would not all look the same. But the goal for every State would be the same: The availability of quality health care for its citizens at a reasonable cost.

Once State programs are operating in 1995 the Federal Government would take the next 3 years to evaluate the effectiveness of each State's approach. By January 1, 1998, the Secretary of Health and Human Services would be required to do one of two things:

First, determine which State plans did the best job in providing universal health coverage at reasonable cost and should be adopted by other States, or

Second, deciding at that time whether the experience gained had demonstrated that the administration of universal health coverage should be moved to the National Government or remain at the State level.

For much of the last century, America has often relied on State governments to serve as laboratories of democracy. By beginning this program at the State level, we would in effect be learning as we go by allowing each of the States to try to demonstrate approaches which would be the most effective in attacking a complicated national problem.

Mr. Speaker this plan does not offer anybody something for nothing. Most of the uninsured in this country are people who work, many of them for small companies or in a self-employed capacity. One-third of the uninsured are children. Three-quarters of those without health insurance in this society are workers or members of workers families. No working American should be denied essential health care simply because he or she cannot afford it. And no person who is too sick or feeble to work should be denied essential health care because they are too weak to demand it. A society that spends $16 billion on cosmetics and $38 billion on tobacco products can afford to attack this problem with decency and with hardheaded financial sense.

Mr. Speaker, Government has an obligation to see to it that the public- and private-sector working cooperatively guarantees access to every human being in need of health care. It also has a right to expect that each corporation and every individual in society will demon-

strate a sense of personal and financial responsibility in addressing these national problems. The Universal Health Coverage Act of 1990 recognizes that fact by establishing a trust fund which would receive money from an increase in excise taxes on tobacco products and a new tax on cosmetics. That trust fund will also receive money from the elimination of the special tax break in the U.S. tax code which allows taxpayers with incomes above $155,000 a year to pay a marginal tax rate 5 percent lower than those with far smaller incomes. There is absolutely no reason why persons making more than $150,000 a year should carry a smaller share of this Nation's tax load than families making much less. The most well-off of this Nation's citizenry has a moral obligation to carry its fair share of the tax load so that society can meet its basic obligations to every citizen in this society.

Mr. Speaker, it is estimated that the use of tobacco products costs this society more than $25 billion a year in health costs. Tobacco is a legal product in this country so tobacco manufacturers have a legal right to produce the product. But they also have an obligation to help meet the health and social cost associated with the sale and use of their product.

Mr. Speaker, under this program the Federal Government will share in the cost associated of the programs established by each State. It will also provide additional funds to selected States for the purpose of establishing pilot programs to demonstrate methods of providing health care to populations with special problems, such as those in rural or sparsely populated areas or the homeless. It would also provide funds for pilot projects to help demonstrate effective ways of controlling costs.

It is inconceivable that the richest country in the world cannot take advantage of the opportunities for huge military budget savings and combine them with modest revenue increases in order to bring health care with dignity to every American who needs it.

What better way could there be for America to enter the next century?

H.R. 3915

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Universal Health Coverage Act of 1990".

SEC. 2. ADOPTION OF HEALTH INSURANCE PLANS BY STATES; DEVELOPMENT OF NATIONAL HEALTH INSURANCE PLAN.

(a) ADOPTION OF PLAN.—Not later than July 1, 1994, each State shall submit to the Secretary of Health and Human Services a description of a State health insurance plan designed to be administered by the State and containing the provisions described in section 3, together with such other provisions as the Secretary may consider appropriate, and shall have such plan in place and operating not later than January 1, 1995.

(b) PAYMENTS TO STATES.—

(1) PLANNING GRANTS.—

(A) IN GENERAL.—The Secretary shall make grants to States for planning and developing the State health insurance plans described in subsection (a).

(B) ALLOTMENT OF FUNDS.—Each State submitting an application to the Secretary for a grant under subparagraph (A) shall be entitled to receive a grant in an amount which bears the same ratio to the total amount appropriated as authorized by this Act as the State's population bears to the total population of the United States.

(C) AUTHORIZATION OF APPROPRIATIONS.—There are authorized to be appropriated for grants under this paragraph not more than $25,000,000.

(2) GRANTS FOR OPERATION OF HEALTH INSURANCE PLANS.—

(A) IN GENERAL.—Funds appropriated to the Universal Health Coverage Trust Fund under section 4(b) shall be made available for payments to eligible States by the Secretary of Health and Human Services, in amounts determined in accordance with the representative revenue system established by the Advisory Committee on Intergovernmental Relations, to assist those States in the operation of the plans developed under subsection (a).

(B) ELIGIBILITY.—A State is eligible to receive payments under subparagraphs (A) if its State health insurance plan is approved by the Secreatary pursuant to subsection (c)(1).

(c) REVIEW OF PLANS BY SECRETARY.—

(1) EVALUATION AND APPROVAL.—The Secretary shall evaluate the State plans developed and implement under subsection (a) and, not later than January 1, 1995, shall approve those plans that efficiently and effectively provide quality health care to State residents in a cost-effective manner, and shall periodically review such plans during 1996 and 1997 to ensure that such plans continue to meet the requirements of this Act.

(2) REPORT TO CONGRESS.—Not later than January 1, 1998, the Secretary shall submit a report to Congress listing those States with approved plans and those States whose plans have not been approved pursuant to paragraph (1). Such report shall consist of—

(A) the Secretary's determination as to which State plans most efficiently and effectively provide quality health care to State residents in a cost-effective manner and should be adopted in whole or in part by other States; and

(B) the Secretary's determination as to whether the experience gained has demonstrated that the administration of universal health coverage should be moved to the Federal Government or remain at the State level.

SEC. 3. REQUIRED PROVISIONS OF HEALTH INSURANCE PLAN.

(a) IN GENERAL.—The health insurance plan developed and implemented by a State under section 2 shall include at least the following provisions:

(1) A requirement that each employer in the State that employs 25 or more persons shall enroll its employees and members of their immediate families in a health benefit plan that meets, at a minimum, the requirements of subsection (b).

(2) The creation of mechanisms (including insurance pools) designed to reduce the costs of providing health insurance coverage for self-employed individuals, unemployed individuals, and individuals employed by businesses with fewer than 25 employees.

(3) The establishment of a health benefit plan—

(A) under which—

(i) low-income individuals in the State,

(ii) individuals in the State who, regardless of income, are unable to obtain health insurance because of preexisting health conditions, and

(iii) other individuals in the State who are otherwise unable to obtain health insurance, including those unable to obtain such insurance through employment, or those who are not eligible to be provided health benefits under title XVIII of the Social Security Act or the State plan for medical assistance under title XIX of the Social Security Act,

are provided health insurance coverage for a premium that is proportional to the individuals' incomes; and

(B) that meets the requirements of subsection (b).

(4) The creation of mechanisms designed to limit an individual's costs of coverage under health insurance plans offered under the State plan, including limitations on the amount of premiums, deductibles, copayment, and coinsurance which may be assessed against an individual participating in such plans.

(5) A requirement that the State plan for medical assistance under title XIX of the Social Security Act meet the national minimum standards established by the Secretary pursuant to section 9 of this Act.

(6) The creation of mechanisms designed to assure, monitor, and maintain the provision of high quality health care to individuals in the State.

(7) The creation of mechanisms designed to control the costs of providing high quality health care to individuals in the State under the State plan.

(b) PLAN REQUIREMENTS.—

(1) IN GENERAL.—Each health benefit plan described in paragraphs (1) and (3) of subsection (a) shall include, at a minimum, coverage for the following care and services:

(A) Inpatient and outpatient hospital care, except that treatment for a mental disorder is subject to the special limitations described in subparagraph (E)(i).

(B) Inpatient and outpatient physician services, except that psychotherapy or counseling for a mental disorder is subject to the special limitations described in subparagraph (E)(ii).

(C) Diagnostic and screening tests.

(D) Prenatal care and well-baby care provided to children who are 1 year of age or younger.

(E)(i) Inpatient hospital care for a mental disorder for not less than 45 days per year.

(ii) Outpatient psychotherapy and counseling for a mental disorder for not less than 20 visits per year.

(F) Long-term care services, including nursing home and home health care.

(2) EXCEPTIONS.—Paragraph (1) shall not be construed as requiring a health benefit plan described in paragraphs (1) and (3) of subsection (a) to provide coverage for—

(A) care and services that are medically necessary,

(B) routine physical examinations or preventive care (other than prenatal care and well-baby care covered under paragraph (1)(D)), or

(C) experimental services and procedures.

(3) AMOUNT, SCOPE, AND DURATION OF CERTAIN BENEFITS.—Except as provided in paragraph (2), a health benefit plan described in paragraphs (1) and (3) of subsection (a) shall place no limits on the amount, scope, or duration of benefits described in subparagraphs (A) through (C) of paragraph (1).

(4) PANELS AND MANAGED CARE SYSTEMS.—Nothing in this subsection shall prohibit a health benefit plan described in paragraphs (1) and (3) of subsection (a) from providing the care and benefits described in this subsection through a panel or other form of managed care system, and from selecting

particular health care providers or types, classes, or categories of health care providers to participate in such panel or managed care system. Such panel or managed care system shall provide, in accordance with regulations issued by the Secretary, reasonable access to care by plan enrollees.

(5) MENTAL HEALTH CARE.—(A) With respect to inpatient hospital care described in paragraph (1)(E)(i), such care shall include reimbursement for professional care provided to the individual while receiving such inpatient care. Nothing in this paragraph shall be construed to modify hospital practices with regard to scope of practice, admitting privileges, or billing arrangements.

(B) The Secretary shall establish standards that providers of services described in paragraph (1)(E)(ii) must meet to be eligible for payment under a health benefit plan described in paragraphs (1) and (3) of subsection (a).

(6) PROHIBITION OF PREEXISTING CONDITION PROVISIONS.—A health benefit plan described in paragraphs (1) and (3) of subsection (a) may not exclude or otherwise limit any individual from coverage under the plan on the basis that the individual has (or at any time has had) any disease, disorder, or condition.

(7) PERMITTING PROPORTIONAL CONTRIBUTION BY PART-TIME EMPLOYEES.—(A) A health benefit plan described in paragraph (1) of subsection (a) may require a part-time employee to pay a proportional premium based on the number of hours worked by the employee, in accordance with regulations promulgated by the Secretary.

(B) In this paragraph, the term "part-time employee" means, with respect to an employer, an employee who normally performs on a monthly basis less than 25 hours of service per week for that employer.

(8) MULTI-STATE INSURANCE MECHANISMS.—Nothing in this subsection shall prohibit a State from establishing or participating in a joint or multi-State mechanism with one or more other States to establish health insurance plans that cover residents of more than one State.

SEC. 4. UNIVERSAL HEALTH COVERAGE TRUST FUND.

(a) CREATION.—There is hereby created on the books of the Treasury of the United States a trust fund to be known as the "Universal Health Coverage Trust Fund". The Trust Fund shall consist of such amounts appropriated to it under subsection (b).

(b) Funding.—(1) There are hereby appropriated to the Trust Fund amounts equivalent to 100 percent of the revenue paid to or deposited into the Treasury as a result of the enactment of sections 5 and 6 of the Universal Health Coverage Act of 1990.

(2) The amounts appropriated under paragraph (1) shall be transferred from time to time (not less frequently than monthly) from the general fund in the Treasury to the Trust Fund. Such amounts shall be determined on the basis of estimates by the Secretary of the Treasury of the revenue described in paragraph (1), and proper adjustments shall be made in amounts subsequently transferred to the extent prior estimates were in excess of or were less than the revenue specified in such paragraph, so that at the close of each year, the transfers made under this subsection shall reflect all the revenue specified in such paragraph paid or deposited into the Treasury during such year.

(c) Administration of Trust Fund.—The provisions of subsections (b) through (i) of section 1841 of the Social Security Act shall apply to the Trust Fund in the same manner in which they apply to the Federal Supplementary Medical Insurance Trust Fund.

(d) Reports on Outlays and Balances.—(1) Not later than July 1 of each year, the Secretary of the Treasury, in consultation with the Board of Trustees of the Trust Fund, shall publish in the Federal Register information on the outlays made from the Trust Fund in the preceding year and the balance in the Trust Fund at the close of the preceding year, and shall submit a report to Congress describing the distribution of outlays from the Trust Fund in the preceding year.

(2) Not later than September 1 of each year, the Comptroller General shall submit a report to Congress evaluating the completeness and accuracy of the report submitted to Congress by the Secretary of the Treasury under paragrah (1).

(3) For purposes of this subsection, the terms "outlays" and "receipts" mean, with respect to a quarter or other period, gross outlays and receipts, as such terms are employed in the "Monthly Treasury Statement of Receipts and Outlays of the United States Government (MTS)", as published by the Department of the Treasury, for months in such quarter of other period.

(e) Uses of Trust Fund.—Amounts in the Trust Fund shall be used for the following purposes:

(1) Payments made to States for the operation of a State health insurance plan under section 2(b)(2).

(2) Payments under the demonstration program established under section 7.

(3) Payments to reimburse the general fund in the Treasury for amounts appropriated for grants to States pursuant to section 2(b)(1) for the planning and development of health insurance plans.

SEC. 5. INCREASE IN EXCISE TAXES ON CERTAIN TOBACCO PRODUCTS AND COSMETICS.

(a) TOBACCO PRODUCTS.—

(1) CIGARS.—Subsection (a) of section 5701 of the Internal Revenue Code of 1986 (relating to rate of tax on cigars) is amended—

(A) in paragraph (1), by striking "75 cents" and inserting "$1.50", and

(B) in paragraph (2)—

(i) by striking "8½ percent" and inserting "17 percent", and

(ii) by striking "$20" and inserting "$40".

(2) CIGARETTES.—Subsection (b) of section 5701 of the Internal Revenue Code of 1986 (relating to rate of tax on cigarettes) is amended—

(A) in paragraph (1), by striking "$8" and inserting "$16", and

(B) in paragraph (2), by striking "$16.80" and inserting "$33.60".

(3) SMOKELESS TOBACCO.—Subsection (e) of section 5701 of the Internal Revenue Code of 1986 (relating to rate of tax on smokeless tobacco) is amended—

(A) in paragraph (1), by striking "24 cents" and inserting "48 cents", and

(B) in paragraph (2), by striking "8 cents" and inserting "16 cents".

(4) FLOOR STOCKS.—

(A) IMPOSITION OF TAX.—On any item subject to tax under section 5701 of the Internal Revenue Code of 1986 (relating to rate of tax on tobacco products) that is removed before the expiration of the 90-day period which begins on the date of the enactment of this Act and held after the expiration of such 90-day period for sale by any person, there shall be imposed a tax equal to the difference between—

(i) the tax that would have been imposed on such item under such section if such item had been removed after the expiration of such 90-day period, and

(ii) the tax that was imposed on such item under such section.

(B) LIABILITY FOR TAX AND METHOD OF PAYMENT.—

(i) LIABILITY FOR TAX.—A person holding an item to which any tax imposed by subparagraph (A) applies shall be liable for such tax.

(ii) METHOD OF PAYMENT.—The tax imposed on any item by subparagraph (A) shall be treated as a tax imposed under section 5701 of the Internal Revenue Code of 1986 and shall be due and payable 180 days after the date of the enactment of this Act in the same manner as the tax imposed under such section is payable with respect to such items removed after the expiration of the 90-day period which begins on the date of the enactment of this Act.

(C) EXCEPTION FOR RETAILERS.—The taxes imposed by subparagraph (A) shall not apply to items in retail stocks held after the expiration of the 90-day period which begins on the date of the enactment of this Act at the place where intended to be sold at retail.

(b) COSMETICS.—

(1) IN GENERAL.—Chapter 32 of the Internal Revenue Code of 1986 is amended by inserting after subchapter D the following new subchapter:

"Subchapter E—Cosmetics

"Sec. 4191. Imposition of tax.
"Sec. 4192. Definition.

"SEC. 4191. IMPOSITION OF TAX.

"There is hereby imposed on the sale of any cosmetic by the manufacturer, producer, or importer a tax equal to 50 percent of the price for which so sold.

"SEC. 4192. DEFINITION.

"For purposes of this subchapter, the term 'cosmetic' means articles intended to be rubbed, poured, sprinkled, or sprayed on, introduced into, or otherwise applied to the human body or any part thereof for cleansing, beautifying, promoting attractiveness, or altering the appearance, or articles intended for use as a component of any such articles, except that such term shall not include soap.".

(2) CLERICAL AMENDMENT. —The table of subchapters for chapter 32 of the Internal Revenue Code of 1986 is amended by inserting after the item relating to subchapter D the following:

"Subchapter E. Cosmetics.".

(c) EFFECTIVE DATE.—The amendments made by subsections (a) and (b) shall apply to items removed after the expiration of the 90-day period which begins on the date of the enactment of this Act.

SEC. 6. 29 PERCENT INCOME TAX RATE ON INCOME IN EXCESS OF AMOUNT AT WHICH 15-PERCENT RATE AND PERSONAL EXEMPTIONS PHASEOUT.

(a) IN GENERAL.—Paragraph (1) of section 1(g) of the Internal Revenue Code of 1986 (relating to phaseout of 15-percent rate and personal exemptions) is amended to read as follows:

"(1) IN GENERAL.—The amount of tax imposed by this section (determined without regard to this section) shall be increased by the sum of—

"(A) 5 percent of the excess (if any) of—

"(i) taxable income, over

"(ii) the applicable dollar amount, plus

"(B) 1 percent of the excess (if any) of—

"(i) taxable income, over

"(ii) the maximum amount of taxable income

which results in an increase in tax under subparagraph (A) with respect to the taxpayer.".

(b) CONFORMING AMENDMENTS.—

(1) The subsection heading of subsection (g) of section 1 of such Code is amended to read as follows:

"(g) PHASEOUT OF 15 PERCENT RATE AND PERSONAL EXEMPTIONS; 29 PERCENT RATE ON INCOMES ABOVE PHASEOUT RANGE.—".

(2) Paragraph (2) of section 1(g) of such Code is amended—

(A) by striking "paragraph (1)" and inserting "paragraph (1)(A)", and

(B) by inserting "on phaseout of 15 percent rate and personal exemptions" in the heading after "Limitation".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1990.

SEC. 7. DEMONSTRATION PROGRAM.

(a) IN GENERAL.—

(1) ESTABLISHMENT.—Not earlier than December 31, 1992, the Secretary shall establish a demonstration program under which the Secretary shall make grants to 10 eligible States to cover the Federal share of the costs to such a State of implementing not more than 1 feature of the State's health insurance plan under section 2 during a period determined by the Secretary.

(2) LIMIT ON PAYMENTS UNDER PROGRAM.—There is authorized to be appropriated from the Universal Health Coverage Trust Fund for grants described in paragraph (1), an amount not to exceed 5 percent of the amount appropriated to the Trust Fund under section 4(b)(1) during 1992.

(b) ELIGIBILITY.—A State shall be eligible to receive a grant under subsection (a) if it submits to the Secretary, at such time and in such form as the Secretary may require by rule, an application containing—

(1) assurances that the State has adopted, and assumed responsibility for enforcing, the State health insurance plan under section 2; and

(2) such other information and assurances as the Secretary may require by rule.

(c) CRITERIA.—In determining those States that are to receive grants under this section, the Secretary shall give preference to States that will use the grant to finance a feature of the State health insurance plan that is designed to provide health care to a category of individuals experiencing difficulty in obtaining reasonably priced quality care, including individuals living in rural areas, non-institutionalized elderly and disabled individuals, and the homeless, or to States that will use the grant to finance the establishment and operation of a mechanism designed to control the costs of providing high quality health care to individuals in the State under the State health insurance plan.

(d) FEDERAL SHARE.—The Federal share referred to in subsection (a) may not exceed 50 percent.

SEC. 8. STATE ADOPTION OF PLAN REQUIRED TO RECEIVE MEDICAID PAYMENTS.

Section 1903 of the Social Security Act (42 U.S.C. 1396b) is amended by adding at the end the following new subsection:

"(w)(1) In order to receive payments under this title for any quarter beginning on or after January 1, 1995, a State must certify to the Secretary that it has adopted, and assumed responsibility for enforcing, an approved State health insurance plan under section 2 of the Universal Health Coverage Act of 1990, or has otherwise adopted, and assumed responsibility for enforcing laws, rules, or regulations which ensure the provision of health insurance coverage to all residents of the State as effectively as such plan.

"(2)(A) The provisions of this subsection shall not apply to a State for any quarter—

"(i) that follows the quarter during which the State meets the requirements of this subsection; or

"(ii) with respect to which the Secretary determines that the State is unable to comply with the relevant requirements of this subsection—

"(I) for good cause (but such a waiver may not be for a period in excess of 4 quarters), or

"(II) due to circumstances beyond the control of such State.

"(B) For purposes of determining deadlines imposed under this subsection, any time period during which a State was found under subparagraph (A)(ii)(II) to be unable to comply with the requirements of this subsection shall not be taken into account, and the Secretary shall modify all such deadlines with respect to such State accordingly.".

SEC. 9. ESTABLISHMENT OF NATIONAL MINIMUM STANDARDS FOR STATE MEDICAID PLANS.

Not later than December 31, 1994, the Secretary shall develop and submit to Congress such recommendations for uniform eligibility and coverage requirements with respect to title XIX of the Social Security Act as the Secretary considers appropriate, except that such requirements shall, at a minimum, include the requirements for health benefit plans developed under section 3(b) of this Act.

SEC. 10. REQUIRING SELF-INSURANCE PLANS TO COMPLY WITH PLAN REQUIREMENTS.

Section 514(b) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1144(b)) is amended by adding at the end the following new paragraph:

"(9) Subsection (a) shall not apply to any State law to the extent such law conforms to or reflects the provisions of the State health insurance plan developed and implemented by the State under section 2 of the Universal Health Coverage Act of 1990.".

SEC. 11. DEFINITIONS.

For purposes of this Act—

(1) the term "employee" means, with respect to an employer, an individual who normally performs on a monthly basis 17½ hours of service per week for that employer;

(2) the term "employer" means, with respect to a calendar year, an employer that normally employs 25 or more employees on a typical business day during the calendar year, including a State or political subdivision thereof;

(3) the term "health benefit plan" means an employee welfare benefit plan (as defined in section 3(1) of the Employee Retirement Income Security Act of 1974 (29 U.S.C. 1002(1)) that provides medical care to participants or beneficiaries directly or through insurance, reimbursement, or otherwise;

(4) the term "Secretary" means the Secretary of Health and Human Services;

(5) the term "Trust Fund" means the Universal Health Coverage Trust Fund established under section 4(a).

HOUSE OF REPRESENTATIVES—*Wednesday, January 31, 1990*

The House met at 12 noon and was called to order by the Speaker pro tempore (Mr. GEPHARDT).

DESIGNATION OF SPEAKER PRO TEMPORE

The SPEAKER pro tempore laid before the House the following communication from the Speaker:

WASHINGTON, DC,
January 31, 1990.

I hereby designate the Honorable RICHARD A. GEPHARDT to act as Speaker pro tempore today.

THOMAS S. FOLEY,
Speaker of the House of Representatives.

PRAYER

The Reverend Barbara St. Andrews, the Episcopal Diocese of California, San Francisco, CA, offered the following prayer:

O God of light, whose presence fills our hearts with peace when we await in stillness, arouse in us a deep compassion for human need and a resolution to fulfill responsibilities carried as a charge from Thee. Pour out abundant faith that we may witness to Thy power in tasks both great and small, and grant a faithfulness to those we serve at home, abroad, and in those circles where personal care and loyalty give strength to family ties. Enable us to transcend petty divisions and limited thinking and to open channels for Thy grace in mind and action. Keep always this Nation and her servants under the protection of Thy eternal care. May divine love in Thee meet divine love in us to create a perfect union of understanding. Amen.

THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Pursuant to clause 1, rule I, the Journal stands approved.

Mr. DOUGLAS. Mr. Speaker, pursuant to clause 1, rule I, I demand a vote on agreeing to the Chair's approval of the Journal.

The SPEAKER pro tempore. The question is on the Chair's approval of the Journal.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. DOUGLAS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 301, nays 100, answered "present" 1, not voting 29, as follows:

PLEDGE OF ALLEGIANCE

The SPEAKER pro tempore. Will the gentleman from New Hampshire [Mr. DOUGLAS] please come forward and lead the Members in the Pledge of Allegiance?

Mr. DOUGLAS led the Pledge of Allegiance as follows:

I pledge allegiance to the Flag of the United States of America, and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Hallen, one of its clerks, announced that the Senate had passed without amendment a bill and joint resolution of the House of the following titles:

H.R. 3792. An act to authorize appropriations for fiscal years 1990 and 1991 for the Department of State, and for other purposes; and

H.J. Res. 149. Joint resolution designating February 16, 1990, as "Lithuanian Independence Day."

The message also announced that the Senate had passed a joint resolution and a concurrent resolution of the following titles, in which the concurrence of the House is requested:

S.J. Res. 103. Joint resolution to designate the period commencing February 18, 1990, and ending February 24, 1990, as "National Visiting Nurse Associations Week"; and

S. Con. Res. 89. Concurrent resolution correcting the enrollment of S. 1838.

AUTHORIZING THE SPEAKER TO DECLARE RECESS ON THIS LEGISLATIVE DAY

Mr. BONIOR. Mr. Speaker, I ask unanimous consent that it may be in order at any time today for the Speaker to declare recesses, subject to the call of the Chair, for the purpose of receiving in joint session the President of the United States.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Michigan?

There was no objection.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. The Chair desires to make an announcement.

After consultation with the majority and minority leaders, and with their consent and approval, the Chair announces that tonight when the Houses meet in joint session to hear an address by the President of the United States, only the doors immediately opposite the Speaker and those on his left and right will be open.

No one will be allowed on the floor of the House who does not have the privilege of the floor of the House.

Due to the large attendance which is anticipated, the Chair feels that the rule regarding the privilege of the floor must be strictly adhered to.

Children of Members will not be permitted on the floor, and the cooperation of all Members is requested.

BUDGET FAILS TO RESPOND TO 1990'S CHALLENGE

(Mr. PANETTA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PANETTA. Mr. Speaker, on Monday the President presented his first budget of the 1990's. I think all Members recognized that the 1990's are a crossroad for this Nation as we face the changing world, as we face an economy that is beginning to slow down in this country, as we face the legacy of debt and unmet needs that have to be addressed. This is a true challenge for leadership in this country and the leadership for the future.

Unfortunately, the budget fails to respond to that challenge and presents a set of very mixed messages to the country. It tries to define the crisis we face without taking action on that crisis. It denounces timing shifts, while implementing some $8 billion in timing shifts as part of the budget. It talks about defense cuts, without addressing any cuts in the very expensive strategic weapons that are eating our budget alive. It proposes benefits for the very wealthy, while proposing freezing cost of living increases for retirees, as well as a $5.5 billion reduction in Medicare.

The challenge is for both the President and the Congress. I think all Members are very tired of the games that have been played with the budget in the past. The people are tired; the Congress is tired. However, obviously the budget presented in the case of the President still is not.

HOPE FOR CONTINUED BIPARTISAN COOPERATION

(Mr. MICHEL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MICHEL. Mr. Speaker, I want to first express my thanks for honoring my request that we defer consideration of the driver-voter registration legislation until next week in order to give Members more opportunity to digest what it is about, even though we will be considering the rule today. That will be a controversial rule, to some degree.

The reason I rise is, although I do not see the gentleman from Washington [Mr. SWIFT] on the floor, but he has done such a yeoman job on the Democratic side of the aisle on the Task Force on Campaign Reform, working with the gentleman from Mississippi [Mr. VANDER JAGT] on our side on the same issue, and I do not want my opposition to the voter registration matter, which was not a part of those over on negotiations on campaign reform, to in any way prejudice what I see down the road as an opportunity for both parties to continue to work together in some kind of overall package on campaign reform.

APPEAL FOR BUDGET SOLUTIONS

(Mr. FAZIO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FAZIO. Mr. Speaker, George Bush's lips say the future but his budget speaks of the past.

His first solo budget is replete with accounting gimmicks, unrealistic economic assumptions, and deficit reduction measures which have been repeatedly rejected on a bipartisan basis by Congress and the American people.

It cites numerous problems, but doesn't provide the resources to deal with them. And it continues the tremendous human and physical disinvestment which characterize the Reagan budgets of the 1980's.

If George Bush is looking to recycle the failed proposals of the Reagan years, and if he thinks this Congress and the American people will stand by and accept them, he is as wrong as the phony premises on which this budget is based.

We have real problems which need real solutions, not another grab bag of fantasies and illusions.

Mr. President, it is time to put aside the political slogans of the past and make the 1990's a decade to reverse the failures of neglect in the 1980's. Let us not continue to pass the buck to the next generation of Americans.

□ 1230

TIME FOR CONGRESS TO GET DOWN TO SOLVING CRITICAL PROBLEMS

(Mr. THOMAS of Wyoming asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. THOMAS of Wyoming. Mr. Speaker, I would like to comment with regard to my concern about us in this body getting on with solving the problems of this country. Most of us have been home. One of the messages I received when I was there was that we were not particularly noted for being

effective in the last session. We did not address many of the problems before us.

A great many of those issues continue. We are talking about competitiveness, the environment, air quality, foreign aid, and a great many other domestic problems, and most important of all, dealing responsibly with the national budget. I know that we have different views, and that is healthy. We ought to have a forum for discussion. But I think it is time that we get past partisan political bashing of the President, and that we move on and get beyond the posturing on defense for our own interests and move forward to solving the problems of this country.

Mr. Speaker, I urge my colleagues to get on with it.

INVEST IN AMERICA'S FUTURE, NOT STAR WARS

(Mr. BONIOR asked and was given permission to address the House for 1 minute.)

Mr. BONIOR. Mr. Speaker, everyone in America seems to know the world is changing—everyone but George Bush.

This week he sent up the same tired old budget we have seen for the last decade, the same strategic weapons that don't work, the same domestic cuts, the same old budget gimmicks.

America is no longer competitive in language, engineering, or math—yet student loans are cut.

Our Nation cries out for health care—yet $6 billion is cut from Medicare.

Europe is in revolt for democracy—yet Bush's answer is billions for the B-2.

The administration still seems lost in a vision of star wars—while working families fight the battle for America's future alone.

AMERICA'S FINEST WELCOMED HOME FROM PANAMA

(Mr. McCRERY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. McCRERY. Mr. Speaker, today we welcome home from Panama some of America's finest—the final contingent of Task Force Regulars from the 5th Infantry Division (Mechanized) stationed at Fort Polk, LA.

They are all to be commended on their outstanding performance in meeting their Operation Just Cause mission, perhaps one of the most difficult. The Task Force Regulars successfully overtook the Panamanian Defense Forces' headquarters, displaying their skill and courage in the face of incessant PDF rocket-propelled grenades, mortars, and automatic weapon fire.

The direct and vital assistance of these soldiers contributed to the overall success of the U.S. operation to protect American lives, ensure the intregrity of the Canal Treaty, install the freely elected leader, President Endara, and, bring Manuel Noriega to justice.

Soldiers, please know that your fellow Americans celebrate your success and commemorate your service to our country. We owe you a debt of gratitude for your selfless dedication to duty.

But, as we celebrate the return to Fort Polk of the last contingent of Task Force Regulars, our jubilation is made bittersweet by the cold reality that not all of our boys will know the warm embrace of this grateful Nation.

We mourn the loss of 23 military personnel who lost their lives in Panama. I particularly want to remember the two from Fort Polk's 4th Battalion, 6th Infantry, Cpl. Ivan Perez and Pvt. Kenneth D. Scott.

To their family, friends, and those who fought along side them, I offer our most sincere condolences.

We will never forget their sacrifice. We remember who they are, what they did, and why they had to be brave for us.

Our freedom, and that of freedom-loving peoples around the world, is not free. And to those who paid for it with their blood, and to those who put themselves in harm's way in duty to their country. I extend my heartfelt gratitude.

I would add a sincere thank you to the families of all the personnel sent to Panama. You have your own jobs in support of the country and our military efforts—that is loving, supporting, missing and worrying about your spouses, family, friends, and neighbors who comprise our military personnel.

As the final contingent of the Task Force Regulars from Operation Just Cause returns to Fort Polk, let us rededicate ourselves and our Nation to the noble ideals of peace and freedom and justice, which they so valiantly served.

MIDDLE CLASS AMERICANS HARMED BY THE PRESIDENT'S BUDGET

(Mr. FROST asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. FROST. Mr. Speaker, I spent the last 2 days studying the President's budget and have come to one inescapable conclusion: President Bush must not know very many middle class Americans. If he did, he would certainly realize that his budget does virtually nothing for the middle class and does quite a bit of harm to it.

Middle class Americans are disturbed about the high cost of sending their children to college, and yet President Bush cuts the Guaranteed Student Loan Program by $758 million.

Middle class Americans are incensed that the Tax Reform Act of 1986 took away their IRA's. What does President Bush propose? An anemic little family savings plan that is not even close to the original IRA concept. Under the original IRA concept they were allowed to deduct both the amount they put into a savings account and the interest earned. Under President Bush's plan, only the interest would be deductible.

Middle class Americans want the Government to make investments in America that will yield future jobs, and yet the President lets the surplus in the highway trust fund continue to build up rather than building the new roads and bridges needed to bring goods to market.

Mr. Speaker, I guess there are not very many middle class people up there in Kennebunkport. If there are, President Bush must not know them.

THE BUSH MILITARY BUDGET

(Mrs. BOXER asked and was given permission to address the House for 1 minute and extend her remarks.)

Mrs. BOXER. Mr. Speaker, the Bush military budget actually reverses a downward trend that was started last year.

In 1989, we went from a $303 billion budget to $299 billion in 1990—a reduction.

This year Bush wants to go from $299 billion up to $304 billion—reversing the trend. And this in spite of Richard Perle, the major Republican cold warrior, who said:

> East European political reforms have eliminated any possibility of a Soviet attack against Western Europe, potentially allowing the U.S. military to cancel virtually the entire "next generation" of major tactical and strategic weapons systems.

This in spite of 60 of the top 100 defense contractors who are under investigation.

This in spite of a tremendous deficit and needs in this country for health care, homeless, education, the drug fight, environmental cleanup.

It is clear that the Congress must lead on this budget.

It is clear that with intelligent planning we can wean this country from a bloated military budget gradually and carefully and in doing so bring down the deficit and bring our economy into the 1990's with America as the leader once again.

A TRIBUTE TO SISTER MARIE IMMACULEE SARDEGNA

(Mr. WALSH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WALSH. Mr. Speaker, I rise today to praise a good person, a woman who has dedicated her life to her faith in God and to Catholic education, and on the occasion of being awarded the St. John Neumann Award for outstanding service by the Syracuse chapter of the New York State Federation of Catholic School Parents.

I know firsthand the benefits of that dedication. Sister Marie Immaculee Sardegna has been a teacher at Most Holy Rosary School in Syracuse for 14 years. Sister Immaculee has taught two of our children, Ben and Jed, and my wife and I look forward to our youngest, Maureen, being in Sister's class next year.

As my colleagues know, and as most American parents trust, we in Congress hold top-notch educators in high esteem. President Bush has said he wants to be remembered as "the Education President." As a Member in the House supports the President's encouragement of quality educational systems, I want to praise Sister Immaculee today as an outstanding example of the classic educator.

As a reading specialist certified to teach in my home State of New York, and also in Pennsylvania and Maryland, Sister Immaculee has brought the blessings of knowledge to an impressive number of young students over three decades.

Sister Marie, a member of the Sisters, Servants of the Immaculate Heart of Mary since the early 1950's, is a graduate of St. Mary's Assumption High School in Scranton, PA. She received her B.S. and M.S. degrees in elementary education at Marywood College.

In addition to her teaching duties, Sister Marie has also prepared children for the sacraments of "Reconciliation and First Eucharist" for 20 years.

It has been said that a teacher affects eternity, that she can never tell where her influence stops. In the case of Sister Marie Immaculee, I know well the positive influence she has had on my community and my family. We all wish her well in her continuing career.

THE PRESIDENT'S BUDGET—A ROADMAP TO NOWHERE

(Mr. NAGLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. NAGLE. Mr. Speaker, today I rise with a deep sense of sadness and disappointment: sadness for my country; disappointment in our President.

The President's budget, plainly put, is a budget of lost opportunities.

He had the chance to be a historic President, in historic times. He shunned it. He had the chance to be a great President; but he didn't even try.

The times cry out for a President who will lead this Nation in making the hard choices we must make if we are to meet the enormous challenges we face as we move into the 1990's and the 21st century.

Instead, George Bush has chosen to be only a President who guards his standing in the popularity polls.

America has many needs, but the biggest is a President who sees historic opportunity and takes it.

I think I speak for many in this Chamber when I say the rhetoric of the President's inaugural address, the rhetoric of his speech a year ago to a joint session of the Congress, and the rhetoric which has surrounded much of his talk about this budget, inspired confidence, optimism and an honest desire to join together in bipartisan cooperation.

The reality, however, is that this budget is a blueprint for staying the same. It has no vision. It repeats the mistakes of the past and does precious little to meet the real needs of the future. It is—in a phrase—a roadmap to nowhere.

Once, he inspired optimism; today, just disappointment.

A President writes his legacy day by day and year by year. So it is still too early to say the final book has been written on George Bush. But it is not too early to observe that the first few chapters are clearly cause for deep concern.

TRIBUTE TO LT. COMDR. WILLIAM P. CULLEN

(Mr. PARRIS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PARRIS. Mr. Speaker, I rise on this occasion to pay tribute to the outstanding service of my constituent, Lt. Comdr. William P. Cullen, in his position as the Navy's congressional liaison officer to the U.S. House of Representatives.

Commander Cullen was selected for this demanding and important assignment based upon his proven performance as a fully qualified naval surface warfare officer, and more recently as a naval flight officer serving on the U.S.S. *Midway* [CV-41] forward deployed to the Western Pacific and Indian Ocean. During his tour on Capitol Hill, which spanned both the 100th and 101st Congresses, I and many of my colleagues relied on Lieutenant Commander Cullen's unfaltering dedication and unique expertise.

Due to his superior accomplishments, and upon completion of his current assignment, Lieutenant Commander Cullen has been selected to attend the Armed Forces Staff College prior to returning to the fleet in his primary warfare specialty. I have the greatest confidence that Lieutenant Commander Cullen will bear his new responsibilities both successfully and admirably, and I am pleased and proud to offer my congratulations and best wishes to him for a bright and promising future. It gives me great pleasure to join my colleagues in recognizing Bill's achievements and service, as well as in wishing him fair winds and following seas.

THE VISION OF THE BUDGET

(Mr. WISE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WISE. Mr. Speaker, a budget is to be a vision stating in hard numbers what has been promised in lofty rhetoric. The American people want to see this vision. We are restless, stirring, knowing we have to grow and build a stronger America.

However, Mr. Speaker, that is not what the President's budget is about. This budget's vision is an optimistic delight, not a budget of growing or building, but of simply sustaining.

This country wants to invest in its future. The President calls this an investment blueprint, but the budget only promises the junk bonds of government investment, promised high return with great risk and likely problems.

Mr. Speaker, I want to invest in America, not run away from it. Crucial infrastructure needs still go unmet: Roads, bridges, airports, shipping ports that make America first. If my colleagues are frustrated by choking traffic, I say, "Don't look to this budget to ease your rush hour. We needed freeway size investment; we got sidewalk rhetoric."

Mr. Speaker, this country is 55th in the world in physical capital investment. It is time for a budget that starts making America No. 1.

EQUAL TREATMENT FOR ALL RETIREES

(Mr. BILIRAKIS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BILIRAKIS. Mr. Speaker, in light of the proposed budget's freeze on military and Federal retirees' COLA's, I have today introduced legislation requiring the equal treatment of all retirees.

Why are military and Federal retirees again singled out? Why can we not understand that these individuals are also entitled to cost-of-living adjustments? I do not believe one group of retirees should receive preferential treatment over another group.

Although I strongly support the goal of deficit reduction, I cannot in good conscience support any plan that singles out certain retirees for a disproportionate share of budget cuts while fully protecting many other programs.

I say enough is enough! Congress should not stand by idly and permit the inequitable treatment of our senior citizens who have served in the Government and those who sacrificed to serve us in the military.

Mr. Speaker, there are over 144,000 military retirees and 147,000 Federal retirees and their families who reside in the State of Florida. The two bills I have introduced today, one to provide for a COLA for both military and Federal retirees and the other to provide for a military COLA, will assure equal treatment for those retirees.

I urge my colleagues to join this effort in providing equal COLA's for all retirees.

THE BRONCO BUDGET

(Mr. ESPY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ESPY. Mr. Speaker, when John Elway was asked about his team's chances in the Super Bowl, the quarterback said simply, "We'll show up."

Mr. Speaker, events of last Sunday suggest that was just about all that they did, and that reminds us of this administration's budget. It is here. It showed up. And that is about the best that we can say.

Mr. Speaker, like that team this budget is listless on offense, it is unimaginative, and, like the team, it does not rise to meet the challenges of international competitiveness and emerging changes in world order. Like that football team it is sort of flat in what is the biggest game in town. Like the football team, this administration's budget just showed up.

Mr. Speaker, we are all fans, but we are disappointed. We are disappointed that four-fifths of the spending cuts come from the domestic account side. We are disappointed that in a time of lessening tensions in the world that this budget shows an increase above last year's level for defense spending. We are disappointed that gimmicks, timing shifts and trick plays are still in the game plan. We are disappointed that farmers, and Medicare recipients, and rural Americans, and homeowners and those who depend on mass transit are among many Americans who still suffer from what is an attacking game plan.

Mr. Speaker, the President, like the quarterback, is the leader. He sets the tone for the Nation. He calls the plays. He executes the offense.

I am afraid, Mr. Speaker, that the best thing that can be said about the budget is the same thing John Elway said about his team. It just showed up.

INTRODUCTION OF AMERICAN FAMILY REINVESTMENT ACT OF 1990

(Mr. BUECHNER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BUECHNER. Mr. Speaker, Thomas Jefferson once stated:

> We must make our choice between economy and liberty, or profusion and servitude * * * if we can prevent the government from wasting the labors of the people under the pretense of caring for them, they will be happy.

Mr. Speaker, these words are especially prophetic, considering the events which are occurring in Eastern Europe. For once again, we are reminded that economic statism and collectivism are no substitute for the genius of ordinary people.

These words should also serve as our guide when the much heralded peace dividend occurs. For if we follow the vision and wisdom of our Founding Fathers, we will simply allow the American people to keep more of their hard earned income, to spend or invest however appropriate.

With this in mind, I am today introducing the American Family Reinvestment Act of 1990. This legislation provides almost $2,200 of direct tax relief to a typical, middle income family of four. That's $2,200 which they can use for child care, better housing, or even additional savings toward retirement.

Mr. Speaker, if the cold war is really over, let us distribute the peace dividend directly to the American people. For as Thomas Jefferson observed over 200 years ago, they know far better than Congress how to spend it.

THE HOUSE IS NOW THE BASTION FOR FREEDOM AND LIBERTY THROUGHOUT THE WORLD

(Ms. PELOSI asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Ms. PELOSI. Mr. Speaker, I rise today to commend and thank my colleagues in the House of Representatives for their courageous vote last week in support of the Chinese students. When the House voted overwhelmingly in a bipartisan fashion 390 to 25, it established itself as the bastion for freedom and liberty throughout the world to support the Chinese students and to support human rights in China.

Mr. Speaker, following the vote, the Chinese Government bitterly stated, "We express great indignation and strongly condemn this hegemonistic act of the United States House of Representatives." Coming from them it is a compliment.

Although we lost the override in the Senate by four votes, I believe we made great progress for human rights in China and for protection for the students. Because of the bill, we got an executive directive. Because of the override vote, we got assurance that the students will never be sent back against their will.

Mr. Speaker, we will hold the administration's feet to the fire on this promise.

I am very pleased, Mr. Speaker, that this House chose to identify itself with the eloquent statement of the one man before the tank rather than associating itself with the strange toast of General Scowcroft to the butchers of Beijing.

□ 1250

FOREIGN AID CREDITS SHOULD BE SPENT IN THE UNITED STATES

(Mr. REGULA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. REGULA. Mr. Speaker, during a recent conversation with Loret Ruppe, our Ambassador to Norway, I learned that a good part of United States foreign aid is in the form of cash transfers. Cash that those countries use to purchase products from Japan, West Germany, Taiwan.

Other nations do not run their foreign aid programs that way—and they also do not have trade deficits. Instead of cash, their foreign aid consists of lines of credit so that their own economies benefit.

My colleagues may be interested in knowing that some of the money we gave to the Nicaraguan opposition for their election campaign went to purchase jeeps from India. They have bought 22 so far and have plans to buy 71 more vehicles while here in the States our auto industry is in a slump.

Are we running an export promotion program for other countries? Does American business not deserve our full support in providing jobs for our citizens?

Mr. Speaker, I believe we need to reexamine how our foreign aid really works and move toward credits to be spent in the United States rather than cash to be expended in other countries.

GOOD CITIZENSHIP CAN BE A LEARNING EXPERIENCE

(Mr. NEAL of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. NEAL of Massachusetts. Mr. Speaker, tonight, President Bush will

give Congress and the American people his assessment of the State of our Union. These occasions are frequently little more than a stage on which a President unveils new initiatives by which the resources of Government will be brought to bear on pressing national problems. I hope, however, that Mr. Bush will use the forum he will have tonight to issue a call, for a renewal of the spirit of community service by which our people can bring their best resources—themselves—to bear on some of those same problems.

It is easy to lose sight of the fact that the maintenance of any society, particularly a democratic society, is a shared enterprise that must involve the collective attention and effort of all its people. While we have done a great job of educating our young people about that to which they are entitled as American citizens, we have done a poor job of teaching them what is expected of them as citizens. I believe that it is wrong, and dangerous, to allow a belief to take root in this country that acts like feeding the hungry, sheltering the homeless, keeping our public areas clean, and supporting the efforts of our public safety officers are always someone else's responsibility or the responsibility of Government.

Sadly, that kind of attitude is all too prevalent today. To that end, I have joined Congressman BILL FORD of Michigan in introducing H.R. 2591, the Service to America Act, which will help local school systems and institutions of higher learning tap the huge potential for community service represented by America's 60 million kindergarten through college age students, by making such service a part of their curricula.

Mr. Speaker, through example, encouragement, and the provision of opportunities to participate in it, serving others can become a lifetime habit for our young people. I can think of few habits that would better enhance the State of our Union.

A WARM WELCOME TO THE MOST POPULAR PRESIDENT IN HISTORY

(Mr. DREIER of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DREIER of California. Mr. Speaker, throughout the decade of the 1990's we would listen to colleagues the day after the State of the Union Message take the well and bash President Reagan. I will tell Members that we this morning have been listening to some very well-scripted attacks on the budget which has been submitted here by President Bush, and I suspect that tomorrow morning we will hear a few people bashing the President's State of the Union Message.

Mr. Speaker, I just want to say that in about 8 hours the President will be standing right here providing his first State of the Union Address to the American people, and I want to say, Mr. Speaker, that I will warmly welcome the most popular President in history.

BROKEN PROMISES IN THE BUDGET

(Mr. DORGAN of North Dakota asked and was given permission to address the House for 1 minute.)

Mr. DORGAN of North Dakota. Mr. Speaker, I want the President and Congress to know that we in North Dakota have had our fill of broken promises in the Federal budget. Here is a story. Forty-five years ago the Federal Government came to us in North Dakota and said they wanted permission to build a permanent flood in our State. They wanted to harness the Missouri River for downstream interests.

The Federal Government said if we allow this permanent Rhode Island-size flood in our State, then they would provide us a water diversion program as compensation for it.

Well, we got the flood all right, but now the President's budget breaks that promise. He says we want what the Federal Government got, but we are not going to give you what we promised you. The President calls for scrapping this project.

Mr. Speaker, I am sending the President today a bill, a voucher for $680 million. That is what the President and what Congress owes my State.

I say to the President and Congress this: If you do not want to keep your word and build this project, then pay us money you owe us. If you do not want to pay us the money you owe us, then give us the dam you built that created the flood and we will sell the electricity every year and make $18 million a year and build our own project and create our own economic development.

There are three ways: Build the project, pay us the money, or give us the dam. We intend to keep the commitment that we made to the Federal Government, and we darn well expect the Federal Government to keep the commitment they made to North Dakota.

PROSECUTE THOSE WHO DESECRATE AMERICAN SYMBOLS

(Mr. BURTON of Indiana asked and was given permission to address the House for 1 minute.)

Mr. BURTON of Indiana. Mr. Speaker, the patriotic symbols that we hold dear in this country are very important, or should be very important, to each and every one of us. Over the past year we have seen people desecrate the American flag, and we have not been able to get a constitutional amendment passed to make that an illegal act. We passed a law, but many Members do not think that is enough. Something needs to be done to protect those sacred symbols.

Today, just a few minutes ago, some people threw what appears to be blood on the front columns of the Capitol of the United States of America. I think this body and the other body should let the people of this country know, and let those people who perpetrate those crimes upon our symbols know, they are going to have to pay a severe price for that.

I submit that all Members ought to be indignant and let the people of this country know we are going to support our symbols and get those people prosecuted to the full extent of the law.

In addition, if that is blood, those men cleaning it up may be at risk. We do not know whether this is contaminated blood or not. I think that should be investigated and that should be added to the charges against those individuals that perpetrated that crime on this Capitol.

A BLUEPRINT FOR THE FUTURE, OR AN AUTOPSY OF THE PAST?

(Mr. TRAFICANT asked and was given permission to address the House for 1 minute.)

Mr. TRAFICANT. Mr. Speaker, the President's budget is supposed to be a blueprint for America's economic future. The fact is, President Bush's 1991 budget seems like an autopsy report from America's past. This budget continues to kill and dash the hopes of many Americans.

What I really want to talk about today is how I keep hearing the screams for a balanced budget amendment. Why have neither President Reagan nor President Bush submitted a balanced budget to this Congress?

When I hear that the President wants to comply with Gramm-Rudman, that takes the cake. That is like fighting fire with gasoline.

What really ticks me off today, and I have to say it, is that camera in the center aisle which will beam the President's speech all over the world is an Ikegami 322, made in Japan. That is about the status of the American Congress and our budget, folks.

EDUCATION FUNDING—PRESIDENT'S BUDGET

(Mr. PERKINS asked and was given permission to address the House for 1 minute.)

Mr. PERKINS. Mr. Speaker, we received a budget this week that was supposed to be the President's proof

that he was serious when he claimed he wanted to be the education President. Well I am tired of hearing such hypocrisy. Simply put, a budget that is unable to even keep up with inflation does not make an education President. It takes guts and some conviction to earn that title and I see neither of those characteristics in President Bush.

When we are crying out for more college graduates as scientists and mathematicians the President abolishes the State student incentive grants. This means that 200,000 less grants will be awarded next year; 200,000 less students get our help. When we talk about opening the doors of education to every qualified student, no matter their economic level, the President cuts out all contributions to the Perkins loans that are designed to help the most financially needy students. This translates to losing 120,000 loans to struggling students. No one else steps in to take up this burden, 120,000 students must simply do without.

Where is the sense in all of this. I see none and I hope that your eyes are open wide enough to realize that this is not an acceptable budget.

Mr. President, it is time to get serious about education and it is time to put up or shut up. The Congress is ready, with or without you.

FOREIGN AID SHOULD BE USED TO BUY AMERICAN PRODUCTS

(Mr. JONTZ asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. JONTZ. Mr. Speaker, 22,000 Chrysler workers are now on layoff, over 500 in the Jeep plant in Toledo and 1,500 in my own district, and where does the National Endowment for Democracy go to buy 50 Jeeps to send to the opposition party in Nicaragua for their campaign?

To India. India, one of three countries cited by our Government as guilty of pervasive unfair trade practices, India, which has an import tariff of 190 percent on trucks, and a 98-percent domestic content requirement. India got started making Jeeps with machine tools that came from Toledo, OH, 30 years ago.

Mr. Speaker, I want to know, what is wrong with using American tax dollars to buy American Jeeps? Surely President Bush would waive the trade embargo against Nicaragua so that American workers could benefit from their own tax dollars.

I confess, I was against the $7 million going to Nicaragua in the first place. I did not think we ought to be spending our money to influence their election. But surely, do not the workers of this country whose taxes finance this aid deserve more while they are standing in line for unemployment than a kick in the pants from our own Government?

□ 1300

CONGRESS NEEDS TO OVERHAUL THE FISCAL YEAR 1991 BUDGET LIKE NAVAL ORDNANCE IN LOUISVILLE OVERHAULS GUNS

(Mr. MAZZOLI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MAZZOLI. Overhaul, Mr. Speaker, the operative term is overhaul. If we in Congress overhauled the President's fiscal year 1991 budget with the same precision and with the same care that Naval Ordnance Station at Louisville overhauls the guns and fire control systems which the Navy needs to do its mission at sea, then we will have produced a better budget. But the irony here, Mr. Speaker, is that the Pentagon has targeted the Naval Ordnance Station at Louisville for possible closure. I intend to fight this closure. My allies in this fight are the Governor of Kentucky, Wallace Wilkinson, Mayor Jerry Abramson, County Judge Executive Dave Armstrong. We will fight together to save Naval Ordnance Station.

We all appreciated yesterday when we met here in Washington the kind attentions of Speaker FOLEY and Chairman ASPIN.

Overhaul, Mr. Speaker, that is the word. We need to overhaul the budget just like Naval Ordnance Station, Louisville, overhauls the Navy's 5-inch guns.

CONGRATULATIONS TO LONGWOOD HIGH SCHOOL CHEERLEADERS

(Mr. HOCHBRUECKNER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HOCHBRUECKNER. Mr. Speaker, I am honored to have this opportunity to extend my heartiest congratulations to the Longwood High School junior varsity and varsity cheerleading squads, who recently captured first and fifth places in their respective divisions at the "U.S. National Championship" held in Nashville, TN and sponsored by the International Cheerleading Foundation.

To be selected to take part in what was billed as the largest cheerleading competition ever held, with over 4,000 teams from the United States and Canada competing, is quite an accomplishment. But to travel to Nashville, TN, and successfully challenge the national powerhouses of the South on their home turf, places these Long Island cheerleading squads in an elite class. Their collective talents combined with strict discipline and the dedication to be the best, have helped revolutionize the sport of cheerleading. Their efforts are to be commended.

I join Longwood High School and the entire Long Island community in saluting the Longwood High School cheerleading teams on their achievements, and wish them continued success in future competition and in roaring the Lions onward to victory.

BUSH'S BUDGET CUTS DEFICIT IN HALF? HOGWASH!

(Mr. APPLEGATE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. APPLEGATE. Mr. Speaker, I looked at the budget and I saw what I saw, but I am not sure of what I saw. I saw a $1.25 trillion in expenditures, the biggest budget buildup we have ever had in this country. Phony economic projections. I saw what they call lower interest rates, and we know that will not happen because the Japanese control those. Yet they say they are going to cut the deficit in half. I think that is a bunch of hogwash.

I think they had better Windex their mirrors and get the smoke out of their eyes. This budget is just like it has always been: It is the rich getting richer, and the poor getting poorer.

Nothing new in the last 9 years. It is tax breaks for corporate America, and it is communities, their workers and the unemployed who are going broke.

I think we had better start looking out for middle America; those are the people that made America the country it is today.

CONGRESS IS RESPONSIBLE FOR ENACTING BUDGETS

(Mr. SOLOMON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SOLOMON. Mr. Speaker, I was not going to join this "funny hour" this afternoon, but after listening to some of these statements, I feel compelled to do so.

Does anybody realize that this Congress in the last 9 years has not enacted one Presidential budget, not eight of them for Ronald Reagan and not one for George Bush?

So, therefore, if we hear all these complaints about the budget, it is your fault and maybe my fault or at least whoever voted for those budgets, because the final product was not Ronald Reagan's and not George Bush's.

I listened to all these complaints; then I hear last night a spokesman for the Democratic Party say—and he is the chairman of the Budget Commit-

tee, Mr. PANETTA—that his answer is to ashcan the Bush budget the same as he did with every previous Republican budget for the last 9 years and do away with Gramm-Rudman, do away with sequestration, do away with the only discipline that this Congress has at all.

If we had not had Gramm-Rudman and sequestration on the books, think what the deficit would be, gentlemen, all you big spenders. We are going to keep you from doing that. We are going to block Gramm-Rudman repeal because you have to do it legislatively; we have got the votes, along with some good, conservative Democrats, to block your trying to repeal Gramm-Rudman.

I dare you to try it; come on, let's put on the gloves and have a fight.

PROVIDING FOR CONSIDERATION OF H.R. 2190, NATIONAL VOTER REGISTRATION ACT OF 1989

Mr. MOAKLEY. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 309 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 309

Resolved, That at any time after the adoption of this resolution the Speaker may, pursuant to clause 1(b) of rule XXIII, declare the House resolved into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 2190) to establish national voter registration procedures for elections for Federal office, and for other purposes, and the first reading of the bill shall be dispensed with. After general debate, which shall be confined to the bill and which shall not exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on House Administration, the bill shall be considered for amendment under the five-minute rule. In lieu of the amendments now printed in the bill, it shall be in order to consider an amendment in the nature of a substitute consisting of the text of the amendment printed in the report of the Committee on Rules accompanying this resolution as an original bill for the purpose of amendment under the five-minute rule, and said substitute shall be considered as having been read. No amendment to said substitute shall be in order except the amendments printed in the Congressional Record on or before February 5, 1990, by and if offered by, Representative Michel of Illinois, or his designee, said amendments shall be considered en bloc and shall be debatable for not to exceed one hour, equally divided and controlled by the proponent and a Member opposed thereto. Said amendments en bloc shall not be subject to amendment, and shall not be subject to a demand for a division of the question in the House or in the Committee of the Whole. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and any Member may demand a separate vote in the House on any amendment adopted in the Committee of the Whole to the bill or to the amendment in the nature of a substitute made in order as original text by this resolution. The previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit with or without instructions.

The SPEAKER pro tempore (Mr. DURBIN). The gentleman from Massachusetts [Mr. MOAKLEY] is recognized for 1 hour.

Mr. MOAKLEY. Mr. Speaker, I yield the customary 30 minutes to the gentleman from Tennessee [Mr. QUILLEN], pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 309 is a modified closed rule providing for the consideration of the bill H.R. 2190, the National Voter Registration Act of 1989.

The rule provides 1 hour of general debate, equally divided and controlled between the chairman and ranking minority member of the Committee on House Administration.

Mr. Speaker, the rule makes in order the amendment in the nature of a substitute consisting of the text printed in the report accompanying this resolution. The amendment shall be considered as original text for the purpose of amendment, and shall be considered as having been read.

The rule further provides that no amendments to the substitute are to be in order except the amendments printed in the CONGRESSIONAL RECORD on or before February 5, 1990, to be offered by the distinguished Minority Leader, Representative MICHEL or his designee.

The amendments shall be considered en bloc and shall be debatable for 1 hour, with the time equally divided between the proponent and a Member opposed thereto.

Mr. Speaker, the amendments en bloc shall not be subject to amendment or to a demand for a division of the question in the House or in the Committee of the Whole.

Finally, Mr. Speaker, House Resolution 309 provides one motion to recommit with or without instructions.

Mr. Speaker, H.R. 2190, the National Voter Registration Act would create a national voter registration procedure for election of Federal offices. The responsibility for the implementation of the system would fall within the States, with the Federal Government responsible for enforcement, as well as financial and technical assistance.

Under this bill, States that require registration would provide uniform methods to enable voters to register to vote. The first method is the so-called motor-voter procedure, this procedure would allow for voters to register to vote when they apply for a driver's license.

The second method would require each State to make available a form that applicants could mail to an election official and be eligible to vote in Federal elections.

The final method would require States to designate some Government locations, as well as private sector locations that would distribute and collect applications for registration.

Mr. Speaker, in order to assure that voter registration lists are accurate and current, H.R. 2190 would require States to update and verify registration lists by providing non-forwardable mailings every 2 years to registered voters or by obtaining information on address changes from the U.S. Postal Service.

Mr. Speaker, in the 1988 Presidential election, barely 50 percent of the electorate voted, this was the lowest voter turnout in 64 years. One of the primary reasons given by non-voters was that they were not registered. This bill that the House will soon consider will not only increase the opportunity for eligible citizens to register to vote, but also open the electoral process to all citizens.

Mr. Speaker, I urge my colleagues to adopt this rule and support the final passage of H.R. 2190.

□ 1310

Mr. QUILLEN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the main purpose of the voter registration bill is supposed to be to make it easier for people to vote.

In that spirit, yesterday in the Rules Committee, I offered an open rule in order to make it easier for Members to vote on amendments to the voter registration bill. But instead of welcoming my proposal to allow Members to vote, the Rules Committee by a party-line vote turned down my open rule proposal and instead reported the rule before us today, which closes off all amemdnents except for one package to be considered en bloc. There is no shortage of amendments to be considered. In the Rules Committee yesterday, the gentlewoman from Nevada, [Mrs. VUCANOVICH] asked to have an amendment made in order to insure that this legislation would not burden the States with a lot of extra costs. The gentleman from Colorado [Mr. HEFLEY] presented three separate amendments. One was designed to enhance voter participation. A second was designed to ensure that voter registration rolls are accurate. A third would protect the integrity of the electoral process.

Mr. Speaker, these are all reasonable proposals which deserve to be considered separately on their merits, not jammed into an en bloc package where only one vote will be allowed on a large group of amendments.

And certainly opponents of a closed rule cannot argue with a straight face that we need to limit amendments be-

cause it would take too long to consider individual amendments. Today is January 31, the last day of the month, and there have been no long hours spent voting on legislation this last month. It appears unlikely that the schedule in the near future is going to be overcrowded.

The bill made in order by this rule is major legislation which will have an impact on all 50 States. It mandates procedures which may have severe unintended consequences in certain parts of the Nation. If there was ever a bill where Members should have an opportunity to offer amendments to prevent unnecessary conflicts with existing State law and practice, this is it.

I should note that the administration opposes this bill even while endorsing the goal of increasing participation in the electoral process. The administration opposes the bill because the bill would increase substantially the risk of voter fraud, and because a sufficient justification has not been demonstrated for imposing extensive procedural requirements and related costs on the States.

The bill made in order by this rule is not even the same one reported by the House Administration Committee. This rule provides for House consideration of a new bill printed in the report accompanying this rule. The new bill is not just technically different. It is substantively different. Among other things, the new bill will cost more than twice as much as the one reported by the House Administration Committee. If you think you know what you're voting on because you have read the House Administration Committee report, think again.

This is the wrong rule for this bill. The bill has a number of major defects which would have to be corrected before this bill would be acceptable. The rule before us today denies the House the opportunity to consider separately the amendments necessary to make those improvements. Forcing the House to deal with a number of different approaches in 1 hour and with one vote on an en bloc amendment is not a satisfactory solution.

In good conscience, I have no choice but to oppose this rule. It is a gross distortion of what the legislative process should be. I urge my colleagues to vote against the rule.

Mr. Speaker, I yield 3 minutes to the gentleman from New York [Mr. SOLOMON].

Mr. SOLOMON. Mr. Speaker, I rise in opposition to this rule. I think we should all be mindful of the hypocrisy involved in considering a restrictive rule for a bill that is supposedly aimed at of all things promoting voters' rights. And then when you take a look at this bill, how H.R. 2190 arrived at the Rules Committee in the first place, you can only conclude that this rule adds insult to injury. This rule, itself, is an antivoters' rights bill. I am shocked that this rule would be on the floor.

Here we have a bill—H.R. 2190—which, in its present rewritten form, has never been voted on by a single subcommittee or rule committee in this House. Neither a voice vote, a show of hands, nor a recorded vote has ever been taken on H.R. 2190 at any stage in the legislative process. And here we are being asked to take it up under a modified closed rule to boot!

At no time during the Rules Committee's deliberations was a single reason given why H.R. 2190 cannot be taken up under an open rule. But here it is—modified closed, by the committee's own definition, not mine. On top of that, not a single proponent of this bill has yet produced a concrete estimate of what it will cost.

And Members heard all these people on this side of the aisle who came here to speak to Members today, talking about how bad the State deficits are. In my State alone, the anticipated cost amounts to twice as much money as this bill would authorize for the entire program nationally. Twice as much. One hundred million dollars foisted on the State of New York to pay for this bill. That is wrong.

If our experience with section 89, which all Members know about, and the Catastrophic Illness Program, which all Members know about, should teach Members anything at all, it is simply: Let Members look before we leap. We are leaping here today. With all due respect to the Members who have worked hard on this bill, H.R. 2190 should go back to the committee. It needs more work. We need to know what it is that we are voting on. Not even the Democratic and Republican proponents of this bill know what is in it. They argued with each other what is in the bill when they came before the Committee on Rules.

Mr. Speaker, I will not belabor the point. At the appropriate time, members of the Committee on House Administration, I am sure, will outline some of the real problems with the bill. On behalf of the members, I offered motions in the Committee on Rules yesterday to make a couple of very important amendments in order. One of the amendments would have provided for Federal funding of the cost the States will be forced to bear in order to implement the mandatory provisions. What is wrong with that? It was not allowed by the committee. Another amendment would have made those mandatory provisions voluntary. What is wrong with that? The committee would not allow them. Both of these amendments were shot down on a party line basis. So much for bipartisanship, my friends.

Mr. Speaker, let me conclude by saying, Congress would rather do with what it does best: pass the buck and heap mandates on local government and on State government. That is wrong, wrong, wrong. Mr. Speaker, in the beginning, I mentioned the word hypocrisy. Every Member wants to encourage greater voter participation in the election process. But when we cannot do it, we cannot do it by denying their elected representatives, you and me, the right to participate and the right to vote in the legislative process here in Washington. Otherwise, why even have elections?

This rule should be defeated, and we ought to go back to committee so we can pass a legitimate voter rights bill.

Mr. MOAKLEY. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, there is much talk about the closed rule. As Members know, the Committee on Rules allowed the minority leader, as designee, up until February 5 to put any and all amendments into the RECORD to be voted en bloc.

□ 1320

Besides that, Mr. Speaker, we give them a motion to recommit with or without instructions. So I am sure that all the amendments that were spoken about by my colleagues on the Rules Committee can be incorporated by this en bloc amendment. So we are not really shutting anybody off.

Mr. Speaker, I yield 2½ minutes to the gentleman from Illinois [Mr. ANNUNZIO], chairman of the Committee on House Administration.

Mr. ANNUNIZIO. Mr. Speaker, I want to thank the gentleman from Massachusetts [Mr. MOAKLEY] the distinguished chairman of the Rules Committee, for this excellent rule. And I want to thank the gentleman from Tennessee [Mr. QUILLEN], the distinguished ranking member of the Rules Committee, for his contribution.

Voting is democracy. It is how the people choose their representatives. It's how they speak to the Congress. And it's their constitutional right.

But getting the right to speak, through casting your vote, can be an obstacle course. And one of the biggest obstacles is getting registered. Each State has a law. And every law is different. That is what makes this country so diverse, and so great. But that is also what makes registering so difficult.

The constitutional right to vote in Federal elections belongs to the people. It is the same right, no matter what State you live in. So we need to recognize the diversity of the States, while guaranteeing the citizens the right to vote, no matter where they live.

How can we accomplish that as a nation? We can set a national standard. We can require States to adopt one or more of the safe, proven methods of registration. And we can help

the States with the resources to administer their elections, and to maintain their records. At the same time, we can encourage voter registration.

While we must be sensitive to the diverse needs of the States, we must also pay more than just lip service to our citizens' constitutional right to vote.

This rule recognizes the need for all these things. It gives us a bill which has worked out between the committee's majority and minority. It takes into consideration States' needs, the demands of civil rights groups, and the good government efforts of groups like the League of Women Voters.

Members who believe they can improve on the committee's effort can offer a substitute through the Office of the Minority Leader. Each Member will have an opportunity to choose how to support the right of the citizens to vote in his or her State.

I support the constitutional right of the citizens of Illinois to vote in Federal elections. I want the States to have the money they need to administer the elections. And I support and encourage voter registration. That is why I will be voting for this rule, and that is why you should, too.

Mr. QUILLEN. Mr. Speaker, I yield for 4 minutes to the gentlewoman from Illinois [Mrs. MARTIN].

Mrs. MARTIN of Illinois. Mr. Speaker, I thank the gentleman for yielding this time to me.

Mr. Speaker, welcome to the great voting rights debate of 1990. The only problem is, it will not be all that great a debate. It seems the majority leadership has seen fit to deny the voting rights of the House in considering a voting rights bill for the country. Now there's a liberal conundrum that will leave most people dumb—not ignorant dumb, but dumb in the sense of being unable to speak. But more importantly, this modified closed rule says something about the lack of confidence the majority leadership apparently has in both the bill and the judgment of all Members, Republican and Democrat alike.

You or I might support a restrictive rule if everyone agreed the bill was perfect; but it clearly is not perfect: this is the fourth version the House Administration Committee has come up with. And you or I might support a restrictive rule if the bipartisan leadership asked for it. But our Republican leader officially requested an open rule. And either you or I might support an open rule if no one wanted to offer amendments; but there are a whole passel out there, and we should have a right to offer them.

You or I might agree to a restrictive rule if this were an urgent, emergency situation. But this bill, by its very terms, does not take effect until the 1992 election cycle. And finally, even I might agree to a restrictive rule if we were really pressed for time. But let us get serious. This is only the second bill this second session has considered in 2 weeks. We are not exactly burning up the legislative calendar with our fast and furious legislative output. At this rate, we will be lucky to consider 40 bills this entire session.

In short, Mr. Speaker, there is absolutely no justification for denying the 400-plus House Members who are not on the House Administration Committee their right to offer and vote on amendments to improve this voter registration bill.

And just what is in this bill? Well, I guess it depends on which version you look at. For the information of my colleagues, the bill you got from documents is not what will be under House consideration next week. For that you will have to get a copy of the report on this rule which contains the text of an entirely new substitute written just yesterday.

You will be interested to learn that the latest version increases Federal grant assistance from $20 to $50 million. But that is still a drop in the bucket in terms of the additional costs that will be imposed on the States. In Illinois alone it is estimated that the initial cost will be $37 million, and probably another $5 million annually in operating costs. That is money that could be spent for the needs of Illinois.

Mr. Speaker, concerning those costs, as a member of the Illinois delegation, I would like to add for the benefit of the Members, Democrat and Republican alike, that these costs affect my State and theirs. When Illinois hoped to get the SSC, many of us still supported it because we said it was good for the country and we would have our taxpayers pay for it even though it went somewhere else.

When the savings and loans of California and Florida and Texas needed help, we in Illinois, almost to a person, said, "We are not happy, but it is a national problem, and we will pay for it."

Now it turns out that if it is voter costs or clean air, we have a different standard, and the standard is that the Midwest will pay and pay and pay. If this is that important, if we believe everything we say, then the Federal Government should be paying for it and those costs should not accrue to States that have other needs and other demands for the education of their children and that have not asked for this legislation.

Mr. Speaker, I have a good record on civil rights legislation, but I cannot blindly endorse everything that is presented to us under that label. We all want to increase voter registration and participation. That is not what is at issue here.

I fear that using drivers' license applications to register voters, without up-front notarization, is fraught with all kinds of potential for fraud and abuse. I am sure there are some places where, if you tell them they can have motor/voter registration, they will be registering people in hearses—before they even get to the cemetery.

Mr. Speaker, this might be an attempt at a national solution, but it is not a rational solution.

Mr. Speaker, I ask the Members to vote down this rule and make sure that we have an open debate on a bill that we can all eventually support.

Mr. QUILLEN. Mr. Speaker, I yield 4 minutes to the gentleman from Kansas [Mr. ROBERTS].

Mr. ROBERTS. Mr. Speaker, I thank the gentleman for yielding this time to me.

Mr. Speaker, I wish we had a full House of our colleagues because this is a very important issue. I see the number of Members on the floor is very small, and I think that is unfortunate.

Despite the good-faith efforts of the gentleman from Washington [Mr. SWIFT], who is my friend and my colleague and who has been fair and who has been bipartisan in his efforts, I rise in strong opposition to this rule on this so-called motor-voter bill. The rule limits debate on this important issue, and I think that is debate that could lead to positive legislation in this whole area.

□ 1330

We are rushing. My colleagues, we are rushing to make major revisions to the American election process with little or no knowledge where these changes will take us.

I would ask my colleagues, "Do you know the cost of this legislation in your own State?" The Secretary of State in Kansas has estimated $1.2 million, that he does not know.

"Are you aware of the fundamental conflicts between the election laws of many States and the mandates of this bill? My colleagues, do you realize there are few antifraud provisions in this bill and that the bill, in fact, would destroy antifraud provisions of many States? Do you understand the constitutional question involved with the usurping State authority to regulate elections? Are we sure this legislation, as written, would not severely damage the entire process?"

My colleagues, ask those questions of the supporters of this bill. Yes, my colleagues will get answers, but those answers vary.

Mr. Speaker, any legislation that has such far-reaching impact on one of the cornerstones of the Republic should receive full and exhaustive debate. Every Member, every Member, should have ample opportunity to gauge the impact on his or her State or district. Local election officials, the ones who work at the grassroots level, should be consulted.

All of us here today, every Member of this body, agrees with the general goal of this legislation. That is to involve more citizens in the election process.

However, Mr. Speaker, does this bill really do that? Or does it open wide the door for fraud and abuse and throw out the honored tradition of tying the privilege of voting with the responsibility of being informed about the issues in registering? Is there really a registration problem, or does the dropoff in voting, does the dropoff in voting, go further to a fundamental cynicism in the way voters view their Government?

What this is, what we have here today, is a proposal by well-intentioned colleagues to increase voter turnout by imposing a new, costly, uncertain system of voter registration upon existing State laws and procedures.

With all due respect to my colleagues, what makes the bill's sponsors and supporters believe their new, costly computerized Federal system can do the job better than any of my 58 county election officers and the secretary of state of Kansas?

My colleagues, let us open the rule. Let us look under the hood of motor-voter before we end up in the ditch.

Mr. QUILLEN. Mr. Speaker, I yield 3 minutes to the gentleman from Colorado [Mr. HEFLEY].

Mr. HEFLEY. Mr. Speaker, I rise today, not to argue against this bill. The time will come to deal with the merits of the bill down the line.

However, Mr. Speaker, I do rise to question why in the world on a bill like this, of all bills, why in the world we would have a closed rule.

Yes; I offered three amendments. I think they are reasonable amendments. I think they are amendments that possibly in the en bloc amendment I may be able to get them in. I may be able to get them passed as a part of this bill, but that is not the point.

Why in a bill that purports to open up participation in the electoral process, why in the world would we close participation here on the floor of the House of Representatives? It is the most inconsistent thing I can possibly imagine.

Mr. Speaker, I think we ought to be ashamed of ourselves for even suggesting such a thing. The reason is that the questions are too numerous, and they have simply not been answered, even in committee or in the Committee on Rules.

Let me just throw out a few of the questions. One is the cost. The proponents of the bill were asked in the Committee on Rules yesterday, "What's this going to cost?" All kinds of figures were thrown out about what it was going to cost. The answer is that no one knew what it would cost the individual States.

The gentlewoman from Illinois [Mrs. MARTIN] asked, "Well, if it's such a good idea, why don't we have the Federal Government pay this cost?"

The proponents of the bill said, "No, no, we don't want to do that. Let the States pay for it." They did not know the cost, but the States could pay for it.

The question was asked, "Will this help in voter participation? Will more people vote? Will a bigger percentage of the population in the different States vote if this goes through?"

The answer was, "We don't know whether it will help or not. We're not sure. We think it is. It makes sense that more people will register, and maybe more people will vote, but we honestly don't know whether it will or not."

The question was asked whether it will violate the Constitution. The answer is, "We don't know whether it will violate the Constitution or not."

Our Constitution limits the Federal role in elections. The Constitution says that elections, the governing of the electoral process, is a State right and only if there is evidence of fraud or corruption is the Federal Government involved in the electoral process. That is a State issue, but not even the most ardent supporters of this bill would indicate there was any evidence of fraud or corruption. There may be, but that was not the reason for the bill.

Mr. Speaker, the bill is to increase participation. We in the Federal Government do not have any role in increasing participation. We have a role in dealing with elections, and fraud and corruption. It is a State issue.

For instance, the bill specifies where we can have, where we cannot have, but where we must have voter registration sites, and it suggests everything from libraries to hunting and fishing license outlets as a place where we can have, we must have, registration. So that means convenience stores in our State, the 7-Eleven's who sell hunting and fishing licenses will also now be voter registration places.

Why does the majority in the House continue to do this, to feel they must ram something through? This is something that we could have sat down, and we could have worked out and let the logical process work instead of putting a closed rule on which limits participation.

Mr. Speaker, at a time when respect for the Congress is at an all-time low we add to it with this kind of behavior.

Mr. MOAKLEY. Mr. Speaker, I yield 3 minutes, for the purpose of debate only, to the gentleman from Minnesota [Mr. SABO].

Mr. SABO. Mr. Speaker, I would like to speak to the issue of changing forms to the "greatest extent practicable." I hold here in my hand a copy of two forms from Minnesota. One is its State social services application, and the other is the unemployment application. Both of these applications have been amended to include the question, "If you are not registered to vote where you live now, would you like to register here today? Yes — No —." And there is a disclaimer in order to let applicants know that they are not required to answer that question in order to be considered for program benefits. Mr. Speaker, Minnesota had no additional costs for amending the State social services application, and amending the unemployment application cost only $600.

Mr. Speaker, this is clear evidence that amending State applications to inquire for voter registration can be easily done, at virtually no additional cost.

In 1988 Minnesota also included voter registration forms in its income tax booklet. Over 90,000 people registered in response to this effort alone. Clearly, voter registration is an ongoing process that involves people throughout their lives as they move around the country. I believe we should make it as easy as possible for people to register, therefore, I urge and encourage each State to follow Minnesota's models.

□ 1340

Mr. QUILLEN. Mr. Speaker, I yield 2 minutes to the gentlewoman from Nevada [Mrs. VUCANOVICH].

Mrs. VUCANOVICH. Mr. Speaker, I thank the gentleman for yielding me this time.

Mr. Speaker, I rise today to express my reservations to the proposed modified closed rule on H.R. 2190, the National Voter Registration Act.

Both the gentleman from Washington [Mr. SWIFT] and the gentleman from California [Mr. THOMAS] have good intentions in this issue, I am positive. I do not disagree with their goal to increase voter participation, but it seems to me that it is rather ironic that we are considering a bill with the premise to increase voter participation, yet should the rule pass, Members themselves will be denied their right to vote. We should be allowed an open rule.

Mr. Speaker, there are Members from both sides of the aisle who have serious concerns about this matter, and like myself, would like the opportunity to introduce amendments which may ensure its betterment. I am sure that most of the Members will agree that our legislative schedule is such that would allow the membership time to take a long, hard look at H.R. 2190, whereas, in the long term, hasty consideration could prove to be nothing short of devastating.

I urge my colleagues to vote against the rule and give those of us who have objections to this legislation the opportunity to express ourselves.

Mr. QUILLEN. Mr. Speaker, I yield 3 minutes to the gentleman from New Hampshire [Mr. DOUGLAS].

Mr. DOUGLAS. Mr. Speaker, I oppose the rule and the bill for three reasons that are very simple: it costs too much, it is vague, and it is not needed.

First of all, as far as cost, the Congressional Budget Office estimates the direct cost to the States and to the localities at between $80 million and $90 million. That is before some of the figures we have heard here today. For a State like New Hampshire that does not have computerized voting lists, we are looking at the possibility of 221 towns and cities having to get some kind of a uniform computer system and at their expense. The cost to the Federal Government, CBO estimates, will be $200 million anually, and we only have a $50 million appropriation. All of this when the other side of the aisle is talking about the homeless and the poor and the folks we need to help. We are going to be wasting money on computers and having towns and cities and States pick up the check for a good idea that is not well drafted.

That brings me to the point of vagueness. Section 106 of this bill is an absolute mess. It requires that each State will have to tell the local registrar of the death, criminal conviction, or mental incapacity of a voter. Let me ask, on a criminal conviction, does that mean after appeal has been exhausted? Does it mean shoplifting? Petty theft? Does it include DWI? That is a criminal conviction that has nothing to do with voting. If they meant a felony, they should have said a felony.

Finally they say mental incapacity. Does that mean one is committed to a mental hospital? Does it mean they are insane as found by a court? Does it mean they are in an alcohol treatment center on election day? We do not know, and if we look at the committee report, page 18, the total explanation for these undefined vague references to mental incapacity and crime are a one-sentence repetition of the language of the bill, no facts, no figures, no definition.

This is an open invitation to civil rights suits, and it is obviously vague and unnecessary, because the States have not asked for this, nor does anybody need this kind of vague language put on the books to hopefully confuse and confound courts across the Nation.

The SPEAKER pro tempore (Mr. DURBIN). The gentleman from Tennessee [Mr. QUILLEN] has 5 minutes remaining, and the gentleman from Massachusetts [Mr. MOAKLEY] has 20 minutes remaining.

Mr. QUILLEN. Mr. Speaker, the minority leader has asked for time, but he is not here yet. I would ask the gentleman from Massachusetts if he has more than one speaker remaining.

Mr. MOAKLEY. Mr. Speaker, I have one speaker remaining, and that is all.

Mr. QUILLEN. Mr. Speaker, I yield back the balance of my time.

Mr. MOAKLEY. Mr. Speaker, I yield such time as he may consume to the gentleman from Washington [Mr. SWIFT], who has worked on this bill for the better part of a year and who is probably the most expert Member on this bill, and the Member whom we in the Committee on Rules listened very attentively to and who has done a great job.

Mr. SWIFT. Mr. Speaker, I thank the gentleman for yielding me this time.

Mr. Speaker, the reason for this rule is that this is exactly the kind of rule one would write when they have a bipartisan agreement on a bill. When one has bipartisan agreement on a bill, each side makes compromises. Each side gives up something that they would like to have had. Each side has to deal with people on its side and its natural constituency that would have preferred the bill to look differently. This is exactly the kind of rule one writes for that situation.

My colleagues, that is the situation we had for well over a year until Monday.

The minority leader, I understand, has indicated that we should not let this fight today interfere with a bipartisan approach. He said on Monday that this issue should be, and was, clearly a part of campaign finance reform, and today, I understand, he has said that this is clearly separate from campaign finance reform, and we should not let any misunderstandings here wash over onto campaign finance reform and the bipartisan approach to that difficult issue that he has been pleading for for months.

Let us examine the bipartisan nature of this bill. Let us examine the history. The end of the last Congress our committee held hearings, and it happened to be in a hearing in California on same-day voter registration; we were hearing a lot of criticism from election officials about the administrative difficulties of same-day, and the ranking Republican member of the subcommittee, the gentleman from California [Mr. THOMAS], and I were trying to figure out what we could do when my secretary of state from the State of Washington, who happens to be a Republican, said, "Why not motor voter?" With that idea, we began to work very carefully together to see if we could not develop an approach that would make it infinitely easier for American citizens to be registered so they could exercise their right, not their privilege, to vote, that did not involve some of the administrative problems of same-day registration. We worked back and forth. We worked together.

There was not a decision made on this legislation at any time from beginning to end in which the ranking Republican on the subcommittee, who is also, incidentally, the ranking Republican on the full committee, did not have full input and agreement, and in that context, we gave up some things, and in that context, he gave up some things. But his bottom line was this: if we are going to write legislation that will add Americans to the rolls, should there not be a section in this bill that would take deadwood off the rolls? It is a little hard to argue with that, except that in many jurisdictions over the years that elimination of deadwood has been abused very badly. I said, "Draft it. See what you come up with." And he did.

We in the majority found that to be a very straightforward address-verification procedure. It had no hidden opportunities for abuse. It was not designed really to discriminate. It did what it said it would do. We examined it carefully, negotiated a bit, and we said, "All right, we will embrace that."

We now have the concept of the legislation worked out in a purely bipartisan way, and then on January 3 of last year, the bill was introduced.

Let me tell the Members the first four sponsors of that bill: a gentleman by the name of THOMAS FOLEY, who at that time was the majority leader of the House; a gentleman named NEWT GINGRICH, who is still the minority whip; a gentleman named TONY COELHO, who at that time was the majority whip; and a gentleman from California named JERRY LEWIS, who is still the chairman of the Republican Conference.

□ 1350

So we have developed a bipartisan concept, and we introduced it with half of the Republican leadership among the first four initial sponsors of the bill. If that does not convey to the majority that we are on the right track and working with the right people, I do not know what possibly it could be that we did wrong.

So we continued to work with this and we got it into legislative language and we did the markups and so on and so forth.

Then a terrible problem occurred for us. Not for the Republicans, but on our side of this issue, among our natural constituency. The civil rights groups began to express a wholly unanswerable anxiety that the section that the gentleman from California [Mr. THOMAS] had insisted be included in the bill might in fact be abused.

I personally spent months working with leaders of the civil rights commu-

nity to persuade them that this was not the case. Very frankly, I had some success, but ultimately failed.

Staff members in the Speaker's office took over the job and worked with these people for weeks and weeks and made more progress, but not success.

Beginning last October the gentleman from Pennsylvania [Mr. GRAY], the majority whip, spent 3 months, and finally was able to persuade our people that the provision that the Republicans had insisted be part of the bill was a sound provision, a good provision, a provision that did not have any little hooks or nooks or crannies through which discrimination was going to take place, and they signed on.

We took on our own natural constituency and worked with them until we had persuaded them that this was a bill they should support.

Having accomplished all of that, we discussed with the ranking member what the rule should be. As I said at the outset, we came up with the kind of rule that one has when you work out a truly bipartisan bill. Each side has made their compromises and each side wants some protection that their compromises will not come unraveled.

On Monday the minority leader of the House of Representatives swooped into town and trashed the entire agreement.

What more should we have done to deal with this issue on a bipartisan basis? We have half the leadership of the Republican Party as the prime sponsors. We worked with the ranking Republican member of both the subcommittee and the full committee. That is the traditional way you have bipartisanship in this institution.

Would the minority leader like to send to the floor a list of all the ranking Republican Members in this body with whom we should not work? I know as a chairman I would love to have a list from the minority leader of all of the Members he does not want me to work out any bipartisan agreements with because he will pull the rug out from under them.

The minority leader said he hopes this will not interfere with bipartisan efforts in other regards. Mr. Speaker, others have to make the determination, I believe, about this. I believe others will have to make the judgment.

I do not believe I have a reputation in this institution as a partisan person. I feel I have worked with Republicans on this committee, on the Committee on Energy and Commerce, and on a wide variety of enormously complex and controversial issues and have never taken partisan advantage.

This bill as it comes to the floor is the product of a careful, long, arduous, difficult bipartisan effort. This, my friends, is the test. We did not intend it that way. We certainly did not intend it that way. But here it is. Here is a bill on which it is put up or shut up time about bipartisanship.

The rule gives the Republicans two opportunities to change, modify, or kill the bill. It gives our side none. The President has eight points he would like to change. I have a memo in my office, 15 single-spaced pages, changes that people in the civil rights community wanted.

We are going to stick by our word. We did not ask for a substitute in the rule for our side for the simple reason that we are going to stick with the bipartisan agreement.

So far as I know, those people with whom this agreement was made are sticking with it as well. But the minority leader has hung out to dry his whip, his conference chairman, his ranking member, the Speaker of the House, the majority whip, and me. He says that he hopes now that this will not hurt bipartisanship and the spirit of bipartisanship in this body.

There is an old rule that says, "Fool me once, shame on you." I do not intend to provide the opportunity that I shall be fooled again.

Mrs. MARTIN of Illinois. Mr. Speaker, will the gentleman yield?

Mr. SWIFT. I yield to the gentlewoman from Illinois.

Mrs. MARTIN of Illinois. Mr. Speaker, I have had the pleasure of working with the gentleman from Washington in the Committee on House Administration and I recognize that obviously he speaks from deep emotion.

The person to which the gentleman from Washington is addressing his complaints is not here. In general, some of us at different times, certainly I, certainly the gentleman from Washington, have had times we may have had disagreements with individual Members. I think most often one hopes we can work some of them out in private, certainly with the people here.

I would hope the gentleman would concur with me we are talking about the rule now. Arguments upon the bill which I may have and disagree, and which the gentleman may have and disagree, are held for a time. Talking about the leader of the other party when he is not here, when we have worked so hard, I just do not want to see the bill deteriorate into that.

Mr. SWIFT. Mr. Speaker, reclaiming my time, I would point out that the ranking Republican on the Rules Committee holds the time and said the minority leader was supposed to be here. The gentleman had time reserved for him. He could have been here.

The point is that the minority leader has made a point over and over and over again in the previous Congress and in this Congress that he wants a spirit of bipartisanship. I do not believe that any fairminded person could take a look at how this legislation was developed over a period of well over a year and find any fault with the way in which the Democrats have dealt with the minority on this issue to develop a bipartisan bill.

For the minority leader to unilaterally and singlehandedly trash that agreement on Monday without warning is the issue.

As I said, I will not be fooled again.

Mr. MOAKLEY. Mr. Speaker, I have no further requests for time.

Mr. QUILLEN. Mr. Speaker, in fairness to all and for a full debate on this, since the gentleman from Washington [Mr. SWIFT] has made some remarks about the minority leader and I have yielded back the balance of my time, I think we should give the minority leader time to respond. I think it was most unfair of the gentleman from Washington [Mr. SWIFT], although I have a high respect for him.

The SPEAKER pro tempore (Mr. DURBIN). If the Chair could intervene, when the gentleman from Tennessee [Mr. QUILLEN] yielded back the balance of his time, he had 5 minutes remaining. At this point the gentleman from Massachusetts [Mr. MOAKLEY] has 7 minutes remaining.

Mr. QUILLEN. Mr. Speaker, I ask unanimous consent to reclaim my time to yield 5 minutes to the gentleman from Illinois [Mr. MICHEL].

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

Mr. MOAKLEY. Mr. Speaker, reserving the right to object, I want to explain. I will yield to my dear friend, the gentleman from Tennessee [Mr. QUILLEN] if we have an undertstanding that in the 5 minutes that I yield to him the gentleman from Illinois [Mr. MICHEL] will yield to the gentleman from Washington [Mr. SWIFT] in that period of time if he has any questions.

PARLIAMENTARY INQUIRY

Mr. SOLOMON. Mr. Speaker, I have a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state his parliamentary inquiry.

Mr. SOLOMON. Mr. Speaker, as I understand it, the gentleman from Tennessee [Mr. QUILLEN] had yielded back the remaining part of his time. I believe what the gentleman is asking is to reclaim his 5 minutes, and certainly I do not think the gentleman from Massachusetts [Mr. MOAKLEY] would object if he understood that.

Mr. MOAKLEY. I am sorry, I thought the gentleman wanted 5 minutes of my time.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. QUILLEN. Mr. Speaker, I yield 5 minutes to the gentleman from Illinois [Mr. MICHEL].

□ 1400

Mr. MICHEL. I thank the gentleman for yielding.

Mr. Speaker, and Members, I apologize because I have been holding other meetings and have not been listening to the debate. I was told that the gentleman from Washington was saying some things about this gentleman from Illinois that there may be some question about.

I would remind the distinguished gentleman that I rose yesterday in a 1-minute speech because I had understood the gentleman was quite concerned about the position that I had taken. I certainly did not intend to give reason for concern, knowing of what he had done with respect to campaign reform and that task force along with the gentleman from Michigan [Mr. VANDER JAGT], and our task force on campaign reform. But this issue as such was not a topic of discussion in overall campaign reform. And that is the big issue over which I was very willing and anxious to work in a bipartisan sort of way.

Then this issue on its own came up. I had not been informed as to how far we were. I maybe have to share some of the blame for missed communication on my side. But I have not been kept as well informed on this one issue as on the overall issue of campaign reform, and I did not want to have the feelings I have about being opposed to this to jeopardize or to taint or to prejudice the other big picture. I am sorry if the distinguished gentleman from Washington should feel so grievous about the position that I have to take on this part of what could conceivably have been incorporated at one time in campaign reform but which we never did frankly consider. It is one, on its own. It is a controversial thing; I am sure it is as controversial on the gentleman's side on some of the issues just as it is on our side. The natural thing to say would be that we ought to have an open rule and have it all aired. I understand that there are some things that the distinguished gentleman from Washington probably would not like to have even offered as amendments on his side, as the gentleman who is carrying it on our side, as the gentleman from California [Mr. THOMAS] thought that maybe there was an accommodation there. But I was not privy to it.

So, you know, I am sorry that the gentleman should have that feeling, because there was certainly nothing intended on my part to gut the gentleman or to turn things on their head here simply because I have a differing view on the specifics of voter registration.

Mr. SWIFT. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Washington.

Mr. SWIFT. I thank the gentleman for yielding.

Mr. Speaker, I hope the gentleman will read my full remarks in the RECORD, and I think he will have a better understanding. He was unable to listen to them as I gave them. I think he will have a better understanding of the reason that I feel that he has made a major attack on the spirit of bipartisanship in this Congress.

I think that is unfortunate. I agree with the gentleman that the road to campaign finance reform is difficult and we will need all the trust between us that we can possibly get on an issue which brings out the paranoia on both sides.

Mr. MICHEL. I made that point all along.

Mr. SWIFT. What the gentleman has done on this bill, perhaps inadvertently, something that raises serious questions to me whether bipartisanship is something that we on our side can safely pursue. And when we have what we believe is an agreement worked out with all of the responsible people speaking for the Republican Party, if the gentleman will not swoop in, as he did on Monday, and trash the whole thing.

If he will read my detailed remarks, he will see the amount of time and effort and the length to which this side has gone in order to reach bipartisan agreement, which we believed we had until it was trashed on Monday.

In terms of whether or not he knew about it, I do not know what is going on in his office. I know his staff has been in touch with my staff on both the substance and the timing on this bill regularly during the last 3 weeks.

I thank the gentleman for yielding.

Mr. MICHEL. I thank the gentleman.

Mr. QUILLEN. Mr. Speaker, I yield back the balance of my time.

Mr. MOAKLEY. Mr. Speaker, I yield back the balance of my time, and I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore (Mr. DURBIN). The question is on the resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. SOLOMON. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 254, nays 166, not voting 11, as follows

[Roll No. 6]

NOT VOTING—11

AuCoin	Dingell	Lantos
Bosco	Hefner	Madigan
Chandler	Hutto	Smith (IA)
Dickinson	Kostmayer	

□ 1424

Mr. HORTON and Mr. CONTE changed their vote from "yea" to "nay."

Mr. BARNARD changed his vote from "nay" to "yea."

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

LEGISLATIVE PROGRAM

(Mr. WALKER asked and was given permission to address the House for 1 minute.)

Mr. WALKER. Mr. Speaker, I have taken this time to proceed for 1 minute for the purpose of ascertaining the schedule for the upcoming week, and I am glad to yield to the distinguished majority leader to explain the schedule for the Members.

Mr. GEPHARDT. Mr. Speaker, I thank the gentleman for yielding.

Mr. Chairman, the program will be as follows: On Monday, February 5, the House will meet at noon, but we will not have legislative business.

On Tuesday, February 6, the House will meet at noon. We will consider the Private Calendar, and on suspensions we have four bills. Recorded votes on suspensions will be postponed until after debate on all suspensions. The bills to be considered under suspensions are as follows:

H.R. 2061, Magnuson Fisheries Conservation and Management Act;

H. Con. Res. 198, authorizing a performance by the American-Soviet youth orchestra;

S. 1096, to provide for the use and distribution of funds awarded the Seminole Indian; and

H. Con. Res. , regarding U.N. participation in Cambodia.

Following those bills and those votes, we will consider H.R. 2190, the National Voter Registration Act of 1989. We just considered and passed the modified closed rule on that bill. There will be 1 hour of general debate.

Members should understand that votes, if there are votes on the suspensions, could come fairly early in the afternoon, and then we will move to the consideration of the voter registration bill.

On Wednesday, February 7, and Thursday, February 8, the House will meet at noon on February 7 and at 11 a.m. on February 8. One of the matters that may come up on those days will be a motion to go to conference on H.R. 1465, the Oil Pollution Prevention Response, Liability, and Compensation Act of 1989, with 1 hour of debate.

On Friday, February 9, the House will not be in session. We will then begin the Lincoln-Washington district work period. At the close of the week's business, the House will adjourn until Tuesday, February 20.

Conference reports, of course, may come up at any time, and any further program will be announced at a later date.

□ 1430

Mr. WALKER. Mr. Speaker, I have just a couple of questions.

Mr. Speaker, if I understand the gentleman from Missouri [Mr. GEPHARDT] correctly, the votes on the suspensions will take place on Tuesday, and Members cannot be assured that those votes would be after 4 o'clock, that the votes could be as early as 1 or 2 in the afternoon. Is that correct?

Mr. GEPHARDT. The gentleman from Pennsylvania [Mr. WALKER] is correct.

Mr. WALKER. Mr. Speaker, I thank the gentleman from Missouri [Mr. GEPHARDT].

Mr. Speaker, is the leadership going to be prepared by next week to give us a tentative calendar for the rest of the month in terms of when we are likely to be in session in the month after the Lincoln Day recess?

Mr. GEPHARDT. Mr. Speaker, we will.

Mr. WALKER. Mr. Speaker, I thank the gentleman from Missouri [Mr. GEPHARDT].

Mr. Speaker, I do not see anything on the schedule with regard to the Panama legislation, which I understand is now being worked on in committee and will make it to the floor next week. If that comes to the floor, could the gentleman from Missouri [Mr. GEPHARDT] indicate to me what day we are likely to consider that?

Mr. GEPHARDT. Mr. Speaker, we are not sure yet that it will. Negotiations are still going on between the State Department, other officials in the executive branch, and different committees here in the House. If that negotiation results in legislation, it would come on Wednesday or Thursday.

Mr. WALKER. Come on Wednesday or Thursday, and is the likelihood of that on Wednesday?

In other words, Mr. Speaker, it appears to me as though the schedule would be fairly well complete by Wednesday if we do not hold over legislation until Thursday.

Mr. GEPHARDT. Mr. Speaker, I think there is a greater likelihood of Wednesday.

Mr. WALKER. Mr. Speaker, I thank the gentleman from Missouri [Mr. GEPHARDT].

Further, there has been some talk that the Eastern Airlines vote might be coming to the floor next week. Does the gentleman from Missouri [Mr. GEPHARDT] have any information on that?

Mr. GEPHARDT. Mr. Speaker, my information is that it will not, but it is still under consideration at a later date.

Mr. WALKER. In addition, Mr. Speaker, would that come on Wednesday as well if that happens?

Mr. GEPHARDT. Mr. Speaker, I do not think that is the case.

Mr. WALKER. Mr. Speaker, I thank the gentleman from Missouri [Mr. GEPHARDT].

ADJOURNMENT FROM THURSDAY, FEBRUARY 1, 1990, TO MONDAY, FEBRUARY 5, 1990

Mr. GEPHARDT. Mr. Speaker, I ask unanimous consent that when the House adjourns on Thursday, February 1, 1990, it adjourn to meet at noon Monday, February 5, 1990.

The SPEAKER pro tempore (Mr. MCNULTY). Is there objection to the request of the gentleman from Missouri?

There was no objection.

HOUR OF MEETING ON FEBRUARY 7, 1990

Mr. GEPHARDT. Mr. Speaker, I ask unanimous consent that when the House adjourns on Tuesday, February 6, 1990, it adjourn to meet at noon on Wednesday, February 7, 1990.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

DISPENSING WITH CALENDAR WEDNESDAY BUSINESS ON WEDNESDAY NEXT

Mr. GEPHARDT. Mr. Speaker, I ask unanimous consent that the business in order under the Calendar Wednesday rule be dispensed with on Wednesday next.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

VOCATIONAL-TECHNICAL EDUCATION WEEK

Mr. SAWYER. Mr. Speaker, I ask unanimous consent that the Committee on Post Office and Civil Service be discharged from further consideration of the Senate joint resolution (S.J. Res. 130) designating February 11 through 17, 1990, as "Vocational-Technical Education Week," and ask for its immediate consideration.

The Clerk read the title of the Senate joint resolution.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mrs. MORELLA. Mr. Speaker, reserving the right to object, I yield to my colleague, the distinguished gentleman from Maryland [Mr. MFUME], who is the prime sponsor of this resolution designating February 11 through 17 as Vocational-Technical Education Week.

Mr. MFUME. Mr. Speaker, I am very grateful to the subcommittee leadership for discharging this important joint resolution, and I am appreciative to the majority of my colleagues here in the House and in the Senate for cosponsoring this resolution.

I rise in optimistic support of House Joint Resolution 367, which will designate the week of February 11-17, 1990, as national "Vocational-Technical Education Week." It is quite fitting that educators across the Nation have praised this Congress for recognizing the significance of vocational and technical education, and I am proud to have sponsored this resolution.

Mr. Speaker, this resolution will help focus national attention on the significance of technical education programs to many of our communities and young adults. This is an educational discipline that by design serves multiple goals—it not only prepares students for employment, but also encourages these same students to broaden their horizons by providing alternative learning experiences that can reduce the dropout rate in our schools.

The Carl D. Perkins Vocational Education Act of 1984, named in memory of a distinguished and outstanding Member of this body who advocated expanding our educational programs, renewed the Federal commitment to augment and improve the quality of vocational education programs as we know it. With increasingly stronger international competition requiring more of our workforce to be well trained, the keen foresight of our sagacious colleague is clearly evident today as foreign businesses continually challenge America's global competitiveness.

In the United States, more than 25,000 vocational and technical education institutions provide nearly 16 million Americans with marketable skills in over 150 occupations. And now we are seeing more and more partnerships occurring in many communities between technical schools and businesses who provide on-the-job-training skills essential for the workplace. Businesses seek workers who have the ability to actively learn, solve problems, and initiate new approaches in industry. Vocational programs offer all of these qualities and more, as evidenced by the growing demand of such graduates by businesses nationwide.

According to the Department of Labor, 80 percent of the jobs in our country require the kind of skills usually taught in vocational-technology educational institutions. Already these students make up a large portion of the high school population in many of our districts. They will be tomorrow's computer operators, programmers, nurses, and lab technicians, to name a few, forging a new and viable workforce for a new and challenging century. Thus, greater attention needs to be brought to the potential that vocational and technical education programs have to offer.

I am especially proud of the significant strides the State of Maryland has taken over the last several years to improve and develop educational disciplines to meet the needs of individual students. Many programs across the country as in Maryland are integrating academics with technical instruction. In fact, 140,000 high school students participated in secondary vocational classes last year in Maryland and 63,000 were community college students. Technical courses are offered in 161 high schools, 30 vocational schools, and 17 community colleges also located in the State of Maryland.

In my own district of Baltimore, where more than 20,000 students benefit from a technical curriculum, Carver Vocational-Technical High School and Mergenthaler Vocational-Technical High School serve as outstanding models of excellence in technical education today. In particular, Mergenthaler High School has greatly expanded its services to computer labs. With increased emphasis on technical education, they have initiated a valuable program that moves handicapped students into the mainstream of regular programs, and maintains a placement rate of an astounding 100 percent.

With equal prominence, Carver High School has continued to serve the community of Baltimore over the past 65 years and was previously honored by the Maryland State Council on Vocational Education as the most outstanding vocational program in the State of Maryland.

Mr. Speaker, vocational programs are taking at-risk students and turning them into productive and contributing citizens around the country.

I urge my colleagues to join me in recognizing the value of vocational and technical education by supporting House Joint Resolution 367.

Mrs. MORELLA. Mr. Speaker, further reserving the right to object, I am pleased to join in cosponsorship of this resolution. I want to thank the gentleman from Maryland [Mr. MFUME] for introducing it and for giving an elaboration of its importance to us in our competitive stance.

Mr. Speaker, further reserving the right to object, I yield to the gentleman from Ohio [Mr. SAWYER], who brought this resolution out on the floor.

Mr. SAWYER. Mr. Speaker, I am pleased to rise in support of Senate Joint Resolution 130, to designate the week of February 11, 1990, as "Vocational-Technical Education Week."

Most of my colleagues have some familiarity with the vocational education system. Approximately 75 percent of secondary school students take at least one vocational education course.

Our colleagues may not be fully aware of the significant role this program plays. Nearly one-half of American youth do not go on to college. However, today, some education and training beyond high school is required for entry into about 50 percent of all job classifications. By the mid-1990's 75 percent of all jobs will fall into that category.

For example, according to the Bureau of Labor Statistics, jobs for technicians will grow by 38 percent by the year 2000—faster than any other occupational group. As new technology spreads, companies need smarter, more flexible employees who can perform a variety of tasks, from installing and monitoring welding robots to reprogramming them if production rates fall.

Vocational-technical education programs in many areas of this country are forging a dynamic link between the classroom and the workplace and are helping meet the Nation's need for qualified workers who have adaptable skills.

In one of the high schools in my district, vocational-technical courses are often taught by "teams" of teachers. Using this technique, one teacher discusses the academic or conceptual framework and the other teacher relates that instruction to the practical applications of existing and developing technology.

The Committee on Education and Labor recently completed consideration of the Applied Technology Education Amendments Act of 1989. These amendments, we believe, will help invigorate vocational education instruction by ensuring that students are offered a combined program of academic skills and that those courses are offered and taken in a rational sequence that can lead to the development of a job skill and academic competence. The legislation also contains a provision that will provide Federal incentives to secondary and postsecondary schools who join together and offer programs linking the last 2 years of secondary training and the first 2 years of college education.

I commend my colleague, Representative MFUME, for bringing this worthwhile resolution to the attention of our colleagues in the House. Vocational-technical programs are on the cutting edge of our Nation's efforts to sharpen our economic tools.

□ 1440

Mrs. MORELLA. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore (Mr. MCNULTY). Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the Senate joint resolution, as follows:

S.J. RES. 130

Whereas vocational-technical education prepares the Nation's workforce by providing students with basic academic and occupational skills;

Whereas vocational-technical education stresses the importance of positive work attitudes and values;

Whereas vocational-technical education builds the leadership skills of students by encouraging them to participate in student organizations;

Whereas vocational-technical education stimulates the growth and vitality of the Nation's businesses and industries by preparing workers for the majority of occupations forecasted to experience the largest and fastest growth in the next decade;

Whereas vocational-technical education encourages entrepreneurship among students through units of study and courses designed to prepare them to start and manage their own businesses;

Whereas a strong vocational-technical education program planned and carried out by trained vocational-technical educators is vital to the future economic development of the Nation and to the well-being of its citizens;

Whereas the Future Business Leaders of America, the Future Homemakers of America and Home Economics Related Occupations, the Future Farmers of America, the Distributive Education Clubs of America, the Vocational Industrial Clubs of America, the American Industrial Arts Student Association, the National Association of Trade and Technical Schools, the Health Occupation Students of America, the National Association of State Councils on Vocational Education, and the American Vocational Association have joined efforts to give added definition to vocational-technical education;

Whereas the planned theme for Vocational-Technical Education Week is "Vocational-Technical Education: It Works": Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That February 11 through February 17, 1990, is designated as "Vocational-Technical Education Week", and the President is authorized and requested to issue a proclamation calling upon the people of the United States to observe such period with appropriate programs, ceremonies, and activities.

The Senate joint resolution was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NATIONAL WOMEN AND GIRLS IN SPORTS DAY

Mr. SAWYER. Mr. Speaker, I ask unanimous consent that the Committee on Post Office and Civil Service be discharged from further consideration of the joint resolution (H.J. Res. 82) to designate February 2, 1990, as "National Women and Girls in Sports Day," and ask for its immediate consideration.

The Clerk read the title of the joint resolution.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

Mrs. MORELLA. Mr. Speaker, reserving the right to object, the minority has no objection to this resolution. I would like to commend the gentlewoman from Maine [Ms. SNOWE], who is the chief sponsor of House Joint Resolution 82 to designate February 2 of 1990 as National Women and Girls in Sports Day.

Mr. Speaker, I certainly add my words of support and hope that this body will, in unison, support this very important resolution.

Ms. SNOWE. Mr. Speaker, I rise in support of House Joint Resolution 82, the bill I have introduced which designates February 8, 1990, as "National Women and Girls in Sports Day."

Setting aside a day to commemorate the participation, achievement, and excellence of women and girls in sports has been a tradition for 3 years.

Participation in athletics at any level has proven to be significant for emotional and physical development of our youth. Through sports, girls learn to take initiatives, to work well with other, and develop a positive self-image, qualities crucial in life.

National Women and Girls in Sports Day, while recognizing the outstanding accomplishments of women in sports, will also point to the fact that women students still have fewer opportunities for athletic achievements than men at the same institutions.

In 1988, just 16 percent of the total college athletic budget was allocated to women. One-third of total athletic scholarships were available to women. In high-school athletic competitions, there were two boys to every one girl participating.

While I applaud the progress that has been made over the last 17 years, I believe we must also acknowledge the large inequities that still exist for women in the area of athletics.

It is important that the past, present, and future accomplishments of our Nation's women sports figures be acknowledged. I encourage each of you to recognize the women and girls involved in sports in your district.

For example, I am proud to recognize the accomplishments of athlete Karen Hunter of Bangor, ME. Karen is a member of the U.S. Freestyle Ski Team. As a specialist in the ballet event, she placed seventh in the 1989 World Championships held in Oberjoch, Germany, and is currently ranked third in the United States. Karen hopes to retain her position on the 1991 national team and to qualify for the 1992 Olympics.

I commend Karen's commitment to her sport. I thank Karen for representing the Second District of Maine as an outstanding woman athlete and role model for future athletes.

National Women and Girls in Sports Day will be a step toward giving women in sports the recognition and attention they deserve. Hopefully, this day will encourage more women to experience the pleasure of sports activity that develops lifelong habits of physical fitness.

Mrs. MORELLA. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

The Clerk read the joint resolution, as follows:

H.J. RES. 82

Whereas women's athletics is one of the most effective avenues available through which women of America may develop self-discipline, initiative, confidence, and leadership skills;

Whereas sport and fitness activity contributes to emotional and physical well-being and women need strong bodies as well as strong minds;

Whereas the history of women in sports is rich and long, but there has been little national recognition of the significance of women's athletic achievements;

Whereas the number of women in leadership positions of coaches, officials, and administrators has declined drastically over the last decade and there is a need to restore women to these positions to ensure a fair representation of women's abilities and

to provide role models for young female athletes;

Whereas the bonds build between women through athletics help to break down the social barriers of racism and prejudice;

Whereas the communication and cooperation skills learned through athletic experience play a key role in the athlete's contributions at home, at work, and to society;

Whereas women's athletics has produced such winners as Flo Hyman, whose spirit, talent, and accomplishments distinguished her above others and exhibited for all of us the true meaning of fairness, determination, and team play;

Whereas parents feel that sports are equally important for boys and girls and that sports and fitness activities provide important benefits to girls who participate;

Whereas early motor-skill training and enjoyable experiences of physical activity strongly influence life-long habits of physical fitness;

Whereas the performances of such female athletes as Jackie Joyner-Kersee, Florence Griffith Joyner, Bonnie Blair, Janet Evans, the U.S. Women's Basketball Team and many others in the 1988 Olympic Games were a source of inspiration and pride to all of us;

Whereas the athletic opportunities for male students at the collegiate and high school level remain significantly greater than those for female students; and

Whereas the number of funded research projects focusing on the specific needs of women athletes is limited and the information provided by these projects is imperative to the health and performance of future women athletes: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That February 2, 1990, is hereby designated as "National Women and Girls in Sports Day", and the President is authorized and requested to issue a proclamation calling upon local and State jurisdictions, appropriate Federal agencies, and the people of the United States to observe the day with appropriate ceremonies and activities.

AMENDMENT OFFERED BY MR. SAWYER

Mr. SAWYER. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. SAWYER: Page 3, line 3, strike out "February 2, 1989" and insert in lieu thereof "February 8, 1990".

The SPEAKER pro tempore. The question is on the amendment offered by the gentleman from Ohio [Mr. SAWYER].

The amendment was agreed to.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

TITLE AMENDMENT OFFERED BY MR. SAWYER

Mr. SAWYER. Mr. Speaker, I offer an amendment to the title.

The Clerk read as follows:

Title amendment offered by Mr. SAWYER: Amend the title so as to read: "Joint resolution to designate February 8, 1990 as 'National Women and Girls in Sports Day'.".

The title amendment was agreed to.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. SAWYER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on Senate Joint Resolution 130 and House Joint Resolution 82, the joint resolutions just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

OLDER AMERICANS WOULD BENEFIT BY PROPOSED LEGISLATION TO ELIMINATE THE EARNINGS LIMIT

(Mr. DONALD E. "BUZ" LUKENS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. DONALD E. "BUZ" LUKENS. Mr. Speaker, why is the U.S. Government wasting one of our most valuable assets? I am referring to the spending power and experience of our Nation's senior citizens. If a senior wants to work, the current Social Security earnings limit or "snowcap" penalizes this desire by imposing a 50-percent tax on their earnings.

America was founded on hard work, however, this country is sending the opposite message to seniors—that they are no longer needed, or wanted, to actively participate in society.

It is time for the U.S. Congress to restore this freedom of choice to citizens who want to work and contribute.

Recent studies have indicated that almost any increase in the earnings limit would reduce—not increase—the Federal deficit. A bill introduced by Congressman DENNIS HASTERT, of which I am an original cosponsor, is designed to eliminate the earnings limit. H.R. 2460, the Older Americans Freedom to Work Act of 1989, was introduced by Representative HASTERT. To solve this problem I call on the Ways and Means Committee to bring H.R. 2460, which has 164 cosponsors, to the floor for debate and passage. The needs of this country's senior citizens must be addressed.

Retirement should be a time when the creative energy and experience of seniors, developed throughout a lifetime of employment should be used, not wasted.

MELT THE SNOW CAP: TURN SENIORS LOOSE TO EARN

(By Donald E. Lukens)

The U.S. government is *wasting* one of our most valuable assets—the spending power and experience of our nation's senior citizens. This "snow cap" or earnings limit penalizes each senior who earns more than $8,800 a year over the Social Security benefits. Imagine a citizen who has worked and paid Social Security all of his life not getting the benefits he has already paid for because he or she wants to work!!

Currently, a senior will lose $1 in benefits for every $2 he earns over the limit!! This is an effective *50 percent marginal tax rate,* which is both poor economic judgment and counterproductive to society. This government invasion of a citizen's life is just another example of unnecessary intervention in the lives of 31 million senior Americans. Current legislation would raise the limit minimally over the next few years, but that's not enough. It's time for the U.S. government to get smart and completely restore this freedom of choice to citizens who want to work!

EMPOWER SENIORS TO LEAD MORE PRODUCTIVE LIVES, INDEPENDENT OF GOVERNMENT!!

The government, in its effort to control our tax money, has been greedy with power. It is afraid to give taxpayers a break, not realizing that *allowing people to spend their own money* generates more tax money and more economic activity. More importantly it gives the *individual,* not the government, the *freedom of choice.* It lets you and me decide how to best spend our money. It empowers the individual at the expense of big government. That is what conservatives in Congress are all about—*we trust the individual to make choices,* and we trust the free market to flourish because individuals are free to make these choices. We want to remove this cap and empower, not penalize, citizens who want to work. Let them spend their money how and when they like.

Seniors have more potential spending power than any other group. They aren't saving for the future. They are spending their retirement money—money they have saved for years. They aren't buying new homes or clothes for themselves, but they *are spending* on their children and grandchildren. They are buying goods and services. Their money is going right back into the economy creating jobs and revenue.

INCREASE GOVERNMENT REVENUE BY $4.9 BILLION

A recent study finds that *almost any increase in the earnings limit would reduce the federal deficit* by generating more in new taxes than the government would lose in increased Social Security benefit payments! This study was released by the National Center for Public Policy Analysis and the Institute for Policy Innovation (titled "Paying People Not to Work: The Economic Cost of the Social Security Retirement Earnings Test)."

INCREASE THE GNP BY OVER $132 BILLION, STIMULATING ECONOMIC GROWTH

The *Wall Street Journal* reports 83 percent of all men and 92 percent of all women over 65 are completely out of the work force. Three out of five of these do not have any disability that would preclude them from working. *These skilled older Americans, who want to work, are ideal for meeting the labor demands of the future, and without them, we may be facing a crisis.*

STOP PENALIZING CITIZENS WHO WANT TO WORK

When you're 65 and ready to retire or want to work part-time or start your own business, do you want the government telling you to stop working or stop earning? No!!! I don't ever want to stop. And if I do, I want it to be my own choice!!!

Recently, a Naples, Fla., realtor wrote the *Wall Street Journal* that he was approaching 65 and would like to keep working to supplement his retirement income. But he figured that with income tax, plus Social Security tax, plus lost Social Security bene-

fits—*he would in effect end up paying the government 82 percent of his earnings and keep only 18 percent!!* He says, "That sounds like some country on the other side of the Iron Curtain." That sounds like economic slavery to me—working 50 to 80 percent of your time for the federal government without pay! Currently, *seniors under 65 working full-time earning as little as $3.35 an hour will lose $244 a year in Social Security benefits.*

HELP THE YOUNGER GENERATION BY SHIFTING SOME OF THE BURDEN OF SOCIAL SECURITY AND MEDICARE

Currently 12.5% of the population is 65 and older, and it's growing every year. By the year 2030, it is estimated that there will be only two workers for every elderly citizen. The Bureau of Labor Statistics indicates that the 16 to 24 year-old labor force of 24.6 million this past summer was down 706,000 from the year before. This represents a steady decline from a 1980 peak of 28.4 million. At the same time, in 30 years the average age of our population is expected to increase by 24 percent.

America was founded on hard work. (When you penalize, you get less—reward to get more!) *It's hard to imagine that productivity is now being penalized!!!* Before the Depression, seniors remained active and productive members of society until they were no longer physically or mentally able. Then they were taken care of by their family. The earnings test has been in place since the payment of the first Social Security benefits, which was created during the Depression when jobs were scarce. Its goal was to move older Americans out of the work force to make way for the younger workers. Either intentionally or unintentionally, Congress continues to act as if this were a primary goal of Social Security! Although the test had undergone a variety of changes over the years, it is still nothing more than a penalty and *costs the Social Security Administration $200 million a year to administer.* Rich or poor, every older American would benefit from removing it. Simply put, the test is antiquated, inefficient, and ripe for elimination.

AGING AMERICA

Removing the Snow Cap earnings test, would benefit all Americans. It gives each citizen the choice to work, regardless of age. It helps the current generation of younger Americans who financially support government programs for seniors, and it stimulates the U.S. economy as a whole. The only ones who benefit from keeping the earnings limit are the socialistic taxaholic liberals who want to keep all the elderly on the same economic plane—poor—and dependent on the government for the rest of their lives.

Currently, pending before Congress is a bill that would completely eliminate the earnings limit for those aged 65 and older. This bill, H.R. 2460, the older Americans Freedom to Work Act of 1989, was introduced by Rep. Dennis Hastert, (R-IL). I am a proud cosponsor of this bill and a member of the Republican Task Force on Social Security Earnings Limit.

SAVING FOR SOCIAL SECURITY'S FUTURE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois [Mr. PORTER] is recognized for 5 minutes.

Mr. PORTER. Mr. Speaker, recently I have said that cutting the payroll tax would destroy Social Security for today's workers. I want to explain what I mean by that.

In 1983, a panel of six congressional leaders crafted a Social Security bailout that was based on partially prefunding the benefits of today's workers.

They knew that prefunding is crucial to the long-range health of the Social Security system because in the coming years we will have more and more retirees and fewer and fewer workers to pay their benefits. The panel rejected a pay-as-you-go system because it simply would not work given the demographics of the 21st century.

Now some members of that 1983 panel—most notably the senior Senator from New York—have turned 180 degrees and irresponsibly rejected saving for the future. At the same time, they deride suggestions that we put Social Security on an even keel by truly saving and investing the Social Security reserves.

Social Security has paid benefits for a half-century precisely because it has been administered with care and foresight. I reject the notion that saving nothing for future benefits shows foresight.

END GOVERNMENT MISUSE OF SOCIAL SECURITY TRUST FUND

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania [Mr. BORSKI] is recognized for 5 minutes.

Mr. BORSKI. Mr. Speaker, would the President or any Member of Congress dare to tax only lower to middle income workers to balance the budget? No one would admit that they were doing that. But practices which have that effect are the ongoing policy of our Social Security trust fund system. That is why Senator DANIEL MOYNIHAN's proposal is a good idea. His proposal would end the Government's misuse of the Social Security trust fund by reducing the tax so that it is sufficient for outlays and no more. Anyone who studies this trust fund's history and current practices as I have, will learn why the Moynihan proposal is an idea whose time has come.

According to its chief author, President Franklin D. Roosevelt, Social Security was supposed to be sacrosanct. Its funds were not to be spent on anything but benefits for those participants who earned them. Social Security was created as a national trust fund, so that each generation of working Americans would provide a retirement pension to sustain the generation that built America before them, and then be sustained in their retirement by the generation which came after them. That purpose has been achieved in a program which ranks as one of the greatest successes of American Government: The Social Security trust fund.

Over the last several years, however, that original purpose has been lost.

Social Security is now generating large surpluses, surpluses which are not needed for benefits but for deficits.

In fact, many policymakers and editorial writers routinely support delaying Social Security's cost-of-living adjustments [COLA's] so that those moneys can instead be borrowed by the Federal Government for deficit reduction purposes. I have strongly opposed these policies over the years, and will continue to do so. Retaining the yearly COLA is a vital priority for Philadelphia and for America.

Mr. Speaker, in my congressional district, the annual COLA keeps over 1,000 elderly men and women from slipping below the poverty line. In the city of Philadelphia, over 5,000 retirees will stay above that line of economic despair because of COLA's. Across America, half a million senior citizens rely on their COLA for that purpose. And hundreds of thousands will use their monthly checks, with the small increases COLA's provide, to enrich their lives just a little in their retirement.

These small raises in benefits are plowed back into our local economy, across our Nation enriching America. COLA's are also the best insurance that inflation will not rob the worker of today of buying power tomorrow, when they will rely upon their Social Security check.

In addition to imperiling COLA's, using Social Security's funds for anything other than benefits is unfair to the millions of men and women who participate in this program.

Mr. Speaker, Social Security's participants fall into three categories: First, the working men and women who contribute 7.65 percent of their paychecks to Social Security each month; second, their employers who match that contribution; third, and the retired men and women currently collecting the benefits they earned by contributing part of their salaries during their working lives to pay for the pensions of the working generation which precede them.

To serve these three kinds of participants fairly, Social Security must remain sacrosanct, and immune from the pressures of fancy budgetary bookkeeping. It should only generate revenues for benefits for its participants. To exact Social Security tax from employers and workers for any other purpose is devious, regressive, and unfair.

But that's exactly what is happening right now. Government is using Social Security to finance our battle against the Federal budget deficit, by borrowing the enormous surpluses generated

by recent increases in the Social Security tax rate.

As you know, in 1983 a bipartisan commission faced the reality that over the next 50 years, the percentage of Americans collecting Social Security will rise dramatically, and the percentage of workers paying the payroll tax will shrink.

The commission persuaded Congress and the administration to pass a law which mandated that the Social Security tax would be raised several times over the years, to amass a surplus large enough to pay the fund's future obligations as they came due. That was a proper goal.

I fully support collecting enough money to pay Social Security's participants their benefits and COLA's each year. In practice, however, the increased Social Security tax has become a back-door subsidy for the deficit.

A look at 1989's figures explains how. The U.S. Government's stated deficit last year was $152 billion. The real number was $204 billion, however, because Social Security tax revenues brought in $52 billion more than was needed to pay last year's benefits.

When Social Security collects funds not needed to meet yearly outlays, it has to invest them so it can afford to pay its obligations in the future. Since no risks can be taken with these moneys, they are invested in U.S. bonds. This means that the Government sells Social Security fifty two billion dollars' worth of bonds, and gets to count those moneys against its $204 billion deficit, so it can claim a deficit of $152 billion.

In fact, according to the Congressional Budget Office, this practice will become even more pervasive as the surpluses in the Social Security fund grow. If this practice is not changed, then by the end of the 1990's, the Government will report a $290 billion deficit as a $30 billion deficit, because it will borrow the Social Security surplus of $260 billion. Continuing on the trail of the borrowed Social Security surplus, when the bonds it sells come due, the Government's general fund will have to pay back the hundreds of billions it will borrow. Since the general fund will then have to raise hundreds of billions of dollars plus interest, where do you think they will get the money? That's right—it will come from taxing the working men and women who paid the money into the Social Security fund in the first place.

Making them pay the Social Security fund back with interest for a contribution they have already made is an additional burden of taxation for workers.

It's not right or fair, but it is current practice. Paying that additional tax is not the only unfair burden that current Government practices place on working families. Borrowing the Social Security tax for deficit reduction constitutes a regressive tax on middle income earners. Income tax is levied progressively on all income above a minimum. Social Security only taxes a person's first $51,300 earned each year. So if you earn $51,000 per year, and a friend earns $153,000 per year, you're paying 7.65 percent of your salary each year for Social Security, and he is paying 2.55 percent of his salary.

Equally unfair is this situation: If a husband and wife both worked—as is common today—and each earned $50,000 per year that family would pay $7,650 in Social Security tax each year, while a one-income family whose wage earner grossed the same amount—$100,000—would pay under $4,000 in Social Security tax. That could be questioned as a system for paying for Social Security benefits. But there is no question that it is a totally unacceptable way to finance the deficit.

Misusing the Social Security tax also treats another group unfairly; small and startup businesses. Every time the Social Security tax is raised, these small enterprises are hit with an additional payment for each worker.

No one disputes that businesses should have to pay for benefits for Social Security's participants: That is a responsibility they accepted when they opened their doors. But to ask them to bear a special burden to finance the deficit, a greater burden than nonbusiness owners are bearing, is unfair. Either the deficit is important enough so that we should all pay for it, according to our means, or it isn't.

At any rate we should not hide this massive deficit behind trust funds and phony bookkeeping tactics. The cure for what ails Social Security is simple: Since we cannot allow Government to levy a special tax on working people and small businesses to pay for the deficits, we must reduce the tax. We should tax workers and businesses whatever it takes to ensure that we can provide the benefits and COLA's which retirees deserve, and that is all.

Then, Mr. Speaker, as Senator MOYNIHAN says, we will have to find a genuine and fair way to pay for our deficits, not paper them over by taxing working people unfairly. That way we will face our deficits squarely, and solve them, without misusing trust funds, or abusing the trust of America's working people.

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Tennessee [Mr. COOPER] is recognized for 5 minutes.

[Mr. COOPER addressed the House. His remarks will appear hereafter in the Extensions of Remarks.]

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois [Mr. ANNUNZIO] is recognized for 5 minutes.

[Mr. ANNUNZIO addressed the House. His remarks will appear hereafter in the Extensions of Remarks.]

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois [Mr. LIPINSKI] is recognized for 60 minutes.

[Mr. LIPINSKI addressed the House. His remarks will appear hereafter in the Extensions of Remarks.]

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from Maryland [Mrs. BENTLEY] is recognized for 60 minutes.

[Mrs. BENTLEY addressed the House. Her remarks will appear hereafter in the Extensions of Remarks.]

□ 1450

GENERAL LEAVE

Mr. MANTON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and to include therein extraneous material, on the subject of my special order today.

The SPEAKER pro tempore (Mr. MCNULTY). Is there objection to the request of the gentleman from New York?

There was no objection.

CONFLICT IN CYPRUS

The SPEAKER pro tempore (Mr. MCNULTY). Under a previous order of the House, the gentleman from New York [Mr. MANTON] is recognized for 60 minutes.

Mr. MANTON. Mr. Speaker, I requested this special order to focus attention on the tragedy of the ongoing division of Cyprus. Since Turkish forces invaded Cyprus in July 1974, this Mediterranean island has been the setting for one of the most intractable international conflicts. Almost since the bloodshed began, people on both sides of this issue have said the Cyprus problem cannot be solved. They have said this fight is too emotional and contentious, and that the Greek Cypriots and Turkish forces will remain forever deadlocked. I have called this special order today to say that the green line which divides Cyprus and separates families can come tumbling down just like the Berlin wall. Not only can the green line be wiped out—it must be.

The year 1989 was momentous. We witnessed the withdrawal of occupying forces from Afghanistan and freedom breaking through the iron grip of oppression in eastern Europe. As we

begin the second session of the 101st Congress, we are faced with a changing world. The cold war has begun to thaw. Yet the island of Cyprus remains the center of a bitter dispute; 35,000 Turkish troops still occupy northern Cyprus and 200,000 Greek Cypriots are refugees in thier own land.

Mr. Speaker, the question of how the longstanding conflict in Cyprus should be resolved is a difficult one for Americans because both Greece and Turkey are NATO Allies. We in the United States must not turn away from this issue because it is a sensitive one. We must not ignore Turkey's violations of international law and the NATO charter, simply because they are perpetrated by an ally. We also cannot overlook the fact the Cyprus conflict weakens our alliance: NATO's southern flank will never be stable as long as the Cyprus question remains. In fact, as a friend, we the United States should use our strong relationships with Greece and Turkey to promote the peace process.

The first step in this process is to recognize the facts. The 1974 Turkish invasion of Cyprus violated section 505(d) of the Foreign Assistance Act of 1961 and, as amended, section 3(c) of the Foreign Military Sales Act and United States-Turkey bilateral agreements. These laws stipulate that U.S. equipment can only be used for defensive purposes. Turkey's occupation of Cyprus also violates the Treaty of Lausanne of 1923 where she renounced all claims to Cyprus and which is still in force. Turkey also violated the terms of the London-Zurich Agreement which established an independent Cyprus in 1960.

The United States currently sends Turkey half a billion dollars annually in foreign assistance. Given Turkey's violation of United States and international law, we must reexamine this commitment. I am not suggesting cutting off assistance to Turkey will solve the question of Cyprus. However, I believe the continuing high level of United States assistance to Turkey gives the United States valuable leverage with the Turkish leadership in working to end this dispute.

For several years, U.N. Secretary General Javier Perez de Cuellar has worked hard to bring about a resolution in Cyprus. I want to commend the Secretary General for undertaking this important dialog to bring about peace in Cyprus. Unfortunately the latest round of talks between Cyprian President Vassiliou, and the Turkish Cypriot leader, Rauf Denktash, stalled without any resolution last June. Since then, Secretary General de Cuellar has been trying to resume the talks without cooperation from the Turkish leadership. In fact, the Secretary General had hoped to begin a new round of talks next month, but his invitation was rejected by Mr. Denktash.

I would like to take this opportunity to urge Mr. Denktash to rethink his decision and join the Secretary General and President Vassiliou in New York in February. If the complicated problems of Cyprus are ever to be resolved, the Turkish leadership must be willing to compromise. President Vassiliou has consistently supported the U.N.-sponsored talks and has indicated his commitment to a negotiated settlement. The time has come for the Turkish leadership to do the same.

Mr. Speaker, I called this special order today to bring attention to the problem of Cyprus, not to condemn any of the participants in this conflict. In the past year, we have seen that insurmountable odds can be overcome. I hope the events in Eastern Europe inspire us to work for justice and peace in Cyprus.

□ 1500

Mr. Speaker, I yield to the gentleman from Michigan [Mr. BROOMFIELD].

Mr. BROOMFIELD. Mr. Speaker, at the outset I would like to thank the gentleman from New York for having this subject discussed today. I think it is a very timely issue.

Mr. Speaker, the winds of change are blowing around the world. From the Soviet Union to Eastern Europe, democracy is on the move along with a growing respect for justice and human rights. The Berlin Wall, once thought to be a permanent fixture dividing the free world and the Soviet empire, has crumbled into souvenirs. Impressive progress is also being made in resolving the problems of South Africa, Angola, Cambodia, and Central America. One problem, however, seems to resist resolution. One dilemma resists the application of fairness, justice, and sensitivity to human rights. Cyprus is that problem.

Since 1974, the tragedy of Cyprus has been with us. The cruel Turkish invasion of that island caused the death of thousands. Over 1,600 Greek Cypriots are still missing along with a number of American citizens. One of them is Andrew Kassapis, a young Michigan resident who was taken from his family's home on Cyprus and never seen again.

That military action resulted in the displacement of 200,000 Greek Cypriots who became refugees in their own land. When they were forced out of the northern part of the island, they left behind land, homes, and personal property worth millions of dollars. Some of that property has been carted off to Turkey. None of those families have been compensated for their huge losses.

In addition to illegally occupying the northern tier of Cyprus with 30,000 troops, who are still armed with United States supplied equipment, Turkey dispatched 60,000 Anatolian settlers to the island. Even the Turkish Cypriots resent the presence of those "non Cypriots" on that once-united island. What is being done to solve the Cyprus problem?

The United Nations-sponsored intercommunal talks broke down in July when Mr. Denktash objected to how the United Nations presented a draft outline to him. The outline provided food for thought about how the talks should proceed and how the two parties to the dispute could work together to settle the dispute. In recent weeks, Secretary General Perez de Cuellar invited both Mr. Denktash and President Vassiliou of the Republic of Cyprus to the United Nations for talks. Again, Mr. Denktash was offended by the way in which the Secretary General issued the invitation. President Vassiliou, who has shown amazing flexibility and determination to pursue peace talks, willingly accepted the invitation. Mr. Denktash should worry more about solving the Cyprus problem and less about diplomatic niceties. This is the time for forward movement in the peace process if there is ever going to be peace on that divided island.

The key to peace on Cyprus is in Ankara. It is time for Turkish authorities to talk with Mr. Denktash about the reality of Cyprus and the need to settle that longstanding problem.

As the gentleman pointed out, we ought to be looking at the amount of money we are giving Turkey. In fact, I would like to see it sharply reduced to be used as leverage, as the gentleman talked about, to force the two parties to get together to resolve these issues. As changes occur at breakneck speed around the world, Turkish and Turkish Cypriot authorities are increasingly seen by the world community as dragging their feet on a fair and timely resolution of the Cyprus conflict. Turkey is the only democratic nation in Europe that has its troops occupying a foreign country. Turkey wants to join the European Community, but surely must realize that Europe's doors will be closed until Ankara makes progress on the Cyprus problem. It is time to resolve the Cyprus dilemma and make the green line part of history along with the Berlin Wall. It is time to aim for the goals set by President Bush a few years ago when he said, "We seek for Cyprus a constitutional democracy based on majority rule, the rule of law, and the protection of minority rights."

I urge my colleagues to work together with me in Congress to bring about a peaceful resolution of the Cyprus problem. Until there is honest progress made on a resolution of that problem, Congress should ensure that

there is no business as usual with Turkey and with Mr. Denktash.

Mr. MANTON. Mr. Speaker, I thank the gentleman for his remarks.

Mr. Speaker, I yield to the gentleman from Illinois [Mr. PORTER].

Mr. PORTER. Mr. Speaker, I thank the gentleman from New York for yielding and for his leadership on this vital issue. Mr. Speaker, I rise today to focus attention on the one wall that is not coming down.

That wall has divided the small island of Cyprus for 15 long years. Since the 1974 Turkish invasion, a green line stretches across the island separating both Turkish and Greek-speaking Cypriots from their traditional homes. Mr. Speaker, there is nothing "green" about this line. It is a collection of barbed wire, walls, and minefields that divides Cyprus and even its capital city of Nicosia. In his new year's message, Cypriot President George Vassiliou asked "can Cyprus be kept away from the earthshaking developments of 1989, thus constituting the only exception in Europe?"

Cyprus is more harshly divided than any European country. Long before this year's reforms, West Berliners had the ability to at least briefly visit East Berlin. Cypriots on the South Side of Nicosia cannot visit the North. As the Berlin Wall comes down, Cypriots see little progress in dismantling their wall.

Despite the lack of progress, we cannot forget the Cyprus problem. This subject will simply not go away. Just 2 weeks ago, the subject came up again during the President of Turkey's visit to the White House. All sides, including Greece and Turkey, recognize that as tensions in Europe disappear, more and more attention will focus on Cyprus.

New forces are also calling for a solution. Many women on Cyprus banded together to form the Women's Walk Home Movement. In their marches across the green line, they focused the international media on the Cyprus problem with the force of peaceful nonviolent protest. My wife, Kathryn, participated in one of these marches and later started the Cypriot Women's Foundation. The foundation's goal is to channel the energies of women on both sides of the green line into bicommunal, interactive projects involving mothers and children. Such projects offer a new vision for the society Cyprus must become. Their efforts show that the pressure on both sides to find a solution is increasing. Let us hope that this year will bring a breakthrough.

That breakthrough may come sooner than we think. It is my understanding that both sides of this conflict have agreed to meet with the U.N. Secretary General next month in New York for a marathon negotiating session. This is very good news. Following the brave initiative of President Vassiliou, he and Mr. Denktas have already spent hundreds of hours mapping out the outlines of draft solutions. This type of negotiation proposed by the Secretary General picks up on the spirit of those private, face-to-face meetings. We here in Congress will be watching these meetings closely.

Mr. Speaker, we share with the gentleman from Michigan, the gentleman from New York, and the gentleman from Florida who will speak after me, the very strong conviction that we will see this through, that there will be a reunification of Cyprus, that the foreign troops that are occupying that country will go home, and that the people of Cyprus will be able to live in peace without a wall dividing them.

Perhaps this year we will truly remove Europe's last wall.

Mr. MANTON. I thank the gentleman for his comments.

Mr. Speaker, I yield to the gentleman from Florida [Mr. BILIRAKIS].

Mr. BILIRAKIS. Mr. Speaker, first I want to thank the gentleman from New York [Mr. MANTON] for taking out this special order and for his concern for fairness and justice all over the world, and in particular in this case the population of the island of Cyprus.

Mr. Speaker, I rise today to join my colleagues in reminding the world of the continued division of the island nation of Cyprus.

As you may know, Mr. Speaker, we usually bring up this division—and the illegal occupation of Cyprus by the Turkish Army—on July 20, the anniversary of the invasion by Turkish troops. We're a little early this year, but it's never too early to speak out in the cause of peace and what is right.

It has been more than 15 years since that invasion, 15 years of occupation and colonization by the Turks of 40 percent of the Republic of Cyprus. For more than 15 years now 200,000 Greek-Cypriots have been forced to live as refugees in their own land—4,000 lost their lives outright during the invasion.

If we see yet another July 20 pass without a resolution to this tragedy, it will be a sad, sad day indeed. However, Cyprus President George Vassiliou, in his 1990 New Year message, expressed renewed hope in this time of unprecedented peace.

Indeed, the "rays of hope generated in 1989," rays of hope to which President Vassiliou referred in his message, brighten the promise of a freer Eastern Europe. We cannot help but be inspired by the retreat of communism in East Europe, from the Baltic Sea to the Adriatic Ocean.

Indeed, every day another piece of the Berlin Wall is chipped away—and with each chip the way is made more clear for freedom. Yet, on Cyprus the green line continues to divide the nation, the Nicosia wall still stands. The rays of hope reaching out from Eastern Europe still fall short of Cyprus.

In view of the wave of freedom sweeping European lands held captive too long, in this time of returning peace, I strongly urge President Bush and all of my colleagues here in the Congress to use all influence, to work with all possible energy, to re-create a unified Cyprus—this year.

The United Nations Secretary General has invited President Vassiliou and Turkish Cypriot leader Denktash to a new joint meeting. The European Economic Community weighed in last month declaring to Turkey that its application for membership would not even be considered until 1993, in hopes that the Cyprus problem will be resolved.

It is time to push for peace and freedom on Cyprus. Conditions are right; the world awaits the demolition of another dividing wall. Turkey simply must reconsider its outrageous Cyprus policy and the Turkish Cypriots must return to the negotiating table.

Mr. Speaker, let us extend those rays of hope into the Mediterranean this year. Let 1990 be the year that peace and freedom and unity comes to Cyprus.

□ 1510

Mr. Speaker, I thank the gentleman from New York.

Mr. MANTON. Mr. Speaker, I yield to the gentleman from Maryland [Mr. MCMILLEN].

Mr. MCMILLEN of Maryland. Mr. Speaker, I thank the gentleman for yielding and commend him for having this special order on Cyprus.

Mr. Speaker, I rise today to express my continuing anguish over the tragic situation on the island of Cyprus. For 16 long years, the people of Cyprus have endured tremendous suffering, suffering caused by the unwillingness of its Greek and Turkish inhabitants to put behind them their bitterness and anger toward one another. So much has been lost because of this division. Cyprus struggles economically and politically. The island lacks leadership, torn by the strife between two waring factions.

I call upon the Governments of Greece and Turkey to encourage their supporters in Cyprus to end this strife. I recognize that nationalism is a strong emotion. But as long as the Greeks and Turkish inhabitants of the island fight for domination, the nation of Cyprus will not thrive.

I am pleased that the United Nations continue to press for peace in Cyprus. It is my hope that the President of our Government will be more assertive in pushing our Greek and Turkish allies toward a resolution of

this dispute. Not only is it unhealthy for the people of Cyprus that this strife continues, but it is also damaging to the NATO alliance that two members remain at such odds with one another.

At a time when freedom and hope are spreading throughout Europe, Cyprus remains a place where peace continues to be elusive. It is my hope that in the year of 1990 that situation will change.

Mr. MANTON. Mr. Speaker, I yield to the gentleman from Massachusetts [Mr. CONTE].

Mr. CONTE. Mr. Speaker, I want to commend the gentleman from New York [TOM MANTON], for reserving this time so that we might address the tragedy of the wall that has not come down, the wall that divides Cyprus.

As the free world rejoices over the emergence of Eastern Europe into the daylight of civility and democracy, we must not forget the enclave of separation that is Cyprus. All of the historic animosity between the Greeks and the Turks is focused on this beautiful but saddened nation. In this prevailing spirit of renewal, we must turn our attention, and our best statesmanship, toward this persistent problem.

The division of Cyprus must end. The walls of shame must be dismantled.

President Bush, to his credit, and members of his Administration, have met with President Vassiliou and with Mr. Denktash. The President has made clear the United States "unqualified support for continuation of the inter-communal negotiating process under the aegis of the Secretary General of the United Nations, Perez de Cuellar." The President told both leaders that "the United States did not see continuation of the status quo as a solution to the Cyprus problem."

The Secretary General has proposed an extended meeting between Vassiliou and Denktash within the next few weeks. I take this opportunity to urge President Bush to make an extraordinary effort through all means available to him and the Administration to make this promising meeting a success.

I was pleased to see that President Vassiliou's New Year's message to his people was very upbeat regarding the prospect of reconciliation. He asked, "can Cyprus be kept away from the earthshaking developments of 1989, thus constituting the only exception in Europe? Is it possible for the Berlin Wall to be demolished, and for the Nicosia dividing wall to remain?"

Mr. Speaker, again I thank our colleague from New York for taking this time for Members of the U.S. House of Representatives to answer those questions with a resounding "no."

The wave of reunion and reconciliation in Europe must not pass over our friends in Cyprus. Now is the time for a historic breakthrough.

Mr. MANTON. I thank the gentleman and yield to the gentleman from Ohio [Mr. FEIGHAN].

Mr. FEIGHAN. Mr. Speaker, I thank the gentleman for taking this time and I want to commend the gentleman from New York along with the other Members participating in this special order on Cyprus. It is especially important at this time that we focus attention on the conflict that continues to divide that island nation.

As we witness the fall of the Berlin Wall, the symbolic embodiment of the East-West conflict, if we glanced to the south and the east, we would still find a divided Cyprus. In 1974, the Armed Forces of Turkey invaded the island, calling it a peace movement on behalf of the Turkish Cypriots. A month later they returned for a second invasion, seizing one-third of the island and leaving behind a garrison of Turkish occupation forces. Those forces continue to occupy the northern part of Cyprus to this day.

For those of us who follow this issue closely, we have witnessed a slow progression of attempts at solving the problem—through bicommunal talks, parallel meetings with the Secretary General and seemingly endless dialog—all without success. In the meantime, the Turkish occupation has acquired a feeling of permanence. In 1983, the north unilaterally declared itself independent. The breakaway state, the so-called Turkish Republic of Northern Cyprus, is recognized only by Turkey. Turkey has slowly built up its forces on the island—with overall numbers nearly doubling in the last few years.

With the election of Greek Cypriot President George Vassiliou, we saw the emergence of a determined, pragmatic, and energetic leader who has committed himself to finding a solution to the Cyprus problem. Upon taking office, he immediately set a 1-year deadline for reaching a settlement framework. He has proposed the complete demilitarization of the island and a unified Federal republic that would respect the rights of all Cypriots. While his personal deadline has passed, he continues to stay at the table.

The same cannot be said for his counterpart, Rauf Denktash, the Turkish-Cypriot leader. As the U.N. Secretary General has worked with both sides to narrow their differences, Denktash has grown more reluctant to pursue a solution. Next month, the leaders will meet again with the Secretary General. But, because of Mr. Denktash's objections, that meeting will be an abbreviated version of the original 2-week meeting called for by the Secretary General and agreed to by the Greek-Cypriots.

This meeting comes in a period of sweeping change. With the lessening of superpower tensions and the move toward freedom in Eastern Europe, there is an overflowing optimism about new possibilities, about managing conflict through diplomatic means, and about replacing historic animosities with reconciliation and reconstruction. In this era of possibilities, it is crucial that the conflict on Cyprus not be left behind.

As the two leaders meet next month, it is important that they know that our President, the Congress, and the people of the United States care about the fate of Cyprus; that we are concerned about the continued Turkish occupation of that island; and that we will continue to keep vigilant in our support for a free, democratic, and unified Cyprus.

□ 1520

Mr. MANTON. Mr. Speaker, I yield to the gentlewoman from Maryland [Mrs. BENTLEY].

Mrs. BENTLEY. Mr. Speaker, first, let me commend the very distinguished gentleman from New York [Mr. MANTON] for setting aside time today to discuss an issue that is very important to many of us in the Congress, the continued occupation of the Republic of Cyprus by the Turkish Army.

Over the course of the past year we have seen the deterioration of totalitarian regimes throughout Central and East Europe. The Soviet Union has begun the process of withdrawing its armies from numerous nations including Poland, Czechoslovakia, Hungary, and East Germany.

But one nation in the region albeit a tiny one, is still under the power of an occupying army. For 16 years, since 1974, Turkish troops have occupied 40 percent of Cyprus, and kept the more than 80 percent ethnic Greek residents of the island from returning to their ancestral homes of many centuries.

The disgrace of this situation, Mr. Speaker, is that the United States provides half a billion dollars each and every year to Turkey in foreign aid, much of it military aid. Our U.S. tax dollars are supporting an occupation that both the United States and the United Nations have called illegal and morally unjustifiable.

As we enter the decade of the 1990's and prepare to assist the nations of Eastern Europe in their struggle to become pluralistic societies, I call on the Congress to lend the same assistance to Cyprus. The time is ripe to put pressure on the Turkish Government to end the military occupation of Cyprus immediately.

Presently several dozen members of this body are cosponsors of a bill that I introduced, H.R. 1045, which would

cut off aid to Turkey until significant steps have been taken by the Turkish Government toward ending the occupation of Cyprus. I would note that this bill has cosponsors on both sides of the aisle and has also been introduced in the Senate by Senator LARRY PRESSLER, the distinguished ranking Republican member on the Senate Foreign Relations Subcommittee on European Affairs.

I would urge all Members in this body who wish to send a serious message to the Turkish Government that it is time for occupation of Cyprus to end and to consider joining H.R. 1045 as cosponsors. Until the Turkish Government realizes that we are serious about resolving the Cyprus question, there will be no action on this issue.

I would like to call the attention of the Congress to a very important news story that was in the New York Times only a few months ago. A Federal judge in Indiana ruled that a collection of priceless sixth-century Byzantine mosaics from a church in Cyprus were, in fact, stolen from the Greek Orthodox Church of Cyprus and ordered returned to authorities of the church.

I find this particular story significant because it paints a very familiar tale of just one aspect of the Turkish occupation of Cyprus.

In this particular instance, a very beautiful church, revered by the people of Cyprus, has stood intact in the northern part of the island and has been in active use as a church for 14 centuries. It has survived the ravages of countless invasions, wars, fires, and pillagings.

It was not until the Turkish occupation in 1974 that this church was closed to the people of the island. Within the past few years the beautiful mosaics of this church, representing our Lord and ancient saints of the church, were ripped from the walls of this holy place that they have graced over the ages.

Under false Turkish export papers they were shipped from the occupied portion of the island for resale to a museum or art dealer in Western Europe.

Fortunately, these mosaics, valued at over 20 million dollars, have been recovered and are under Federal protection pending their return to the Church of Cyprus.

As I relate this story, Mr. Speaker, I want to emphasize that this is not an isolated incident, but what has become a way of life for Cypriot citizens.

The past 15 years have witnessed an attempt by the Turkish invaders to erase everything that is Greek or Cypriot from the occupied 40 percent of the island nation.

Churches and schools have been closed, and in many cases razed. Whole villages have been displaced, and even today, after a decade and a half, their inhabitants live as refugees in camps. Fifteen hundred Greek Cypriots are still listed as missing from the invasion, and many are presumed to be sitting in Turkish jails as political prisoners even to this day. Of those missing, I might add, five are American citizens who were unfortunate enough to be in Cyprus at the time of the invasion.

The time is here and now to speak up for human rights around the globe. As the people of Europe find liberation, freedom, and democracy, we must demand no less for Cyprus. We as Members of the U.S. Congress have a special duty to Cyprus, because it is largely our military aid to Turkey that makes the continued occupation of Cyprus feasible.

I would close, Mr. Speaker, by again commending the distinguished gentleman from New York for taking this special order today. He along with my fellow Greek Orthodox members in this body, have always been leaders in the forefront of the battle to end the occupation of Cyprus. It is only that by standing together with one voice that we will bring the message home to the Turkish Army—get out of Cyprus.

Mr. MANTON. Mr. Speaker, I yield, to the gentleman from Maryland [Mr. DYSON].

Mr. DYSON. Mr. Speaker, I want to thank my colleague from New York for arranging this special order today. There is no doubt that the problems facing Cyprus as a result of the Turkish invasion in 1974 deserve the attention and condemnation of this great nation.

Cyprus received its independence from Great Britain in 1960. Only 14 years later, this tiny nation was invaded by tens of thousands of Turkish troops. To this day, Turkey maintains an occupational force of some 25,000 to 30,000 troops. These soldiers have only one mission: to continue the forceful occupation of almost 40 percent of the northern part of Cyprus. The Turkish Government has attempted to hide its continuing invasion by calling its conquest the "Turkish Republic of Northern Cyprus." However, the nations of the world have not been fooled, and only the Turkish Government recognizes this sham government.

Our Government wisely imposed an arms embargo on Turkey after the invasion. This embargo remained in place until 1978. Unfortunately, little has changed since that time.

Greek Cypriots compose about 80 percent of Cyprus' population. The population of Turkish origin is about 20 percent. Nevertheless, the Turkish forces occupy 37 percent of this island nation and they have built a barrier, called the "Green Line," which separates the occupied zone from the rest of the Nation as surely as the Berlin Wall isolated Communist controlled Berlin. We have seen the Berlin Wall tumble, and now it is time to remove the Turkish forces and eliminate the green line.

It is time for the nation of Cyprus to once again become whole and begin the painful process of healing. It is time for Greek Cypriots to return to their homelands in the northern part of the island and to begin to reconstruct their lives and their communities from the ashes and destruction that the Turks have imposed upon them.

It is time to reopen the churches and replace the statues and icons which have been systematically destroyed by the Turkish forces. Mr. Speaker, it is time for the Turkish empire to study the former occupying forces of Eastern Europe and learn the lesson that these repressive governments learned: the burning desire to live free is a part of the human soul and it cannot be repressed through force.

As the sponsor of the annual Greek congressional independence day celebration, I can tell my colleagues that this turkish invasion force and its brutal suppression of freedom continues to be the most serious issue affecting a lasting peace in this region.

I believe that it is important for America to clearly voice its strongest condemnation of the continued occupation of Cyprus and the brutal repression of tens of thousands of Cypriots. It is through this leadership role that America will contribute to the restoration of Cyprus' freedom and the independence which was stolen from it in that brutal invasion 16 years ago.

Again, I thank Mr. MANTON for providing this opportunity to address this important issue. I urge all of my colleagues to review this issue and voice their strongest disapproval of the occupation and lend their support to all efforts to negotiate a lasting peace and restore freedom to the citizens of Cyprus.

□ 1530

Mr. MANTON. Mr. Speaker, I thank the gentleman from Maryland [Mr. DYSON] for his contribution.

Mr. CARPER. Mr. Speaker, will the gentleman yield?

Mr. MANTON. I yield to the gentleman from Delaware.

Mr. CARPER. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I thank the gentleman from New York [Mr. MANTON], as my colleagues have, for providing us this opportunity to speak our minds on the issue of Cyprus. I am pleased to have the opportunity to take a moment today to join my colleagues in focusing the attention of the House and the

Nation on the plight of the people of Cyprus.

Tragically, Cyprus has been a divided island for longer than I have been in this body. The ongoing occupation of Cyprus by Turkish troops has shattered the lives of over 150,000 Greek Cypriots who are literally refugees in their own country—denied access to their ancestral lands for over 15 years.

And not only has this been a personal tragedy, the Turkish occupation has been ruinous to relations between Turkey and Greece, destabilized the peace and security of the Aegean region, and virtually paralyzed United States foreign policy regarding Cyprus.

Through the years, there have been those in Congress and the administration who have argued that our relations with Turkey are too important to risk putting pressure on that government to find a resolution to the tragedy in Cyprus. Events in the Soviet Union and Eastern Europe may forever change the political landscape of Europe and the Mediterranean, and with it, the strategic importance of Turkey to our country's security needs. But regardless of where those events—largely beyond our control—leave us, we must today, and in the months to come, begin to reconsider our priorities as they relate to Cyprus, and ask ourselves——

"Can we continue to largely ignore the right of Greek Cypriots to return to their homes, or should we rededicate ourselves to using every means at our disposal to restore that basic human right?"

As it turns out, a mechanism is already in place that should allow a negotiated settlement. The United States has been trying to act as an intermediary by sponsoring talks between President Vassiliou of Cyprus and Rauf Denktash, the Turkish Cypriot leader. But those talks have been stalled since June 1989.

U.N. Secretary General de Cuellar has been trying to get those talks going again. Last fall he proposed a 2-week session of talks to begin on February 12, just a few days from now. But that date was rejected by the Turkish Cypriot leader, and it is unclear when, if ever, Mr. Denktash will meet de Cuellar and Vassiliou.

Turkish Cypriots are now scheduled to hold leadership elections in April and June. There is some question as to whether those elections will be conducted fairly. The United States has an interest in seeing that they are. Many observers believe that if Turkish Cypriots were allowed to speak their will, they would eventually choose a course that would lead to peaceful reunification of Cyprus.

That may or may not be true, but clearly the current Turkish Cypriot leadership is unwilling to enter into a dialog that could lead to reunification.

The United States should pay close attention to the elections in occupied Cyprus. We should press the government of Turkey to ensure that they are free and fair. And when the elections are over, we should push—and push hard—to get U.N. talks back on track. That seems to me to be the least we can do to end the years of tragedy on that divided island.

Mr. Speaker, I thank the gentleman again for allowing me to participate in this special order.

Mr. MANTON. Mr. Speaker, I thank the gentleman from Delaware [Mr. CARPER] for his contribution.

Mr. Speaker, I do not see any other Members in the chamber who wish to speak on this special order, so I yield back the balance of my time.

Mr. AUCOIN. Mr. Speaker, I am pleased to join my colleagues who are speaking out today for an end to the travail of a divided Cyprus. I commend my colleague from New York, Mr. MANTON, for taking the lead and arranging a special time to speak about this pressing issue.

Given the monumental changes taking place in many places across the globe, it is unavoidable that we should compare what is happening in Europe with what is not happening on Cyprus.

Some will say there are differences between the cases. That is true; there are differences rooted in history, culture, and regional politics. But those differences do not obscure the similarities.

The urges for self-determination and freedom of movement are fundamental to the human spirit. The demand for human dignity transcends borders, walls, fences, checkpoints, and barriers of every description. In Europe the barriers are crumbling. On Cyprus they are not. That must change.

Fifteen years ago Turkish troops invaded Cyprus, divided the island in two, and drove nearly 200,000 Greek-Cypriots from their homes. Over 1,500 people who disappeared in the invasion are still missing. Today, the Green Line which divides Cyprus is patrolled and maintained by 35,000 Turkish troops. Before long an entire generation of Cypriots will have been forced to live in this untenable situation.

For too long the partition of Cyprus has received too little attention from the United States, even though we provide substantial military aid to Turkey. As openings occur elsewhere in Europe, however, I believe that we can no longer keep Cyprus on the back burner. The intrasigence of the Turkish regime is beginning to stand out like a sore thumb.

Reconciliation talks under the auspices of the United Nations have stalled. They must be reopened in earnest, without delay. Aside from the humanitarian and human rights concerns, which should be sufficient motivation in themselves, Turkish leaders must realize that neither their security nor the international standing of Turkey is enhanced by continuing the status quo.

I believe that this awareness has begun to penetrate the minds of thoughtful Turks who want their country to join the tide of progressive change. As we begin a new decade, using whatever leverage we have to press these points with Turkish leaders should be one of our highest foreign policy objectives.

Until the people of Cyprus are reunited under a form of government they are free to choose themselves, with adequate safeguards for minorities, our rejoicing over the changes in Europe will be tempered by the continued pain of a military occupation which should never have happened.

Again, Mr. Speaker, I commend my colleagues for shining the spotlight on Cyprus today. We must continue to speak out until the light of hope is no longer blocked by the barbed wire and guns of the occupation.

Mr. ANNUNZIO. Mr. Speaker, I rise to join Congressman THOMAS MANTON and my other colleagues in the House of Representatives in calling for an end to the illegal occupation of Cyprus by Turkish forces.

During the last 16 years since this unprovoked act of Turkish aggression on July 20, 1974, we have witnessed an unprecedented buildup of the Turkish military in northern Cyprus. We in Congress have seen well-documented evidence verifying the horrendous acts against humanity committed by the Turks during and after the brutal invasion. The Turkish occupiers have been brazen in their attempts to destroy completely the Greek-Cypriot cultural and religious heritage, and they have been ruthless in their desecration of ancient Greek Orthodox churches.

Over 200,000 Greek-Cypriots were displaced from their homes, and over 1,600 individuals are still missing from this invasion—an action which was in direct violation of the United Nations Charter, the Charter of the North Atlantic Treaty Organization, and the European Convention on Human Rights.

Today, we are witnessing dramatic democratic changes taking place in Eastern Europe and the Soviet Union, but the atrocities of the Turkish Government remain. They must be held accountable for the numerous and barbaric crimes committed against Greek-Cypriots.

Mr. Speaker, I join with my many constituents of Greek descent in the 11th Congressional District of Illinois which I am honored to represent, and Greek-Americans throughout the United States, as we symbolically stand at the "Green Line," that infamous barbed wire barricade that has been cut through the heart of Cyprus, and demand that the Turks end this illegal occupation. As a Member of Congress, I am committed to continue to pressure the Turkish Government until they withdraw all of their forces from northern Cyprus, and they begin to show some respect for human rights and human decency.

Mr. BONIOR. Mr. Speaker, ever since the August 1974 Turkish invasion, Cyprus has been a divided nation. Today, 25,000 to 30,000 Turkish troops remain in Cyprus. Thousands of Cypriots dislocated by the invasion have been unable to return to their homes or recover their property.

The Green Line, a barbed wire fence cutting across Cyprus, is a stark reminder of the Turkish invasion. As a result, Cypriots are no longer free to travel, buy a house, or settle in parts of their own country. People have had to

leave the towns and communities that their families lived in for generations.

Since 1974, the United Nations has sponsored negotiations to resolve the differences between the Greek and Turkish-Cypriot communities. Unfortunately, these negotiations have not produced an agreement. In fact, the Turkish community has taken steps to make the division permanent. In 1983, Turkish-Cypriot leader Rauf Denktash declared the Turkish Republic of Northern Cyprus and adopted a new constitution. Turkey is the only country to recognize the Turkish Republic of Northern Cyprus.

Denktash's recent invitation for Bulgarian Turks to settle in Cyprus will only make an already deplorable situation worse. Such an influx of settlers would be a blatant attempt to alter the demographic balance on the island and send a clear signal that the Turkish-Cypriots are only interested in the further partition of Cyprus.

The division of Cyprus has continued for too long. So far, diplomacy and negotiation have failed to bring a resolution of the problem. The withdrawal of foreign forces and demilitarization is essential to the peaceful reunification of Cyprus. In addition, human rights must be respected by all sides, including the rights of movement, property and settlement.

Turkey receives over $563 million in United States aid annually and benefits from the protection of the NATO alliance. The time is long overdue for the United States to actively pursue the unification of Cyprus and to apply pressure on Turkey to remove its troops. The time has come for the Green Line to meet the same fate as the Berlin Wall.

Mr. FAZIO. Mr. Speaker, I would like to preface my remarks by commending the distinguished gentleman from New York, the Honorable TOM MANTON, for calling this special order to recognize the anniversary of Cyprus' independence.

Thirty years ago, the island of Cyprus became an independent state; however, for 16 years, the northern part of the island has been under the grip of foreign occupation. When Turkish troops invaded, 200,000 Cypriots were driven from their homes, deprived of their possessions, and reduced to refugees in their own land. The decades that have followed have been marked with violence and bloodshed.

Over the years, there has been an influx of approximately 65,000 settlers from mainland Turkey and 35,000 Turkish troops now occupy Cyprus. The demographic and cultural character of the island has been drastically affected by this occupation. As a result, Cyprus is losing its cultural, social, and historical identity.

Today, I am again voicing my support for a negotiated peace and for the reunification of Cyprus. With the dramatic events that have taken place recently in Eastern Europe as an example, now is the time to dissolve the Green Line that divides Cyprus, as the Berlin Wall formerly divided East and West. It is important that we reaffirm our commitment to establishing a genuine and lasting peace through meaningful negotiations, and that the United Nations and Secretary General Javier Perez de Cuellar join in this effort.

I continue to hope that the people of Cyprus—both the Greek and Turkish-Cypriots—will find a way to live in peace and justice together. On this anniversary of Cyprus' independence, we must pledge our continued efforts to help stabilize this troubled nation.

Mr. ACKERMAN. Mr. Speaker, I welcome Congressman MANTON's leadership in organizing this special order to draw attention to the problem of continued Turkish occupation of Cyprus.

On July 20, 1974, Turkish forces invaded Cyprus; today there are approximately 35,000 Turkish troops on Cyprus, and 60,000 Turkish colonists living on the island.

It is time that we work together to peacefully end the Turkish occupation of Cyprus. Turkey's withdrawal of its troops from Cyprus would certainly demonstrate that Ankara desires to contribute to international détente, and would aid the peace process in that region.

United Nations Secretary General Javier Perez de Cuellar has called numerous times for the removal of Turkish troops and for the protection and recognition of civil and human rights for all people of Cyprus. As recently as this past July, 100 Greek Cypriot demonstrators, who were within the borders of the United Nations buffer zone, were forcibly arrested by Turkish troops. This kind of act is unconscionable, and must not be allowed to occur again.

President George Vassiliou of Cyprus and Rauf Denktash, the Turkish-Cypriot leader, have met to attempt to bring about a reconciliation to these 15 years of occupation. But their meetings ceased this past June. U.N. Secretary General de Cuellar proposed a 2-week session with both President Vassiliou and Denktash, but the meeting, scheduled to begin on February 12, was canceled by Denktash.

I can only hope that both sides will work together to resolve this situation. Fifteen years of forced occupation, bitterness, death, disappearances, and the separation of families is enough. The time has come to end this war. If it is a war of bullets or a war of propaganda and hatred is irrelevant. Peace must return to this island and we in the U.S. Congress must use every available means to see that it is done.

Mr. YATRON. Mr. Speaker, I rise to speak in support of today's special order on Cyprus and to commend the gentleman from New York [Mr. MANTON] for initiating this important debate.

Mr. Speaker, with the winds of change sweeping through Eastern Europe and regional conflicts approaching peaceful settlements in Southeast Asia, Afghanistan, and southern Africa, it is extremely important that we not lose interest in facilitating a peaceful settlement on Cyprus.

For American policymakers, the conflict on Cyprus is unique in that it has escalated tensions between two NATO allies, Greece and Turkey. Out of fear that an aggressive American effort to resolve that dispute might antagonize one of our allies, policymakers in successive administrations have chosen to downplay or totally ignore Cyprus.

However, we cannot ignore the fact that Turkish forces have illegally occupied over one-third of this island nation with American defense equipment and we cannot ignore the fact that this occupation has eroded American influence in the eastern Mediterranean.

Mr. Speaker, recent developments suggest that international pressure, effective U.N. diplomacy and assertive American leadership are the essential ingredients to resolving regional disputes. Unfortunately, American leadership is the missing ingredient with respect to Cyprus.

With the strong support of U.N. Secretary General Perez de Cuellar, the President of Cyprus, George Vassiliou, has fully committed himself to negotiating a peaceful settlement to this dispute with the Turkish-Cypriot leader, Rauf Denktash. Unfortunately, due to the obstreperousness of Mr. Denktash, the talks are stalled. To the State Department's credit, Special Cyprus Coordinator, Nelson Ledski has been working prodigiously with all parties to the dispute to get these talks back underway. But more must be done.

Mr. Speaker, the United States must pursue a two-track policy in which it supports the U.N. talks while at the same time making it clear to Ankara, that its unjust occupation of Cyprus is entirely unacceptable by democratic standards. Only then, will the people of Cyprus live free of foreign occupation.

Mrs. BOXER. Mr. Speaker, these are times that lend a new breath of encouragement to world affairs. Across the world, longtime adversaries are laying down their arms. Eastern Europe is no longer the battlefield of the cold war. Its citizens are working toward a new era of freedom and democracy.

But on the beautiful island of Cyprus, conflict wages on, now unbelievably, in its 16th year. The Berlin Wall that divides East and West Germany may be coming down, but in Cyprus the awful green line persists. This artificial line of angry barbed wire stretches 110 miles across Cyprus. It divides Greek Cypriots in the south from Turkish Cypriots in the north—and it tears Cyprus apart.

It is time for this wall, too, to come down.

For too long, the city of Nicosia has been another Berlin, with one side enjoying Western prosperity and another left behind. For too long, the fate of those missing during the 1974 Turkish invasion has been hidden. For too long, citizens have been unable to travel freely throughout Cyprus.

Less than 2 years ago, reconciliation seemed a possibility. The Greek Cypriots elected President George Vassiliou, who began meeting with the Turkish leader Mr. Denktash.

Unfortunately, I am sorry to say, talks at this point seem to have broken down. At a time when the world is moving forward in a new spirit of cooperation, Mr. Denktash has left the bargaining table. Even his own people are increasingly expressing interest in joining the Greek Cypriots in negotiations. It is my hope that these talks will resume soon, perhaps in February, as suggested by U.N. Secretary General Perez de Cuellar.

I urge both sides to put the past behind them and look forward to a mutual peace and prosperity. Otherwise, an entire generation will have grown up knowing nothing but hate and division and bitterness.

Negotiations will not be easy. The challenges, in many ways, are far greater than any of those facing Berlin. Leaders will have to work at overcoming cultural and other differences between their peoples.

But the world is moving quickly ahead. It is my fervent hope that Cyprus will not be left behind.

Mr. CARDIN. Mr. Speaker, I wanted to join with my colleague, Representative MANTON, in bringing to the world's attention the current situation in Cyprus. It has been 16 long years since Turkish forces occupied Cyprus. Winds of change are blowing throughout all of Europe, and it is inevitable that the breezes reach Cyprus. The people of Poland, East Germany, Czechoslovakia, and other Eastern European nations have demonstrated the true force of people power. The peaceful transition from autocracy to democracy should serve as a reminder to others that change is possible through negotiation.

The Cypriot people, Turkish and Greek, have both suffered. I believe the status quo is unacceptable. The United Nations have called for a new round of negotiations between Greek and Turkish Cypriots in February in which President Vassiliou has agreed to participate. Turkish Cypriot leader Denktash has not yet responded. It is only through discussion at the negotiating table that a peaceful solution to the situation on Cyprus is possible.

Who would have thought that we would witness the Berlin Wall tumble? The people of Cyprus, both Turkish and Greek, are frustrated by the status quo—a divided nation. It is time for the walls that divide the capital city of Nicosia to come down. It is time that Cypriot refugees, whether they are Greek or Turkish, be permitted to return to their homes. And it is time that occupying forces withdraw to enable the Cypriot people to determine for themselves the direction in which Cyprus should proceed.

Mr. EVANS. Mr. Speaker, the island nation of Cyprus has been divided for almost three decades. For 16 long years, the United Nations have had to station peacekeeping forces to maintain peace between the Greek and Turkish peoples of Cyprus. This is much too long to keep a country divided and much too long for two of our NATO allies to be in a virtual state of war. The time has come for a more focused effort to solve the unfortunate division of this island nation that has continued the past tensions between two important American allies in the region.

The situation on the island of Cyprus has been a constant thorn in the unity and effectiveness of NATO's southern flank. At a time when the divisions between East and West have fallen so spectacularly, it is embarrassing that this dispute continues in NATO's backyard.

Since 1974, the United Nations have attempted to mediate a settlement to the situation. Unfortunately, the negotiation process has remained stalemated. A first step to get the negotiating momentum rolling again would be to put our support behind the United Nations efforts. I hope that as an institution, we can strongly support the United Nation's efforts to seek a negotiated settlement to the situation and continue to urge the administration to do likewise. It would hopefully push the negotiations down the long road of healing the wounds felt by the Greek and Turkish Cypriots alike.

I urge my colleagues to put their full support behind the United Nations efforts to end this stalemate and finally establish a reunified Cyprus.

Mr. RUSSO. Mr. Speaker, the destruction of the Berlin Wall was one of the greatest moments in this century. After decades of repression, the people of Eastern Europe are embracing new forms of democratic government. In our excitement over their good fortune, however, we cannot forget the repression felt in other countries around the world.

The green line is still dividing Cyprus. Unfortunately after centuries of foreign domination, Cyprus was given only a fleeting glimpse of peace and self-rule as an independent republic. After gaining its independence from Britain in 1960, the small island of Cyprus was invaded by Turkish troops in 1974. With no respect for the sovereignty of this new republic, Turkey brutally invaded and illegally annexed part of this beautiful island. Today 30,000 Turkish troops continue to control the illegally annexed Turkish section of the island and a U.N. peacekeeping force monitors the green line. It is unconscionable to think that it has been 15 years since the Turkish invasion wreaked havoc on the lives of the Cypriots, and there has not yet been a settlement.

The inhabitants of Cyprus deserve the right to be a free and independent State. The basic human right of self-determination should be theirs. The Cypriots are a strong and persevering people and deserve our unwaverable support. This conflict has sadly waged on far too long and Cyprus remains a deeply troubled country with no negotiated settlement.

We must send a message of hope and support to the people of Cyprus. They must know that as the walls fall around Berlin, we have not forgotten their struggle for a resolution to this 15-year-old conflict. As a nation founded on the right of self-determination, their struggle has become ours. There should be no doubts as to the United States' interest and efforts in favor of an equitable and peaceful solution for the island of Cyprus. I implore both the Turkish and Greek Cypriots to find an end to the strife on this deeply divided island.

Ms. PELOSI. Mr. Speaker, I rise today to join my colleagues in bringing attention to the continuing tragic division of Cyprus.

Around the world, significant changes are occurring at an amazing rate, but the problem in Cyprus remains. As trade barriers, political barriers, and physicial barriers elsewhere are brought down, the continued existence of the green line underscores the stalemate in negotiations to end the occupation of Cyprus.

U.N.-sponsored talks between President Vassiliou and Rauf Denktash, the Turkish Cypriot leader, have been stalled since June 1989. Secretary General de Cuellar has been trying to restart the talks, proposing last fall a 2-week session with President Vassiliou and Mr. Denktash. Unfortunately, the February 12, 1990, date was rejected by Mr. Denktash, who has been evasive about whether and when he will meet. Mr. Denktask seems to be undermining the possibility of U.N.-sponsored talks by attempting to impose unrealistic preconditions for the talks, including recognition of his illegal regime and the derecognition of the officially recognized Republic of Cyprus.

Several steps can be taken immediately to resolve the crisis in Cyprus. First, serious efforts must be made to start the stalled peace talks. I urge my colleagues to look seriously at the proposals offered by President Vassiliou of Cyprus. These proposals should meet the economic, security, cultural, and political concerns of the Turkish Cypriot people. Second, Turkey could make a major contribution to the process of world peace by starting to withdraw its troops from Cyprus.

The momentum for change around the world continues to grow. I sincerely hope that Cyprus is not left out of this positive movement. The Greek Cypriot people have suffered tremendously. They have lost their land and with that, a part of their heritage and their history. As my colleagues watch world events closely, I urge them to add their voices to the call for a resolution of the tragedy of a divided Cyprus. Thank you.

Mrs. MORELLA. Mr. Speaker, I want to thank my colleague from New York, Mr. MANTON, for calling this special order today to focus greater attention on the continued division of Cyprus, and on recent developments which offer the most promising possibility in the last few years of restoring that country's political and geographic integrity.

Cyprus, populated largely by those of Greek ancestry, was illegally invaded in 1974 by Turkey. The Turks, fearful that the new Cypriot government intended to unite with Greece, intervened to protect the rights of the Turkish Cypriot minority. Since that time, Turkey has continued its illegal military presence, and has helped to bring about the so-called Turkish Republic of Northern Cyprus, whose sovereignty is recognized by no one in the world but Turkey, in the 37 percent of the island which it has continued to occupy.

Mr. Speaker, few Americans are aware of the costs incurred by the Turkish invasion of Cyprus. After 15 years, five Americans abducted by the Turkish Armed Forces during the invasion still remain unaccounted for, in addition to more than 1,600 Greek Cypriots. The invasion dislodged more than 200,000 Greek Cypriots living in the Turkish-occupied sector, who are now refugees in their own country. The situation in Cyprus also causes difficulty for the United States in our relations within NATO with our Greek and Turkish allies and is not helpful in our efforts to stabilize the Eastern Mediterranean, a region key to United States strategic and diplomatic interests.

President Bush has stated, "We seek for Cyprus a constitutional democracy based on majority rule, the rule of law, and the protection of minority rights." Since late 1988, U.N.-sponsored negotiations have shown some movement in this direction, as Cypriot President George Vassiliou and Turkish Cypriot leader Rauf Denktash have engaged in direct dialog with the goal of a new federal republic in a united Cyprus.

Mr. Speaker, today a green line divides Cyprus. The United States should increase its support for the U.N. role and enhance its efforts in influencing both sides in reaching a just solution which reestablishes the sovereignty of a united and democratic Cyprus

while recognizing the unique heritage of all Cypriots and guaranteeing minority rights. The Berlin Wall is falling; it is time that the green line be erased.

Mr. BUECHNER. Mr. Speaker, 1989 will long be remembered as the year in which the people of Eastern Europe at last found their voices and declared themselves free. In nation after nation the forces of oppression are being ousted. Discredited in both theory and fact, the occupying forces of totalitarianism and tyranny are being consigned to their rightful place, on the historical scrap heap of failed policies. In their place, democratic reforms characterized by pluralism are taking root. In this, freedom loving people everywhere rejoice.

But as we celebrate the events of 1989, let us not become comfortable or complacent in resting on these laurels. Because even as we have watched the many nations of Eastern Europe shrug off their shackles which have bound them, much remains to be accomplished. Even as we rejoice in present victories let us not forget that the battle is not over. As we take glory in the growing chorus of the song of freedom around the world, let us not fail to notice those still small voices which remain unheard—notable by their silence.

Fifteen years ago the island of Cyprus was invaded by the forces of Turkey. To this day 30,000 Turkish troops remain in Cyprus, enforcing an artificial division of Cyprus which is acceptable to none, oppressive to all, and in direct contradiction to the basic principles of international justice. Yet, despite years of on-again, off-again negotiations, this difficult problem remains as intractable and resistent to resolution as it was 15 years ago. Despite numerous meetings between Cypriot, Greek, and Turkish officials little progress has been made and little hope has been offered for an end to this schism. To say that this is unacceptable does not adequately address the truth of this situation.

I do not have any easy answers to this difficult question. However, I do know that the continued separation of Cyprus by force of arms is wrong, that this situation is untenable, and that it must end. Cyprus is not a nation of Turks anymore than it is a nation of Greeks, it is a nation of Cypriots. The people of Cyprus, no less than the rest of the nations of the world, deserve the right to control their own destinies.

Let us rejoice and join in the celebration of those who have found the voice of freedom—for it is important to recognize the successes of the past even as we struggle to insure their permanency. However, let us also offer a commitment to Cyprus so that one day soon we can also rejoice in a Cyprus which is truly for the Cypriots. Let us commit ourselves as individuals and the collective resources of our great Nation to finding the means whereby this problem can be resolved.

Mr. WYDEN. Mr. Speaker, today, we are here to express our grave concerns over the continued division of Cyprus. For 15 years, the status of Cyprus has remained unsettled. All talks to resolve this conflict—including those sponsored by the United Nations Secretary General Javier Perez de Cuellar—have been unsuccessful. I believe that if we simply allow this problem to fester, it will give rise to very serious and adverse consequences in the future.

It is time for the wall that separates and divides Cyprus to come down. Today, 40,000 Turkish troops remain on the island, occupying one-third of the country and maintaining the partition. The Turks claim their troops remain to protect the Turkish population. That's what they said 16 years ago, when they first invaded. But that claim today holds no water, at a time when the Greeks pose no threat at all to the Turkish population.

The situation on Cyprus is much like the one that prevailed in Berlin before the wall come down. There is barbed wire strung out along the frontier, command posts, and a buffer zone patrolled by U.N. troops. Greek Cypriots cannot cross back into the Turkish sector, even though their old homes are still standing. So they just come to the barbed wire fence and look longingly at the houses from which they were so suddenly ejected 16 years ago.

In many cases, they were summarily thrown out by the advancing troops, leaving food cooking on the stove, and clothes hanging on the line. Today, entire cities are ghost towns, only because they were once inhabited by Greek Cypriots.

You can seen by my remarks, Mr. Speaker, how strongly I feel that negotiations must go forward to resolve the Cyprus problém. The U.S. Government has been far too passive in its support for efforts to settle this conflict and end the partition of the island.

Given our strong relationships with a number of the key actors and governments, we should push hard in the weeks and months ahead to support negotiations and end the Turkish occupation of Cyprus, which is so clearly in contravention of international law.

Thank you very much.

Mr. JONTZ. Mr. Speaker, I would like to thank my colleague from New York, Mr. MANTON, for his leadership in organizing this special order and for his concern on behalf of the people of Cyprus. I wish also to bring to the attention of my colleagues the human rights abuses which have been occurring on that island.

In July and August of 1974 the Turkish Army invaded Cyprus claiming to be the guarantor of the island's independence. In reality, Greek Cypriots have lost many of their freedoms. Turkish soldiers seized control of 40 percent of the total territory, which held 70 percent of the island's economic potential. The United Nations Security Council called for the immediate withdrawal of the troops, but these requests have been ignored. Since then, the Turkish Government has ignored the U.N. and has compiled a questionable human rights record.

Some 20,000 Greek Cypriots were displaced—more than one-third of the island's total population at that time. Attempts were made to undermine the ethnic and religious culture of the Greek Cypriots in the occupied area. Turkish soldiers bombed civilian targets and hospitals, and killed noncombatants including women and children. Thousands of Greek Cypriots disappeared, and to this day, relatives of the missing do not know if their loved ones are dead or alive.

The Government of Turkey has broken several international laws, ignored the U.N. charter, and violated U.N. International Covenants on Human Rights. For their crimes against the Greek Cypriots, the Turkish Government has not answered repeated inquiries about the missing or faced charges leveled by the European Commission on Human Rights.

To date, Greek Cypriot refugees are still denied the right to return to their homes in the occupied area.

Mr. Speaker, this violation by Turkey against the people of Cyprus is disturbing to me and to the people of Greek ancestry in our Nation. I hope that we in the United States Congress can send a message that will be heard and heeded to end the indignities the Greek Cypriots are forced to endure.

The human rights declaration written by the United Nations applies to all people everywhere, including Greek Cypriots. We must do all that we can to restore human rights to these people.

Mr. APPLEGATE. Mr. Speaker, after nearly 16 years of Turkish occupation, the Island of Cyprus remains divided. A 1974 coup by the Faction of Greek Cypriots and the Greek Army to bring about union of Cyprus with Greece prompted an invasion and occupation which has left refugees on both sides of the "Green Line."

While both Greek and Turkish troops had been stationed on the island of Cyprus, the July 15 coup compelled Turkey to invade militarily to protect its citizens on the island and keep the small country from uniting with Greece. Less than 1 month later, Turkish troops and civilians occupied 41 percent of Cyprus. Over 200,000 Cypriots were forced to flee their homes in the northern territories leaving homes, businesses, and personal belongings behind. The Turkish government brought in 60,000 civilians to live in the homes left empty, giving the Turks a democratic majority. Meanwhile, in the south, the Cypriot refugees were forced to start over from nothing.

Mr. Speaker, on behalf of Cypriot-Americans in the 18th District of Ohio and the citizens of Cyprus, I appeal for the Turkish troops to leave the island of Cyprus. The citizens of Cyprus desire the rights of free movement, free trade, and freedom to acquire land throughout their country. The people of the Island of Cyprus deeply desire the basic human and democratic right that is fundamental to our great Nation—the right of the minority to be heard.

Mr. MAVROULES. Mr. Speaker, I rise today to voice my support for a peaceful resolution to the Cyprus dilemma. Since 1964, the country of Cyprus has been divided by "the Green Line," a barbed wire border with armed patrols on each side. With the dramatic events in Eastern Europe over the last few months bringing an end to the Berlin Wall, isn't it time

for an end to this deplorable barricade as well?

Today's special order on Cyprus should cause us all to pause and consider the unfortunate situation in Cyprus. "The Green Line" has unnecessarily divided a country and a people. Hundreds of thousands of Greek and Turkish Cypriots have become refugees within their own country.

As many of you may recall, in 1974 Turkish armed forces occupied the northern half of the island—ostensibly to protect the interests of the Turkish-Cypriots during a coup, supported by the Greek military junta, against the Greek-Cypriot president. These forces took up positions along the U.N.-partrolled "Green Line." Greek-Cypriot National Guardsmen were deployed along the south side of the line in response. Tragically, these same forces continue to patrol the same line to this very day.

The United Nations has made repeated efforts to mediate a peaceful resolution to the Cyprus situation. Unfortunately, recent negotiations, which last year seemed so promising, are now at a standstill. Last July, U.N. General-Secretary, Mr. Perez de Cuellar, presented what he believed to be a mutually acceptable solution. Regrettably, the leader of the Turkish-Cypriot community, Mr. Rauf Denktash, has not been as flexible as hoped and has chosen to avoid responding to this latest U.N. proposal. Denktash has chosen instead to perpetuate the course of his illegitimate government. With the exception of Turkey, no sovereign country recognizes the Denktash regime.

On this day of special consideration for the Cyprus problem, both sides need to be urged to continue diplomatic efforts, no country should be divided by armed barricades. "The Green Line" needs to come down. The displaced Greek-Cypriots and Turkish-Cypriots need to be resettled. Turkish armed forces and settlers need to return to Turkey. The country of Cyprus needs a constitutional democracy with majority rule and provisions for the protection of minority rights.

Until unity can be achieved, the authority of U.N. forces needs to be respected and sides need to take precautions to avoid human rights violations similar to the unfortunate arrest of Greek-Cypriot women and clergy by Turkish forces this past summer.

On the topic of human rights, I would also like to voice my hopes that the country of Albania will improve its treatment of ethnic Greeks within its borders. The 400,000 ethnic Greeks that live in Albania have been denied such basic freedoms as the right to celebrate Christmas and the right to receive an education in the Greek language. Further, Albania must be held accountable for the whereabouts of the four Prassos brothers who many believe were killed while trying to flee to Greece. Hopefully, the wave of reform sweeping Eastern Europe will reach Albania as well.

As we begin a new decade, let us renew our efforts to promote peace and stability in Cyprus, Albania, and throughout the Eastern and Western blocs.

Mr. GILMAN. Mr. Speaker, I rise to express my strong support of today's Special Order on Cyprus, and to commend the distinguished gentleman from New York [Mr. MANTON] for his work on this issue.

The ambiance of democratization throughout Eastern Europe and the relaxation of tensions between the Soviet Union and the United States has caused some of the spotlight to be removed from the difficult regional issues and conflicts that continue to linger on. The territorial dispute on the island of Cyprus stands as a poignant reminder that regional problems must not be forgotten as we seem to improve East-West relations.

It is true that Turkey has occupied one-third of the Cypriot island since 1974, and their presence has adversely affected U.S.-Turkish relations. In fact, the Cyprus issue is one of the sources of tension between Greece and Turkey—two important NATO allies.

Mr. Speaker, effective multilateral efforts must call upon both sides to soften their position. United Nations Secretary General de Cuellar has asked both President Vasilliou and Turkish Cypriot leader Dentash to come to New York to once again attempt to work out their differences.

We commend Special Cyprus Coordinator Nelson Ledsky for his outstanding diplomatic efforts thus far, in attempting to bring both leaders back to the bargaining table. The U.S. position on this issue must be clear. The unjust, illegal occupation of Northern Cyprus must end once and for all.

Mr. DELLUMS. Mr. Speaker, I rise today to speak out in support of the human rights of a forgotten majority—the majority Greek population on the island of Cyprus, which is still suffering under the oppression of Turkish military occupation.

A true people's history of modern Cyprus would have to focus on the tragic, ongoing reality that, despite two world wars, the United Nations and NATO Charters, and the Helsinki Accords, the majority Greek population on Cyprus have been denied full personal and political freedom.

In the wake of World War I, a defeated Ottoman Empire reconstituted as the nation of Turkey formally renounced any territorial rights to Cyprus in one of the covenants of the 1923 Treaty of Lausanne. During World War II, while 600,000 Greeks (more than 9 percent of their total population) died in the war against Nazi Fascism, Turkey stood by as a less-than-neutral toward the Allied cause.

During the long twilight of the Cold War, Turkey has used NATO membership as a vehicle for a military build-up that culminated in the invasion of Cyprus during July and August of 1974. Sadly, that invasion was made possible by the complicity and duplicity of the U.S. Secretary of State, Mr. Kissinger. The Carter administration compounded the disaster by failing to call the Turkish government to account because of its human rights violations, and then actually increasing the scope of foreign assistance and military aid to the Turkish government.

Now, 16 years after the Turkish invasion of Cyprus, peace is breaking out all over Europe, as people demonstrate the power of democratic ideas in overcoming authoritarian adversity. We, in the Congress, must broaden the parameters of awareness and concern on this process to include the Greek majority on Cyprus who still yearn to be free of the shackles of Turkish military control. Their time has come—and we must help them overcome, so that they may be able to live out the words of the international anthem: "We shall live in peace, someday * * *."

Mr. MATSUI. Mr. Speaker, I rise today to call for the dismantling of the "Green Line" in Cyprus. The world stood watching the dismantling of the Berlin Wall, but the Cypriot capital city of Nicosia remains the only divided city in Europe.

This is the era in which united people have brought down tyrants and wall. The walls and barbed wire that divide the Cypriot people shall become the new symbol of oppression in Europe. Let us not forget the lesson of the Berlin Wall. Always and everywhere it is terrible to divide and restrain the citizens of a nation.

On December 28, 1989, thousands of Nicosia residents expressed their wish to live in a reunited city by participating in a candlelit protest At that vigil, Mayor Lellos Demetriades asked that the world feel their pain and hear their voices. I call today for this free and united nation, the United States of America, not to turn away from this desperate plea.

My colleagues, all of the world's divisive and sinister walls have not yet been obliterated. Let us recognize injustice and work toward its end.

Mr. HUGHES. Mr. Speaker, as we enter a new era of democracy around the world, it's time to end the pain and suffering of some 200,000 Greek Cypriots who remain refugees in their own land because of the illegal occupation by Turkish troops and the forced rule of the minority Turkish/Cyprus Government.

On August 16, 1960, Cyprus gained its independence from British rule. On the same day, the constitution and a series of treaties between the United Kingdom, Greece, Turkey, and the new Republic went into effect. The treaties prohibited both enosis and partition of the island between Greece and Turkey, and guaranteed Cypriot independence, territorial integrity, security, and the Republic's constitution.

Shortly after the creation of the Republic, serious differences arose between Greek and Turkish Cypriots over the execution and interpretation of the constitution. In November 1963, a series of constitutional revisions were proposed. These revisions would have eliminated the special protection accord with the Turkish Cypriots in the 1960 constitution, and would have introduced a straightforward majority system of representation. Unfortunately, the Turkish Cypriots resisted these revisions and established their own form of government to rule the northern part of the island.

Since that time, the island has become deeply divided. Communities where people of Greek and Turkish descent once lived side by side have been torn apart. Neighbors were pitted against neighbors. Thousands and thousands of people have lost their homes, while many others have become the innocent victims of the violence of separation. Some 35,000 Turkish troops occupy northern Cyprus illegally, adding to the violence and fear which pervades the island.

Mr. Speaker, it's time to end the violence and restore peace and stability to this beauti-

ful island. I understand that Turkey is important to us geopolitically, and so is Greece. But nothing is more important than the advancement of human rights and the restoration of the fundamental elements of freedom which belong to all Cypriots.

We pride ourselves in America in our commitment to protecting human rights around the world, but we've walked away from the situation in Cyprus. It's tragic that we have not used our leverage more effectively to force the removal of the Turkish troops and the restoration of majority rule to the nation.

At a time when we are promoting the rule of law, free elections, and majority rule in the Philippines, Nicaragua, Panama, and elsewhere, we must aggressively pursue the same goals in Cyprus. We need to elevate this crisis to a higher level, and identify whatever economic, political, and other pressure we can apply to force the withdrawal of Turkish troops and the restoration of democracy to Cyprus. For the good of the people in Cyprus and the world, it's time to bring this unfortunate conflict to an end.

Mr. KENNEDY. Mr. Speaker, I am proud to have this opportunity today to call to the attention of my colleagues, of the American people, and of members of the international community, the situation in Cyprus. I feel it is my obligation to address this issue in order to increase our Nation's awareness of the tragic situation of a nation divided and occupied.

In Cyprus we see one more nation artificially divided, one more nation whose people are demanding that the walls come tumbling down, one more nation demanding freedom, justice, democracy, and peace. These are words that we as Americans use frequently and speak freely in this country. Words, in fact, that we take almost for granted in the United States today. Especially as we watch others around the globe struggle and many of them die to gain just a glimpse of these very ideals. For us, fortunately, these four words are very much a reality—they are, indeed, the backbone of our Nation; they are the very fabric of our country. And they are the source of inspiration for so many others from Beijing to Berlin.

But in some parts of the world the situation is not the same. As we witness this natural outpouring of democratic change taking place around the globe, we assume it is contagious. We hope it spreads. Yet in one corner of the world, the situation remains hopeless, as it has been for many years.

For 15 years now the island of Cyprus has been divided and its people have lived under occupation forces. The United States Congress is on record as stating that there can be no resolution to this situation until the Turkish troops are removed from the island. Turkey and the Turkish Cypriot leadership have for too long subjected the Creek Cypriots to an unlawful occupation of their country.

Today, more than 35,000 Turkish troops occupy Cyprus. Today, more than 200,000 Greek Cypriots live as refugees in their own land. Today, they are victims of unjust human rights violations. During this 15-year occupation much has been said and done in an attempt to bring about change in Cyprus. But, despite the efforts of the U.S. Congress, despite the efforts of the United Nations' Secretary General, despite efforts on the part of the international community, little progress has been made in reaching a settlement on the situation in Cyprus.

If the United States, the world's greatest defender of democracy, of freedom, of justice, and of peace, can inspire so many others around the world, if we can do so much to help the rest of the world to make their dreams become reality, why can we not bring down the dreaded dividing line in Cyprus?

Of all the many aspects of this issue that need to be addressed I would like to focus upon the most important—the people. The people of Cyprus have had their rights as a sovereign nation violated. The right to live peacefully in their own homeland has been taken away from them and what little is left of Greek heritage and culture has been all but destroyed by the presence of over 35,000 Turkish troops. We cannot allow the basic human rights of the people of Cyprus to be completely trampled. We need to promote well-being and stability in Cyprus, and we must work to ensure that the people of Cyprus regain their freedom, that they regain their voice, and that their voice is heard.

Does the Turkish Cypriot leadership still believe that we, preservers of the fundamental principles of democracy, would not stand up and take notice of this grave situation in Cyprus? Does this leadership continue to believe that we, as friends and as an ally to Cyprus, would not attempt to erase the so-called "green line" that divides Cyprus? Does anyone dare think that we will sit idly by and not bring about this long-needed change in Cyprus? They are sadly mistaken if they do. We must and we will continue with our efforts to negotiate peace in Cyprus and to ultimately bring about reunification for this Mediterranean nation.

Cyprus is a very small nation that has been caught up in the turmoil of history. The people living there now will have to travel a long road in order to achieve what we as Americans so proudly refer to as the "democratic way." But with hard work and perseverance, it can be done. Cyprus need not be left out of the current wave of democracy and freedom which so many others are finally able to enjoy. The end of occupation and a unified Cyprus are dreams that deserve to be reality.

Mr. MARTINEZ. Mr. Speaker, I rise today to speak out against the partition of Cyprus and to express my concern about the continuing plight of the 200,000 Greek Cypriot refugees who were forced to flee from their homes when Turkey invaded the northern part of the island in 1974.

President Vassiliou of the Republic of Cyprus should be commended for making every effort to keep open channels of communication with Mr. Denktash, the Turkish Cypriot leader, who has remained unmoved by the need to broach the division that separates Greek and Turkish Cypriots. Mr. Denktash's intransigence in the face of U.N. mediating efforts to resolve the Cypriot crisis is counterproductive and unacceptable, especially in the wake of the historic developments in Eastern Europe.

I would also like to voice my concern about Turkey's policy of colonizing northern Cyprus with over 60,000 of its nationals. Unfortunately, Turkey has supported the partition of Cyprus by refusing to abide by various U.N. resolutions and the principles of international law. Moreover, the systematic destruction of Cyprus' cultural heritage in the northern third of the island only helps to perpetuate the crisis for future generations of Cypriots.

The continued partition of the island is clearly in no one's interest, and I strongly urge all parties concerned to have the vision and leadership to strive for the peaceful resolution of this conflict. One possible gesture of goodwill by Mr. Denktash would be to uphold the Vienna agreement and allow the return of Greek Cypriot refugees to the Karpass Peninsula. But a more immediate gesture of good will would be to agree to continue the process of U.N. talks with representatives of the Republic of Cyprus.

There is a need to demilitarize the situation in Cyprus and foster a meaningful intercommunal dialog that will hopefully result in the reunification of the country. I wholeheartedly believe that the Cypriot problem can only be resolved by negotiations and constructive dialog and not by the use of military force and political intimidation. Mr. Speaker, I look forward to the day when the green line that divides Greek and Turkish Cypriots is peacefully shattered under the weight of national reconciliation and political reunification.

Ms. LONG. Mr. Speaker, I commend the gentleman from New York for bringing attention to this pressing matter. The situation in Cyprus is one about which we all should be keenly aware and seriously concerned.

The persisting division of Cyprus is a situation that the world has tolerated for far too long. Divided since 1974, Cyprus continues to suffer from ethnic divisions that result in internal tensions and the denial of civil freedoms that should be taken for granted. The events of 1974 led to the violent separation of one island into, in effect, two nations.

This division should concern us immensely. First, the instability of Cyprus has severely disrupted the lives of nearly all Cypriots and over time has caused a massive dislocation of the native population. This unrest has resulted in human hardships that the people of Cyprus cannot tolerate and compassionate nations cannot ignore. For example, the right to move about the country freely has been severely impinged. Last July, Greek Cypriot women, in one of a series of demonstrations against the inaccessibility of Turkish-controlled areas, marched into the buffer zone between the two territories. Over a thousand women participated in the demonstration; and many were arrested, even injured. The division of the island into two camps and the consequent restrictions have been so onerous that these women were willing to risk personal harm at the hands of military forces in order to lodge their protest. Moreover, there are nearly 1,600 Greek Cypriots and 6 Americans listed as missing since 1974.

Second, the problems in Cyprus affect relations between two of our NATO Allies, Greece and Turkey. While the events of Eastern Europe are truly encouraging and the threat to the security of Europe appears to be waning, it is still in our best interests that our NATO partners remain on good terms with one an-

other. The historical animosity between these two great nations can only be exacerbated by the conflict in Cyprus, and their relations can only stand to be improved by a Cyprus solution. Moreover, the situation in Cyprus has long complicated our dealings with leaders in Athens and Ankara, and the resolution of hostilities in Cyprus could only improve our standing with our allies.

Third, the maintenance of a U.N. peacekeeping force in Cyprus is a financial burden that our Nation helps shoulder. Ever since hostilities broke out in 1964, the United Nations has maintained a large peacekeeping force of several thousand people and, without a substantial breakthrough in Greek Cypriot-Turkish Cypriot relations, they are likely to remain there. These forces are costly to maintain, so much so that one country, Sweden, has withdrawn most of its troops because of financial constraints. The lack of resolution of the Cyprus problem and the nonimplementation of U.N. resolutions in Cyprus undermine the peacekeeping and peacemaking force of the United Nations.

The history of settlement attempts between the two sides has started and stalled, but mostly stalled, throughout the years. The most recent negotiations between the Greek Cypriots and the Turkish Cypriots were in June of last year, and have since been suspended due to a variety of complications. The importance of reestablishing these negotiations cannot be overemphasized. The key to resolving tensions in Cyprus lies in talks that would institute a viable, bicommunal federal government, one acceptable to both sides. Unless the talks between the two sides are soon renewed, the prospect of a peaceful settlement between the two communities cannot be realized.

There are steps that we can take to encourage a cessation of tensions in Cyprus. The settlement process has been grinding slowly and must be moved along. We should do all that we can to urge both sides to return to the negotiating table and make a concerted and genuine effort to resolve their differences. While negotiations are the essential beginning to relieving tensions, they need not be the only effort. We should also support measures that would foster a meaningful dialog between the two groups on all levels and encourage ties that would result in peaceful interaction. For example, bicommunal projects, freedoms of travel and settlement, and the removal of foreign forces other than those provided for by international agreements should be encouraged. With the opportunity to work peaceably together, without the threat of external military intervention, the citizens of Cyprus can be reconciled.

The situation in Cyprus is one that has gone on long enough. As Members of Congress, we should do all that we can to foster improved relations within Cyprus and encourage meaningful and conclusive negotiations. I urge my colleagues to reflect upon that troubled nation and consider what measures we can take to support the settlement process.

Mr. GREEN. Mr. Speaker, I rise today to join my colleagues in deploring the continued division of Cyprus.

For too many years, Turkish troops have remained in Cyprus, prohibiting that nation from finding a political solution to its problems. I should like to add my voice to the many that cry out today to urge that Turkey remove its troops and that all parties work toward the peaceful resolution of the Cyprus problem.

Over the past several months, we have rejoiced in the falling of the Berlin Wall. Cyprus, too, must benefit from the greater atmosphere of peace and freedom that is sweeping across so much of Europe. Cypriots, both Greek and Turkish, deserve to be free of the hostilities that have plagued their land for over 15 years. Let us erase the Green Line and bring an end to the division of Cyprus. Let us work to restore the civil liberties for the people of Cyprus. Clearly, the Turkish military presence must end.

Congress has long voiced its disapproval over the continued Turkish presence in Cyprus, and I remain committed to working with my colleagues to achieve peace and reunification for Cyprus.

Mr. OWENS of Utah. Mr. Speaker, American foreign policy often stands accused of sacrificing the long-term interest for short-term gain, losing sight of our most cherished principles in blind pursuit of a specific policy objective. Nowhere is this more evident than in the eastern Mediterranean, where United States policy has drifted away from the long-standing political and human rights problems on Cyprus. Unfortunately, we've witnessed a slow and steady erosion of the American commitment to the reunification of Cyprus ever since the United States embargo was lifted in 1978.

Successive administrations have adopted the military's view that Turkey's strategic importance should be considered over and above—even at the expense of—the withdrawal of Turkish troops and a political settlement of Cyprus. The anti-American rhetoric of the Papandreou administration, the refusal to extradite terrorists, and the difficulty in negotiating base rights further enabled proponents of this view to narrowly define the myriad Greece-Turkey-Cyprus issued and win unprecedented political support.

Unfortunately, the situation on Cyprus has remained relatively unchanged since 1974. Turkish troops still occupy the north, and the so-called Turkish Republic of Northern Cyprus isn't recognized by a single nation except Turkey. The moral issue has not changed since 1974, so why has U.S. policy drifted?

When the United States embargo on arms to Turkey was repealed 12 years ago, Congress and the President agreed to link United States foreign assistance to Greece and Turkey by establishing a ratio which limited Turkish aid to $10 for every $7 provided to Greece. This ratio, which was narrowly preserved in the recent foreign aid bill, was intended to go far beyond the terms of military hardware and address the broader, more important political and military balance between the two countries. It was and remains a clear reminder that the United States regards the Turkish military presence in northern Cyprus as illegal.

As relations steadily improve between the United States and the Soviet Union, Turkey's strategic importance in the region will drastically diminish, and hopefully the underlying political and human rights issues on Cyprus will become a United States foreign policy priority.

The United States must play an active role to promote progress in the floundering United Nations sponsored talks and continue efforts to promote bi-communal efforts in education and development. The appointment of Nelson Ledsky as special Cyrpus coordinator was a step in the right direction, but he can't do the job alone. We, in Congress, must remain vigilant and encourage Mr. Denktash to come to the table this month in New York and resume discussions without insisting on preconditions or statements of intention. There is a lot of work to be done, and now is no time for delay.

Mr. TORRICELLI. Mr. Speaker, a series of international events has gripped the world's attention. The striking changes in Eastern Europe and the upheaval in Panama have been the focus of attention both in the United States and abroad. It is important that while recognizing and dealing with these developments, we not neglect other areas of the world where ongoing conflicts create greater danger.

Cyprus is one such place. The division of the island, the continuing military buildup, and the unresolved tensions between Greek- and Turkish-Cypriot communities have created a tinderbox. Cyprus has been peaceful for the last number of years. The potential for renewed conflict—which would, of course, have implications beyond the island of Cyprus, and inevitably create a crisis between Greece and Turkey—will remain a danger until a settlement takes place.

In the last 2 years, there has been reason for some optimism on the Cyprus issue. President George Vassiliou, who took office nearly 2 years ago, has advanced several innovative ideas for the settlement of the issues dividing the two communities. Within the last year, President Vassiliou has held talks with Mr. Rauf Denktash, leader of the Turkish-Cypriot community, to explore possible areas of agreement.

Throughout the process, the United Nations has played a constructive role in bringing the parties together. I have introduced legislation, House Concurrent Resolution 205, that declares the support of this Congress for the work of the United Nations on the Cyprus issue and encourages the U.N. Secretary General to begin a new round of negotiations to complete an outline for a Cyprus settlement. I am pleased that this legislation has already been approved by the Subcommittee on Europe and the Middle East and the Subcommittee on Human Rights and International Organizations.

My resolution is one demonstration of the concern in Congress about Cyprus. Another, tangible element is the $15 million in annual economic assistance we have been providing. Although Cyprus is not a poor country, this funding is a visible statement of our support for the people of Cyprus and our commitment to a peaceful solution of the Cyprus conflict.

Those who care about Cyprus and its future have a task. It is to educate our fellow citizens about the issue and to keep Cyprus high on the list of United States foreign policy priorities. Through these efforts, we can advance

the day when Cyprus will again be one country, unmarred by a division through its midst—a land in which all Cypriots can live in security and prosperity.

Mr. WALGREN. Mr. Speaker, today I would like to express my support for the people of Cyprus who continue to pursue a long struggle for a unified nation. The United States has a central responsibility for the circumstances facing the Cypriot people.

Cyprus first received its independence from Great Britain in 1960. At that time approximately 18 percent of the population was Turkish and 72 percent of Greek origin. The Treaty of Association and Guarantee established a system that sought to ensure the rights of both peoples through a power-sharing system. But in 1974 the island was unilaterally invaded by Turkish troops allegedly out of Turkish fears that the Greek majority on Cyprus was seeking unification with Greece.

Since 1974, Turkish troops have occupied 40 percent of the island of Cyprus. The line that divides northern and southern Cyprus separates many families from their traditional homes and even from association with family members. Hundreds of Greek refugees from north Cyprus are displaced citizens within their own land. Now Turkey has the distinction of being the only country in Europe that has military troops occupying a foreign land.

The Governments of both Greece and Turkey must put their historic animosities behind them and strive toward a peaceful resolution of the Cyprus problem. The United States must strongly urge the Turkish Government to remove their troops from northern Cyrprus. The foreign aid that Turkey receives from the United States enables that Government to continue its occupation of a foreign land. Turkey's interest in continued American aid certainly gives us unique leverage with Turkish authorities to move toward a peaceful solution that would end Turkish occupation.

The recent transitions in Eastern Europe can serve as an example to the world. We have seen that it is possible to overcome unsurmountable problems through the courage of people dedicated to freedom. The Berlin Wall has fallen. Now is time for the Green Line dividing north and south Cyprus to be abolished. I commend the people of Cyprus for their dedication to a united nation through a peaceful settlement.

Mr. SCHUMER. Mr. Speaker, I would like to thank the gentleman for organizing and coordinating this special order.

We have witnessed the winds of peace blow over Europe in the closing months of 1989. We have watched dictators fall. We have seen the Berlin Wall dismantled. And we have viewed peaceful revolution spread from Poland to East Germany to Czechoslovakia. Sadly, this spirit of peace has not spread to the island of Cyprus. In the midst of these historic events, we should not forget that Cyprus remains an occupied and divided country.

Fifteen years ago, Turkey invaded northern Cyprus, 5 days after a short-lived coup by Greek Cypriot extremists. The island has been divided ever since. The Green Line, marked by barbed wire and armed guards, divides north and south Cyprus. Today, Nicosia remains the only divided city and divided capital in Europe.

Yet, there is cause for hope. The Greek Mayor of Nicosia, Mayor Demetriades, and his Turkish counterpart, Mayor Akinci have begun to cooperate on infrastructure projects. I am confident that this cooperation between the people of Cyprus may be a precursor of a reunified Cyprus. Yet this reunification will not take place unless negotiations between the Turkish Cypriot leader, Denktash, and President Vassilou continue to progress.

Hopefully, under the able guidance of the UN Secretary General Perez de Cuellar and with the continued assistance of the United States, the spirit of reconciliation and solidarity will bring down the final barrier in Europe, Cyprus' Green Line, and will end the 15 years of division on that island. The Greeks have proven their willingness to negotiate in good faith, and now the Turks must follow suit.

The time for peace in Cyprus is now. Mr. Speaker, I would like to thank Mr. MANTON for his leadership on this important human rights issue.

Mr. BLILEY. Mr. Speaker, for almost 16 years, 35,000 Turkish troops have illegally occupied Northern Cyprus while 200,000 Greek Cypriots remain refugees in their own land. When Turkish troops invaded cyprus in 1974, they easily defeated the Greek forces who were outnumbered and who were ill-equipped. In the face of those Turkish forces, the Cypriots stood courageously to protect their native land and in return, they have become hostage to the ruling minority.

We are now in the beginning of a new decade, and the Turks remain on the island in violation of international law. Their presence has been condemned by the United Nations and the Secretary General has consistently pursued unification talks, but to no avail. The Turks occupy 40 percent of Cyprus and their presence simply lends protection to the rump government of the Turkish Republic of northern Cyprus.

The United States' policy has been aimed at preserving the autonomous, united, and sovereign Cypriot Republic. The ultimate goal is the formulation of a democracy where the majority rules and the rights of the minority are protected. At the time of the invasion, the United States imposed an arms embargo and attempted to mediate the dispute between the two nations. Again, to no avail.

President Carter lifted the arms embargo in an effort to encourage the Turks to enter into peace talks and to invite a resolution to the problem. Yet since the lifting of the embargo, I have been disappointed as aid to Turkey has increased while the situation remains unchanged. The United States has continued to pressure the Turks into a peaceful resolution only to be met with threats of an exposed southern flank at NATO.

Mr. Speaker, I fully recognize the strategic significance of Turkey in the NATO alliance. Yet I do not believe that geopolitics are the only factor which sustains a secure alliance. The members of NATO are also bound by a common goal of democracy, freedom, and human rights. The alliance was founded in an effort to develop and preserve a civilized world in which those same freedoms on which the United States was founded, can be realized. The occupation of Cyprus does not heed this spirit of the NATO alliance.

Through the Davos process, the beginnings of peace have begun to take root. But the ultimate goal has not yet been achieved; we have not returned Cyprus to her full sovereignty. Mr. Speaker, I urge my colleagues to work to encourage democracy in Cyprus and to return autonomy and freedoms to the Cypriot people.

Mr. WOLPE. Mr. Speaker, thank you. I would like to extend my special thanks to the gentleman from New York [Mr. MANTON] for taking the time to coordinate this special order. Clearly, this is an issue which is worthy of the consideration and attention of this House.

Startling events are occurring throughout Eastern Europe. Slumbering eastern bloc countries are slowly awakening from a prolonged sleep under Soviet domination. We—in the West—have marveled at these dramatic changes, as the walls of oppression and isolation have, literally, come tumbling down across the continent. However, at the same time, the island of Cyprus continues to be divided by the green line which stretches across the once unified nation.

Cyprus has been divided since 1974, the year in which Turkish troops invaded the Republic of Cyprus and annexed nearly 40 percent of the island's territory. Surely we must be sensitive to the historic conflicts which contributed to the fateful invasion. But, while no one group is entirely blameless, we must acknowledge that several actions by Turkey and the Turkish-Cypriot leadership have effectively blocked the U.N.-sponsored peace talks and any hope for a resolution of the problem. These actions include the continued presence of thousands of Turkish troops and settlers on the annexed part of the island; the evasiveness of Rauf Denktash, the Turkish Cypriot leader, about whether and when he would meet with President Vassiliou to engage in peace talks; and the ongoing, violent intimidation by Turkish hardliners of Turkish-Cypriot opposition leaders who advocate an end to the illegal Turkish occupation.

In the past, the United States has been reluctant to put pressure on Turkey because of our concern about how such presence would affect Turkey's relationship to NATO and American security interests. But recent events in Eastern Europe and the Soviet Union have clearly diminished these strategic concerns. [It is time now that we strongly reaffirmed America's determination that there be a lasting negotiated settlement of the Cyprus conflict and an end to the Turkish occupation of Cyprus. We must impress upon Turkey that we will not casually acquiesce to continued Turkish intransigence.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. HUTTO (at the request of Mr. GEPHARDT) for today on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Member (at the request of Mr. PORTER) to revise and extend his remarks and include extraneous material:)

Mr. PORTER, for 5 minutes, today.

(The following Members (at the request of Mr. BORSKI) to revise and extend their remarks and include extraneous material:)

Mr. BORSKI, for 5 minutes, today.

Mr. COOPER, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. SAVAGE, for 30 minutes, today and 30 minutes on February 1.

Mr. RICHARDSON, for 60 minutes, today and 60 minutes on February 5.

Mr. SKELTON, for 30 minutes, on February 5.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. PORTER) and to include extraneous matter:)

Mr. CAMPBELL of California.

Mrs. MORELLA.

Mr. BROOMFIELD.

Mr. CRANE in two instances.

Mr. BROWN of Colorado.

Mr. GALLO.

Ms. ROS-LEHTINEN.

Mr. SUNDQUIST.

Mr. WOLF.

Mr. DUNCAN.

Mr. MCMILLAN of North Carolina.

(The following Members (at the request of Mr. BORSKI) and to include extraneous matter:)

Mr. STOKES in two instances.

Mr. DONNELLY.

Mr. KANJORSKI in two instances.

Mr. GUARINI.

Ms. OAKAR.

Mrs. SCHROEDER.

Mr. HOYER.

Mr. FASCELL in two instances.

Mr. MCMILLEN of Maryland.

Mr. MARKEY.

Mr. PANETTA.

Mr. LEVINE of California in two instances.

Mr. SANGMEISTER.

Mr. HAMILTON.

Mr. LEHMAN of Florida.

Mr. TOWNS.

SENATE JOINT RESOLUTION REFERRED

A joint resolution of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S.J. Res. 103. Joint resolution to designate the period commencing February 18, 1990, and ending February 24, 1990, as "National Visiting Nurse Associations Week," to the Committee on Post Office and Civil Service.

RECESS

The SPEAKER pro tempore. Pursuant to the order of the House earlier today, the House will stand in recess until approximately 8:40 p.m. to receive a message from the President.

Accordingly (at 3 o'clock and 37 minutes p.m.), the House stood in recess until approximately 8:40 p.m.

AFTER RECESS

The recess having expired, the House was called to order by the Speaker at 8 o'clock and 45 minutes p.m.

JOINT SESSION OF THE HOUSE AND SENATE HELD PURSUANT TO THE PROVISIONS OF HOUSE CONCURRENT RESOLUTION 242 TO HEAR AN ADDRESS BY THE PRESIDENT OF THE UNITED STATES

The SPEAKER of the House presided.

The Doorkeeper, the Honorable James T. Molloy, announced the Vice President and Members of the U.S. Senate, who entered the Hall of the House of Representatives, the Vice President taking the chair at the right of the Speaker, and the Members of the Senate, the seats reserved for them.

The SPEAKER. The Chair appoints as members of the committee on the part of the House to escort the President of the United States into the Chamber:

The gentleman from Missouri [Mr. GEPHARDT];

The gentleman from Pennsylvania [Mr. GRAY];

The gentleman from Maryland [Mr. HOYER];

The gentleman from Michigan [Mr. BONIOR];

The gentleman from California [Mr. FAZIO];

The gentleman from Texas [Mr. BROOKS];

The gentleman from Illinois [Mr. MICHEL];

The gentleman from Georgia [Mr. GINGRICH];

The gentleman from California [Mr. LEWIS];

The gentleman from Oklahoma [Mr. EDWARDS];

The gentleman from Minnesota [Mr. WEBER]; and

The gentleman from Texas [Mr. ARCHER].

The VICE PRESIDENT. The President of the Senate at the direction of that body appoints the following Senators as members of the committee on the part of the Senate to escort the President of the United States into the House Chamber:

The Senator from West Virginia [Mr. BYRD];

The Senator from Maine [Mr. MITCHELL];

The Senator from California [Mr. CRANSTON];

The Senator from Arkansas [Mr. PRYOR];

The Senator from Illinois [Mr. DIXON];

The Senator from Louisiana [Mr. BREAUX];

The Senator from South Dakota [Mr. DASCHLE];

The Senator from Georgia [Mr. FOWLER];

The Senator from Kansas [Mr. DOLE];

The Senator from Wyoming [Mr. SIMPSON];

The Senator from Colorado [Mr. ARMSTRONG];

The Senator from Rhode Island [Mr. CHAFEE];

The Senator from Mississippi [Mr. COCHRAN];

The Senator from Oklahoma [Mr. NICKLES]; and

The Senator from South Carolina [Mr. THURMOND].

The Doorkeeper announced the Ambassadors, Ministers, and Chargés d'Affaires of foreign governments.

The Ambassadors, Ministers, and Chargés d'Affaires of foreign governments entered the Hall of the House of Representatives and took the seats reserved for them.

The Doorkeeper announced the Chief Justice of the United States and the Associate Justices of the Supreme Court.

The Chief Justice of the United States and the Associate Justices of the Supreme Court entered the Hall of the House of Representatives and took the seats reserved for them in front of the Speaker's rostrum.

The Doorkeeper announced the Cabinet of the President of the United States.

The members of the Cabinet of the President of the United States entered the Hall of the House of Representatives and took the seats reserved for them in front of the Speaker's rostrum.

At 9 o'clock and 2 minutes p.m., the Doorkeeper announced the President of the United States.

The President of the United States, escorted by the committee of Senators and Representatives, entered the Hall

of the House of Representatives, and stood at the Clerk's desk.

[Applause, the Members rising.]

The SPEAKER. Members of Congress, I have the high privilege and the distinct honor to present to you our former colleague, the President of the United States.

[Applause, the Members rising.]

THE STATE OF THE UNION—ADDRESS BY THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 101-120)

The PRESIDENT. Mr. President, Mr. Speaker, Members of the 101st Congress, fellow citizens: I return as a former President of the Senate, and former member of this great House. Now, as President, it is my privilege to report to you on the State of the Union.

Tonight, I come not to speak about the "state of the government"—not to detail every new initiative we plan for the coming year, nor to describe every line item in the budget. I'm here to speak to you and to the American people about the State of the Union—about our world—the changes we've seen, the challenges we face. And what that means for America. There are singular moments in history: dates that divide all that goes before from all that comes after. Many of us in this chamber have lived much of our lives in a world whose fundamental features were defined in 1945. The events of that year decreed the shape of nations. The pace of progress. Freedom or oppression for millions of people around the world.

1945 provided the common frame of reference—the compass points of the post-war era we've relied upon to understand ourselves. That was our world. Until now. The events of the year just ended—the revolution of '89—have been a chain reaction—change so striking that it marks the beginning of a new era in the world's affairs.

Think back—just twelve short months ago—to the world we knew—as 1989 began.

One year ago, the people of Panama lived in fear, under the thumb of a dictator. Today, democracy is restored—Panama is free.

Operation "Just Cause" has achieved its objective. The number of military personnel in Panama is now very close to what it was before the operation began. And tonight, I am announcing that—well before the end of February—the additional numbers of American troops—the brave men and women of our Armed Forces who made this mission a success—will be back home.

A year ago in Poland, Lech Walesa declared that he was ready to open a dialog with the communist rulers of that country. Today, with the future of a free Poland in their own hands, members of Solidarity lead the Polish Government.

A year ago, freedom's playwright, Vaclav Havel, languished as a prisoner in Prague. Today, it's Vaclav Havel—President of Czechoslovakia.

And one year ago, Erich Honecker of East Germany claimed history as his guide. He predicted the Berlin Wall would last another hundred years. Today—less than one year later—it's the Wall that's history.

Remarkable events—events that fulfill the long-held hopes of the American people. Events that validate the long-standing goals of American policy—a policy based on a single, shining principle: the cause of freedom.

America—not just the Nation—but an idea, alive in the minds of people everywhere. As this new world takes shape, America stands at the center of a widening circle of freedom—today, tomorrow, and into the next century.

Our Nation is the enduring dream of every immigrant who ever set foot on these shores—and the millions still struggling to be free. This Nation—this idea called America—was and always will be—a new world. Our new world.

At a workers' rally—in a place called Branik on the outskirts of Prague—the idea called America is alive. A worker, dressed in grimy overalls, rises to speak at the factory gates. He begins his speech to his fellow citizens with these words—words of a distant revolution:

"We hold these truths to be self-evident. That all men are created equal, that they are endowed by their Creator with certain unalienable rights, [and] that among these are life, liberty and the pursuit of happiness."

It's no secret that, here at home, freedom's door opened long ago. The cornerstones of this free society have already been set in place: Democracy. Competition. Opportunity. Private investment. Stewardship. And of course, leadership.

Our challenge today is to take this democratic system of ours—a system second to none—and make it better.

A better America, where there's a job for everyone who wants one.

Where women working outside the home can be confident their children are in safe and loving care—and where government works to expand child care alternatives for parents.

Where we reconcile the needs of a clean environment and a strong economy.

Where "Made in the U.S.A." is recognized around the world as the symbol of quality and progress.

Where every one of us enjoys the same opportunities to live, to work, and to contribute to society. And where, for the first time, the American mainstream includes all of our disabled citizens.

Where everyone has a roof over his head—and where the homeless get the help they need to live in dignity.

Where our schools challenge and support our kids and our teachers—and where all of them make the grade.

Where every street, every city, every school, and every child is drug-free.

And finally, where no American is forgotten. Our hearts go out to our hostages—our hostages who are ceaselessly on our minds and in our efforts.

That's part of the future we want to see—the future we can make for ourselves. But dreams alone won't get us there. We need to extend our horizon—commit to the long-view. Our mission for the future starts today.

In the tough, competitive markets around the world, America faces great challenges and great opportunities. We know that we can succeed in the global economic arena of the nineties, but to meet that challenge we must make some fundamental changes—some crucial investments in ourselves.

Yes—we are going to invest in America. This Administration is determined to encourage the creation of capital—capital of all kinds. Physical capital: Everything, from our farms and factories to our workshops and production lines, all that is needed to produce and deliver quality goods and quality services. Intellectual capital: The source of ideas that spark tomorrow's products. And of course, our human capital: The talented workforce we'll need to compete in the global market.

And let me tell you. If we ignore human capital—we lose the spirit of American ingenuity—the spirit that is the hallmark of the American worker. That would be bad. And the American worker is the most productive worker in the world.

We need to save more—we need to expand the pool of capital for the new investments that mean more jobs, more growth. That's the idea behind a new initiative I call the Family Savings Plan, which I will send to the Congress tomorrow.

We need to cut the tax on capital gains—encourage risk-takers—especially those in our small businesses—to take those steps that translate into economic reward, jobs, and a better life for all of us.

We'll do what it takes to invest in America's future. The budget commitment is there. The money is there. It's there for Research and Development, R&D—a record high. It's there for our housing initiative—HOPE, to help everyone from first-time homebuyers to the homeless. The money's there to keep our kids drug-free: 70 percent more than when I took office in 1989. It's there for space exploration—and it's there for education: another record high.

And one more thing: Last fall at the Education Summit, the Governors and I agreed to look for ways to help make sure that kids are ready to learn—the very first day they walk into the classroom. I've made good on that commitment—by proposing a record increase in funds—an extra half a billion dollars—for something near and dear to all of us: Head Start.

Education is the one investment that means more for our future because it means the most for our children. Real improvement in our schools is not simply a matter of spending more. It is a matter of asking more—expecting more—of our schools, our teachers, of our kids, of our parents and ourselves. That's why tonight I am announcing America's education goals—goals developed with the enormous cooperation from the Nation's Governors; and if I might, I would like to say I am very pleased that Governor Gardner, Governor Clinton, Governor Branstad, Governor Campbell, all of whom are very key, in these discussions, these deliberations, are with us here tonight.

—By the year 2000, every child must start school ready to learn.

—The United States must increase the high school graduation rate to no less than 90 percent.

—And we're going to make sure our schools' diplomas mean something: In critical subjects—at the 4th, 8th and 12th grades—we must assess our students' performance.

—By the year 2000, U.S. students must be first in the world in math and science achievement.

—Every American adult must be a skilled literate worker and citizen.

—Every school must offer the kind of disciplined environment that makes it possible for our kids to learn—and every school in America must be drug-free.

Ambitious aims? Of course. Easy to do? Far from it. But the future's at stake. This Nation will not accept anything less than excellence in education.

These investments will keep America competitive. And I know this about the American people: We welcome competition. We'll match our ingenuity, our energy—our experience and technology—our spirit and enterprise—against anyone. Let the competition be free—but let it also be fair. America is ready.

Since we really mean it—and since we are serious about being ready to meet that challenge—we're getting our own house in order. We've made real progress. Seven years ago, the Federal deficit was 6 percent of our Gross National Product. In the new budget I sent up two days ago—the deficit is down to 1 percent of GNP.

That budget brings Federal spending under control. It meets the Gramm-Rudman target, brings that deficit down further, and balances the budget by 1993—with no new taxes.

And let me tell you, there's still more than enough Federal spending. For most of us, $1.2 trillion is a lot of money.

And once the budget is balanced, we can operate the way every family must when it has bills to pay. We won't leave it to our children and grandchildren. Once it is balanced, we will start paying off the national debt.

And there's something more we owe the generations of the future: Stewardship—the safekeeping of America's precious environmental inheritance.

As just one sign of how serious we are, we will elevate the Environmental Protection Agency to cabinet rank. Not more bureaucracy, not more red tape—but the certainty that here at home, and especially in our dealings with other nations, environmental issues have the status they deserve.

This year's budget provides over $2 billion in new spending to protect our environment, with over $1 billion for global change research. And a new initiative I call "America the Beautiful"—to expand our national parks and wildlife preserves and improve recreational facilities on public lands.

And something else: Something that will help keep this country clean, from our forestland to our inner cities, and keep America beautiful for generations to come—the money to plant a billion trees a year.

And tonight, let me say again to all the members of the Congress: The American people did not send us here to bicker. There's work to do—and they sent us here to get it done. And once again, in the spirit of cooperation, I offer my hand to all of you. Let's work together to do the will of the people. Clean Air. Child Care. The Educational Excellence Act. Crime and Drugs. It's time to act. The Farm Bill. Transportation policy. Product liability reform. Enterprise Zones. It's time to act together.

And there's one thing I hope we will be able to agree on. It's about our commitments. I'm talking about Social Security.

To every American out there on Social Security, to every American supporting that system today, and to everyone counting on it when they retire: We made a promise to you—and we are going to keep it.

We rescued the system in 1983—and it's sound again. Bipartisan agreement. Our budget fully funds today's benefits—and it assures that future benefits will be funded as well. The last thing we need to do is mess around with Social Security.

There's one more problem we need to address. We must give careful consideration to the recommendations of the health care studies now underway. That's why tonight, I am asking Dr. Louis Sullivan—Secretary of Health and Human Services—to lead a Domestic Policy Council review of recommendations on the quality, accessibility and cost of our nation's health care system. I am committed to bring the staggering costs of health care under control.

The "state of the government" does indeed depend on many of us in this very chamber. But the State of the Union depends on all Americans. We must maintain the democratic decency that makes a nation out of millions of individuals. I have been appalled at the recent mail bombings across this country. Every one of us must confront and condemn racism, anti-semitism, bigotry and hate. Not next week, not tomorrow, but right now. Every single one of us.

The State of the Union depends on whether we help our neighbor—claim the problems of our community as our own. We've got to step forward when there's trouble—lend a hand, be what I call a point of light to a stranger in need. We've got to take the time after a busy day to sit down and read with our kids, help them with their homework, and pass along the values we learned as children. That's how we sustain the State of the Union.

Every effort is important. It all adds up—it's doing the things that give democracy meaning. It all adds up to who we are—and who we will be.

And let me say, that so long as we remember the American idea—so long as we live up to the American ideal—the State of the Union will remain sound and strong.

And to those who worry we have lost our way—well, I want you to listen to parts of a letter written by James Markwell—PFC James Markwell, a 20-year-old Army medic of the 1st Battalion, 75th Rangers. It's dated December 18th—the night before our Armed Forces went into action in Panama. It's a letter servicemen write—and hope will never be sent. Sadly, Private Markwell's mother did receive this letter. And she passed it on to me out there in Cincinnati.

Here is some of what he wrote: "I have never been afraid of death, but now he is waiting at the corner. . . . I have been trained to kill and to save, so has everyone else. I am frightened of what lays beyond the fog, yet. . . . Do not mourn for me, revel in the life that I have died to give you. . . . But most of all, don't forget that the Army was my choice. Something that I wanted to do."

"Remember I joined the Army to serve my country and insure that you are free to do what you want and live our lives freely."

Let me add that Private Markwell was among the first to see battle in Panama, and one of the first to fall.

He knew what he believed in. He carried the idea we call America in his heart.

I began tonight speaking about the changes we've seen this past year. There is a new world of challenges and opportunities before us. And there is a need for leadership that only America can provide.

Nearly 40 years ago, in his last address to the Congress, President Harry Truman predicted such a time would come. He said: "As our world grows stronger, more united, more attractive to men on both sides of the iron curtain, then inevitably there will come a time of change within the communist world."

Today, that change is taking place.

For more than 40 years, America and its allies held communism in check, and ensured that democracy would continue to exist. Today, with communism crumbling, our aim must be to ensure democracy's advance. To take the lead in forging peace and freedom's best hope—a great and growing commonwealth of free nations.

To the Congress and to all Americans, I say it is time to acclaim a new consensus at home and abroad—a common vision of the peaceful world we want to see.

Here in our own hemisphere, it's time for all the people of the Americas—North and South—to live in freedom.

In the Far East and Africa, it is time for the full flowering of free governments and free markets that have served as the engine of progress.

It is time to offer our hand to the emerging democracies of Eastern Europe. So that continent—for too long a continent divided—can see a future whole and free.

And it's time to build on our new relationship with the Soviet Union—to endorse and encourage a peaceful process of internal change toward democracy and economic opportunity.

We are in a period of great transition, great hope, yet great uncertainty. We recognize that the Soviet military threat in Europe is diminishing, but we see little change in Soviet strategic modernization. Therefore, we must sustain our own strategic offense modernization and the Strategic Defense Initiative.

But the time is right to move forward on a conventional arms control agreement to move us to more appropriate levels of military forces in Europe—a coherent defense program that ensures the U.S. will continue to be a catalyst for peaceful change in Europe. I've consulted with leaders of NATO—and in fact, I spoke by phone with President Gorbachev, just today.

I agree with our European allies that an American military presence in Europe is essential—and that it should not be tied solely to the Soviet military presence in Eastern Europe.

But troop levels can still be lower. So tonight, I am announcing a major new step—for a further reduction in U.S. and Soviet manpower in Central and Eastern Europe to 195,000 on each side.

This number, this level, reflects the advice of our senior military advisors. It is designed to protect American and European interests—and sustain NATO's defense strategy. A swift conclusion to our arms control talks—conventional, chemical and strategic—must now be our goal. That time has come.

Still, we must recognize an unfortunate fact: In many regions of the world tonight, the reality is conflict—not peace. Enduring animosities and opposing interests remain. Thus the cause of peace must be served by an America strong enough—and sure enough—to defend our interests and our ideals. It's this American idea that for the past four decades helped inspire this Revolution of '89.

Here at home—and in the world—there is history in the making—and history to be made. Six months ago, early in this season of change, I stood at the gates of the Gdansk Shipyard in Poland at the monument to the fallen workers of Solidarity. It's a monument of simple majesty. Three tall crosses rise up from the stones. Atop each cross, an anchor—an ancient symbol of hope.

The anchor in our world today is freedom. Holding us steady in times of change—a symbol of hope to all the world. And freedom is at the very heart of the idea that is America.

Giving life to the idea depends on every one of us. Our anchor has always been faith and family.

In the last few days of this past momentous year, our family was blessed once more—celebrating the joy of life when a little boy became our 12th grandchild.

When I held the little guy for the first time, the troubles at home and abroad seemed manageable and totally in perspective.

Now, I know you're probably thinking: that's just a grandfather talking.

Well, maybe you're right. But I've met a lot of children this past year—across this country, as all of you have, and everywhere from the Far East to Eastern Europe. All kids are unique. Yet, all kids are alike. The budding young environmentalists I met this month, who joined me exploring the Florida Everglades. The little leaguers I played catch with in Poland—ready to go from Warsaw to the World Series. Even the kids who are ill or alone—God bless the boarder babies, born addicted to drugs and AIDS and—coping with problems no child should have to face. But, you know, when it comes to hope and the future: Every kid is the same. Full of dreams. Ready to take on the world. All special because they are the very future of freedom. To them belongs this new world I've been speaking about.

So tonight I'm going to ask something of every one of you. Let me start with my generation—with the grandparents out there. You are our living link to the past. Tell your grandchildren the story of struggles waged, at home and abroad. Of sacrifices freely made for freedom's sake. And tell them your own story as well—because every American has a story to tell.

Parents: Your children look to you for direction and guidance. Tell them of faith and family. Tell them we are one Nation under God. Teach them that of all the many gifts they can receive, liberty is their most precious legacy. And of all the gifts they can give, the greatest, the greatest is helping others.

And to the children and young people out there tonight: With you rests our hope—all that America will mean in the years and decades ahead. Fix your vision on a new century—your century. On dreams we cannot see. On the destiny that is yours—and yours alone.

And finally, let all Americans—all of us together here in this chamber, the symbolic center of democracy—affirm our allegiance to this idea we call America. And let us all remember that the State of the Union depends on each and every one of us.

God bless all of you, and may God bless this great Nation, the United States of America.

[Applause, the Members rising.]

At 9 o'clock and 40 minutes p.m., the President of the United States, accompanied by the committee of escort, retired from the Hall of the House of Representatives.

The Doorkeeper escorted the invited guests from the Chamber in the following order:

The members of the President's Cabinet.

The Chief Justice of the United States and the Associate Justices of the Supreme Court.

The Ambassadors, Ministers, and charges d'Affaires of foreign governments.

JOINT SESSION DISSOLVED

The SPEAKER. The Chair declares the joint session of the two Houses now dissolved.

Accordingly, at 9 o'clock and 45 minutes p.m., the joint session of the two Houses was dissolved.

The Members of the Senate retired to their Chamber.

MESSAGE OF THE PRESIDENT REFERRED TO THE COMMITTEE OF THE WHOLE HOUSE ON THE STATE OF THE UNION

The SPEAKER pro tempore (Mr. GEPHARDT). The Chair recognizes the gentleman from Pennsylvania [Mr. GRAY].

Mr. GRAY. Mr. Speaker, I move that the message of the President be referred to the Committee of the Whole House on the State of the Union and ordered printed.

The motion was agreed to.

ADJOURNMENT

Mr. GRAY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 9 o'clock and 47 minutes p.m.), the House adjourned until tomorrow, Thursday, February 1, 1990, at 11 a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2388. A letter from the Chief Financial Officer, Department of State, transmitting a report of two violations of the Anti-Deficiency Act which involved the excess obligation of the fiscal years 1979 and 1980 allotments for the American Embassy in Moscow, pursuant to 31 U.S.C. 1517(b); to the Committee on Appropriations.

2389. A letter from the Secretary of Defense, transmitting the Department's annual report of expenditures and accomplishments, pursuant to 10 U.S.C. 113 (c), (e); to the Committee on Armed Services.

2390. A letter from the Vice Chairman, Potomac Electric Power Co., transmitting a copy of the company's balance sheet as of December 31, 1989, pursuant to D.C. Code Section 43-513; to the Committee on the District of Columbia.

2391. A letter from the Chairman, Federal Labor Relations Authority, transmitting a report of actions taken to increase competition for contracts, fiscal year 1989, pursuant to 41 U.S.C. 419; to the Committee on Government Operations.

2392. A letter from the Deputy Associate Director for Collection and Disbursement, Department of the Interior, transmitting notification of proposed refunds of excess royalty payments in OCS areas, pursuant to 43 U.S.C. 1339(b); to the Committee on Interior and Insular Affairs.

2393. A letter from the Deputy Associate Director for Collection and Disbursement, Department of the Interior, transmitting notification of proposed refunds of excess royalty payments in OCS areas, pursuant to 43 U.S.C. 1339(b); to the Committee on Interior and Insular Affairs.

2394. A letter from the Deputy Associate Director for Collection and Disbursement, Department of the Interior, transmitting notification of proposed refunds of excess royalty payments in OCS areas, pursuant to 43 U.S.C. 1339(b); to the Committee on Interior and Insular Affairs.

2395. A letter from the General Counsel, Department of the Treasury, transmitting a draft of proposed legislation to authorize the Secretary of the Treasury to adopt distinctive counterfeit deterrents for exclusive use in the manufacture of U.S. securities and obligations, to clarify existing authority to combat counterfeiting, and for other purposes; to the Committee on the Judiciary.

2396. A letter from the Assistant Secretary of the Army (Civil Works), transmitting the second report on a list of projects which have been authorized, but for which no funds have been obligated during the preceding 10 full fiscal years, pursuant to 33 U.S.C. 579a; to the Committee on Public Works and Transportation.

2397. A letter from the Administrator, Federal Highway Administration, transmitting the third status report on certain highway demonstration projects, as of September 30, 1989, pursuant to Public Law 100-17, section 149(j)(1) (101 Stat. 202); to the Committee on Public works and Transportation.

2398. A letter from the Under Secretary, International Affairs and Commodity Programs, Department of Agriculture, transmitting the second quarterly commodity and country allocation table showing current programming plans for commodity assistance under titles I/III of Public Law 480 for fiscal year 1990, pursuant to 7 U.S.C. 1736b(a); jointly, to the Committees on Agriculture and Foreign Affairs.

2399. A letter from the Administrator, Federal Aviation Administration, transmitting the report of progress on developing and certifying the Traffic Alert and Collision Avoidance System [TCAS], covering the months of September through December 1989, pursuant to Public Law 100-223, section 203(b) (101 Stat. 1518); jointly, to the Committees on Public Works and Transportation and Science, Space, and Technology.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DIXON: Committee on Standards of Official Conduct. Report entitled "In the Matter of Representative Gus Savage" (Rep. 101-397). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. JONES of North Carolina:

H.R. 3921. A bill to amend Title 46 of the United States Code relative to laws governing the coastwise trade, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. BILIRAKIS:

H.R. 3922. A bill to guarantee cost-of-living adjustments in fiscal year 1991 for persons receiving retired pay or an annuity under military retirement and survivor benefit programs; to the Committee on Armed Services.

H.R. 3923. A bill to guarantee cost-of-living adjustments in fiscal year 1991 for persons receiving benefits under civil service retirement and military retirement and survivor benefit programs; jointly, to the Committees on Post Office and Civil Service and Armed Services.

By Mr. BUECHNER:

H.R. 3924. A bill to amend the Internal Revenue Code of 1986 to increase the personal exemption amount; to the Committee on Ways and Means.

By Mr. COOPER:

H.R. 3925. A bill to amend title 23, United States Code, to establish national safety belt and motorcycle helmet use requirements, to amend the National Traffic and Motor Vehicle Safety Act of 1966 to authorize the Secretary of Transportation to conduct informational programs to promote the use of motor vehicle safety equipment, and for other purposes; jointly, to the Committees on Public Works and Transportation and Energy and Commerce.

By Mr. HENRY:

H.R. 3926. A bill to amend the Internal Revenue Code of 1986 to remove certain limitations on the exclusion of income from United States savings bonds when used to pay higher education tuition and fees; to the Committee on Ways and Means.

By Mr. LIPINSKI (for himself, Mr. COX, Mr. ROSTENKOWSKI, Mr. KLECZKA, Mr. MCGRATH, Mr. SANGMEISTER, Mr. VISCLOSKY, Mr. FEIGHAN, Mr. ACKERMAN, Mr. HERTEL, Mr. HYDE, Mr. MANTON, and Ms. KAPTUR):

H.R. 3927. A bill to provide for 200,000 additional immigrant visas in each of 5 fiscal years for certain independent immigrants from countries that have traditionally denied freedom of emigration; to the Committee on the Judiciary.

By Ms. OAKAR (for herself and Mrs. LLOYD):

H.R. 3928. A bill to authorize the Secretary of Housing and Urban Development to make grants to locally based nonprofit organizations, local governments, and Indian tribes to provide home repairs and modifications for older and disabled homeowners; to the Committee on Banking, Finance and Urban Affairs.

By Mr. PANETTA (for himself, Mr. MILLER of California, Mr. PENNY, Mr. STENHOLM, Mr. SYNAR, Mr. MOODY, Mr. BATES, Mr. MORRISON of Connecticut, Mr. DEFAZIO, Mrs. PATTERSON, and Mr. SIKORSKI):

H.R. 3929. A bill to amend the Congressional Budget Act of 1974 to provide for budget process reform, to repeal sequestration under the Balanced Budget and Emergency Deficit Control Act of 1985, to establish a pay-as-you-go basis for Federal budgeting, and for other purposes; jointly, to the Committees on Government Operations and Rules.

By Mr. RAHALL:

H.R. 3930. A bill to reauthorize the waste treatment construction grants program, and for other purposes; to the Committee on Public Works and Transportation.

By Mr. SCHUETTE (for himself, Mr. MADIGAN, Mr. FIELDS, Mr. MACHTLEY, Mr. RHODES, Mr. DOUGLAS, Mr. GOSS, Mr. STEARNS, Mr. ROHRABACHER, Mr. WELDON, Mr. MCEWEN, Mr. NEAL of North Carolina, Mr. MCMILLEN of Maryland, Mr. COSTELLO, Mr. TOWNS, Mr. WALSH, Mr. BLILEY, Mr. PAXON, and Mr. PURSELL):

H. Con. Res. 253. Concurrent resolution expressing the sense of the Congress that President Guillermo Endara of Panama should be invited to address a joint meeting of Congress; to the Committee on Foreign Affairs.

By Mr. DIXON:

H. Res. 313. Resolution providing amounts from the contingent fund of the House for expenses of investigations and studies by the Committee on Standards of Official Conduct in the 2d session of the 101st Congress; to the Committee on House Administration.

By Mrs. BOXER (for herself, Mr. AUCOIN, Mr. FAZIO, Ms. SLAUGHTER of New York, Mr. SCHUMER, Mr. MILLER of California, Mrs. LOWEY of New York, Mrs. JOHNSON of Connecticut, Mr. LEHMAN of Florida, Mr. UDALL, Mr. YATES, Mr. CONYERS, Mr. KOSTMAYER, Mr. DICKS, Mr. TOWNS, Mr. RAVENEL, Mr. KENNEDY, Mr. DEFAZIO, Mr. MOODY, Mr. DIXON, Mr. WILSON, Mr. FAUNTROY, Mr. GEPHARDT, Mr. WEISS, Mr. NAGLE, Mr. LEWIS of Georgia, Mr. MORRISON of Connecticut, Mr. WAXMAN, Mr. SCHEUER, Mr. FRANK, Mr. LEVIN of Michigan, Mr. FROST, Mr. MINETA, Mr. BRYANT, Mr. MARTINEZ, Mr. SKAGGS, Ms. SCHNEIDER, Mr. GREEN, Mr. BROOKS, Mrs. COLLINS, Mr. CLAY, Mr. ESPY, Mr. RANGEL, Mr. AKAKA, Mr. BOEHLERT, Mr. ROYBAL, Mrs. KENNELLY, Mrs. SCHROEDER, Mrs. ROUKEMA, Mrs. UNSOELD, Mr. MORRISON of Washington, Mr. NELSON of Florida, Mr. BOUCHER, Mr. BATES, Mr. LEVINE of California, Ms. PELOSI, Mr. JOHNSTON of Florida, Mr. STARK, Mr. HAYES of Illinois, Mr. STOKES, Mr. BERMAN, Mr. CROCKETT, Mr. MCDERMOTT, Mr. DURBIN, Mr. MARKEY, Mr. GILMAN, Mrs. MORELLA, Mr. DOWNEY, Mr. OWENS of New York, Mr. EDWARDS of California, Mr. MRAZEK, Mr. SMITH of Florida, Mr. GORDON, Mr. FORD of Michigan, Mr. MCCLOSKEY, Mr. DELLUMS, Ms. SNOWE, Mr. ACKERMAN, Mr. BUSTAMANTE, Mr. GEJDENSON, Mr. STUDDS, Mr. FOGLIETTA, Mr. WYDEN, Mr. JONTZ, Mr. ATKINS, Mr. BEILENSON, Mr. WOLPE, Mr. EVANS, Mr. PAYNE of New Jersey, Mr. SOLARZ, Mr. CAMPBELL of Colorado, Mr. PEASE, Mr. PANETTA, Mr. CARDIN, Mr. FORD of Tennessee, Mr. TORRICELLI, Mr. BROWN of Colorado, Mr. GRAY, Mr. TORRES, Mr. MILLER of Washington, Mr. BRENNAN, Mr. DYMALLY, and Mr. HUBBARD):

H. Res. 314. Resolution expressing the sense of the House of Representatives permitting medicaid funding of abortions in the case of rape or incest; to the Committee on Energy and Commerce.

By Mr. DELLUMS:

H. Res. 315. Resolution providing amounts from the contingent fund of the House for expenses of investigations and studies by the Committee on the District of Columbia in the 2d session of the 101st Congress; to the Committee on House Administration.

ADDITIONAL SPONSORS

Under clause 4 of rule XXII, sponsors were added to public bills and resolutions as follows:

H.R. 5: Mr. ENGLISH and Mr. SABO.

H.R. 84: Mr. SCHUMER.

H.R. 89: Mrs. PATTERSON.

H.R. 101: Mr. ROYBAL.

H.R. 303: Mr. DOUGLAS, Mr. MANTON, Mr. DOWNEY, and Mr. MARTIN of New York.

H.R. 995: Mr. HYDE.

H.R. 1090: Mr. BARNARD.

H.R. 1167: Mr. PAYNE of New Jersey.

H.R. 1400: Mr. MOORHEAD, Ms. SLAUGHTER of New York, Mr. LEWIS of California, Mr. LEHMAN of California, Mr. KOLBE, Mr. ROYBAL, Mr. SPRATT, and Mr. BRYANT.

H.R. 1451: Mr. BLILEY.

H.R. 1470: Mr. KANJORSKI.

H.R. 1574: Mr. DIXON and Mr. WOLPE.

H.R. 1676: Mr. BUSTAMANTE.

H.R. 1730: Ms. ROS-LEHTINEN and Mr. TAYLOR.

H.R. 1746: Mr. FAUNTROY.

H.R. 2057: Mr. BRYANT.

H.R. 2096: Mr. KENNEDY.

H.R. 2202: Mr. FROST.

H.R. 2228: Mr. ENGEL.

H.R. 2270: Mr. LIPINSKI, Mr. CAMPBELL of Colorado, and Mr. LANCASTER.

H.R. 2562: Mr. ANNUNZIO.

H.R. 2575: Mr. SKEEN, Mr. SPRATT, Ms. LONG, Mr. CONDIT, Mr. BATES, Mrs. UNSOELD, Mr. HATCHER, Mr. ASPIN, Mrs. MORELLA, Mrs. BENTLEY, Mr. ARCHER, Ms. SLAUGHTER of New York, Mr. ROBINSON, Mrs. VUCANOVICH, Mr. SARPALIUS, Mr. FRANK, Mr. RITTER, and Mr. ANNUNZIO.

H.R. 2584: Mr. MARKEY, Mr. BATES, Mr. STEARNS, Mr. LANCASTER, Mr. DORGAN of North Dakota, and Mr. FRENZEL.

H.R. 2754: Mr. FROST, Mr. HAWKINS, Mr. JOHNSON of South Dakota, Mr. JOHNSTON of Florida, Mr. JONTZ, Mr. MCCURDY, Mr. MOORHEAD, Mr. MORRISON of Connecticut, Mr. NOWAK, Mr. PASHAYAN, Mr. PAXON, Mr. SAXTON, Mr. SMITH of Texas, Mr. SPENCE, and Mr. WAXMAN.

H.R. 2816: Mr. STALLINGS.

H.R. 2819: Mr. CHANDLER, Mr. MILLER of Washington, and Mr. MCDERMOTT.

H.R. 2826: Mr. MILLER of Washington, Mr. CHANDLER, and Mr. MCDERMOTT.

H.R. 2832: Mr. MCDERMOTT and Mr. CHANDLER.

H.R. 3162: Mr. CONDIT and Mr. GINGRICH.

H.R. 3380: Mr. WEISS, Mr. WAXMAN, Mr. COX, Mr. BAKER, Mr. HAYES of Louisiana, Mr. BONIOR, Mr. KENNEDY, Mr. DURBIN, Mr. NELSON of Florida, and Mr. MCDERMOTT.

H.R. 3401: Mr. TAYLOR, Mr. CLARKE, and Mr. JENKINS.

H.R. 3412: Mr. BOUCHER.

H.R. 3454: Mr. ESPY, Mr. MARTIN of New York, Mr. JONES of North Carolina, Ms. SNOWE, Mr. RAVENEL, Mr. ANTHONY, Mr. VALENTINE, Mr. TALLON, Mr. BAKER, Mr. COURTER, Mr. LANCASTER, and Mr. HARRIS.

H.R. 3475: Mr. LANCASTER.

H.R. 3500: Mr. BARTON of Texas, Mr. CONTE, Mr. COUGHLIN, Mr. HYDE, Mr. BUECHNER, and Mr. NEAL of North Carolina.

H.R. 3505: Mr. BORSKI.

H.R. 3539: Mr. EDWARDS of Oklahoma.

H.R. 3604: Mr. SMITH of New Hampshire, Mr. SAXTON, Mr. LAGOMARSINO, Mr. JAMES, Mr. HOLLOWAY, and Mr. BLILEY.

H.R. 3625: Mr. BEILENSON, Mr. HOUGHTON, Mr. BATEMAN, Mr. MURPHY, Mr. TOWNS, Mr. HUGHES, Mr. MILLER of California, Mr. MCGRATH, Mr. WILSON, Mr. BOEHLERT, Mr. GREEN, Mr. ROE, Mr. LEWIS of Georgia, Mrs. COLLINS, Mr. OWENS of Utah, Mr. SMITH of Vermont, Mr. FAZIO, and Mr. NEAL of North Carolina.

H.R. 3639: Mr. MYERS of Indiana.

SENATE—*Wednesday, January 31, 1990*

(Legislative day of Tuesday, January 23, 1990)

The Senate met at 10 a.m., on the expiration of the recess, and was called to order by the President pro tempore [Mr. BYRD].

PRAYER

The Chaplain, the Reverend Richard C. Halverson, D.D., offered the following prayer:

Let us pray:

In those days there was no king in Israel: every man did that which was right in his own eyes.—Judges 21:25.

Almighty God, Ruler of the Earth, perfect in justice, author of order, in light of the explosive ferment in Eastern Europe we pray for the people who struggle and for those who labor to bring order out of chaos. Protect the fragile efforts lest new found freedom degenerate into anarchy, setting the stage for tyranny and worse bondage than before. And help us in these critical times in America to realize that liberty is not license; freedom is not each one doing what is right in his own eyes. Remind us that the liberty we have enjoyed for 200 years is possible only under the rule of God, that freedom under law is the only true freedom, that refusal to accept the consequences of choice imperils the right to choose.

In Jesus' name who came to fulfill the law. Amen.

RECOGNITION OF THE MAJORITY LEADER

The PRESIDENT pro tempore. Under the order the majority leader is recognized.

THE JOURNAL

Mr. MITCHELL. Mr. President, I ask unanimous consent that the Journal of the proceedings be approved to date.

The PRESIDENT pro tempore. Without objection, it is so ordered.

SCHEDULE

Mr. MITCHELL. Mr. President, this morning, following the time for the two leaders, there will be a period for morning business until 10:30 a.m., with Senators permitted to speak therein for up to 5 minutes each. At 10:30 this morning, the Senate will resume debate on the clean air bill, S. 1630.

I alert Senators again to the possibility of rollcall votes occurring today on amendments to the clean air bill.

This evening at 8:40 p.m, Members of the Senate will assemble as a body to proceed to the House Chamber for the State of the Union Address.

RESERVATION OF LEADERS' TIME

Mr. MITCHELL. Mr. President, I reserve the remainder of my leader time and I reserve all of the leader time of the distinguished Republican leader.

The PRESIDENT pro tempore. Without objection, the unused portions of the leaders' time will be reserved.

MORNING BUSINESS

The PRESIDENT pro tempore. Under the order the Senate will now proceed to the consideration of morning business until the hour of 10:30 a.m. with Senators permitted to speak therein for not to exceed 5 minutes each.

Mr. MITCHELL. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The absence of a quorum has been suggested. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. REID. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

The Senator from Nevada is recognized for not to exceed 5 minutes if he seeks recognition.

Mr. REID. I thank the Chair.

(The remarks of Mr. REID pertaining to the introduction of S. 2045 are located in today's RECORD under "Statements on Introduced Bills and Joint Resolutions.")

The PRESIDENT pro tempore. The majority leader is recognized.

SENATOR KENNEDY AND THE POCKET VETO

Mr. MITCHELL. Mr. President, last Thursday the Senate failed to join the House in overriding President Bush's veto of the Emergency Chinese Immigration Relief Act of 1989. Although I was disappointed in the result of that vote, the fact that the bill's fate was determined by a vote in each Chamber, rather than by the President's exercise of a pocket veto, represents a victory for proper constitutional procedures. This development may be credited in significant part to Senator TED KENNEDY's defense, beginning nearly two decades ago, of Congress' prerogative under the Constitution to consider whether legislation should be passed over the President's objections.

On two occasions in the 1970's, Senator KENNEDY brought lawsuits to challenge Presidential pocket vetoes. In one, Kennedy versus Sampson, which Senator KENNEDY argued on his own behalf, the U.S. Court of Appeals for the District of Columbia Circuit invalidated President Nixon's pocket veto of health legislation during an intrasession adjournment in 1970. A second lawsuit, Kennedy versus Jones, in which Senator KENNEDY also appeared pro se, resulted in the Department of Justice's acquiescence in the publication as a law of a transportation bill that President Nixon had attempted to pocket veto in 1974 during an intersession adjournment of the Congress. As an outgrowth of Senator KENNEDY's litigation, President Ford, relying on Attorney General Levi's advice, which in turn had been based on Solicitor General Bork's advice, determined that a return veto rather than a pocket veto should be used during both intrasession and intersession adjournments, whenever the House of Congress to which a bill must be returned had specifically authorized an officer or other agent to receive return vetoes.

Senator KENNEDY described the history of the pocket veto issue in a scholarly article, entitled "Congress, The President, and the Pocket Veto," which was published in the Virginia Law Review in 1977. Although the executive branch had acquiesced in judgment against it in Kennedy versus Jones, Senator KENNEDY, with foresight, warned that a future administration might choose to relitigate the issue. That, in fact, occurred when President Reagan sought to utilize during an intersession adjournment in 1983 a pocket veto to kill a human rights measure concerning military aid to El Salvador. Joining Representative Michael Barnes and other Members of the House, the Senate argued in the case of Barnes versus Kline that the President's pocket veto was ineffective. The District of Columbia Circuit sustained the congressional position, holding that the principle which Senator KENNEDY had established 10 years earlier in Kennedy versus Sampson applied equally to intersession vetoes. The Supreme Court left the constitutional issue unresolved, however, because the case became moot when the

fiscal year to which the El Salvador bill applied ended.

President Bush's memorandum on vetoing the Emergency Chinese Immigration Act of 1989 last November suggests that the act had been subject to a pocket veto because the intersession adjournment of the Congress had prevented, in the President's view, the return of the bill. However, taking note of the opinions of the District of Columbia Circuit, the President wrote that he was "sending" the bill to the House Clerk "with my objections." But the President complies with the Constitution's veto clause, which establishes that the procedure for vetoing a bill is to "return" it "with his Objections," when he sends the bill back to the originating House with a statement of objections, as was done with the Emergency Chinese Immigration Act.

Although the President's memorandum may have preserved a legal position for a future day, in the case of the Emergency Chinese Immigration Act both Congress and the President acted on the well-founded constitutional understanding that whether the bill became a law would be determined by whether there were sufficient votes in each House to override the veto. The President and administration officials lobbied hard and successfully for votes. They would not have had to do so if the act was already a nullity because it had been pocket vetoed last November, and if the President's decision to send it back to the Congress was only a gesture.

In the end, the defeat of the legislation was a consequence of a vote according to the constitutional plan. That plan, which Presidents should use rather than avoid, amply protects the Executive's interests, for the President need obtain the support of only one third plus one of the voting Members in one Chamber to sustain a veto, while recognizing the framers' determination that the President's veto power should be qualified rather than absolute.

Consistency and certainty in the procedural relationships between the executive and legislative branches is important in providing both branches with a common set of rules within which to resolve disagreements over policy. Because each House has appointed an officer to receive Presidential messages during adjournments, we expect that the President will continue, if the occasion arises, to return bills with objections during all adjournments which precede the final adjournment of the Congress, as President Ford earlier had determined he should do. While the administration has not embraced the principles which the District of Columbia circuit has recognized, it has acted in the case of the Emergency Chinese Immigration Relief Act consistently with those principles. This is a salutary development for our system of constitutional government, and is an achievement for which Senator KENNEDY deserves considerable credit.

The PRESIDENT pro tempore. The Senator from Arizona [Mr. MCCAIN] is recognized for not to exceed 5 minutes.

CATASTROPHIC HEALTH CARE

Mr. MCCAIN. Mr. President, I would like to take the 5 minutes this morning to discuss the catastrophic health care issue which, despite perhaps the desire of many of us, has not gone away.

As we all remember at the end of last year the Congress repealed the act entirely. This body acceded at a very late hour, just before adjournment, to the other body. We repealed the entire act, which, of course, was in contravention to the 99-to-0 vote here which would have maintained the core benefits for our seniors of the catastrophic illness package.

Since the repeal of the act, Mr. President, a number of things have happened. All of them were predicted. Medigap insurance rates have gone up—in my own State around 20 percent. The Washington Post reported last week that Washington area seniors are being hard hit with increases as high as 35 percent for Medigap insurance premiums. About two-thirds of the rate increase is said to be tied to the full repeal of the Catastrophic Coverage Act.

For most, these rate increases are becoming effective this month. For those who purchased their insurance through AARP, the American Association of Retired Persons, the rate increases will not hit until July, at which time it will be a 17-percent increase.

We will plan on seeing Medigap insurance rates continue to rise at an alarming rate, placing a very heavy financial burden on many middle-income and low-income seniors, which, very frankly, Mr. President, they cannot afford. There are other financial costs such as exposure to multiple hospital deductibles, coverage of mammogram screening, and duplicate deductibles for skilled nursing care to name a few.

Equally important are the human costs of this repeal. Mr. President, 4,000 elderly women will die this year due to the loss of the mammogram screening benefit. Some who had previously had coverage under catastrophic during 1989 have now lost those benefits. A few days ago, on the MacNeil/Lehrer program, there was a story of a woman who had a stroke and was eligible then at the time under the catastrophic health care insurance as it was enacted into law. She had a relapse and was back in the hospital, and since the legislation has been repealed, she faces economic disaster.

No access to immunosuppressive drug coverage for seniors is now available. Terminally ill seniors will no longer have expanded hospice coverage, and repeal of home health benefits will result in some not being able to get care in the environment of their home, and some will not be able to get care at all.

Mr. President, the need to take care of America's seniors has not gone away with repeal. The need and the obligation of America as a society to care for our elderly has not gone away.

Mr. President, I see we have several options. We can stay with total repeal and ignore this need that is out there—the need which is exacerbated by increasing Medigap premium costs—and ignore our obligations to Americans as a society. We could, as some suggested over in the other body, add a few of the minor benefits that were repealed. That is a step in the right direction. Or we could take the basic core bill that we passed by a vote of 99 to 0 and left pending at the desk and sent to the House.

Mr. President, I guess what I am saying this morning is the issue is not going away. There are Americans who we have incurred obligations to as a society, and we must fulfill those obligations. I look forward to us revisiting the entire gamut of issues and coming up with a package of benefits which our seniors have so rightfully earned and that we as a society owe them.

I yield back the remainder of my time. I suggest the absence of a quorum, Mr. President.

The PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. LIEBERMAN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

HONORING CHERYL BORTH

Mr. BURDICK. Mr. President, last fall a North Dakotan, Cheryl Borth, became the first woman to be elected to a voting position on the National Telephone Cooperative Association's board of directors. I would like to take this opportunity to congratulate Cheryl on achieving this position.

Cheryl Borth is a board member of the Consolidated Telephone Cooperative in Dickinson, ND. She has chaired the North Dakota Association of Telephone Cooperative's Planning and Education Committee, has served on NTCA's member services committee, and has won NTCA's Excellence in Leadership Award. She will be repre-

senting North Dakota, South Dakota, and Minnesota as a national director.

Borth testified before my Agriculture Appropriations Subcommittee last April on the need to continue support for the Rural Electrification Administration and Rural Telephone Bank. Unfortunately, much of her testimony against a 1990 Bush administration proposal to terminate direct REA loans applies to the administration's 1991 budget for REA as well.

She said:

The Administration's proposal ignores the fact that this subcommittee has repeatedly rejected less drastic measures to reduce funding for these programs. The important thing to remember is that benefits of the REA loans flow completely and directly to the customers served by the telephone companies. REA borrowers continue to serve high-cost, low-density regions, which means that large capital costs for new technology must be spread over fewer subscribers. REA plays a vital role in financing these technological changes, because most borrowers don't qualify for commercial loans.

As a long-time supporter of cooperatives and women's equality, I am pleased to see a woman, especially one of Borth's high caliber, serving on NTCA's board of directors. She called her election a cooperative effort, but I think it can be attributed to her own hard work and dedication. I look forward to working with her as we continue to fight for a strong REA.

TERRY ANDERSON

Mr. MOYNIHAN. Mr. President, I rise to inform my colleagues that today marks the 1,782d day that Terry Anderson has been held in captivity in Beirut.

SERBIAN REPRESSION IN KOSOVO

Mr. PELL. Mr. President, the press is reporting that another 10 people died this week in continued fighting in Kosovo, Yugoslavia. Current estimates are that several hundred people have died or been injured since the ethnic unrest began there last spring.

Although relations between the two neighboring peoples, the Serbs and the Albanians, are weighted down with antagonisms that have accumulated over at least 300 years, the current unrest has a more recent history and more identifiable causes.

Until last spring, Kosovo was an autonomous region of Serbia, one of six Republics which make up the Socialist Federal Republic of Yugoslavia. Situated next to Albania, Kosovo's population is overwhelmingly Albanian. Most estimates are that about 90 percent of the region's population is Albanian.

This did not prevent the leadership of Serbia from using troops and armed police to strip Kosovo of most of its legal autonomy. Martial law has been imposed in Kosovo for almost a year. In the words of the New York Times, April 10, 1989, "only a cynical demagogue would recklessly inflame ancient ethnic hatreds for the sake of his own political ambitions," adding that Serbia's Communist Party Chief, Slobodan Milosevic, had done just that. The people of Kosovo are fighting and dying for democracy and human rights. As with other Eastern European countries, the United States must support this just cause.

According to the Times, Milosevic has pressed a relentless political campaign, complete with mass rallies and inflammatory rhetoric, aimed at making Serbia—and its party leader—supreme in Yugoslavia. While Serbians are the minority in Kosovo, they comprise the largest single ethnic group in Yugoslavia, having some 37 percent of the total population. To accomplish his aims, he has recklessly intervened in the affairs of Kosovo and Vojvodina—another autonomous province—and in the affairs of the neighboring Republic of Montenegro.

What many fear is that Mr. Milosevic intends to impose friendly regimes in the neighboring Republics of Montenegro and Macedonia, as well as in Kosovo and Vojvodina, and use this bloc to install himself as leader of Yugoslavia.

The Senate has already expressed its views on this matter. On July 18, 1989, the Senate adopted by voice vote an amendment to the State Department authorization bill that expresses concern about the human rights abuses, violence, and ethnic unrest in Kosovo, and urges the Government of Yugoslavia to take steps to halt the violence and to observe its obligations under the Helsinki Final Act and the U.N. Declaration on Human Rights. It is clear that—up to now, at least—Yugoslavia has been unable to do so.

I therefore call on the Government of Yugoslavia, and more particularly, on the leaders of Serbia, to carry out their obligations under the international agreements to which Yugoslavia is a party, and to refrain from the reckless and dangerous exacerbation of ethnic tensions of political advantage.

U.S. DEFENSE STRATEGY FOR THE 1990's

Mr. DOLE. Mr. President, Monday I held a meeting with a small bipartisan group of Senators and military experts to discuss the critical issue of the redefining of U.S. defense strategy in the coming decade.

The United States is confronted with dramatic changes in Eastern Europe, and around the globe. The world situation, in conjunction with U.S. deficit pressures, make deciding what defense strategy we should adopt one of the most pressing matters the administration and the Congress will face this year and in the coming years.

As I have said before, it is my opinion that the United States needs to reach a consensus on defense priorities, and more importantly on strategy, early in the budget process. So, I am very pleased that the following military experts shared their insights and views about what steps the United States should take with respect to its force structure and defense strategy:

Gen. Russell E. Dougherty, former commander in chief, Strategic Air Command, currently of counsel at McGuire, Woods, Battle & Boothe.

Ambassador Robert Ellsworth, former Member of Congress, served as U.S. Ambassador to NATO and Deputy Secretary of Defense.

Gen. Andrew J. Goodpaster, former supreme allied commander Europe, currently Chairman of the Atlantic Council of the United States.

Gen. William E. Odom, former Director of the National Security Agency, currently director of national security studies for the Hudson Institute and an adjunct professor at Yale University.

Gen. Bernard W. Rogers, former supreme allied commander Europe, currently a trustee of the Institute of Defense Analyses.

Adm. Harry D. Train II, former supreme allied commander, ocean sea area, Atlantic, currently executive vice president at Strategic Research and Management Services.

This distinguished group of military experts unanimously holds the view that the United States needs to redefine its defense strategy prior to restructuring its forces. That view seems obviously logical, yet there are those who would like to cut the defense budget on the basis of numbers and percentages and without a view of how such cuts can affect vital U.S. interests.

In the words of one of the participants, we, as a country, need to "call time out." The United States needs to define its national interests, set priorities, and then devise a strategy which will utilize the tools necessary to promote and protect these U.S. interests.

These experts also pointed out that although the threat of a conventional war is diminishing, the Soviet nuclear threat is unchanged and remains formidable. Moreover, there are new emerging threats and other U.S. interests which need to be addressed in a strategy for the 1990's.

During this meeting, there was also considerable discussion on the issue of stability. The group agreed that the changes in the Soviet Union and Eastern Europe will probably lead to increasing instability in the short term. Moreover, changes and reforms could be reversible. Both of these factors need to be taken into account when

creating a new strategy and restructuring our forces to fit this strategy.

This cautionary theme is particularly relevant since only yesterday we heard rumors of Gorbachev possibly resigning his position as head of the Soviet Communist Party. While this news was discounted, in my view, even rumors such as this should serve as reminders that there is not only the potential for great instability, but the potential for significant reversal in the Soviet Union and elsewhere.

Mr. President, I hope that these insights and recommendations will be helpful to my Senate colleagues as we begin the defense budget review process.

How we approach the defense and foreign policy challenges of this new decade will have consequences for years to come. I urge my colleagues to take a serious objective look at U.S. defense policy and separate from this review process the parochial politics of pet peace dividend projects. After all, it is not just my State that will be affected by the national security decisions this Government makes, but the other 49 States, as well.

CONCLUSION OF MORNING BUSINESS

The PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

CLEAN AIR ACT AMENDMENTS OF 1989

The PRESIDENT pro tempore. Under the order previously entered, the Senate will now resume consideration of the pending business, Calendar Order No. 427, S. 1630, a bill to amend the Clean Air Act, which the clerk will report.

The assistant legislative clerk read as follows:

A bill (S. 1630) to amend the Clean Air Act to provide for attainment and maintenance of health protective national ambient air quality standards, and for other purposes.

The Senate resumed consideration of the bill.

Pending: Chafee amendment No. 1219, to control methyl chloroform pollution.

The PRESIDENT pro tempore. The pending business before the Senate is S. 1630. The pending question is on the adoption of amendment No. 1219 by the Senator from Rhode Island [Mr. CHAFEE].

The Senator from Connecticut [Mr. LIEBERMAN] is recognized.

Mr. LIEBERMAN. Thank you very much, Mr. President, I rise to address one or two aspects of the underlying bill that are of particular importance, and questions have been raised about them both in committee and in the debate that is going on here on the floor.

The first is the ozone transport zone. That is one of the most important provisions of this bill for the Northeast. Obviously, Connecticut is part of the Northeast and therefore of great importance to my State.

It is of importance to my State for this simple reason. The Connecticut Department of Environmental Protection has concluded that even if all of the industry in the State was shut down and all of the cars in the State were stopped that the State would still not comply with the nationally established ozone standard. The reason for that is that ozone is traveling from areas upwind of Connecticut and affecting the quality of our air in Connecticut. That conclusion is based not just on speculation but on some very sophisticated ozone modeling that has been done under the auspices of the Federal Environmental Protection Agency.

The problem of pollution traveling from one State to another, it seems to me, is a matter of basic fairness and must be addressed by Congress in the Clean Air Act that I hope and believe we will adopt this year, because an individual State will find it difficult to take measures requiring controls on its industries when the benefit is for a neighboring State.

So there is a basic point here that Connecticut cannot clean its air itself because so much of its problem comes from outside of the State of Connecticut, and therefore if we are going to have clean air in Connecticut and in so many other States in the country, but particularly in the Northeast, we need help from the Federal Government.

S. 1630 requires that all areas within the established transport region, except those States with no nonattainment areas, implement reasonably available control measures. The controls that are contained in the Senate bill reflect those strategies that have actually already been agreed upon by a group of the Northeast States. It is a rather remarkable and significant development in the last year, that the States, and particularly those in the Northeast, have been initiating their own cohesive plan to improve the quality of the air in the Northeast—not just in their own States.

Mr. President, there is a real difference between Senate bill 1630 in this particular area, and the bill that the administration has recommended to our committee and to Congress. President Bush's bill would leave to EPA the final decision about whether any control measures should be imposed to deal with this so-called transport issues, dirty air coming in from outside of one State to another.

For us in the Northeast, the President's grant of discretion to EPA on this critical issue is simply unacceptable. It will not provide for clean and healthy air in our States. Indeed, it is in part the lack of support of EPA which in the past has prevented the effort to institute regional controls from being successful.

In contrast to EPA's inaction, as I have said, the States have taken the lead in environmental protection in general and in particular in putting together solutions that deal with some of the regional pollution problems. Senate bill 1630 recognizes that leaving the final responsibility for recommending baseline regional controls with EPA simply does not ensure that transported pollutants will be substantially reduced.

During consideration of this bill, a concern was raised at the committee level that the bill as introduced gave the Regional Transport Commission in the Northeast, which is established as part of this particular section of the bill, too much authority. That is to say there was a fear expressed that this Regional Transport Commission would have ultimate authority to impose additional controls on sources of emissions in the separate States.

The committee heard those concerns and responded to them. S. 1630, as reported to the Senate, provides that the final authority to disapprove additioinal measures actually rests with EPA. However, EPA bears the burden, as clearly stated in the bill, of demonstrating that the additional control measure is not necessary to bring any area of the region into attainment by the dates provided. In making their decision, EPA must not place unfair burdens on the recipient State.

Some have also expressed concern that areas which are not contributing to the nonattainment problem in another area must meet the requirements of this section. But S. 1630 clearly provides that an area which is not contributing to another area's nonattainment problem may obtain an exemption from EPA. I believe what we have here is a rather creative attempt by this legislation to build on some cooperation that is occurring now among the States in the Northeast, and to recognize the fact that you cannot put a bubble over an individual State. The air that we breathe in Connecticut or air breathed in California or Florida or anywhere—Illinois, Indiana, Ohio—is air that comes from elsewhere, Particularly from within the region in which that State happens to be located.

This transport zone section puts some responsibility on individual States to be good neighbors in that sense. But it does so with a degree of reason and sensibility in that it says to States that they can make an appeal to EPA to exempt the particular area of the State which is not contributing to the problem. For instance, concerns have been expressed in a particular case about gasoline stations in rural

areas and one of the States in the Northeast, specifically, about whether they would have to go to stage two, which is the attempt to reduce the vapors that come out of gasoline when it is being put into a motor vehicle. It is clear from the bill that the State could apply to EPA for a waiver to except areas of the State from particular requirements such as that stage two requirement.

This is an important part of the bill. It is a creative part of the bill. I hope it will remain intact as it makes its way through this Chamber, through the House, and to the President's desk.

Second, Mr. President, I would like to talk for just a moment about the importance of NO_x. Those of us who have been living with this problem of clean air in the bill tend to fall into the lingo that is particular to this subject.

NO_x is an easy word to say, but what does it mean? It means oxides of nitrogen. It is a very important part of both nonattainment and acid rain sections of the bill.

Let me say a word about NO_x. It has been mentioned here in the debate earlier. Sometimes it is not, in my opinion, mentioned enough, as we focus in on the hydrocarbons that are a precursor of ozone. NO_x is certainly, in some areas of the country, a critical air pollutant and an aggravating air pollutant when combined with others in the appropriate climatic conditions.

NO_x is a principal component of urban smog, acid rain, and other major pollution problems.

In a recent report issued last April, the American Lung Association concluded:

> NO_x is a dangerous and pervasive pollutant of our air and water. NO_x is now understood to be a prime factor in virtually every major pollution problem that we face. The neglect of NO_x pollution control, nitrogen oxide pollution control, has retarded significantly the national drive for clean air.

I have previously discussed some of the health effects of urban smog and acid rain, but there are also major health effects from nitrogen oxide, which the controls in this bill will help to eliminate. Pollution from NO_x in drinking water may actually cause major health problems, particularly in infants, whose digestive systems are not fully developed. Nitrogen pollution interferes with the blood's ability to carry oxygen, which can lead in the extreme to asphyxiation and death.

NO_x, nitrogen oxide, also plays a key role in forming what we call particulate matter, another form of pollution. When inhaled, these particles, usually microscopic particles, but nonetheless particles, can irritate the incidence and increase the severity of respiratory system diseases.

These particles carry other toxic chemicals and heavy metals into the most sensitive regions deep in our lungs. In that sense, they are insidious because we are not aware, normally, of that damage that is being done to our bodies.

Additionally, NO_x contributes to the formation of airborne acids. These particles are precursors to acid rain. But the American Lung Association reports that these particles themselves are present in the air today already at levels which pose a threat to the health of our children.

Studies reported by the Lung Association show that airborne acids may result in bronchitis or changes in the lungs that are similar to chronic exposure to cigarette smoke. Moreover, the combined effects of airborne acids and ozone may actually be far more dangerous than exposure to either one alone.

The study at the University of British Columbia, which was done over a period of 14 years, concluded that there is a consistent relationship between the combination of acid particles in the air and in the ozone and respiratory admissions to hospitals. So, increasingly, we are finding a direct connection between air pollution and people's health.

Finally, again in the extreme, NO_x in the atmosphere forms nitrogen dioxide, which can be fatal at very high concentrations. At lower concentrations, which are more common, nitrogen dioxide is a lung irritant which can contribute to the development of bronchitis and pneumonia. It can also lower our resistance to flu and other lung diseases by interfering with the body's normal immune system. Recent studies reported by the Lung Association show that short-term exposure at low levels can, again, be very dangerous to children.

Mr. President, we keep coming back to the health effects and the health costs of air pollution, and do so not wanting to be alarmists. I myself came to this subject matter without a particular awareness of the seriousness of the consequences of dirty air. I came to it, honestly, because of my concern about protecting the national environment and my concern in the State of Connecticut about the growing role that air pollution plays in water pollution.

We find, for instance, that in studies that have most recently been done, as much as 25 percent of the pollution problem in Long Island Sound, which is one of our most precious natural resources in Connecticut and generally the Northeast, is a result of air pollution falling into the water.

But the more I have worked with the members of the Environment and Public Works Committee on this bill and the more I have read the literature, which is done not by extremists but by medical, health, and science professionals, the more I understand that the pollution that we are putting into the air not only does serious damage to our great natural environment, to the forests and lakes and rivers and open spaces of America and of the Earth, but air pollution is doing serious damage to us, to our health, and to our children's health.

There is, in the city of Hartford, a doctor by the name of Thomas Goddard, who is the head of the pulmonary disease section in St. Francis Hospital in Hartford and the immediate past president, by coincidence, of the American Lung Association.

I visited with Dr. Goddard on a couple of occasions and have seen some of the treatment he is offering there. In that hospital you see in very real terms the impact of air pollution. Dr. Goddard, who is by temperament a moderate man, by training a disciplined professional, said to me quite clearly that in examining children nearing teen years, who have grown up in urban areas and had no specific exposure to smoking or anything else that would hurt their lungs, he sees that their lungs look like those of the individual has been smoking for a sustained period of time. He attributes that to the normal ingestion by active children of air which contains pollutants.

He concludes that over the course of their lives, as they grow, they will have an increased propensity toward pulmonary diseases, emphysema, in a more serious stage, and on a more regular and continuing basis, bronchitis and flus and other respiratory ailments.

Here, again, he is talking not about a particularly susceptible population, but about young, healthy children. The susceptible populations, those who are asthmatic, those who are older and have declining lung systems, are clearly impacted by nitrogen oxide—NO_x—and other air pollutants. It is reason just on the basis of health, I think, for us to pass a good strong clean air act in this session.

Mr. President, I thank the Chair for the time and for the opportunity to address the Senate.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BAUCUS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. LIEBERMAN). Without objection, it is so ordered.

Mr. BAUCUS. Mr. President, the pending amendment is the amendment offered by the Senator from Rhode Island [Mr. CHAFEE] to add methyl chloroform to the list of substances along with chlorofluorocarbons and halons, the production of all of which is to be phased out this

decade and completely phased out by the year 2000. It is a very important amendment because methyl chloroform is a substance with chlorine atoms which have the effect of depleting the atmospheric ozone layer. It is also particularly important because methyl chloroform has more impact than many CFR's particularly the degree to which methyl chloroform destroys ozone molecules in the atomspheric layer of the ozone layer that covers the Earth.

It is my hope that there will be a vote on this amendment shortly. Senators who have views on this amendment should come to the floor and debate the amendment. It is my expectation that we will have a vote on that amendment. It is important that we have a vote on that amendment so that we can begin to move the clean air debate.

Mr. President, there has been a great deal of debate in recent weeks about the cost of S. 1630. All the economic studies and assessments of control technologies have a place in the current debate, of course. But we never lose sight of the fact that air pollution also has its costs—and the price tag of pollution is rising.

The real costs of air pollution cannot be measured adequately in economic terms. What value should we place on the physical pain of an asthmatic child, or the emotional stress of a child who is ordered off the playground during a smog alert? Of what economic value is the mobility of the elderly and chronically ill lessened or lost from air pollution? Of what value are the tens of thousands of Americans whose lives are shortened by exposure to pollution?

The very young, whose lungs are not fully formed and who breathe more rapidly than adults; the elderly; those with chronic heart and lung diseases; children in the womb—these are the first victims of pollution. But they are not the only victims. Recent studies have found evidence that healthy adults and healthy children are affected at smog levels typical of many parts of the United States in summer months, and may risk long-term or permanent lung damage.

Surely, economic studies are inadequate to express the real cost of lives shortened or diminished by air pollution. Many attempts have been made to quantify the health consequences of air pollution. The American Lung Association regularly reviews and publishes the major conclusions of these attempts.

The ALA has just released the third edition of "The Health Costs of Air Pollution," by James S. Cannon. Cannon concluded in media interviews that as scientists' ability to quantify the health impact of air pollution improves, the best guess of the cost of air pollution continues to increase. Among his conclusions:

The price tag of pollution is rising. Worst cost estimates ranged into the hundreds of billions of dollars—more than $600 billion for all criteria pollutants except lead in one University of California study.

In studies where direct comparison of the various economic effects was possible, health costs appeared as the most significant or among the most significant of the adverse economic repercussions of air pollution.

Researchers at the University of California at Davis estimated that between 50,000 and 120,000 deaths could be linked to auto pollution each year.

Using conservative factors to calculate the percentage of mortality and illness linked directly to vehicles, the study estimated total health costs of vehicular air pollution between $4.43 billion and $93.49 billion in 1988 dollars.

Reducing air pollution is cost effective. Three studies, all by the Environmental Protection Agency, attempted to relate benefits to control costs, and in all three cases, the pollution controls were found to be cost effective, usually by wide margins.

Based on the Cannon report, Ms. Fran DuMelle, director of the Washington office of the American Lung Association, reached the following conclusions in a letter to Senators:

No single study has ever derived a total dollar figure representing all the health costs associated with human exposure to air pollution—this may be an impossible task given today's data base and methodological approaches. However, estimates approaching an annual cost of $100 billion are defensible based on the reasonable middle ranges of the comprehensive, multipollutant studies.

Five years ago when ALA released its previous study, the high range estimate for the health costs of air pollution was $40 billion. This change clearly represents the growing price tag of air pollution and the failure to strengthen the Clean Air Act.

Mr. President, Cannon surveyed 12 studies, at the local, regional and national level, the attempt to express in dollar terms the illness and premature death that result from exposure to air pollution. Most of the studies were pollutant-specific. Most identified health costs in the range of $500 million to $15 billion per year. The report listed the major conclusions of the 12 studies as follows:

First, annual health cost benefits of $9.4 billion could be realized if air quality in the South Coast Air Basin complied with the Federal particulate and ozone standards; benefits rise to $14.3 billion annually with compliance with the stricter California standards.

Second, particulate and ozone air pollution emitted in four California air basins in 1979 resulted in $9.6 billion less in health costs than would have resulted if pollution sources operated with control equipment required by regulations in place in 1960.

Third, actual particulate and ozone pollution in Santa Clara County, CA, cause health costs of between $8.7 million and $213.5 million per year more than would occur under the alternative pollution control scenarios of achieving the Federal standards, meeting the California standards, or achieving typical background levels.

Fourth, annual health costs of $112.8 million are associated with particulate pollution exposure in Denver, which exceeds the Federal public health standard for fine particulates.

Fifth, the net present value of nationwide health benefits are estimated to be between $5.3 billion and $9.6 billion as a result of implementing new Federal public health standards for fine particulate matter.

Sixth, annual health benefits nationally of $6.1 billion are estimated to result from implementing a program to limit the concentration of lead in gasoline.

Seventh, the net present value of national health costs are estimated to be between $2.7 billion and $10 billion for mortality, morbidity, and material damage effects from exposure to sulfur dioxide and related particulate matter in excess of the current Federal public health standard.

Eighth, between $218.9 million and $899.3 million in annual health costs could be eliminated nationally by reducing ozone according to seven scenarios.

Ninth, between $0.5 billion and $4.0 billion in annual morbidity health costs could be eliminated nationwide if ozone pollution were reduced to levels meeting the Federal ozone public health standard.

Tenth, health benefits worth between $0.7 billion and $1.2 billion per year could be realized in the Northeastern United States by reducing 1980 ozone concentrations by 35 percent to 50 percent.

Eleventh, national health costs worth between $4.43 billion and $93.49 billion per year due to automotive and truck exhaust pollution could be avoided.

Twelfth, annual health costs ranging from $5.1 million to $76.4 million could result for local residents exposed to pollution from a hypothetical coal-fired power plant.

Mr. President, I ask unanimous consent that the entire report be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. BAUCUS. Mr. President, these conclusions, I think, are quite telling. We have heard some words on the Senate floor in the last few days talking about potential adverse economic

consequences if this legislation is enacted.

It is true, nothing is free. There is no free lunch. The passage of significant air pollution legislation that is going to control air pollution will have some economic consequences. Auto companies will have to install even better equipment than they now do install. Chemical companies, petroleum refineries, the steel industry, all will have to invest the capital necessary to prevent its employees and people who live nearby from getting cancer. It is true the utilities will have to install clean coal technologies or other technologies to cut down SO_2 emissions so we begin to allow our rivers, lakes, and streams in our country to regenerate and achieve their natural health.

It is true there are costs associated with this. Mr. President, we do not know exactly what those costs are. We do have a rough estimate of what those costs are, and it is clear, in looking at all those estimates, that they are roughly a quarter to a third of the adverse economic costs because of air pollution.

That is, we are getting a benefit/cost ratio here of between 3 to 1 or 4 to 1. That is, for every 25 cents or every 35 cents, approximately, that we spend to help cleanup the air, we get back a dollar.

It is a bargain. It is a real bargain. And I would like to get a 3-for-1 or 4-for-1 return on my investments. This is an investment where the American people are going to get back much more than they are going to have to pay. Frankly, Mr. President, I have not even begun to mention the emotional consequences of dirty air, of illness; the physical discomfort of illness, which we just cannot quantify.

The illness of children, the illness of the elderly, and the chronically ill is difficult to quantify. It is a physical and emotional discomfort of pain which cannot be quantified, let alone all of the deaths. How are you going to quantify the additional deaths that this country incurs because of air pollution? There are a lot of estimates. I have seen estimates from 2 to 5 percent of our population getting sick or prematurely dying because of dirty air in this country. How does one quantify economic consequences, health care consequences, hospital care, medical care, lost work because people miss work because of illness from dirty air.

Mr. President, I want to make clear for the RECORD that the economic costs of inaction, the economic costs of not cleaning up our air far exceed the cost that will occur if industry properly invests to make sure our air is cleaned up.

We know the air is not going to be totally cleaned up. We are saying if we are going to achieve the lowest possible levels of smog in our larger cities, if we are going to do a pretty good job of stopping acid rain, acidification of rivers, lakes, and streams in the Northeast, if we are going to do a pretty good job of preventing cancer next to some of the chemical plants, steel and coke ovens in this country, we are going to pay just a little bit to do that in order to get much greater benefits.

EXHIBIT 1

THE HEALTH COSTS OF AIR POLLUTION, A SURVEY OF STUDIES PUBLISHED 1984–89

(Prepared for the American Lung Association by James S. Cannon)

I. INTRODUCTION AND SUMMARY OF FINDINGS

This monograph, *The Health Costs of Air Pollution*, is the third in a series of analyses by the American Lung Association to discuss the complex issue of identifying economic costs related to the health-related effects of exposure to outdoor air pollution. These effects include both illness and premature death. The first two books, published in 1979 and 1985 by the American Lung Association, reviewed the methodologies and findings of comprehensive health cost studies identified after thoroughly searching the scientific literature from 1975 through 1983. The American Lung Association reports then placed the health cost information contained in these studies within the context of national environmental policy discussions prevalent at the time.

The two earlier studies have been used by a variety of audiences, including American Lung Association personnel, environmental protection advocates, government decision makers, and the media. This new publication provides an update of health cost information published since 1984 and reexamines the economic implications of exposure to air pollution.

Only comprehensive health cost assessments are reviewed in this monograph. These are studies that venture a "bottom-line" estimate of the cost associated with exposure by a certain population of people to a specific concentration of a particular pollutant or pollutants.

All dollar figures in Chapter I are 1988 dollars. Monetary values in Chapter II and the Appendix are dollars in the base year of the individual studies being cited followed by 1988 in parentheses.

Health cost studies generally follow a sequence of four steps. First, air pollution data is collected for the pollutant or pollutants being studied in the region selected for analysis. Second, the size of the population exposed to the pollution is determined, usually broken down by age group or by groupings reflecting the relative sensitivity of people to air pollution—for example, separating people with asthma from the general population.

Next, dose-response coefficients are established that correlate the extent of adverse health effects with levels of exposure to air pollutants. Different air pollutants have different dose-response coefficients depending on the extent to which they affect human health. Furthermore, the dose-response coefficients for individual pollutants often vary among the diverse population groups exposed to the pollutant.

Finally, monetary values are assigned to each adverse health effect, including premature death predicted to result from pollution exposure. The monetary values assigned to premature deaths represent conclusions about the economic value of small changes in the risk of dying from exposure to air pollution, not the value of life itself. Estimates of the cost needed to convince persons to accept small changes in the risk that they will die can be translated into presumed values of statistical lives saved or lost. For example, if evidence suggests that people would accept a $1,000 wage increase in exchange for undertaking a job with a 1 in 1,000 greater risk of accidental death, then a value of statistical life would be 1,000 times $1,000 or $1 million. Such figures, however, do not presume to reflect the actual worth of a human being.

Once the four steps have been performed it is possible to aggregate the data and calculate the total health cost facing people who live in a polluted environment. It is also possible, and this is often the major purpose of conducting comprehensive health cost assessments, to calculate the reduction in health costs or the economic health benefits likely to accrue if pollution were reduced. This information can be especially useful in environmental decision making because it offers a measure of the heretofore nebulous economic rewards of pursuing pollution-control programs that offset the usually well-documented economic costs of such programs.

It is noteworthy to observe that health costs are only a portion of the total economic effects that result from air pollution. Other effects—such as reduced agricultural and forest yields, corrosion of buildings, and reduced visability—also have substantial costs associated with them. Moreover, because of data limitations, health cost studies themselves are confined in their analysis to just a few of the many possible air pollutants that affect human health, and they cannot address synergistic consequences of pollutants acting in combination to multiply their individual health effects. Health cost assessments also focus on just those effects that can be most clearly correlated with exposure to air pollution, such as eye irritation from ozone pollution or respiratory problems from particulate pollution, leaving out more subtle or long-term effects that cannot easily be quantified. Thus, as large as some of the health cost figures derived in the studies reviewed in this monograph are, these costs represent only a fraction of the true econoic impact of air pollution.

Interest in Health Cost Analysis is Growing

In total, the American Lung Association has identified twelve comprehensive health cost assessments published in the United States since 1984. They are listed in Table I (see page 4), reviewed in depth in Chapter II, and summarized in Appendix A of this monograph. Compared with the 8 studies discussed in the 1985 publication, the 12 studies reflect a growing interest in the health costs associated with human exposure to pollution and how air pollution control system strategies can reduce the price tag of living in a polluted environment.

Fully half of the twelve health cost assessments discuss pollution effects within a specific metropolitan area or region of the country. Analysis of the localized economic impacts of pollution is expanding, only one quarter of the studies reviewed in 1985 were citywide or regional assessments. This trend marks the increasing interest in health cost research by the municipal, state, or regional pollution control agencies that are frequently responsible for developing and implementing urban air pollution control strategies. The localities included in these studies are the South Coast area of California, which includes Los Angeles; the San Jose area; four California air basins (areas desig-

nated for air quality planning purposes) including Los Angeles and San Jose reviewed separately from the above studies; Denver; the Pacific Northwest; and the northeastern United States.

TABLE I.—NEW COMPREHENSIVE HEALTH COST STUDIES

[In 1988 dollars]

Author	Location	Pollutants studied	Cost estimate
Hall et al	Los Angeles area	Ozone and partculates.	9.4–14.3 billion annually.
Rowe et al	Four air basins in California.	Particulates, ozone, and sulfates.	9.6–11.0 billion annually.
Chestnut et al	San Jose area	Particulates and ozone.	8.7–213.5 million annually.
Chestnut and Rowe.	Denver area	Particulates and ozone.	112.8 million annually.
U.S. EPA	United States	Particulates	5.3–9.6 billion net present value.
U.S. EPA	United States	Lead	6.10 billion net present value.
U.S. EPA	Eastern United States.	Sulfur oxides	2.7–10–0 billion net present value.
Krupnick and Kopp.	United States	Ozone	218.9–899.3 million annually.
U.S. OTA	United States	Ozone	0.5–4–0 billion annually.
Krupnick	Northeastern United States.	Ozone	0.7–1.2 billion annually.
DeLuchi et al	United States	All automotive air pollutants.	4.43–93.49 billion annually.
Bonneville Power	Northwestern United States.	All coal-fired powerplant air pollutants.	5.1–76.4 million annually.

The six other health cost assessments discuss pollution exposure by the population nationwide. Five of these studies examine the health costs of implementing new national pollution control regulations for particular pollutants. Two address ozone pollution. Particular matter, lead, and sulfur oxides are the pollutants of concern in the other three. The final assessment quantifies health costs associated with the exposure to automative exhaust emissions that contain numerous pollutants.

Despite the large number of pollutants emitted into the atmosphere, most health cost assessments focus on four of the six "criteria" air pollutants that are regulated under the Clean Air Act: particulate matter sulfur dioxide, lead, and ozone. A number of pollutants, including toxic air pollutants, are aggregated in the measurements of several of these pollutants. Therefore, the studies, by implication, provide information about a range of air pollutants much larger than four.

Eight of the studies evaluate the effects of exposure to particulate matter (including all forms of airborne particles) or sulfur dioxide (including fine sulfates produced as sulfur dioxide interacts in the environment). One study analyzed exposure to airborne lead. All premature deaths predicted to result in the 12 assessments were associated with exposure to these pollutants. Morbidity effects such as illness or discomfort were associated with exposure to these pollutants.

Nine studies included analyses of the health costs from exposure to ozone. Commonly called smog, ozone is produced by the interaction of reactive hydrocarbons and nitrogen oxides pollution in the atmosphere; it is not directly discharged from polluting sources. Although adverse morbidity effects from exposure to ozone are well known, including respiratory irritation and breathing difficulties, none of the twelve health cost assessments predicted premature deaths from ozone exposure. Significant health costs were associated with the morbidity effects from ozone exposure, however.

The Price Tag of Pollution is Rising

No single study has ever derived a total dollar figure representing all the health costs associated with human exposure to air pollution. In fact, this is an impossible task. Limited data and knowledge require that individual studies be tailored to address specific populations, pollutants, health effects, and valuations of health impacts about which adequate information exists. Thus, the studies reviewed in this monograph examine a variety of health effects from exposure to different pollutants by different groups of people living in different areas. This makes direct comparison of results of the studies difficult, but a side-by-side synopsis of the studies offers a useful perspective on what is known about the health costs from exposure to air pollution.

Among the twelve studies reviewed in this monograph, the health cost estimates ranged from a low of $5.1 million in annual health costs to a local population living near a polluting coal-fired power plant to a high of $93.49 billion as the annual health costs suffered by the American population exposed to automotive exhaust pollution. Most of the studies identified health costs in the range of $500 million to $15 billion per year, although the upper range estimates offered in several studies were much higher. The highest overall estimate from any of the studies reviewed predicted $432 billion in annual health costs from exposure to sulfate pollution, assuming "worst case" dose-response correlations between sulfate pollution and premature deaths.

The major findings of each health cost assessment reviewed in this monograph follow. A more complete synopsis of each study appears in Appendix A.

1. Annual health cost benefits of $9.4 billion could be realized if air quality in the South Coast Air Basin compiled with the federal particulate and ozone standards; benefits rise to $14.3 billion annually with compliance with the stricter California standards.

2. Particulate and ozone air pollution emitted in four California air basins in 1979 resulted in $9.6 billion less in health costs than would have resulted if pollution sources operated with control equipment required by regulations in place in 1960.

3. Actual particulate and ozone pollution in Santa Clara County, California cause health costs of between $8.7 million and $213.5 million per year more than would occur under the alternative pollution control scenarios of achieving the federal standards, meeting the California standards, of achieving typical background levels.

4. Annual health costs of $112.8 million are associated with particulate pollution exposure in Denver, which exceeds the federal public health standard for fine particulates.

5. The net present value of nationwide health benefits are estimated to be between $5.3 billion and $9.6 billion as a result of implementing new federal public health standards for fine particulate matter.

6. Annual health benefits nationally of $6.1 billion are estimated to result from implementing a program to limit the concentration of lead in gasoline.

7. The net present value of national health costs are estimated to be between $2.7 billion and $10.0 billion for mortality, morbidity, and material damage effects from exposure to sulfur dioxide and related particulate matter in excess of the current federal public health standard.

8. Between $218.9 million and $899.3 million in annual health costs could be eliminated nationally by reducing ozone according to seven scenarios.

9. Between $0.5 billion and $4.0 billion in annual morbidity health costs could be eliminated nationwide if ozone pollution were reduced to levels meeting the federal ozone public health standard.

10. Health benefits worth between $0.7 billion and $1.2 billion per year could be realized in the 31 northeastern United States by reducing 1980 ozone concentrations by 35% to 50%.

11. National health costs worth between $4.43 billion and $93.49 billion per year due to automotive and truck exhaust pollution could be avoided.

12. Annual health costs ranging from $5.1 million to $76.4 million could result for local residents exposed to pollution from a hypothetical coal-fired power plant.

Reducing Air Pollution is Cost Effective

Three comprehensive health cost assessments prepared by the U.S. Environmental Protection Agency (EPA) presented data on the estimated costs of implementing air pollution reductions as well as the economic health benefits likely to result from a cleaner environment. In all three cases, the pollution controls were found to be cost effective, usually by wide margins.

In the case of new federal regulations to reduce particulate pollution, the economic benefits were found to exceed costs in 66 of the 72 scenarios examined. The overall net benefits (the savings of potential health costs above the estimated pollution control costs) in one "conservative" scenario totaled $4.8 billion. Another EPA study found the tighter sulfur dioxide control regulations would produce net economic benefits in 25 of the 27 scenarios studied. The EPA's analysis of a third program to reduce lead pollution in automotive exhausts found that the overall health benefits would exceed the program's cost by a factor of more than 10 to 1. The net present value of the health benefits was $34.0 billion, compared with costs of just $3.1 billion.

The results of these and other EPA studies have led the agency to conclude that many new pollution control initiatives are overwhelmingly supportable on economic as well as on public health grounds. A 1987 EPA report, entitled *EPA's Use of Benefit-Cost Analysis: 1981–1986*, observes that "environmentalists often fear that economic analysis will lead to less strict environmental regulations in an effort to save costs, but our study reveals that the opposite is just as often the case."

Health Costs Are a Major Economic Effect From Air Pollution

A number of the comprehensive health cost assessments reviewed in this monograph studied other economic effects of air pollution besides those on human health. These effects include agricultural losses from crop damage, reduced forest yields, increased damage and soiling of property, and visibility degradation. Nonhealth economic costs from air pollution, like health costs, are often difficult to quantify. Thus, direct comparisons between results of different types of economic analyses should be made cautiously. Nevertheless, in three studies where direct comparison of the various economic effects was possible, health costs appeared as the most signfiicant or among the most significant of the adverse economic repercussions of air pollution.

The study of the effects of air pollution form a hypothetical coal-fired power plant, for example, attributed 95% to 97% of the total expected economic costs from all sources to health costs from pollution-induced illnesses or premature deaths. Similarly, health costs contributed 68% of the total economic impacts from all sources in a study of air pollution in four air basins in California. Finally, health costs from exposure to automotive exhausts were found to compose between 45% and 90% of the total cost of adverse environmental effects of vehicular air pollution.

Value of Statistical Life Estimates Clustering Around $3 Million

Perhaps the most problematic aspect of comprehensive health cost assessments stems from the need to assign a monetary value to a human life cut short as the result of exposure to air pollution. Over the past decade, two economic theories have been pursued to provide the basis for making this ethically troublesome valuation. The "human capital" approach assesses the value of premature death in terms of the wages a person would forgo as a result of an early death. More recently, the "willingness to pay" theory has been advanced which calculates the value of human life in terms of how much a person is willing to pay to enjoy a reduction in risk of dying as a result of exposure to pollution.

Economic studies using the willingness to pay approach usually yield higher estimates of the value of health or life, compared with analyses relying on the human capital approach. There is an emerging trend among economists to consider lost wages as a subset of the total economic effects of pollution exposure that includes many other effects, including pain, suffering, and other subjective issues. Thus, rather than representing competing economic theories, the results of human capital studies increasingly appear as components of more broad-based willingness to pay analyses. There is a virtual unanimous rejection of the use of human capital studies as the sole basis for assigning a value to statistical lives by economists working in the health cost field.

All of the studies reviewed in this monograph that analyzed the economic costs of premature death utilized the willingness to pay approach to establish a value of human life. The "best" estimates used in these studies ranged from a low of about $2 million to a high of about $5 million, with an average of about $3 million per human life.

Many Techniques Are Being Developed to Assess Morbidity Costs

Significant new research during the past five years has evaluated the costs of illnesses and physical discomfort caused by exposure to air pollution. These morbidity studies generally use one of three techniques. Contingency valuation methods involve asking people what they would pay to avoid experiencing adverse health reactions. Averting behavior techniques attempt to measure how much people actually pay to avoid pollution, for example, by buying an air conditioner to reduce indoor pollution. Finally, direct costs from pollution-related health effects such as lost wages and medical bills are the basis of studies that use the cost of illness methodology. As in the case of human capital studies of mortality cost, cost of illness data are generally considered as a subset of the total morbidity costs because they don't reflect the cost of pain, suffering, and inconvenience associated with pollution-induced ailments.

In the studies reviewed in this monograph, morbidity costs have been estimated for many types of illnesses including breathing difficulty, increased asthma attacks, and heart attacks. The values assigned to these health effects have varied considerably from less than $10 for a number of symptoms, including headaches and eye irritation, to $60,000 as the cost of surviving a heart attack.

Morbidity estimates suffer from many uncertainties that might overstate or understate the actual costs involved. For example, the cost associated with experiencing a headache and eye irritation might not be more than the cost of experiencing either one separately. How well the additive effects of multiple symptoms are accounted for affects the accuracy of morbidity assessments. Moreover, because dose-response functions have not been quantified for many types of morbidity effects from exposure to air pollution, morbidity studies to date might be capturing only a portion of the true costs resulting from pollution-related illnesses. Dose-response data are especially sparse for long-term or chronic low-level illnesses. To the extent that unquantified morbidity costs exist, current morbidity studies would tend to underestimate the total costs of pollution-related illnesses.

Air Pollution Causes Billions of Dollars in Annual Health Effects

Table I shows that annual health cost estimates for exposure to air pollution cover a range of a few million dollars to hundreds of billions of dollars depending on the scope of the population studied, the number of pollutants analyzed, and the dose-response coefficients and economic assumptions employed. An overview of the 12 studies reviewed in this monograph suggests that the most reasonable estimate for the total health cost from exposure to air pollution by the population of the United States lies in the range of tens of billions of dollars per year, rather than millions or hundreds of billions of dollars annually. This conclusion was also reached in the 1985 American Lung Association health cost assessment study.

II. COMPREHENSIVE HEALTH COST ASSESSMENTS

Comprehensive health cost assessments calculate the economic costs that exposure to air pollution causes human beings as a result of pollution-induced illnesses or premature death. These assessments predict economic benefits to be derived from reducing air pollution. The American Lung Association has identified 12 comprehensive health cost assessments that have been published in the United States since 1984.

Of the twelve studies, four focus on the effects of air pollution on people living in metropolitan areas of the country. All four are reviewed in this report. Three other studies, all prepared by the U.S. Environmental Protection Agency (EPA), address the economics of health benefits that might result from new government regulations changing standards for permissible levels of air pollution. The health effects of nationwide or regional ozone pollution throughout the 31 states that border or lie east of the Mississippi River are the focus of three additional studies. Of the last two studies, one gauges the health effects resulting from pollution discharged in motor vehicle exhausts and the other projects the health costs from the operation of a hypothetical power plant.

Metropolitan Area Studies

Air quality in more than 100 cities currently violates various federal public health standards set by the EPA to protect human health. Under increasing pressure to reduce pollution, city officials are searching for new pollution abatement strategies for which they can gather widespread public support. Toward this objective, governments in several metropolitan areas have hired consultants to prepare health cost assessments quantifying the economic benefits that might result from specific pollution reduction efforts. These studies are helping to verify the overall cost effectiveness of urban pollution control programs. Four such studies are reviewed below.

The South Coast Basin Air Quality Management Plan

In mid-March 1989, the 12-person Board of the South Coast Air Quality Management District approved a 5,500-page plan to reduce air pollution in one of the most polluted urban areas in the world, the South Coast basin (composed of the urban areas of Los Angeles, Orange, Riverside, and San Bernardino Counties). The air management plan contains more than 120 pollution abatement measures to improve air quality to the point where it complies with federal public health standards to be phased in over a 20-year period with a process involving three stages or "tiers." The new pollution control strategies range from a ban on certain types of outdoor barbecue fuel to the virtual elimination of conventional gasoline-fueled automobiles by the year 2007.

Although the South Coast cleanup plan has been approved by the state Air Resources Board, it faces intense local opposition, especially from interest groups fearing that economic repercussions of the business and life-style changes caused by the plan will severely and adversely affect the region. The economic cost of implementing just the Tier 1 pollution control measures has been estimated by the district to be approximately $3.4 billion per year. The cost of implementing the entire plan has been placed as high as $13 billion per year.

To assess the degree to which economic benefits might offset some or all of the staggering costs of the South Coast Air Management Plan, that District contracted with the California State University Fullerton Foundation to prepare an economic evaluation of potential health benefits for the people of Los Angeles from reducing pollution to which they are exposed. The project resulted in a final report that was published in June 1989 entitled *Economic Assessment of the Health Benefits from Improvement in Air Quality in the South Coast Air Basin* (hereafter called the South Coast report).

The final 260-page report was researched and written by a team of scientists headed by Dr. Jane Hall and was accompanied by two supplementary reports. They were the *Effects on Human Health of Pollutants in the South Coast Air Basin*, which discussed the development of the dose-response assumptions used in the Los Angeles report in depth, and the *Characterization of Air Pollutant Exposures in the California South Coast Air Basin: Application of a New Regional Human Exposure (REHEX) Model*, which explained how the South Coast report determined the number of people at risk from different levels of air pollution.

In 1988, air quality in the South Coast basin exceeded the federal hourly ozone standard on about 180 days; the highest readings surpassed the federal and California standards by 300% and 400%, respectively. Moreover, the annual average concentration of particulate matter in the basin ex-

ceeded the federal and state standards by 80% and 200%, respectively.

Because ozone and particulates are the two most pervasive air pollution problems in southern California, the South Coast report focused on the economic benefits that might result from reduction of ozone and particulate air pollution to levels complying with federal and state public health standards. The baseline pollution scenario represented actual data obtained from air pollution monitors during the years 1984 through 1986. The future pollution scenarios reflected compliance with federal and state public health standards, respectively.

A unique, state-of-the-art model was developed to determine the total population exposed to air pollution both before and after implementation of the pollution controls required in the South Coast air management plan. Called the regional human exposure model (REHEX), it calculated the daily exposure to air pollution by each member of nine demographic groups living in 32 pollution "exposure districts" throughout the South Coast basin. The demographic groups were distinguished by age, working status, and whether or not they worked indoors, outdoors, or predominantly in an automobile. Based on censes data and other information sources, the total population living within each of the 32 exposure districts in the four counties was divided among the demographic groups.

The most innovative aspect of the REHEX model was its capability to translate concentrations of ozone and particulate air pollution recorded at pollution monitoring stations into actual amounts of pollution inhaled by each of the demographic groups living in each exposure district. To do this, 1,000 time-activity patterns were developed in the model to estimate the amount of pollution exposure experienced during each hour of a typical day by a member of each demographic group living in each area. One of six exercise states ranging from asleep to heavy exertion was applied to each time-activity pattern.

To gain a sense of the complexity of this process, consider the application of the time-activity pattern reflecting automotive driving time. The REHEX model assumed that infants spend 15 minutes per day in an automobile, whereas the demographic group representing adults who work largely out of their cars spends 9 hours a day driving. Ambient air pollution readings in each exposure district were multiplied by 0.2 to reflect the pollution reduction effect of a typical automotive ventilation system on reducing pollution inside an automobile. The model then credited this level of pollution exposure for the portion of the average day that each demographic group spent in the driving time-activity pattern. This process was repeated until pollution exposure profiles were created for the entire 24-hour "average" day of each demographic group in each exposure district.

The conclusion reached through the application of the REHEX model was that nearly everyone living in the South Coast area is exposed to concentrations of ozone or particulate pollution that exceed federal or California public health standards. Furthermore, more than 50% of the population is exposed to ozone levels more than two-thirds higher than the federal ozone standard, and 2% of the population suffers exposure to ozone at a level three times the federal standard. School-age children, college students, and adults working outdoors were judged to experience the highest ozone exposure per capita. A similar pattern of the pervasive air pollution in the South Coast was found to exist for particulate pollution.

An equally great level of effort in the South Coast report was devoted to the analysis of pollution-induced health effects as the basis of the REHEX analysis of the population exposed to pollution. A computerized search identified nearly 1,000 health effects studies which were reviewed by the project staff. Particular attention was paid to pollutant-specific criteria documents published by federal and state pollution control agencies. Although data were reviewed for all major air pollutants, the report focused on morbidity effects from exposure to ozone and on mortality and morbidity effects from particulate matter because the strongest correlations between adverse health effects and pollution concentration exist for these pollutants.

Five morbidity effects were analyzed for exposure to ozone pollution: mild cough, eye irritation, sore throat, headache, and chest discomfort. Using dose-response coefficient from the scientific literature and the results of the REHEX analysis, the South Coast report predicted that reducing ozone pollution to meet the federal public health standard would eliminate annually 121.7 million occurrences of mild cough, 191.6 million eye irritations, 179.0 million sore throats, 107.4 million headaches, and 64.5 million cases of chest discomfort. The figures for the scenario projecting compliance with the stricter California standard were between 10% and 20% higher.

Because many of these symptoms would occur simultaneously, the South Coast report calculated the number of days that one or more of these symptoms would not occur in an individual because of reduced ozone pollution. This analysis concluded that 1,21.7 million "multiple minor symptom days" would be eliminated by compliance with the federal ozone standard. Compliance with the state standard was estimated to eliminate 137.1 million multiple minor symptom days. Finally, the report studied another ramification of morbidity effects from exposure to ozone pollution, that is, the restriction in daily activity due to the minor health effects discussed above. The report estimated that 17.6 million restricted activity days would be avoided each year if ozone levels complied with the federal standard. The estimate rose to 20.6 million days assuming compliance with the state standard.

The analysis of the effect of reducing particulate pollution was limited to an estimate of restricted activity days and premature deaths from pollution exposure. An estimated 14.6 million and 24.7 million restricted activity days would be eliminated each year, the report concluded, if particulate pollution were reduced to comply with federal and state standards, respectively. The averted death investigation led to the startling conclusion that 1,617 deaths would be avoided annually if air quality in the South Coast area complied with federal particulate standards. The figure increased to 2,733 averted days assuming compliance with the state standard.

Next, the South Coast report made estimates of the monetary value associated with each avoided morbidity effect resulting from reduced ozone and particulate pollution. For the morbidity effects, values were set ranging from a low of $4.50 for an avoided cough to $7.50 for a sidestepped headache or sore throat (all figures from this report are in 1988 dollars). A restricted activity day was awarded a higher value of $21.50 because the restriction would often involve lost wages in addition to personal discomfort. For mortality, the report assumed a median value of a statistical life to be $3.7 million, with a low and high estimate of $1.7 million and $8.6 million, respectively.

Finally, the research project developed and utilized an economic benefits assessment model to integrate the data collected in other project components in order to estimate the overall economic value of health benefits from reduced ozone and particulate pollution. The total annual benefits from complying with the federal and state ozone standards were estimated under the "best conservative" scenario to be $2.4 billion and $2.6 billion, respectively. Compliance with the federal and state particulate standards was calculated to reap much higher annual economic benefits, $7.0 billion and $11.7 billion, respectively. Most of the particulate-derived benefits, $6.0 billion and $10.1 billion, were estimated to result from reduced mortality.

On a per capita basis, the health benefits from reducing ozone to the federal standard were calculated to be worth $196 each year for every person living in the South Coast Basin and $214 per year per person for compliance with the California standard. Per capita annual health benefits for compliance with the federal and state particulate standard were estimated to be $575 and $972, respectively.

Combining ozone and particulate benefits, the South Coast report made a "best conservative" estimate of total annual health benefits of $9.4 billion for compliance with the federal standards and $14.3 billion for compliance with the California standards. On a per capita basis, these figures translate to health benefits worth $771 and $1,186 per person per year.

Four Air Basins in California

In 1983, the California Air Resources Board (CARB) issued a request for proposals for a "quantitative assessment of the effects of not controlling air pollution in California." The contract was awarded to a four-person research group at Energy and Resource Consultants, Inc., in Boulder, Colorado headed by Robert Rowe but including scientists from Oregon State University and Systems Applications, Inc., in California. The three-year project culminated with the publication in December 1986 of a two-volume report entitled *The Benefits of Air Pollution Control in California* (hereafter called the CARB report).

Concentrations of six air pollutants were analyzed in the CARB report: particulate matter, sulfur dioxide, nitrogen oxides, sulfates, lead, and ozone. Ultimately, however, health costs were calculated only for particulates and ozone. In addition to health costs, the CARB report also examined other economic effects from air pollution, including its impact on agricultural productivity, buildings and other materials, forest growth, and visibility.

Four regions in California were selected for detail analysis because of their high population density; together they include 19 million people or 80% of the state's population of 23 million people. The regions were the San Diego Air Basin, the South Coast Air Basin (which includes Los Angeles and neighboring metropolitan areas), the San Joaquin Air Basin (including Bakersfield, Fresno, and Stockton), and the San Francisco Bay Area Air Basin.

Unlike many other studies of localized regions that assess costs and benefits of complying with public health standards, the CARB study examined five alternative scenarios that differed in the type and amount of pollution control equipment operating on existing sources of pollution. The scenarios compared the economic effects caused by air pollution levels actually experienced in 1979 with the lower levels expected to exist in 1987 with maximum pollution control and with the higher levels of pollution that would exist in 1987 if only minimal pollution controls were required.

Projected 1987 levels of pollution were calculated assuming that all pollution control requirements contained in government pollution abatement plans officially on record in 1983 were implemented. Emissions under the "no controls" scenario were calculated assuming that sources of pollution in 1979 were operating only with pollution control equipment required in 1960. The authors of the report argued that studying the impacts of specific pollution control programs rather than comparing effects associated with different ambient concentrations of air pollution (e.g., the public health standards) provides more useful policy analysis for real-world environmental decision making.

Air pollution emission statistics from the CARB Emission Data System were the source of information about the 1979 pollution levels in the 22 counties within the four basins studied. Emission levels were calculated for pollution sources contained in the 1979 data base using only the pollution control equipment required in 1960 or the equipment required for installations in 1987. This analysis concluded, for example, that hydrocarbon emissions in 1979 would have been 207% higher if only pollution controls required in 1960 were operating; on the other hand, additional planned pollution abatement efforts were estimated to cause 1979 emissions to decrease by an additional 13% by 1987. Similar calculations were performed for each of the six pollutants studied. Computer modeling was then used to translate emissions (in tons per year) to expected changes in ambient concentrations of each pollutant in each county under the alternative scenarios.

Particulate dose-response functions for mortality and morbidity from exposure to particulate matter were established after a review of the scientific literature. The CARB report asserts that only "the most credible and up-to-date results of previous studies have been used in this analysis to develop quantitative estimates of the health effects that could be expected under the alternative pollution control scenarios." Application of the coefficients for particulate pollution to the pollution exposure and population data led to the conclusion that 3,428 fewer premature deaths occurred in the study area in 1979 as a result of particulate air pollution than would have occurred if only the pollution control equipment required in 1960 were operating. Moreover, implementation of additional pollution controls planned for 1987 would reduce the mortality rate in the four basin area by another 540 fatalities per year.

In order to assess morbidity, for each scenario sick days, restricted activity days, emergency room visits, hospital stays, and asthma attacks attributable to exposure to particulates were estimated. For ozone pollution, only restricted activity days and aggravation of asthma attacks were studied. This portion of the analysis indicated, for example, that 4,135 fewer emergency room visits occurred in 1979 as a result of particulate and ozone air pollution than would have occurred if only the pollution control equipment required in 1960 were operating. Moreover, implementation of additional pollution controls planned for 1987 would reduce emergency room visits in the four-basin area by another 177 cases per year.

Finally, the CARB report translated these health effects into monetary values. Review of the scientific literature led to the selection of $2,000,000 ($2,380,000) as a reasonable midpoint value for a statistical life (all figures from this study are in 1983 dollars; figures in parentheses are 1988 dollars.) Morbidity values were assigned based on the average cost of lost wages and average medical expenditures in each of the four regions studied. Application of these monetary values to the health effects estimates led to a "best estimate that $8.1 ($9.6) billion in total annual health costs were eliminated in 1979 as a result of pollution controls operating at that time compared with the health costs that would have resulted from particulate and ozone pollution that would have been emitted if only pollution control equipment required in 1960 were operating. Completion of the pollution control programs planned for 1987 would reduce health effects in four-basin area by another $1.2 ($1.4) billion per year according to the CARB report.

Only about 20% of the total health costs were projected to result from morbidity impacts. As in many other studies, the CARB report found that mortality effects contribute to the total health costs much more significantly than do the effects of pollution on morbidity. For both mortality and morbidity, the authors of the CARB report believed that their methodology captured only a fraction of the true health costs from pollution. Health costs from exposure to several pollutants were not estimated at all and what analysis did occur was limited in scope. For example, increased respiratory illnesses in children and aggravated chronic illnesses from pollution exposure were not quantified. Thus the authors estimated that "the dollar estimates probably encompass 50 percent to 80 percent of the total health damage."

The inclusion of nonhealth economic benefits from reduced pollution resulted in total economic benefits of $11.9 ($14.2) billion from reduced pollution with control equipment in place in 1979 compared with equipment required by 1960 standards. Reduced health costs accounted for 68 percent of the total benefits, exemplifying, as in other studies, the importance of health effects to the overall economic benefits of reducing air pollution.

Not surprisingly, residents in the Los Angeles area benefited most from the reductions in health costs identified in the CARB report. Approximately $4.5 ($5.4) billion, or 56 percent of the health benefits were projected in the report to occur within the South Coast Air Basin. The San Francisco Bay Air Basin enjoyed $1.8 ($2.1) billion in avoided health costs, or 22 percent of the total. Reduced health costs worth $1.1 ($1.3) billion (14 percent) and $575 ($684) million (8 percent) benefited residents of the less populous San Diego and San Joaquin Air Basins, respectively.

Santa Clara County, California

Santa Clara County lies at the southern tip of San Francisco Bay. Nearly one quarter of the Bay Area's residents live here. About half of the county's 1.4 million population lives in San Jose, and much of the remaining citizenry lives in the neighboring "silicon valley" communities.

Shortly after completion of the four-region California environmental benefits study discussed above, the Santa Clara Valley integrated Environmental Management Project within Region 9 of the U.S. EPA contracted with Energy and Resource Consultants, Inc., to prepare a similar analysis of air pollution in Santa Clara County. The authors included Lauraine Chestnut and Robert Rowe from Energy and Resource Consultants, Inc., and Bart Ostro from the EPA. The study, entitled Santa Clara Criteria Air Pollutant Benefit Analysis, was published in May 1987 (hereafter called the Santa Clara report). The study focused on four pollutants regulated under the Clean Air Act: particulates, ozone, lead, and carbon monoxide.

Air pollution readings from two Santa Clara County monitoring stations in 1985 provided data to the baseline scenario in the particulate analysis. Environmental benefits were then assessed under three alternative scenarios; pollution levels complying with what was then the federal public health particulate standard (annual average of 75 μ^3 g/mμ), complying with the California standard (approximately 65 μ^3g/mμ), or maintained at the lowest annual level recorded in the County in the 1980s (38 μ^3g/mμ, in 1983).

The Santa Clara report addressed mortality effects associated with exposure to particulate pollution and two morbidity effects, increased emergency room visits and restricted activity days due to acute reactions. Dose-response coefficients for these effects were established after a review of the scientific literature. Modifications of mortality risk analyses by Lave and Seskin, Evans, and a number of other scientists led to the establishment of a mortality coefficient of 0.221 annual deaths per 100,000 people per microgram per cubic meter of change in particulate concentration. Moreover, review and modification of the data in the scientific literature led to establishing dose-response coefficients equating the annual per capita emergency room visit rate to 0.00013 per microgram per cubic meter of change in particulate concentration. For restricted activity days, 0.0048 was established to represent the percentage change in annual restricted activity days per person per microgram per cubic meter of change in fine particulate concentration.

Applying these coefficients to the pollution and population data led to the conclusion that between 3 and 68 deaths from exposure to particulate pollution could be eliminated annually if 1985 pollution levels in Santa Clara County were reduced to the more protective levels set in the three alternative scenarios. Between 175 and 3,981 emergency room visits and between 29,500 and 672,200 restricted activity days could also be avoided.

Monetary values were then established for two morbidity effects. Based on an average daily wage for California workers of $80 ($88) and an average cost of $130 ($143) for outpatient medical treatment, a value of $210 ($231) was set for an emergency room visit (all figures from this report are in 1985 dollars; figures in parentheses are 1988 dollars). The average cost of a restricted activity day was keyed to lost wages likely to result from minor illnesses resulting from exposure to pollution. This value was set at $42 ($46) per instance.

These values, when applied to the estimated health effects, yielded an estimate of the

total annual savings of avoided morbidity effects from reducing particulate pollution as set out in the three scenarios of between $1.3 ($1.4) million and $29.3 ($32.2) million. On a per capita basis, these figures translate to about $1.0 ($1.1) saved per person per year in reduced health costs from meeting the federal standard, about $12 ($13) per person for meeting the California standard, and about $21 ($23) per person for maintaining the 1983 particulate pollution levels.

The main body of the text of the Santa Clara study does not include an analysis of the costs associated with premature death from exposure to particulates because "placing dollar values on risks of premature death can spark a lot of emotional controversy." An appendix was included, however, that quantifies mortality costs using an assumed value of $2.0 ($2.2) million for a statistical life. This assumption led to the conclusion that mortality costs in Santa Clara County could be reduced between $6.0 ($6.6) million and $135.9 ($149.5) million if particulate pollution were reduced to the levels assigned in the alternative scenarios.

Ambient pollution data collected hourly in 1984 at five monitoring stations in Santa Clara County provided the basis for the analysis of the health costs of reducing ozone. Dose-response coefficients were set for each of the three morbidity impacts selected for analysis using a procedure similar to that utilized to study exposure to particulates. The three morbidity effects examined were restricted activity days due to respiratory discomfort, asthma attacks, and eye irritation. As for particulates, health effects were calculated under actual baseline conditions and under three alternative scenarios. The alternatives for ozone were pollution levels complying with the federal public health standard (hourly average of 0.12 parts per million [ppm]), complying with the California standard (0.10 ppm), or maintaining a level nearly equal to natural background ozone readings (0.04 ppm).

The analysis indicated that compliance with the reduced ozone concentrations considered in the alternative scenarios would eliminate 24,700 to 472,600 eye irritations, 13,100 to 875,800 restricted activity days, and 400 to 13,700 asthma attacks each year. Using the $80 ($88) average daily wage in California as a guide, monetary values of $9 ($10), $31 ($34), and $60 ($66) were assigned to each of these effects, respectively.

Applying these values led to the conclusion that reducing ozone in the Santa Clara County would reduce health costs by $627,500 ($690,250) if federal standards were met, $3,214,200 ($3,535,620) if the California standards were met, and $29.0 ($31.9) million if background levels of ozone were attained. These figures translate to $0.45 ($0.49) to $21.00 ($23.10) per person in reduced health costs per year.

The Denver Area

Fourth in the series of health cost assessments prepared by many of the same researchers who worked on the California studies discussed above was the report entitled *Ambient Particulate Matter and Ozone Benefit Analysis for Denver* (hereafter called the Denver report). It was written by Lauraine Chestnut and Robert Rowe, then working at RCG/Hagler, Bailly, Inc., a consulting firm that survived the reorganization of Energy and Resource Consultants, Inc. The report, prepared on behalf of the Region 8 office of the U.S. EPA in Denver, was released in draft form in January 1988.

The Denver study analyzed the effects of reducing the concentration of particulate matter and ozone in a six-county area along the Front Range of Colorado, which includes the city of Denver. In total, 1.6 million people lived in 615,000 households within the study region in 1985, the base year for the analysis.

The assessment attempted to compare health costs actually experienced in the mid-1980s with projected health costs if air quality in the region had met the federal public health standards or other lower pollution levels. The study considered both mortality and morbidity effects.

For particulate matter, three scenarios were examined: compliance with the federal public health standards, compliance with pollution levels 10% below the federal standards, and compliance with even more stringent standards in effect in California. The starting point for this analysis was the determination of existing pollution levels based on a three-year average of the annual average and the 24-hour average particulate concentrations collected at 10 pollution monitoring stations in the study area from 1984 to 1986. These concentrations were converted to reflect the percentage of particulates with a diameter of less than 10 microns (μ) by using a conversion factor of 0.46.

The population within the study area was divided among 124 census tracts. An exposure based on the average particulate reading of the nearest monitor was assigned to each person living in each tract. Mortality and morbidity dose-response coefficients were used to estimate the number of deaths and illnesses likely to be avoided if concentrations of particulates were reduced to meet the federal particulate standards. The same dose-response coefficients were used in the Denver report as were applied in the Santa Clara report discussed above. The mortality coefficient was set at 0.221 annual deaths per 100,000 people per microgram per cubic meter of change in particulate concentration. A morbidity dose-reponse coefficient was established equating the annual per capita emergency room visit rate to 0.00013 per microgram/cubic meter of change in particulate concentration. For restricted activity days, 0.0048 was established to represent the percentage of change in annual restricted activity days per person per microgram per cubic meter of change in fine particulate concentration.

Applying these coefficients to the population exposure rates led to the conclusion that 21 deaths per year would be eliminated in the Denver area if the federal particulate standard was met, along with 1,212 emergency room visits and 255,000 restricted activity days stemming from pollution-induced illnesses. Although the study observed that no health effects necessarily occur at particulate concentrations below the federal public health standard, assumptions used in sensitivity analyses indicated that additional health effects could be avoided if particulate concentrations were reduced to the levels set in the two other alternatives. The number of avoided deaths increased to 31 for compliance with a particulate level 10% below the federal standard. Avoided emergency room visits increased to 1,804 and restricted activity days to 380,000. Compliance with the California standard was projected to lead to 74 fewer deaths annually and to 4,353 less emergency room visits and 917,000 fewer restricted activity days per year.

Health costs were assigned only for the reduction in health effects associated with compliance with the federal standard. The authors of the Denver study selected $450 ($486) as a reasonable value for a 1/100,000 reduction risk of dying from exposure to particulate pollution (all dollar figures from this report are in 1986 dollars; figures in parentheses are 1988 dollars). This translates to a value of $4.5 ($4.9) million per statistical life. They used data from the U.S. EPA setting a dollar value of an emergency room visit at $175 ($189). Data from the U.S. Census Bureau indicating an average daily wage in the Denver area of $85 ($92) plus other information from the National Center for Health Statistics were used to derive an average value of $43 ($46) for a restricted activity day.

Using these values, the Denver study concluded that annual health costs of $104.2 ($112.5) million could be avoided if air quality in the Denver area complied with the federal particulate standard. Nearly 90% of this total, or $93.1 ($100.5) million, would result from reduced mortality. Avoided emergency room visits would save $212,000 ($228,960) and eliminated days of restricted activity would save $10.9 ($11.8) million per year.

A similar methodology was used to determine health effects from ozone exposure in the Denver area. Daily high ozone readings during 1986 provided the data for the analysis. Three types of morbidity effects from exposure to ozone were examined: increased asthma attacks, restricted activity days due to respiratory discomfort, and eye irritations. The same coefficients for these effects were used in this study as were developed and applied in the Santa Clara report discussed above. Also as in the Santa Clara report, the Denver report assumed that exposure to ozone did not cause premature death.

Health effects for ozone were calculated for two scenarios. The first assumed a reduction in ozone concentrations to meet the federal public health standard. The second assumed elimination of all ozone other than naturally occurring background levels. The second scenario also assumed that adverse health effects occur at ozone concentrations between background levels and the federal public health standards. Application of the dose-response coefficients to the calculations of population exposure led to the conclusion that cases of asthma attacks would be reduced by 150 per year if the federal ozone standard were attained in the Denver area and that 6,900 instances of restricted activity days and 15,400 cases of eye irritation would also be avoided each year. Much more extensive health effects would be avoided if ozone levels were reduced to background levels under the second scenario: 6,000 asthma attacks, 260,000 restricted activity days, and 470,000 eye irritations per year.

The Denver study placed a value of $21 ($23) for each restricted activity day due to respiratory discomfort, half the value for a restricted activity due to exposure to particular pollution. Asthma attacks were assumed to involve a more serious disruption in activity and a $43 ($46) value was assigned to each attack. Eye irritations were valued at $9 ($10), or one-tenth the average daily wage in the Denver area.

As for particulates, costs were calculated only for a scenario involving compliance with the federal standard. Total annual morbidity cost reductions of $289,900 ($313,092) were predicted to result from compliance with the federal ozone standard. Most of these health cost benefits, $144,900 ($156,492) and $138,600 ($149,688), respec-

tively, resulted from fewer restricted activity days and eye irritations.

EPA Regulatory Impact Analyses

On February 19, 1981, President Reagan issued Executive Order 12291 as one of his first significant policy actions after the inauguration. The order directs all federal agencies to consider the economic repercussions of new regulations and to select regulatory approaches that "maximize the net benefits to society." To accomplish this, "the alternative involving the least cost to society shall be chosen" as long as the "potential benefits to society for the regulation outweigh the potential costs to society."

As a result of the Executive Order 12291, all federal agencies must prepare a regulatory impact analysis (RIA) for any proposed regulation the implementation of which is likely to cost more than $100 million per year. The U.S. EPA has probably been the federal agency most affected by this requirement. Since 1981, the EPA has prepared nearly 20 RIAs. Three of these, which address regulations affecting the public health standards for criteria air pollutants regulated in the Clean Air Act, include comprehensive health cost assessments in their analyses and are discussed in this monograph.

The results of the RIAs to date have been to overwhelmingly justify on economic grounds alone many new EPA pollution control initiatives. In a 1987 EPA report, EPA's Use of Benefit-Cost Analysis: 1981–1986, the agency observed that the 15 RIAs produced at that time concluded that the proposed new EPA regulations they examined would provide net economic benefits to society of more than $10 billion, largely from reduced health costs from exposure to pollution. The report noted that "environmentalists often fear that economic analysis will lead to less strict environmental regulations in an effort to save costs, but our study reveals that the opposite is just as often the case."

The RIA for Particulate Matter

The RIA for particulate matter was published by the EPA on February 24, 1984. The 230-page report addresses the impact of revising public health standards for total particulate matter in any of six ways, each of which reflects a new standard based on the concentration of particulates smaller than 10 microns in diameter rather than total particulates in the air. These particulates, called PM10, usually constitute about 55% of the total mass of suspended particles in air pollution, but they are thought to be responsible for most of the adverse health effects from all particulates. The existing standards in 1984 addressed only total suspended particles (TSPs). They limited the annual concentration of TSPs to 75 $\mu g/m^3$, and the 24-hour maximum concentration was 260 $\mu g/m^3$, which was not be exceeded more than once per year. The six proposed PM10 standards studied in the RIA are:

[Micrograms/cubic meter]

Standard	Annual average	24-hour average
1	55	.....
2	55	150
3	55	200
4	55	250
5	70	250
6	48	183

Pollution data for particulates are widely monitored by the EPA as part of its national emission data systems (NEDS). From the NEDS data base, the EPA extracted particulate readings for the year 1978 from 1,230 counties throughout the United States that account for 70% of all point source emissions and where 82% of the U.S. population lives. These TSP readings were translated to PM10 concentrations with a conversion factor of 55%.

The adjusted particulate readings were updated for each county by a computer model that projected future change in particulate pollution between 1978, the base year, and 1995. The model found that particulate pollution nationwide would drop between 1978 and 1987 as a result of pollution control programs already in place. It would then begin to rise as pollution from new industrial growth offsets further pollution reductions at existing plants. By 1995, particulate pollution nationwide was projected to be slightly higher than in 1978.

Next the EPA developed pollution control strategies for each county that was predicted to be in violation of any of the six proposed PM10 standards. This complicated process involved consideration of the industrial mix within each county, future retirements and new construction of industrial facilities, and population changes. Costs were assigned to each control strategy and summed for all counties. Total annual costs nationwide for achieving compliance with the proposed PM10 standard by 1989 ranged from a low of $370 ($532) million for the number 5 set of standards to a high of $1,360 ($1,958) million for complying with the number 2 set of standards (all figures from this report are in 1980 dollars; figures in parentheses are 1988 dollars). The net present value of these annual costs, using a 10% discount rate, was calculated to range from $1.43 ($2.059) billion to $5.3 ($7.632) billion.

The EPA has been criticized for using a 10% discount rate in its regulatory impact analyses[1] The higher the discount rate, the less net present value is assigned to future costs, such as medical bills for cancer treatment incurred a decade hence as a result of exposure to carcinogens today. Although the 10% discount rate has been approved by the Office of Management and Budget for use in federal government economic analyses, it is believed to be too high by many economists working in health-related fields because it understates long-term health benefits relative to the pollution control costs that are incurred in the short term. As V. Kerry Smith notes in his book, *Environmental Policy under Reagan's Executive Order*, notes, "most environmental economists would advocate the use of a social rate of discount criterion . . . rates ranging from 2 to 6 percent generally form the consensus estimates for the social rate of discount."

The principal objective of the particulate RIA was to place the costs of compliance with the proposed PM10 standards as calculated above side-by-side with the economic benefits expected from controlling PM10 pollution. The EPA benefits analysis addressed six categories: health, visibility, and climate effects, impacts on soiling and materials damage, acid rain, and miscellaneous nonuser benefits. These types of health benefits were studied fewer pollution-related deaths and reduced chronic and acute morbidity.

The EPA used the pollution and population data from its pollution abatement cost assessment in the environmental benefits analysis. This analysis measured the incremental health benefits of complying with each of the six proposed standards compared with the health effects resulting from retention of the existing standards.

Six different sets of dose-response coefficients were applied to each of the six scenarios. The first two, A and B, represented conservative benefits assessments limited solely to health effects and based almost exclusively on data contained in two earlier 1982 EPA publications, *Air Quality Criteria for Particulate Matter and Sulfur Oxides and Review of the National Ambient Air Quality Standards for Particulate Matter: Assessment of Scientific and Technical Information.* Dose-response sets C through F included other health-related coefficients and coefficients for the nonhealth effects of materials' soiling and damage.

The EPA established a low and a high estimate of the monetary value of a statistical life, $360,000 ($518,400) and $2.8 ($4.0) million, respectively. The agency also set monetary values for morbility effects based on lost wages from pollution-induced sicknesses and the cost of medical treatment for illnesses related to exposure to pollution.

In the final step, EPA aggregated its data and calculated the net present value of the economic benefits for compliance with each of the six scenarios reflecting proposed PM10 standards. Separate estimates were made for each of the six sets of dose-response assumptions within each category, and two health costs were estimated, one reflecting each of the life valuations. The result was a complex matrix of 72 net present value health benefit estimates. The lowest prediction was $370 ($533) million in total economic benefits from complying with the 70 $\mu g/m^3$ PM10 standard (assuming set A dose-response coefficients for the weakest proposed standard and the lower life value). The highest projection was $154 ($222) billion in health benefits (for the tightest proposed standard and the set F dose-response coefficients and the higher life value).

Under set C dose-response assumptions, the tightest proposed PM10 standards were estimated to produce between $27 ($39) billion and $31 ($45) billion in total benefits. These benefits would result from 3,600 "saved" lives and a reduction of 190,000 lost work days and 910,000 reduced activity days. The analsysis using the health effects assumptions in set B indicates EPA's bests conservative estimate of health benefits alone. The most stringent proposed PM10 standard under these conditions yields between $3.7 ($5.3) and $6.7 ($9.6) billion in health benefits.

When placed against the estimated costs of implementing the pollution controls required to meet the various proposed PM10 standards, the overall cost/benefit ratio was highly favorable to implementing tigher standards. Costs exceeded benefits in only 7 of the 72 scenarios analyzed. Net benefits totaled as high as $151 ($217) billion for the tightest standard, assuming the higher life valuation estimate. For the set B case cited above, net benefits were estimated to be between $340 ($490) million and $3.3 ($4.8) billion.

The RIA for Lead

In February 1985, the EPA published its final regulatory impact statement entitled *Costs and Benefits of Reducing Lead in Gasoline.* The principal purpose of this RIA was to assess the economic costs and bene-

[1] The discount rate is an estimate of the time value of money, it is used to calculate the current day value of money to be spent in the future. This value is reduced according to the size of the assumed discount rate.

fits of implementing EPA regulatory proposals limiting the concentration of lead in gasoline from 1.1 grams per gallon down to 0.10 grams per gallon by one of three timetables ending on January 1, 1988.

The EPA regulatory action was contemplated to respond to increasing medical evidence that high lead concentration in blood was causing serious adverse health effects including high blood pressure, kidney and liver damage, interference with blood creation and basic cellular processes, and retardation in cognitive development in children. Further evidence indicated that airborne lead from motor vehicle exhausts was the source of more than half of the lead in the bloodstream of the average American.

The RIA calculated economic costs and the economic benefits of implementing each phasedown scenario relative to the costs and benefits implied by continuing to enforce the 1.1 gram per gallon standard already in effect. The EPA cost of compliance analysis calculated the difference between the cost of producing gasoline under the 1.1 gram per gallon standard and the cost of producing fuels with reduced lead concentrations. A refinery production cost model estimated the differential to be less than $0.01/gallon between leaded and low-lead gasoline. The total incremental cost of supplying low-lead gasoline was ultimately calculated by the EPA to be $441 ($525) million per year once full implementation of the lead phasedown program was completed (1983 dollars are used throughout the discussion of the lead RIA; figures in parentheses are 1988 dollars). In the early years, costs varied by $96 ($114) million to $608 ($723) million as the oil refining industry adjusted to the new production requirements.

Turning to the issue of health cost benefits from reducing lead, the EPA analyzed three health effects from lead exposure:

Health effects on cognitive development in children

Effects on blood pressure in adults

Health effects caused by emissions of other air pollutants in automotive exhausts that result from the use of lead-containing fuel in cars designed for lead-free gasoline

Health effects from lead exposure tend to be most prevalent in children largely because many biochemical reactions central to physical growth and development are inhibited or altered by lead. Research in the 1970s showed that more than three-quarters of children in the United States younger than 18 years of age had lead levels in their blood exceeding the 10 micrograms per deciliter (μg/dL) of blood threshold concentration linked to adverse biological effects. In order to determine the number of children whose health might benefit from reduced exposure to lead, the EPA turned to data collected during the second National Health and Nutrition Examination Survey (NHANES II) project and subsequently analyzed by the Centers for Disease Control and the National Center for Health Statistics. In the NHANES II project, health information concerning 27,801 people living in 64 sampling locations was collected from 1976 through 1980. From this group, all children 6 months through 6 years of age and half of the participants 7 years old or older were asked to donate blood to determine its lead concentration. The NHANES II results are widely believed to be representative of the health of the general U.S. population.

From the NHANES II data and various population growth projections, the EPA calculated the future size of the child-aged population and the number of children likely to experience different elevated blood lead concentrations at future dates if the leaded gasoline standard remains unchanged. EPA then estimated the reductions in lead emissions nationwide that would result from implementation of the three alternative lead phasedown schedules analyzed in the RIA and how those reductions would translate into lower lead concentrations in the air and in the blood of children. As a result of the analysis, EPA concluded that the alternative lead phasedown proposals would significantly lower the blood lead levels in children by 1992, thereby improving the health of 31,000 children whose blood lead concentration would otherwise exceed 30 μg/dL. Some 103,000 other children predicted to have blood lead levels greater than 25 μg/dL without the lead phasedown would also benefit.

The EPA health cost assessment quantified two types of economic benefits from reducing blood lead concentrations in children. First the agency calculated monetary savings from reduced medical care for children whose blood lead concentrations would no longer be high enough to cause health problems requiring medical treatment. The second analysis quantified savings in avoided compensatory education for children no longer needing supplemental education because their cognitive development would no longer be impaired due to high lead levels.

In the medical cost assessment, the EPA assumed that all children with blood lead levels greater than 25 μg/dL should receive medical treatment. Treatment would consist of an initial screening of all children, followed by additional testing and treatment of children with blood levels at a cost of as much as $3,000 ($3,570) per child. The analysis projected an average medical cost of $900 ($1,071) to treat each child with a blood lead level greater than 25 μg/dL.

A review of the scientific literature indicated to EPA that approximately 20% of the children with blood lead levels greater than 25 μg/dL would require supplemental education programs to compensate for the impairment in cognitive development resulting from lead exposure. These figures result in an estimated cost of a three-year compensatory education program of $2,600 ($3,094) for each child with an elevated blood lead.

Summing up medical and education costs, the EPA calculated that $3,500 ($4,165) in health benefits would result from each case of elevated blood lead level avoided as a result of reducing airborne lead. Merging this finding with the results of the analysis of the number of children affected by airborne lead, the EPA concluded that by 1992 the proposed lead phasedown schedules would yield annual health benefits in children of $361 ($430) million, $93 ($111) million in avoided medical treatment, and $268 ($319) million in avoided supplemental education. Because the phasedown was being implemented between 1986 and 1991, the annual benefits were determined to be even higher, ranging from $371 ($441) million to $602 ($716) million per year.

The second area of health cost analyzed in the lead RIA concerned the effects of lead exposure on the blood pressure of adult white males between the ages of 40 and 59 years. This analysis was undertaken in response to a number of dose-response studies that correlated exposure to lead to elevated blood pressure and consequent cardiovascular diseases. Because the effect was found to be most prevalent in middle-aged males, the EPA analysis focused on this sector of the population.

Using the NHANES II data base, the EPA performed regression analyses to identify the degree of correlation between blood pressure and 87 nutritional and biochemicalk factors, including lead exposure, and conclude that "lead was significantly related to blood pressure at all levels down to zero." Armed with this data, the EPA estimated the effect of the proposed lead phasedown on lowering blood pressure in the adult male population in the United States. Next, the reduced blood pressures were translated to reduced incidence of hypertension and cardiovascular disease in middle-aged males. The analysis concluded that by 1992 the lead phasedown would eliminate annually 1.4 million cases of hypertension, 4,289 cases of heart disease, 892 strokes, and 4,132 deaths among middle-aged men.

The monetary value assigned to morbidity health effects was limited to avoided medical costs and forgone wages, although the EPA admits that these estimates "are clearly too low" because of their neglect of the costs of pain, suffering, and inconvenience. The average annual estimated cost of avoiding one case of hypertension was set at $220 ($262), one heart attack was evaluated at $60,000 ($71,400), and $44,000 ($52,360) was set as the total cost of one stroke. A value of $1.0 ($1.2) million was assumed by the EPA to represent the value of a premature death from exposure to lead.

Merging the dose-response data with the monetary value assumptions resulted in an estimated annual health cost benefit of $4.7 ($5.6) billion by 1992 from reducing blood pressure in middle-aged males as a result of the lead phasedown program. The total health benefit for the entire population would undoubtedly be much greater.

The third category of health effects studied by the EPA analyzed an indirect effect of lead in gasoline. Misfueling (using leaded fuel) cars designed to burn lead-free gasoline incapacitates the catalytic convertors in those vehicles and increases the emissions of hydrocarbons, carbon monoxide, and nitrogen oxides. The EPA estimates that the catalytic convertors in about 15% of the vehicles in use are not functioning because of lead contamination introduced by misfueling.

The EPA assumed the lead phasedown program would eliminate most misfueling, thereby preventing emissions of 2.8 million tons of the hydrocarbon, carbon monoxide, and nitrogen oxides pollution. Health effects were assessed for the avoided ozone pollution that results from the interaction of hydrocarbons and nitrogen oxides in the atmosphere.

For ozone, only acute health effects were studied, and the EPA analysis predicted that 1.9 million cases of minor respiratory illness and 3.26 million cases of nonrespiratory illnesses (such as eye irritation) would be associated with the ozone pollution avoided as a result of the lead phasedown. The cost of avoiding a respiratory illness was set as $8 ($10), and $3 ($4) was estimated as the price of enduring a headache using estimates of $100 ($119) for one day's lost wages. The EPA then calculated $69 ($82) million in annual health cost reductions from these effects of the lead phasedown.

Summing up the benefits from all three sources of avoided health effects from the lead phasedown yielded an estimated total reduction in annual health costs of $5.13 ($6.10) billion in 1992. About 90% of the health benefits resulted from avoided high blood pressure in adult males. The overall health benefits exceeded the $441 ($525)

million annual cost of implementing the lead phasedown by a factor of more than 10 to 1. On a net present value basis, the entire lead phasedown program was estimated to yield $28.6 ($34.0) billion in health cost reductions between 1985 and 1992 compared with net present value costs of only $2.6 ($3.1) billion.

The Sulfur Oxides RIA

A 242-page RIA addressing the economic effects of implementing different public health standards for sulfur oxides was published in draft form by the U.S. EPA Air Quality Management Division in March 1988. Entitled *Regulatory Impact Analysis on the National Air Quality Standards for Sulfur Oxides (Sulfur Dioxide)* and hereafter called the SO_2 RIA, it assessed the economic effects of retaining the current public health standard for sulfur dioxide compared with the effects resulting from implementation of two more stringent standards.

The existing sulfur dioxide (SO_2) standards set by the EPA in 1971 establish a maximum allowable concentration of sulfur dioxide of 0.14 ppm averaged over any 24-hour period or 0.03 ppm averaged over any year. Compliance with these standards was the first scenario studied in the SO_2 RIA. The two alternative standards considered the effect of establishing new maximum standards for sulfur dioxide averaged over any 1-hour period not to exceed 0.5 ppm or 0.25 ppm, respectively.

The EPA cost and benefit analysis focused on the 63 regions throughout the country where air quality exceeded the existing sulfur dioxide standard in 1982. The agency used its STACK data base as a starting point to determine the costs of reducing sulfur dioxide pollution in each of these areas to the levels set in the three scenarios. This data base lists the pollution discharges from each of the 777 power plants in the United States that discharge 67% of all the SO_2 emitted from all sources.

Dispersion modeling was used to estimate how much pollution would need to be eliminated from each pollution source in each noncompliance area to meet the standards set in the three alternatives. Analyses were then performed to estimate the cost of pollution control strategies to achieve the necessary pollution reductions. The EPA also developed pollution control strategies for copper and lead smelters and for industrial boilers. These industries, together with utilities, account for 87% of the nation's sulfur dioxide pollution.

The EPA analysis estimated that between 1.6 million and 4.2 million tons of sulfur dioxide emissions must be eliminated nationwide to achieve compliance with the existing SO_2 standards. Its cost study predicted that between $200 ($228) million and $1.1 ($1.2) billion worth of additional pollution controls would be needed to achieve this level of reduction (all figures from this report are in 1984 dollars; figures in parenthese are 1988 dollars). These costs grew to $2.2 ($2.5) billion for compliance with the 0.5 ppm 1-hour standard and to $5.4 ($6.2) billion for compliance with the tighter 0.25 ppm 1-hour standard. Pollution reduction targets to achieve these latter two standards were estimated to be 6.4 million and 11.2 million tons per year so SO_2, respectively.

The SO_2 RIA concluded that economic benefits would result from several sources as a result of reducing sulfur dioxide. Reduced sulfur dioxide itself would yield benefits, the report concluded, as would reduction in sulfate and other particulate pollution generated by the interaction of SO_2 in the atmosphere. The benefits analysis quantified these benefits assuming compliance with each of the alternative standards by 1990 and maintenance of compliance through the end of the century.

Mortality and morbidity health effects were assessed for the predicted reduction in SO_2 concentrations set forth in the three alternative scenarios. Morbidity effects were also calculated for the reduction in particulate pollution predicted to accompany reduction in sulfur dioxide emissions. The SO_2 RIA also studied other nonhealth benefits including property damage, visibility degradation, and loss of agricultural productivity.

Computer modeling was used to predict how compliance with the standards set in each scenario would affect the exposure to sulfur dioxide of people living near four existing power plants currently operating in violation of the SO_2 standards. The results of these analyses were then extrapolated to reflect the total effect of reduced SO_2 on the population living in the 31 eastern United States (i.e., east of or bordering on the Mississippi River). In an analogous effort, regional pollution transportation models were used to predict the effects of reduced particulate emissions on the eastern population. Westerns states were not included in the benefits analysis because of insufficient air quality data.

The SO_2 RIA does not reveal the numerical values of all the dose-response coefficients used to assess the effects of reduced SO_2 pollution on human health. For mortality effects, zero effect is used as a lower bound, whereas data presented in a study of pollution-related mortality in London served as the basis for the upper bound. For morbidity effects from SO_2 reductions, the SO_2 RIA notes that "the full range of clinical studies of effects of SO_2 on symptoms prevalence is utilized." The monetary values assigned to each predicted health effect change are also not detailed in the SO_2 RIA.

The results of the analysis, however, are presented, and they indicated only minimal health benefits from reducing SO_2 under the three scenarios. The net present value of health benefits in the eastern United States from compliance with the existing SO_2 standard was projected to be only $2.0 ($2.2) million using a 10% discount factor. The benefits increased to $4.0 ($4.6) million and to $8.0 ($9.1) million under the two more stringent standards. Higher benefits result from calculations using a 2% discount factor. In this case, the benefits from reducing sulfur dioxide rise to $6.0 ($6.8) million, $10.0 ($11.4) million, and $20.0 ($22.8) million, respectively.

The analysis of benefits resulting from the reduction in particulate matter associated with reduced sulfur dioxide pollution concluded that exposure to particulates is a much greater source of health costs than exposure directly to sulfur dioxide. Unfortunately, the particulate analysis was limited to morbidity effects, and these findings were merged with the results from the analysis of the benefits of reduced material damage in the SO_2 RIA. This prevents the reader from separating the morbidity benefits from property-soiling benefits.

The SO_2 RIA concluded that the net present value of morbidity and soiling benefits in the eastern United States from reduced particulate pollution associated with compliance with the existing SO_2 standard was $2.4 ($2.7) billion using a 10% discount factor. The benefits increased to $4.3 ($4.9) billion and to $8.8 ($10.0) billion under the two tighter standards. With a 2% discount factor, these figures rose to $5.2 ($5.9) billion, $9.5 ($10.8) billion, and $19.4 ($22.1) billion for compliance with the three scenarios, respectively.

Comparison of the overall costs and projected benefits of reducing sulfur dioxide pollution suggests that any of the three regulatory strategies analyzed in the SO_2 RIA would be cost effective. The report notes that "of the 27 combinations of interest rates, benefits assumptions, and alternate standards, 25 have positive net incremental value." The 10% discount rate analysis, for example, indicated that total benefits exceeded costs by between $3.3 ($3.8) billion and $18 ($21) billion.

It is important to note that the SO_2 RIA did not quantify health costs related to exposure to sulfates produced by the interactions of sulfur dioxide in the atmosphere because of "uncertainties associated with the available studies." The report notes, however, that "the data clearly suggest a risk at current ambient levels" that "may have substantial economic benefit." Exposure to sulfates may in fact be the largest cause of adverse health effects. An appendix to the SO_2 RIA discusses this issue in greater detail. Based on a number of dose-response studies of sulfates and human health, the appendix includes mortality benefit estimates as high $379 ($432) billion stemming from sulfate reductions resulting from compliance with the current federal sulfur dioxide standard.

National and Regional Ozone Studies

Smog is one of the most intractable air pollution problems facing the United States. Smog pollution, composed mostly of ozone created in the atmosphere by the interaction between nitrogen oxide and reactive hydrocarbon pollutants, is especially severe in major cities. Air quality in about 100 metropolitan areas now exceeds the federal public health standard for ozone. About 100 million Americans are exposed to dangerous levels of ozone.

Control of ozone is one of the foremost issues facing federal environmental decision makers. The U.S. EPA is constantly investigating new national ozone control strategies, and further ozone abatement requirements are included in virtually every congressional proposal to amend the Clean Air Act.

Since 1988, three analyses of the economic costs associated with national or regional ozone pollution have been completed. They are reviewed in this section. Two address ozone pollution nationwide and the other focuses on ozone problems in the northeastern United States.

National Ozone Pollution

In few environmental issues has Congress become more directly embroiled than in the national effort to control ozone pollution. Statutory language establishing pollution reduction requirements for ozone-causing air pollution has been included in the Clean Air Act for more than a decade. Elaborate and complex new strategies to reduce ozone pollution in the United States are continuously debated in Congress.

The considerable knowledge of ozone pollution acquired by Congress comes in part as a result of studies performed by its research agencies, including the U.S. Office of Technology Assessment (OTA). For most of the 1980s, the Oceans and Environment Program within OTA has been studying air pollution in the United States, especially acid rain and ozone pollution, at the request of Congress.

In July 1989, the OTA published the most comprehensive of its studies of ozone to date, a 237-page report entitled *Catching Our Breath—Next Steps for Reducing Urban Ozone* (hereinafter called the OTA report). Directed by Robert Friedman, project researchers studied the health effects of ozone on the urban population of the United States, the costs of those effects, and the environmental and economic consequences of implementing a wide range of new ozone control strategies. More than 60 pollution control strategies for reducing hydrocarbon emissions, one of the key precursor pollutants to ozone, were analyzed in the report.

In its analysis of the health costs associated with exposure to ozone air pollution, the OTA report relied heavily on a study prepared by Alan Krupnick and Raymond Kopp of Resources for the Future (RFF) under contract to OTA. This report, entitled *The Health and Agricultural Benefits of Reductions in Ambient Ozone in the United States* (hereinafter called the Krupnick report), was published by Resources for the Future as a discussion paper in August 1988. The findings of the Krupnick report are presented first, followed by a discussion of the integration of these findings into the OTA report.

Seven ozone control scenarios were analyzed in the Krupnick report. These scenarios reflected different combinations of baseline ozone levels, future ozone control levels, and assumptions about the minimum concentration of ozone at which adverse health effects appear (i.e., the ozone threshold). Two baseline ozone levels were selected: actual average ozone concentrations in 1983, the worst ozone year in the early part of the 1980s, and actual average ozone concentrations from 1983 through 1985. Pollution statistics for these years were obtained from the SAROAD (Storage and Retrieval of Aerometric Data) data base system developed by the EPA.

Five target levels of ozone reductions were selected for comparison with the baseline: compliance with hourly maximum ozone standards set at 0.10 ppm, 0.12 ppm (the current federal public health standard), and 0.14 ppm. Two other ozone targets reflected reductions resulting from either a 35% or a 50% decrease in the reactive hydrocarbon emissions largely responsible for the production of ozone pollution in the atmosphere. Finally, two health effects thresholds were selected: 0.04 ppm and 0.06 ppm. It was assumed that no health effects occur at ozone concentrations below these levels.

The population analyzed included all people living in 81 metropolitan statistical areas covering 257 counties where air quality violated the ozone public health standard in 1984. Health effects from ozone exposure under the seven scenarios were estimated for this population. A review of epidemiological research led to the selection for inclusion in the study of dose-response coefficients for four symptoms of adverse reactions to ozone pollution. They were increased cough, shortness of breath, chest tightness (i.e., the experience of pain upon deep inhalation), and eye irritation. Moreover, the study estimated the increase in asthma attacks and the number of days when human activity would be restricted due to respiratory-related discomfort.

The Krupnick report concluded that a large number of instances of adverse morbidity effects would be avoided in urban areas if ozone pollution were reduced. For example, under the scenario comparing actual 1983 ozone levels with the situation that would exist if all areas complied with the current ozone public health standard, the report predicted that 49.9 million cases of adverse health symptoms would be eliminated annually throughout the United States. Asthma attacks would decrease by 1.9 million.

Based on a review of the scientific literature, monetary values were assigned to the morbidity effects. A value of $5 ($6) was placed on the discomfort of experiencing any of the adverse health symptoms included in the study (all dollar figures from this report are in 1984 dollars; figures in parentheses are 1988 dollars). The cost to the victim of an asthma attack was set at $25 ($28), and activity restrictions were assumed to cost an average of $18 ($21) in lost work time and inconvenience.

Merging the health effects and economic valuation findings together led to an estimated "middle" value of between $192.0 ($218.9) million and $788.9 ($899.3) million in annual health effects from reducing ozone. Based on epidemiological studies of health effects, the full range of findings, including low and high estimates of health effects, extended from $53.9 ($61.4) million to $2.2 ($2.5) billion in annual health benefits.

In addition to this analysis, the Krupnick report also calculated health costs based on clinical studies of pollution exposure that yield a much broader range of dose-response coefficients compared with the epidemiological studies cited above. In this case, the range of "middle" estimates of annual health cost reductions among the seven scenarios extended from $52 ($59) million to $2.7 ($3.1) billion. Based on clinical studies of health effects, the full range of findings, including low and high estimates of health effects, stretched from $18.8 ($21.4) million to $6.8 ($7.8) billion in annual health benefits.

The findings of the Krupnick study were modified and used as part of the analysis in the OTA report. The OTA project focused on two ozone-reduction scenarios compared with the seven scenarios in the Krupnick report. The seven scenarios reflected future compliance with the federal 0.12 ppm ozone public health standard and the less ambitious ozone reductions achieved through a 35% reduction in reactive hydrocarbon emissions nationwide.

The OTA report concluded that for achieving the 0.12 ppm ozone standard nationwide, "about $.5 billion to $4 billion per year is a reasonable range for the portion of health benefits that we were able to evaluate. Under some assumptions, benefits are less than $0.1 billion per year and under others, up to about $10 billion per year." The figures in the OTA report are in 1988 dollars.

The highest health benefits were calculated in the OTA report for compliance with the federal public health standard. In this scenario, "middle" range estimates ranged from $550 million to $3.7 billion per year. The full range of findings, including low and high estimates of health effects, stretched from $150 million to $9.5 billion in annual health benefits. In the 35% reactive hydrocarbon reduction scenario, "middle" range estimates ranged from $190 million to $1.4 billion per year. The full range of findings, including low and high estimates of health effects, extended from $54 million to $3.4 billion in annual health benefits.

Ozone in the Northeastern United States

Dr. Alan Krupnick is the author of a second study of ozone pollution in addition to the work he prepared for the OTA. This Resources for the Future report, *An Analysis of Selected Health Benefits from Reductions in Photochemical Oxidants in the Northeastern United States* (hereafter called the RFF report), was released in final draft form in September 1988.

As discussed earlier, ozone itself is not discharged directly from stationary or mobile pollution sources. It is produced by atmospheric reactions of other pollutants, primarily reactive hydrocarbons and nitrogen oxides, the discharges of which are regulated under the Clean Air Act. The RFF analysis examined how changes in discharges of reactive hydrocarbon emissions would affect concentrations of ozone in the atmosphere. The base year for the study consisted of actual ozone levels and reactive hydrocarbon emissions during the 214-day "smog season" in 1980. The study was limited in geographical scope to the 31 northeastern states located east of or bordering on the Mississippi River.

Two pollution reduction scenarios were examined. Scenario I reflected completion of pollution control strategies scheduled for implementation as part of programs under way in 1982. Emissions of reactive hydrocarbons in 1987 within this scenario were projected to be 30% below the 1980 baseline levels. Under scenario II, additional pollution controls, not yet required or planned as of 1982, were assumed to be operating by 1987. In this case, reactive hydrocarbon emissions were projected to be 50% of baseline levels.

The next step in the analysis was to project how the reductions in hydrocarbon emissions would affect ambient concentrations of ozone in the atmosphere. This was accomplished using an EPA air pollution dispersion model programed to calculate ozone concentrations on a county-by-county basis throughout the Northeast. This model predicted that the annual hourly average ozone reading would decline by an average of 1.25% throughout the study area under scenario I and by about 2.15% under scenario II conditions. The results of another EPA exposure model were then used to predict the average change in exposure to ozone pollution in the northeastern United States under the two scenarios compared with exposure levels in the base year.

A variety of morbidity effects from exposure to ozone were examined in the RFF report; mortality effects were not included in the study. A comprehensive review of dozens of health effects studies led to an inclusion of 10 adverse health reactions to ozone exposure in the benefits analysis. They were acute asthma attacks, minor respiratory discomfort causing restricted activity, and eight short-term symptoms: increased coughing, shortness of breath, chest tightness, nose and throat irritation, eye irritation, and three other types of respiratory problems. Based on a review of the scientific literature, 22 dose-response coefficients for these morbidity effects were selected.

Application of the dose-response coefficients to the population groups previously identified as being exposed to ozone pollution resulted in predictions about changes in health effects in the Northeast because of ozone reduction predicted in the two scenarios. For example, under scenario I ozone reductions, the RFF report predicted that 35.3 million instances of increased coughing, 5.6 million cases of eye irritation, and 124,000 asthma attacks would be avoided by the northeastern population annually. These health benefits increased to 60.4 million, 9.8

million, and 219,000, respectively under scenario II conditions.

The RFF report calculated the predicted health benefits for an "average" person living in the Northeast. For example, the average person would experience 0.486 fewer instances of increased coughing per year if ozone pollution were reduced as proposed in scenario I and 0.831 fewer bouts of coughing per year under the scenario II cleanup conditions.

Monetary valuations for the 10 morbidity effects were established based on a review of the scientific literature. The valuation assumptions ranged from a low of $2.84 ($3.24) for a case of nose and throat irritation to $25 ($28) for the cost of an asthma attack (all figures from this report are in 1984 dollars; figures in parentheses are 1988 dollars). Most health effects were valued between $4 ($5) and $7 ($8) per case.

Using these figures, the report expressed the projected health benefits from the ozone pollution reductions in two ways: benefits per person and benefits per ton of avoided reactive hydrocarbon pollution. On a per person basis, projected avoidance of the coughing, eye irritations, and asthma attacks, for example, were evaluated to benefit each person in the study area by $1.61 ($1.81), $0.39 ($0.44), and $1.41 ($1.61) per year under scenario I. Per ton of reactive hydrocarbon pollution removed, these projected health benefits were calculated to be $92.25 ($105.17), $23.84 ($27.18), and $2.45 ($2.79). Per person and per ton health benefit estimates were made for each of the 22 dose-response coefficients applied to each scenario.

The process of pulling together the many monetary estimates of health benefits for the 22 dose-response coefficients involved five aggregation procedures that differed as to which dose-response coefficient analyses were included in the final tabulation. Each aggregation procedure yielded different estimated health costs broken down with a low, middle, and high value.

For scenario I ozone reductions, the total morbidity health benefits throughout the northeastern United States were estimated to be between $120 ($137) million and $3.1 ($3.5) billion per year. On a per ton of hydrocarbon removed basis, the health benefits ranged from $95 ($108) to $2,438 ($2,779) per ton of avoided pollution. The study authors asserted that these wide ranges represent "a set of clearly not incorrect answers." Their "grand" best estimate was $611 ($696) million in annual total health benefits from reducing pollution under scenario I.

Projected health benefits approximately doubled under scenario II conditions. The range of estimated total health benefits ranged from $210 ($239) million to $5.4 ($6.2) billion under scenario II. On the other hand, the benefits on a per ton of reactive hydrocarbon removed basis declined slightly compared with scenario I; the range was $80 ($91) to $2,064 ($2,353) per ton of avoided reactive hydrocarbon pollution. The RFF report stated a best estimate of $1.1 billion in total health benefits, or $405 per ton ($462/ton) of removed reactive hydrocarbons, for achieving scenario II ozone reductions.

Health Costs of Vehicle Exhaust Pollution

Automobile exhausts are one of the largest sources of air pollution in the United States, contributing about 66% of the nation's total carbon monoxide air pollution and about 43% and 34% of its nitrogen oxides and its reactive hydrocarbon pollution, respectively. Burning fuels other than gasoline—such as natural gas or methanol—have been shown in prototype vehicles to emit less of these pollutants.

A 1987 study investigating the viability of alternative transportation fuels attempted to balance the known costs of alternative fuel use against the economic benefits of avoiding some of the externalized or "hidden" costs from the use of higher-polluting conventional fuels. The study, release in October 1987 and entitled A Comparative Analysis of Future Transportation Fuels (hereafter called the Davis report), was written by three scientists at the Davis campus of the University of California and published by the Institute of Transportation Studies at the Berkeley campus. The authors were Mark DeLuchi, Daniel Sperling, and Robert Johnston.

The starting point for the Davis report was an EPA compilation of total 1985 nationwide emissions of five air pollutants regulated under the Clean Air Act—particulates, sulfur oxides, nitrogen oxides, carbon monoxide, and reactive hydrocarbons—and the resulting average ambient concentrations nationwide of these pollutants, plus the ozone created by the interaction of reactive hydrocarbons and nitrogen oxides. The study then investigated how many deaths and how much illness would be avoided if this pollution were eliminated.

After reviewing six major studies of the relationship between air pollution and death rates, the Davis report concluded that nationally "an upper bound of about 120,000 excess deaths attributable to air pollution in 1985 is reasonable, and that a lower bound of approximately equal likelihood is about 50,000." A similar review of several life valuation studies resulted in the establishment of lower and upper bounds of $500,000 ($550,000) and $5 ($6) million as the value of a statisical life (all figures from this report are in 1985 dollars; figures in parentheses are 1988 dollars). Multiplying estimated deaths by these life valuations resulted in an estimated range of $25 ($27) billion to $600 ($660) billion in costs related to excess deaths from exposure to all air pollution in the United States.

A similar methodology was used to estimate morbidity costs from exposure to air pollution. A review of the scientific literature led to an estimate of morbidity costs associated with exposure to air pollution of $25 ($27) billion to $125 ($137) billion in 1985. The mortality and morbidity estimates were reduced by 12.5% to correct for overlap between mortality and morbidity effects caused, for example, by sicknesses that result in death. The range of combined health costs for mortality and morbidity in 1985, therefore, was $44 ($48) billion to $634 ($697) billion.

In order to focus on air pollution from automobiles, the Davis report estimated the overall contribution of vehicular air pollution to the nation's total air pollution. Vehicles emit about 40.5% of the total discharges of the pollutants examined, but the authors concluded conservatively that vehicles were responsible for just 15% to 25% of the total health costs from air pollution. This and other assumptions lowered the estimated total health cost of vehicular air pollution to between $4.03 ($4.43) billion and $84.99 ($93.49) billion in 1985.

In addition to health costs from vehicular air pollution, the Davis report also analyzed other externalized costs of fuels used for transportation, including vehicular air pollution damage to agriculture and wildlife, corrosion and soiling of buildings and clothes, and degradation of visibility. Health costs from exposure to water contaminated by gasoline leaking from underground storage tanks and from accidents during fuel distribution were also calculated. Further, the Davis report estimated the cost of maintaining a military presence in the Middle East in order to secure oil supplies for the United States and direct subsidies underwritten by the federal government to the oil industry.

Merging these analyses, the Davis report estimated that the total externalized costs of supplying oil to the automotive and truck fleet in the United States to be between $31 ($34) billion and $229 ($252) billion in 1985. Excluding the military costs, which constituted more than half of the total external costs, health costs were the largest source of economic costs, constituting 45% and 90% of the externalized costs in the low and high health cost scenarios, respectively. Thus, health costs from air pollution emerged as a major source of external costs in the nation's transportation fuel supply system.

Health Costs From a Proposed Power Plant

The Bonneville Power Administration (BPA) has probably analyzed the environmental costs, including health costs, of generating electricity more extensively than any other electric utility in the United States. A federal agency as well as a power producer, the BPA receives direct policy guidance from the U.S. Congress. In 1980, the Pacific Northwest Electric Power Planning and Conservation Act became law and changed the way BPA analyzed the environmental effects of its power supply system. The law, among other things, required the agency to consider environmental costs and benefits in economic analyses of all future energy programs, including generating and conservation resources.

In the early 1980s, the BPA made fledgling attempts to incorporate environmental cost assessments into its planning process by funding studies of the environmental costs of operating four power plants within its generation system, including nuclear, coal-, gas-, or oil-fired, and hydroelectric plants. With these tentative efforts completed in 1983, the BPA undertook two other studies in 1984, one involving analysis of two nuclear power plant projects and the other addressing the agency's residential weatherization program.

The third phase of the BPA program began in 1985 with analyses of environmental costs associated with "generic" power plants hypothetically operating in different regions within BPA's service area. These studies calculated the pollution expected to be emitted from a power plant built to burn a particular fuel and then assessed the environmental costs associated with that pollution load. Among the categories of costs studied were health risks, boomtown effects such as increased need for schools and hospitals to serve power plant workers, costs associated with changes in fish and wildlife management, and impacts on agricultural productivity and aesthetic enjoyment of the environment.

As part of this program, in January 1987 the BPA released a study prepared by the consulting firm ECO Northwest and entitled *Generic Coal Study: Quantification and Valuation of Environmental Impacts* (hereafter called the BPA report). It focused on three air pollutants commonly emitted from coal-burning power plants and on three secondary pollutants formed as the

primary contaminants interact in the air. The primary pollutants were sulfur oxides, nitrogen oxides, and particulates that produce sulfates, nitrates, and ozone as secondary pollutants.

Six types of environmental costs from emissions of these pollutants were examined. They were crop and materials damage, effects on endangered species, general ecosystem impacts, visibility reduction, and, of course, health costs. The BPA defined environmental costs, including health costs, as "those costs that are not already internalized in the system costs of electricity generated by a plant." In other words, expenses related to pollution control equipment are not included in the analysis, only costs related to the effect of the pollution that escapes into the environment.

The model upon which the BPA study was based was a hypothetical coal-fired power plant consisting of two 650-megawatt units located in any of six locations. Three sites typified environmental conditions commonly found within BPA's service area east of the Cascade Mountains in the states of Washington or Oregon. Two other sites were typical of plausible power plant locales in the more densely populated area within BPA's service area west of the Cascade Mountains. The final locale was placed in Montana, outside of the BPA service area but within a region that might supply electricity to the Northwest in the future.

The BPA report projected that 28,500 tons of sulfur dioxide, 1,400 tons of particulates, and 13,100 tons of nitrogen oxides would be emitted each year from each hypothetical power plant. Computer models calculated ground-level concentrations of each primary and secondary pollutant at various distances within a 100-mile radius of each plant site.

The next steps entailed calculating the number of people near each site affected by the pollution caused by the power plant and assigning dose-response coefficients describing how each person would react to exposure to the projected pollution. Population data were disaggregated among three age groups: 18–44 years, 45–64 years, and 65 years and older.

Dose-response coefficients were calculated for the effect of pollution exposure on human mortality. The mortality coefficients were arrived at through subjective evaluations of the results of past epidemiological studies of air pollution effects on human health. Ultimately, the BPA analysis assumed a mortality risk factor of three out of one million deaths per year per exposure to air containing a concentration of one microgram per cubic meter of particulate matter. A risk factor of 6 deaths per million was assigned to ozone exposure, but no mortality risk was assumed to exist for exposure to nitrogen oxides or nitrates. Variable dose-response coefficients were assigned to different age groups for exposure to sulfur dioxide and sulfates. For sulfur dioxide, the risk factors for the three age groups analyzed in the study were 1.5, 6.0, and 35.0 per million deaths of each annual exposure to one microgram per cubic meter concentration of pollution. By far the highest mortality risks—15.0, 60.0, and 350.0 per million deaths—were assigned to exposure from each increment of sulfate pollution.

The final two steps in the BPA study involved quantification of the total mortality effect from all pollutants emitted by the hypothetical coal-fired power plant and estimation of the total cost of that effect. The quantification step was performed by multiplying the projected concentration of each pollutant resulting from the power plant's emissions times the size of the exposed population times the relevant mortality dose-response coefficients.

The BPA analysts reviewed the moral issues and practical limitations of placing an economic value on human life but concluded that "while we recognize the inherent validity of these concerns, we believe some quantification of the value of risk or health is both possible and, from the standpoint of establishing agency policy, extremely useful." After reviewing the scientific literature, the report set a value for a statistical life at the equivalent of $3,000,000 ($3,240,000). All figures in this report are in 1986 dollars; figures in parentheses are 1988 dollars.

From this analysis, the BPA report concluded that the annual health costs, limited to mortality effects from air pollution only, of the operation of a hypothetical coal-fired power plant ranged from $4.6 ($5.0) million (at the Montana site) to $68.3 ($73.8) million (at the westside urban site). The 1986 net present values of these costs for the 40-year life cycle of the plant were estimated to be $106.1 ($114.6) million and $1.578 ($1.704) billion, respectively. Net present value is the current total monetary value of accumulated future expenditures that have been reduced by an assumed discount rate to reflect the time value of expenditures that occur in the future.

Total environmental costs, including non-health-related effects from air pollution, ranged from a low of $4.7 ($5.1) million for a plant located in Montana to $70.7 ($76.4) million for a plant located near a large city west of the Cascades. The 1986 net present value of these costs was estimated to be $110 ($119) million and $1.634 ($1.765) billion, respectively. Although six categories of environmental costs from air pollution were assessed, the report observed that "the greatest single component of the damages stems from the effects of air pollution on human health, which accounts for 95 to 97 percent of all costs, depending on the location of the plant."

APPENDIX A: SUMMARY OF HEALTH COST STUDIES REVIEWED IN THIS MONOGRAPH

Author: Jane Hall, Principal Investigator, et al.

Title of Study: *Economic Assessment of the Health Benefits from Improvement in Air Quality in the South Coast Air Basin.*

Date of Publication: June 1989.

Type of Effects Analyzed: Morbidity effects from ozone and particulate pollution. Mortality effects from particulate pollution.

Pollutants Examined: Ozone and particulate matter.

Population Studied: The population of the four-county South Coast Basin.

Health Cost Estimates: A "best conservative" estimate of total annual health benefits of $9.4 billion for compliance with the federal standards and $14.3 billion for compliance with the California standards (in 1988 dollars). On a per capita basis, these figures translate to health benefits worth $771 and $1,186 per person per year.

Author: Robert Rowe, Lauraine Chestnut, Donald Peterson, and Craig Miller at Energy and Resource Consultants, Inc.; Richard Adams at Oregon State University; and William Oliver and Henry Hogo at Systems Application, Inc.

Title of Study: *The Benefits of Air Pollution Control in California.*

Date of Publication: December 1986.

Type of Effects Analyzed: Mortality and morbidity for particulate matter and sulfates. Morbidity for ozone.

Pollutants Examined: Particulate matter, sulfates, and ozone.

Population Studied: More than 19 million people living in four California regions; the San Diego Air Basin, the South Coast Air Basin, the San Joaquin Air Basin, and the San Francisco Bay Area Air Basin.

Health Cost Estimates: Air pollution emitted in 1979 caused $8.1 ($9.6) billion less health costs than would have resulted if pollution sources operated with control equipment required by regulations in place in 1960 (1983 dollars; figures in parentheses are 1988 dollars). Reduced pollution resulting from the installation of additional controls by 1987 were estimated to save another $1.2 ($1.4) billion in annual health costs compared with emissions that would have resulted if 1979 pollution control were continued.

Author: Lauraine Chestnut and Robert Rowe at Energy and Resource Consultants, Inc.; and Bart Ostro at the U.S. Environmental Protection Agency.

Title of Study: *Santa Clara Criteria Air Pollutant Benefit Analysis.*

Date of Publication: Draft final report, May 1987.

Type of Effects Analyzed: Mortality and morbidity for particulates, morbidity for ozone.

Pollutants Examined: particulate matter and ozone.

Population Studied: 1.4 million people living in Santa Clara County, California, in 1985.

Health Cost Estimates: Mortality costs between $6.0 ($6.6) million and $135.8 ($149.4) million (1985 dollars; figures in parentheses are 1988 dollars) and morbidity costs between $1.3 ($1.4) million and $29.3 ($32.2) million annually for exposure to 1985 levels of particulates compared to effects under three scenarios with lower concentrations. Morbidity costs between $627,500 ($690,250) and $29.0 ($31.9) million from excess ozone between actual and alternative scenarios.

Author: Lauraine Chestnut and Robert Rowe at RCG/Hagler, Bailly, Inc.

Title of Study: *Ambient Particulate Matter and Ozone Benefit Analysis for Denver.*

Date of Publication: Draft report, January 1988.

Type of Effects Analyzed: Mortality and morbidity for particulate matter. Morbidity for ozone.

Pollutants Examined: Ozone and particulate matter.

Population Studied: 1.6 million people living in the Denver metropolitan area.

Health Cost Estimates: Annual health costs of $104.2 ($112.5) million (1986 dollars; figures in parentheses are 1988 dollars) associated with exposure of particulate matter above the federal public health standard. Annual health costs of $289.900 ($313,090) for exposure to ozone at concentrations above the federal public health standard.

Author: U.S. Environmental Protection Agency, Office of Air Quality, Planning and Standards.

Title of Study: *Regulatory Impact Analysis on the National Ambient Air Quality Standards for Particulate Matter.*

Date of Publication: February 21, 1984.

Type of Effects Analyzed: Morality, acute and chronic morbidity.

Pollutants Examined: Particulate matter.

Population Studied: The entire U.S. population.

Health Cost Estimates: Net present value of health cost benefits conservatively estimated to be between $3.7 ($5.3) billion and $6.7 ($9.6) billion (1980 dollars; figure in parentheses are 1988 dollars) as a result of implementing a new federal public health standard for fine particulates. Under varying assumptions, total benefits varied from $370 ($533) million to $154 ($222) billion.

Author: U.S. Environmental Protection Agency, Office of Policy, Planning and Evaluation.

Title of Study: *Costs and Benefits of Reducing Lead in Gasoline: Final Regulatory Impact Analysis.*

Date of Publication: February 1985.

Type of Effects Analyzed: Morbidity and cognitive development in children from lead exposure. Morbidity and mortality in middle-aged adult males from lead exposure. Morbidity effects from exposure to ozone produced from automotive exhausts in the general population.

Pollutants Examined: Principally lead with some analysis of ozone.

Population Studied: Primarily children and middle-aged adult males throughout the U.S. Some analysis of effects on entire population.

Health Cost Estimates: Annual health benefits of $5.13 ($6.10) billion (1983 dollars; figures in parentheses are 1988 dollars) in 1992 from implementing a national program to limit the concentration of lead in gasoline. Most of these benefits, $4.7 ($5.6) billion, are derived from reducing blood pressure in middle-aged adult males.

Author: U.S. Environmental Protection Agency, Office of Air and Radiation.

Title of Study: *Regulatory Impact Analysis on the National Amebient Air Quality Standards for Sulfur Oxides (Sulfur Dioxide).*

Date of publication: March 1988.

Type of Effects Analyzed: Mortality and morbidity effects for sulfur dioxide. Morbidity and household soiling from particulates produced from sulfur dioxide.

Pollutants examined: Sulfur dioxide and related particulates.

Population studied: Residents of the 31 eastern United States.

Health cost estimates: Net present value costs between $2.4 ($2.7) billion and $8.8 (10.0) billion (1984 dollars; figures in parentheses are 1988 dollars) for mortality, morbidity, and material damage effects from exposure to sulfur dioxide and related particulate matter in excess of the current federal public health standard.

Author: Alan Krupnick and Raymond Kopp.

Title of study: *The Health and Agricultural Benefits of Reductions in Ambient Ozone in the United States.*

Date of publication: August 1988.

Type of effects analyzed: Morbidity effects from short-term exposure.

Pollutants examined: Ozone.

Population studied: The population of the U.S. living in nonattainment areas for ozone.

Health cost estimates: Estimated "middle" value of between $192.0 ($218.9) million and $788.9 ($899.3) million in annual health costs from reducing ozone among seven scenarios based on epidemiological studies of health effects (1984 dollars; figures in parentheses are 1988 dollars). The "middle" value range stretched from $52 ($59) million to $2.7 ($3.1) billion based on the results of clinical studies of health effects from ozone exposure.

Author: Robert Friedman, Project Director.

Title of study: *Catching Our Breath: Next Steps for Reducing Urban Ozone.*

Date of publication: July 1989.

Type of effects analyzed: Morbidity effects from short-term exposure.

Pollutants examined: Ozone with some discussion of the effects of nitrogen oxides and carbon monoxide.

Population studied: The population of the U.S. living in nonattainment areas for ozone.

Health cost estimates: Elimination of between $.5 billion and $4.0 billion (1988 dollars) in annual morbidity health costs if ozone pollution was reduced to levels meeting the federal ozone public health standard.

Author: Alan Krupnick.

Title of study: *An Analysis of Selected Health Benefits from Reductions in Photochemical Oxidants in the Northeastern United States.*

Date of publication: Final draft, 1988.

Type of effects analyzed: Ten morbidity health effects.

Pollutants examined: Ozone.

Population studied: The population in the northeastern United States.

Health cost estimates: Health benefits of $611 ($696) million per year from reducing 1980 ozone concentrations through implementation of pollution abatement programs already required in 1982 pollution control plans (1984 dollars; figures in parentheses are 1988 dollars). Annual benefits of $1.1 ($1.2) billion for achieving further reductions in ozone pollution.

Author: Mark DeLuchi, Daniel Sperling, and Robert Johnston.

Title of study: *A Comparative Analysis of Future Transportation Fuels.*

Date of publication: October 1987.

Type of effects analyzed: Morbidity and mortality effects from exposure to automotive exhaust emissions.

Pollutants examined: Particulates, sulfur oxides, nitrogen oxides, carbon monoxide, and ozone.

Population studied: The entire U.S. population.

Health cost estimates: Health costs of between $4.03 ($4.33) billion and $84.99 ($93.49) billion (1985 dollars; figures in parentheses are 1988 dollars) associated with exposure to automotive and truck exhaust pollution in 1985.

Author: ECO Northwest for the Bonneville Power Administration.

Title of study: *Generic Coal Study: Quantification and Valuation of Environmental Impacts.*

Date of publication: January 31, 1987.

Type of effects analyzed: Morbidity effects from pollution from a hypothetical coal-fired power plant located at different locations in the Northeast.

Pollutants examined: Particulates, sulfur oxides, nitrogen oxides, sulfates, nitrates, and ozone.

Population studied: Hypothetical populations within about a 100-mile radius of the assumed plant sites.

Health cost estimates: Annual health costs ranging from $4.7 ($5.1) million to $70.7 ($76.4) million for the 40-year lifetime of the plant (1985 dollars; figures in parentheses are 1988 dollars). A net present value of these costs was calculated to be $100 ($119) million and $1.634 ($1.765) billion, respectively.

Mr. BAUCUS. Mr. President, I see the Senator from Rhode Island is on the floor and I yield the floor.

The PRESIDING OFFICER. The Chair recognizes the Senator from Rhode Island [Mr. CHAFEE].

Mr. CHAFEE. Mr. President, this amendment is about destruction of the ozone layer. It adds a control program for methyl chloroform, one of the chemicals responsible for destruction of Earth's fragile shield against the Sun's harmful ultraviolet radiation. The bill already includes a control program for CFC's, halons, and carbon tetrachloride.

Another amendment, adding a control program for all other substances covered by the new title 5—primarily a class of chemicals known as hydrochlorofluorocarbons or HCFC's—will be offered later. This amendment is about methyl chloroform, not HCFC's.

The amendment before us provides that, effective on the date of enactment, production of methyl chloroform will be frozen at 1989 levels. Allowable production will then be reduced 50 percent by January 1, 1996, and completely eliminated by 2000.

Mr. President, this approach is modeled after a proposal that was developed by the administration and presented as a possible amendment to the Montreal Protocol. The international community is considering this and other proposals in preparation for an important meeting that is set for June of this year in London.

By adopting this amendment, we will accomplish two important goals. First, we will be eliminating nearly one-half of the problem. That is the U.S. share of global methyl chloroform production—41 percent.

Second, we will demonstrate world leadership on a critical environmental problem—destruction of the ozone layer. We are not suggesting that we can solve this problem alone—it is a global problem and it will, in the long run, require a global solution. But we have to start somewhere and, as the world's largest producer of methyl chloroform, we have a responsibility to lead the world in solving this problem.

We are not trying to be environmental martyrs. This bill was carefully crafted to assure that we are not placing our domestic industries at an unfair disadvantage. If other countries do not follow our lead, if they continue to use these chemicals after we have eliminated them in the year 2000, important trade sanctions will apply.

Recent analyses by EPA suggest that a year 2000 phaseout of methyl chloroform would be the single most important source for near-term reductions in stratospheric chlorine levels.

EPA estimates that the addition of methyl chloroform to the CFC and halon phaseout will eliminate almost 4 million cases of skin cancer in the United States and 65,000 cancer deaths among people born before 2075. Similarly, 364,000 cases of cataracts will be avoided.

That is the difference between adopting this amendment and failing to adopt it. For those who are thinking about modifying the amendment to, for example, simply cap production at current levels, it is worth noting that such a change is estimated to result in an additional 875,000 cases of skin cancer, almost 16,000 cancer deaths, and more than 86,000 cases of cataracts in the United States alone, of the people born before the year 2075.

Mr. President, this chemical can and must be eliminated by the year 2000. There is no need to delay. This is a good amendment and I do hope it will be adopted and I hope we can vote on it very soon.

Mr. President, I see no other Senators desiring to speak. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Rhode Island has suggested the absence of a quorum. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. GORE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. BUMPERS). Without objection, it is so ordered.

Mr. GORE. Mr. President, I rise in support of the pending amendment. But first of all, I would like to congratulate our majority leader, Senator MITCHELL, for bringing this bill to the floor as the first item of business during this session.

I also want to congratulate the Environment and Public Works Committee, particularly Senators BURDICK, BAUCUS, CHAFEE, and DURENBERGER, for the leadership they have demonstrated in bringing the clean air amendments, truly historic legislation, to the floor of this body. It is a comprehensive bill addressing many of the threats now confronting our environment.

I will reserve until a later time general comments on the Clean Air Act itself. For now, I wish to speak specifically in support of the amendment introduced by my distinguished colleague, Senator CHAFEE, calling for a phaseout of methyl chloroform by the year 2000.

Methyl chloroform is one of the manmade chemicals now destroying the stratospheric ozone layer which protects life on Earth from deadly ultraviolet radiation. As has been graphically illustrated by the huge hole torn in the ozone layer above Antarctica, these substances are extremely powerful.

It is not quite as well known that the damage done to the stratospheric ozone layer is not just above Antarctica, but is above Washington, DC, Carthage, TN, Little Rock, AR, and all parts of the United States. Indeed, all mid latitudes throughout the world during the winter months suffer roughly a 3- to 4-percent decrease in stratospheric ozone.

The scientists, predicting that this damage would occur 15 years ago, estimated that by 1990 there would be a 1-percent loss in the thickness of the stratospheric ozone layer because of these chemicals.

Many were skeptical and they said these predictions may well be wrong. Why should we act on the basis of scientific studies and models without emperical evidence? Well, it turns out they were wrong—instead of a 1-percent reduction, we see more than a 3-percent reduction.

It is worth remembering as we hear the debate over global warming and other global environmental problems, that which the models and numbers may be wrong, they may be off on the down side as well as on the up side. Stratospheric ozone depletion is an example of a problem which did in fact turn out to be worse than predicted, and will in fact become much worse unless we take actions like the one recommended in this amendment.

For several years the ozone depletion debate has focused on chlorofluorocarbons [CFC's]. CFC's are the principal culprits in destroying the stratospheric ozone layer. They are also responsible for about 20 percent of global warming. But as the world moves toward controls on chlorofluorocarbons, the scientific community has directed our attention to exactly how they cause damage. The scientists have specifically asked us to pay attention to other chemicals that cause the same damage in the same way.

What CFC's do which is so harmful is release chlorine atoms into the stratosphere which then eat away the protective ozone shield. Methyl chloroform, the chemical that is the subject of the pending amendment, does exactly the same thing. About 13 percent of the chlorine atoms put into the stratosphere are delivered by this particular chemical. It is therefore obvious that we need to pay close attention to controlling the use and the manner of the production of this chemical.

There is a startling graph prepared by the Environmental Protection Agency showing what would happen if the world merely complied with the Montreal Protocol limits on CFC. The graph demonstrates that part way into the next century, the concentration of the chlorine in the stratosphere would triple.

What would happen if CFC's were completely eliminated? Surprisingly, part way through the next century, the chlorine concentration of the stratosphere would still double. Clearly, we cannot get back down to a safe level unless we ban not only the worst offending CFC's but also methyl chloroform and a few other chemicals like carbon tetrachloride and the ACFC's which also catalyze ozone destruction.

This is a good amendment. True, it is not without economic impact. I know; it will impact industry in my home State. But, the cost of continuing to destroy the stratospheric ozone layer is unfathomably higher.

What are the costs? My distinguished colleagues have already described them in thorough detail. Let me just review them here very briefly.

We know that a thinner ozone layer produces millions more cases of skin cancer, many of them fatal. We know that a thinner ozone layer produces millions of cases of cataracts, many of them causing blindness. What is not as well known is that a thinner ozone layer also suppresses the activity of the immune system in all 5 billion people who live on this planet, making human beings more susceptible to disease and infection, particularly in tropical areas. What is even less well known is that the smallest animals and plants at the base of the food chain, are apparently especially vulnerable to the increased ultraviolet radiation that comes through a thinner ozone shield. What consequences there might be for the entire food chain if there is a dramatic impact on the photosynthesis of plankton, for example, or the ability of the smallest plants and animals to survive, we do not know.

We also know that larger plants, some of them, like soybeans, that are relied upon for food also do poorly when more ultraviolet radiation comes through the ozone shield.

So, Mr. President, the threat we are discussing in advocating this amendment is one which is quite serious, indeed. I am proud to be a cosponsor of the amendment, and I was proud to bring this matter before the Environment Committee during the hearings that were conducted last year. Again, I wish to compliment the committee on the work that they have done.

A couple of other points, briefly. At a meeting last May in Helsinki, nations that are party to the Montreal Protocol agreed that that treaty is not tought enough. They recognized that just cutting CFC's by 50 percent and freezing the output of halons would not be enough, and they identified methyl chloroform as a deadly substance urgently in need of attention.

What if we delay action? EPA estimates that if we delayed the phaseout of methyl chloroform by just 30 years, from the year 2000 to the year 2030, we would get a 45-percent increase in the atmospheric concentrations of chlorine over and above today's level. Currently, that level is a little more than three parts per billion, and that will rise to almost four parts per billion if we do not phase out methyl chloroform by the year 2000.

We are also told in the same set of studies that if we fail to eliminate methyl chloroform emissions by the year 2000, we will increase by about 3½ million cases the number of nonmelanoma skin cancer, by about 350,000 the number of cataract cases, and cause about 65,000 additional deaths among people born between now and three-quarters of the way through the next century. So make no mistake, Mr. President, if we fail to enact this amendment, the responsibility for these enormous health tragedies is none other than our own.

Fortunately, I have the feeling that we are going to adopt this amendment, because I think the awareness among our colleagues and our constituents is really beginning to grow. I think people are ready for tough action of the kind contained in this amendment. I urge my colleagues to adopt this amendment. I compliment its author, and I am proud to be a cosponsor.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. ROBB). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HOLLINGS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HOLLINGS. Mr. President, with respect to our clean air bill, the Committee on Environment and Public Works, and most particularly our distinguished manager here, the Senator from Montana [Mr. BAUCUS] and I have been in conference. We are trying to teach an understanding so there will not be a misunderstanding.

What really occurred, and brought the global change issue to the fore for me, was that sometime early last year, having traveled down to the Antarctic and gotten to the South Pole and looked up at the atmosphere there, and seeing the hole in the atmosphere that they speak of, I realized better than anyone that there were many interested parties in this particular problem of global warming and that what we really needed was a consummate kind of coordinated endeavor by the Government, in all departments and agencies, whatever their jurisdiction or responsibility, to coordinate and periodically report to the Congress. Then we would know what is to be ruled on and to be regulated and controlled. The latter is principally, of course, in the Environment and Public Works Committee.

During that Antarctic trip, it was a NOAA, National Oceanic and Atmospheric Administration, scientist who was pointing out the ozone hole. Incidentally, there were bells ringing in the sun. We have not found out how or why. We were watching all of this occur.

We were down there with the National Science Foundation, and we also had authorities there from NASA, the space agency. NASA, NOAA, and the National Science Foundation, of course, are within our Commerce, Science and Transportation Committee.

Regarding S. 169, once we checked with the Environmental Protection Agency, with both sides of the aisle, with the White House and all the departments and agencies, we reconciled any differences we had learned about, and we ordered that bill reported in April. The bill has been on the calendar, ready to pass.

However, there was a hold on it. The best I could determine about the hold was that it was not anything, really, with respect to the provisions of the particular bill, but rather that there was a definite feel in the Environment and Public Works Committee that there ought to be sequential referral to that committee, and also that that committee should have conferees.

I did not think it was necessary. There could be a time when some bill would come up, and we would want to do that. But I did not see that here, and I did not want to set a precedent.

The situation put this chairman of the Commerce Committee to the task to say, let us raise this issue now when we have the clean air bill up and specifically the amendment of our distinguished colleague from Rhode Island [Mr. CHAFEE].

Senator CHAFEE's amendment, and I am reading section 508(b), and then (c), says: "Monitoring atmospheric concentrations of chlorine—the Administrators of the National Aeronautics and Space Administration and the National Oceanic and Atmospheric Administration shall monitor"—and so forth and so on.

I said, well, now, if we are going to get technical, we will have to get the clean air bill referred to the Commerce Committee and then we would have to have conferees.

So, in order to establish an understanding, to forestall misunderstanding, I raised that point. I have discussed it at length now, as well as other provisions at issue, sponsored by the Senator from Arizona, Senator MCCAIN. And I think with this colloquy and understanding there is no reason for us to have the referral. We are going to have enough problems with the conference on the clean air bill.

I generally support the clean air bill. There are some amendments. But I commend the Senator from Montana and his leadership in this regard, and the Environment Committee for bringing to the Congress in the early part of the session a clean air bill. I am ready to vote for the Chafee amendment. But I had to establish this understanding for our committee members because they wanted to know.

This is what has occurred. There are overlapping jurisdictions. There will be those questionable provisions from time to time. But I think the Members working together, as we are trying to do here on the floor this afternoon, will clear the air on that. And I do not believe my distinguished colleague, having seen and been able to study our bill, S. 169, on global change, wants sequential referral and conferees, as I understand it.

The PRESIDING OFFICER. The Chair recognizes the Senator from Montana [Mr. BAUCUS].

Mr. BAUCUS. The Senator from South Carolina has accurately stated the situation. The stratospheric ozone depletion that exists around the world, and particularly the Antarctic hole that the Senator from South Carolina was able to observe, along with other global warming phenomenon in this world, affect a number of different committees in the Senate. No one committee has the total exclusive jurisdiction over all environmental matters.

However, it is true the Environment and Public Works Committee is the primary committee of jurisdiction over environmental matters. It is, after all, the Environment and Public Works Committee and, under the Standing Rules of the Senate, the Environment and Public Works Committee has jurisdiction over environmental research, and over environmental policy, research and development. It is the premier environmental committee.

However, the Committee on Commerce, Science, and Transportation also has a very strong, definite, deep stake in the matter. After all, NOAA and other agencies are certainly within their jurisdiction, relevant agencies are within the jurisdiction of that committee.

This Senator will not object to S. 169 when it is brought up; will not object seeking sequential jurisdiction or even the appointment of conferees. However, the staffs of our two committees have been discussing and have agreed upon, at least at the staff level, some substantive changes that would be appropriate for S. 169 when it is brought up, and I think the Senator agrees to that.

In addition, I can speak for Senator CHAFEE in saying he has spoken with Senator MCCAIN, and Senator MCCAIN has indicated his desire that we proceed here today and that Senator MCCAIN, does not object to us bringing up the present amendment by the Senator from Rhode Island.

I think it is appropriate that the chairmen of the committees, as I know they will, work these matters out as they come up. This is not going to be the first time this Senate will visit global warming or chlorofluorocarbons. It is going to come up again. And when it does, Mr. President, I know the Senator from South Carolina, the chairman of the Commerce Committee, and Senator BURDICK, the chairman of the Environment and Public Works Committee, will be able to work out the appropriate delineations of jurisdiction both committees have. There is some overlapping jurisdiction here. It is clear. I think we can work this out.

My statement, Mr. President—I think I can speak on behalf of the committee—that I will not object to S. 169, is really a statement of good intention and good faith to work with the Senator from South Carolina.

There may be other instances, though, with other legislation before this Senate, where it would be appropriate for this Senator to object on a jurisdictional basis. But based on the discussion I have had with the Senator from South Carolina, this Senator will not object.

Mr. HOLLINGS. I thank the distinguished Senator. There are those fine points, as the distinguished Senator talks about research, and there are members of our committee who have tried to delineate them. They have said, now, Environment and Public Works has control of policy on the environment, but we have the research end of it, as this amendment acknowledges—when they ask NOAA, when they ask NASA to monitor, we have that responsibility.

We are not trying to stand on technicalities. We are trying, as the distinguished Senator from Montana says, to work in good faith and move along, for the good of the country, a good clean air bill, and move along research. We have methane provisions in the clean air bill—on methane we just do not know enough. We tried over a year ago to get S. 169 going to better our understanding so we could legislate intelligently. We have to assess the problems and charge the executive branch and various departments to get going.

I appreciate the chance to have this colloquy and the understanding with my distinguished colleague from Montana.

Mr. BAUCUS. I deeply thank the Senator from South Carolina. He has been very, very helpful and constructive in finding a resolution to this matter.

Mr. HOLLINGS. I thank our colleague very much.

Mr. BAUCUS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. CHAFEE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. ADAMS). Without objection, it is so ordered.

Mr. CHAFEE. Mr. President, it is my understanding that the matter before the Senate now is the Chafee amendment dealing with methyl chloroform.

The PRESIDING OFFICER. The present matter under consideration is S. 1630. The pending question is on amendment No. 1219, sponsored by Senator CHAFEE.

Mr. CHAFEE. Mr. President, have the yeas and nays not been ordered?

The PRESIDING OFFICER. The yeas and nays have not been ordered.

Mr. CHAFEE. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. CHAFEE. Mr. President, I will defer.

Mr. BAUCUS. Mr. President, the yeas and nays have been ordered on the amendment. There was an earlier objection on the Democratic side by Senator HOLLINGS. The chairman of the Commerce Committee is no longer objecting to the amendment. We are ready to vote on this amendment. It is my intention to try to get a vote on this amendment tonight. The only objection made to the amendment has been lifted. I will be consulting with the majority leader trying to set a time for a vote later this afternoon.

Mr. President, I yield the floor.

The PRESIDING OFFICER. Who seeks recognition?

Mr. SYMMS addressed the Chair.

The PRESIDING OFFICER. I will recognize the Senator from Idaho in just a moment.

Is it the statement of the Senator from Montana to the Chair that there will be a later request, or is he requesting that we proceed to a vote?

Mr. BAUCUS. Mr. President, I am consulting now with the majority leader. He will put the request at his discretion as to the time when there might be a vote. I am just generally reminding Senators that we have been on this amendment for a couple of days. There has been ample opportunity to debate it.

The PRESIDING OFFICER. That is why the Chair was inquiring. I assumed the Chair might be able to put the question at this time, and that is why I made the inquiry.

Mr. BAUCUS. Mr. President, as I was saying, we have been on this amendment now for a couple of days—the amendment offered by the Senator from Rhode Island. I think it is time now to vote on this amendment. Senators have had the opportunity to come to the floor to speak on this amendment. They have had more than ample time to learn the contents of the amendment. I must say it is a very simple amendment. This is not a complicated amendment at all. The amendment is only to add methyl chloroform to the list of ozone depleting substances; that is, along with other substances presently contained in the bill. The Chafee amendment is only adding that one substance, methyl chloroform.

So at a later time today either I or perhaps the majority leader will indicate to the Senate when there might be a vote on this amendment. But I am not in a position at this moment to state when that time is.

With that, Mr. President, I yield the floor.

The PRESIDING OFFICER. The Senator from Montana yields the floor. The Senator from Rhode Island had the floor and, I believe, had yielded it.

Mr. SYMMS addressed the Chair.

The PRESIDING OFFICER. The Chair recognizes the Senator from Idaho.

Mr. SYMMS. Mr. President, I am glad that the two managers of the bill are on the floor. I had a question I wanted to ask about the pending amendment. I have received some correspondence on the amendment.

The first question I wanted to ask the author of the amendment is with relationship to the Montreal protocol. Is this amendment more, does it reach further than, or is it the same as or less than in terms of banning CFC, methyl chloroform? How does it stack up? How does it compare with what is proposed in the protocol?

Mr. CHAFEE. Mr. President, in answer to the distinguished Senator from Idaho, this substance, this chemical, is not currently in the Montreal protocol. There is pretty definitive evidence that it soon will be included in the Montreal protocol. The United States itself has submitted a suggestion to the Montreal participants that methyl chloroform be included. But as of now, it is not.

Mr. SYMMS. I guess the question I have is if it is not involved in the protocol, but it is the same as the general outline for CFC's, why should the United States be doing this unilaterally?

Mr. CHAFEE. Mr. President, I think the Senator from Idaho has put his finger on the principal issue here. I think that no one will argue with the fact that methyl chloroform is an extremely dangerous chemical as far as the ozone layer is concerned. The Senator then raises the question should we proceed unilaterally—that is, the United States under this legislation would ban it 50 percent by 1996 and 100 percent by the year 2000.

So the Senator says, well, that is fine, but let us proceed in accordance with the Montreal protocol as amended. The answer to that, and I believe that the merits of the answer overwhelmingly is that the United States produces nearly half, 41 percent to be exact, of all methyl chloroform produced in the world. Therefore, it is our belief, and those who have spoken in favor of this legislation, that it behooves the United States to take a leadership position. Methyl chloroform is extremely destructive.

One of the virtues of moving quickly on this is that methyl chloroform is not a long-lasting substance in the ozone layer. In other words, it completes its dangerous work within 7 years, as opposed to many of the other chemicals, the CFC's with which we are dealing, which last much longer, some of them up to 50 years, in the stratosphere before they do their destructive work.

So it seems to me that we can strike a tremendous blow in the preservation of the ozone layer by getting rid of these dangerous chemicals known as methyl chloroform—and at the same time, as the distinguished Senator, who is a very valuable member of our committee, knows, the CFC's and methyl chloroform and similar chemicals are part of the problem of the global warming.

And so by getting rid of the CFC's and methyl chloroform, we are striking a blow also against the global warming. So what this amendment does is, it takes methyl chloroform and adds it in with the CFC's that are currently in the bill which, all of them, not just methyl chloroform alone, but all the rest of them, have a definite phaseout date by the year 2000, which the Montreal protocol at the current time does not have.

As the Senator, who has been following this knows, the Montreal protocol provides for a 50-percent reduction in production by the year 1998 for most of the CFC's. It does not have a total ban on any of them. This legislation has a total ban by the year 2000. I think the Senator knows the rationale for that position. But we can develop that further.

Mr. SYMMS. I thank my good friend for that comment. Mr. President, I have not made up my mind on this amendment yet, which way I wish to vote. I may have some more questions for the Senator from Rhode Island. But my concern is that if we do something unilaterally in the United States, we may drive this business offshore, and I think we did that in the case of aerosol cans in 1977. We drove the business offshore.

I do not know how much business this bill potentially can drive offshore, but I am concerned about the unilateral aspects of an amendment that predisposes what the U.S. position would be prior to ongoing negotiations, because there may not be much incentive for other nations to negotiate.

I am going to read a letter here, and I do not know this company. I do not know the president of the company, Eugene Fleishman who wrote to me, but I do think, with great respect to my friend from Montana, that the reason there seems to be some concern on the part of Senators regarding how soon they want to vote on this amendment or other amendments, that the Senator from Montana and others have worked with this clean air bill for 9 years. For 9 years we have had the clean air bill before the Environment and Public Works Committee.

Four times previous to this, we have passed a clean air bill through the committee. It comes over here to the

floor, and the majority leaders of the past have not seen fit to bring the bill up. I see the distinguished majority leader on the floor. My fear would be that if this bill passed in the current form it is in before the Senate today, that 1990 would be the year that America would remember the Mitchell-Baucus recession, caused in the year that this bill passed the Senate and ended up driving America into recession.

Some of us are trying to save our good friends from that fate and not allow this bill to pass until there is an opportunity for all Senators to understand it. There is no effort on this Senator's part or any other Senator's part in any way to filibuster or slow down this bill to any degree or length. But there is a very complicated, almost 500-page piece of legislation before us, that I believe needs a lot of study.

Is the majority leader seeking recognition for some other business?

Mr. MITCHELL. No. If the Senator will yield.

Mr. SYMMS. I will certainly yield.

Mr. MITCHELL. Merely for a question and a request as to when we might vote on this amendment. I have heard just the most recent of the Senator's remarks. I simply say that it is my hope that we can vote on this amendment as soon as possible, today, if we can.

I would point out that the bill has been pending now for—we are in the second week. This amendment has been pending for 3 days. I recognize it is a complicated amendment, but in the 10 years I have been in the Senate we have voted on literally hundreds, perhaps thousands of amendments of equal or greater complexity that have not been pending for 3 days.

Tonight I expect, at the State of the Union Address, that the President will once again urge the Congress to move on the clean air bill. I have been trying very hard to do that, to comply with the President's request. I know how responsive the Senator from Idaho wants to be to the President's request. So my purpose now is merely to inquire of the Senator, so that other Senators can be aware, can I anticipate that the Senator will be in a position to have completed his inquiries on the matter and his arguments, such as he wishes to make, today so that we can proceed to vote on this?

Mr. SYMMS. I can speak only for myself. I say to the majority leader, I think I will have exhausted my interest in this amendment before the day is over. I do not know what other Senators feel.

I say also to the majority leader, Mr. President, that I do not believe that this amendment is as much of a concern for the whole Senate as the whole proposition is.

As the majority leader knows, there is talk that there may be a bipartisan substitute offered or a bipartisan position that would be a more moderate bill or something closer to the President's bill than the committee bill. I think that that work is going on. Maybe Senators are working on it. I know of two Senators that I saw during the lunch hour that were interested in coming to the floor and speaking on this amendment. I expect they will be here soon, two Senators from this side of the aisle.

I just have a few more questions on this. I think, I say to my colleagues, that there is a great concern in the country that this bill—and I said this before the majority leader came on the floor—has been around for about 9 years, but it has not really been on the Senate floor for a long time. Senators that are not on the Environment Committee have not had the opportunity to really understand the full impact of this legislation, the far-reaching impact of this legislation to their constituencies. I think that is part of the problem. I think this amendment is fairly straightforward and fairly simple.

I would like to read this letter. As I said, I have no ax to grind with this Mr. Fleishman that wrote this letter. He may have written all members of the Committee.

DEAR SENATOR: I'm writing to you on behalf of our company CRC Industries located at 885 Louis Drive, Warminster, PA 18974. We manufacture and supply many items for the Automotive aftermarket throughout the country and we provide employment for 85 people here in Warminster, Pennsylvania.

My concern relates to the proposed Chafee Amendment (Under Section 508) of S. 1630. This amendment immediately restricts the use of a chemical vital to the operation of our business and provides a schedule for phasing out its use 100% by the year 2000. Such legislation is bound to have damaging effects on future sales, size, and employment offered by our company.

The chemical is methyl chloroform (1.1.1 trichloroethane) and it has been the subject of recent research and discussion concerning possible negative effects on the environment. At this point, however, there is no direct evidence to implicate this chemical.

Currently there is no substitute or replacement for many of the jobs done by this chemical, nor is there a foreseeable substitute. It is the most environmentally acceptable substance for most of its applications.

1. It is not a hydrocarbon and therefore does not contribute to ozone in the lower atmosphere.

2. It is non-explosive and does not have a flash or fire point.

3. It has been throughly tested for toxicity and carcinogenicity.

4. It has negligible global warming effect.

In 1989 NASA concluded that use of methyl chloroform at current levels until 2020 would not cause an increase in peak atmospheric chlorine concentrations if currently mandated CFR phase-outs are followed.

This potential problem of methyl chloroform's effect on our environment is currently being debated by the Montreal Protocol organization. It is vital to the well being of our economy that the United States does not precipitously pass unneeded or more stringent legislation than that that might come out of the Protocol deliberation scheduled for London, England in June, 1990.

I urge you to oppose the Chafee Amendment, Section 508 of S. 1630.

Sincerely yours,

EUGENE FLEISHMAN,
President.

Obviously he has an interest in it. That is all right.

Does anyone have an answer to this letter?

Mr. MITCHELL. Mr. President, will the Senator yield so I may merely engage in a brief dialog, and then I will yield to my distinguished colleague from Rhode Island?

Mr. SYMMS. I yield.

Mr. MITCHELL. I am grateful for the remarks from the Senator from Idaho. He has indicated he does not intend to delay the vote on this amendment and that he will be completing his questioning and his comments shortly.

So Senators may be aware, it is my intention to continue the session until we have a vote on this and to have such a vote as soon as all Senators have completed their comments or inquiries on the amendment.

I am personally unaware that the managers are aware of any other Senator who intends to come over and speak. If they do, I hope they will immediately come to the floor, and Senators who are not present in the Capitol should be notified through their offices that we are going to stay until we vote on this amendment. I expect that to be sometime shortly, since I am relieved and delighted to hear there is no concerted effort to delay a vote on this amendment. We really do want to get on. We really do want to heed the President's call for prompt action on clean air. So I thank my colleagues.

I alert all Senators to the now apparent likelihood there will be a vote on this amendment as soon as the Senator from Idaho and any others who wish to ask questions about it have had the opportunity to do so.

I thank my colleagues for their cooperation. I thank the managers especially, and I thank the Senator from Idaho for yielding, permitting me to make this comment.

Mr. JEFFORDS. Mr. President, will the Senator yield?

Mr. SYMMS. I am happy to yield for a question.

Mr. JEFFORDS. The Senator asked whether or not anyone had an answer to the letter. I respond that obviously I do not know the impact on every type of business.

I do know I was concerned about that question and inquired of my Vermont community, and the two largest

users of methyl chloroform in my State are General Electric and IBM, and both of them are satisfied they do have an alternative and intend to phase out by 1993. It is also our legislature's intention, I believe, to have the ban in Vermont, and it is my understanding they have checked with our businesses, and they do not seem to have a problem.

Again that business to which the Senator referred to may be a different business than those we have in our State. To my knowledge there are substitutes available, at least for the businesses in Vermont and that they intend to go ahead, well ahead of any deadline.

Mr. SYMMS. I thank my friend. The Senator from Rhode Island may have an answer. Maybe there is a substitute. I am asking this in a genuine state of inquiry. I do not know the answer to the question. I am happy to yield for the Senator to answer my question.

Mr. CHAFEE. Mr. President, first of all, I thank the Senator from Idaho for his interest in this because obviously this is helpful to those who are listening in their offices or watching this in their offices on television.

In answer to his question, first of all this legislation provides no restrictions on the use of methyl chloroform. That is a point that the gentleman who wrote the letter I do not think completely understood.

As you notice in his letter, he talks about we ban the use of methyl chloroform. That is not so. We ban 50 percent of the production starting on January 1, 1996. That is 5 full years from now. We then ban 100 percent of the production starting in January 1, 2000. But in the interim, these materials, this methyl chloroform, can be used.

You might say, it can be used but it disappears; that is the problem. There are capabilities of recapturing this in the use. In other words, it is a principal use; 60 percent of it is used as a degreasing solvent, and it is possible to recapture this and use it over again. That has not been done a great deal—to a great extent now because it is cheaper and easier now to forget that.

But necessity is the mother of invention. There are capabilities and obviously they will come down in price in recapturing this substance for reuse.

But that does not get to the Senator's question. The Senator said: Are there substitutes? On January 30, 1989, the report of the Montreal Protocol Technical Review Panel, which is an international panel of experts, concluded that substitute substances currently exist for 90 to 95 percent of the methyl chloroform uses. That is not just the United States saying this; this is the international people saying it. A draft report by EPA agrees that for all end users of methyl chloroform technically feasible technologies are already available to reduce the use of methyl chloroform more than 50 percent by 1991 and to eliminate its use completely by the year 2000.

In other words, between 90 and 95 percent of the substitutes currently exist, and they are convinced that other substitutes will be available and technically feasible. They can see it on the horizon clearly by the time we phase this out.

Mr. SYMMS. I thank my good friend from Rhode Island.

Mr. President, I must say I hear what my colleague is saying, and I know he is very sincere and dedicated about what he is saying.

This Senator has some concern about the proposition that the Senator advanced about necessity being the mother of invention, or something. That is equivalent to holding a gun at someone's head and saying, "You start inventing." If that were the case, it would not be the United States of America that has just introduced the Soviet Union to the wonders of McDonald's this morning. It would be vice versa. It would be the other way around.

We have been much, much more inventive, much, much more creative, and much, much more talented in terms of solving environmental problems, through the market voluntary system as opposed to the coercive whips and chains of a government system.

I do not know exactly what business this gentleman is engaged in but he does say this:

It is not a hydrocarbon and therefore does not contribute to ozone in the lower atmosphere.

It is non-explosive and does not have a flash or fire point.

It has been thoroughly tested for toxicity and carcinogenicity.

It has negligible global warming effect.

The fact of the matter is that the committee bill contains the text of an amendment which was reported by the committee earlier in connection with budget reconciliation. The amendment provides for unilateral phaseout by the United States of CFC, halons, and carbon tetrachloride without regard to the outcome of international negotiations now underway to strengthen and expand the Montreal Protocol.

One question I should have asked my friend from Rhode Island, and I will not ask him how, but he may want to address it later, is a rhetorical question. If we outlaw methyl chloroform, I am just wondering what will be the next product. How many products is the U.S. Senate going to vote out of existence in this great body of scientists and experts on toxicity and carcinogenicity? How many specific substances are we going to start voting on here to remove from scientific review?

Also I think there is a concern on this Senator's part to removing a negotiating position from our negotiators who are trying to get the rest of the world to go along with us so that we don't just drive this business offshore and then come back on another bill and talk about the terrible trade deficit that we have for merchandise trade where we are buying the things that we no longer make.

One of my colleagues was on the floor yesterday saying if you stood at the plant gate and breathed the air of the plant gate for 70 years, 24 hours a day, then 3 out of 10,000 people I believe it was, if I heard the Senator correctly, might somehow get some increased risk of cancer. Of course 3 out of 10,000 is bad.

I am not sure, though, that the expenditure of money we are talking about could not be better spent in a direct application to research on how to improve people's own individual lifestyles and habits that may bring on more cancer. I think that is a question all Senators have to think about. It is a basic question of what this bill is all about. And it is probably true this amendment may not be a big fish in respect to this big bill.

This may be a small fish in a big bill. But there is a principle involved here. We are invoking unilateral legislative action by the United States on chemicals that would put United States industries at a competitive disadvantage compared to foreign companies using CFC's or other chemicals that would be under no comparable restriction, the Japanese electronics industries for example. This could cost the United States jobs. I think Senators should be aware of what it is they are voting on.

I know, sure, nobody wants to vote for anything that might be viewed as an indication that the Senator who is standing on the floor of the U.S. Senate somehow is in favor of cancer. I would venture to say that there is no Senator here that would intentionally impugn the motives of a colleague and infer that they are in favor of cancer because there is not any Senator here that has not had some loved one impacted by this dreaded disease.

What you cannot see is the impact. We can pass all of these wonderful sounding pieces of legislation. We can pass this amendment for that matter. It may be that this little CRC Industries can go do something else. Maybe they can get another product or produce another product.

But it appears to me that we are walking on very, very thin ice. Unilateral legislative action could frustrate international negotiations for us to strengthen the Montreal protocol by tying the hands of the United States negotiating team.

I just have a great deal of reservation about the folly of unilateral action in this regard as is illustrated by the CFC aerosol ban enacted by

Congress in 1970 because the European nations impose no comparable restrictions and they now enjoy a bargaining advantage over the United States by virtue of their ability to offer easy short-term reductions in CFC aerosol use.

The amendment that we are discussing here now would impose limits on methyl chloroform. Enactment of this provision, limiting these substances—maybe it will not be as bad as this Senator thinks; it might be—but I think all Senators need to be aware of the fact that it very well could hinder our ability to achieve a more rapid phasedown of CFC's by restricting alternatives to CFC's in a wide variety of uses.

In other words, what I am saying is we are standing here on the Senate floor passing legislation, about to vote for an amendment that I imagine will pass by an overwhelming majority that is the substitute for a product that is already going to be phased down. By eliminating such alternatives, we give other nations a tremendous competitive advantage over the United States and then next year we could come in with some kind of a bill to put a higher tariff on or do something else and interfere with the efforts that have been made to try to open the world up for more trade, having serious implications as to the growth and well-being of our people and our economies in this country.

HCFC's and methyl chloroform, according to the information I have, are the only alternatives to CFC's in many applications. There may be others. The Senator from Rhode Island I see is on his feet and may want to comment on that statement.

Mr. CHAFEE. Mr. President, if the Senator would yield for me to make one quick point.

Mr. SYMMS. Yes.

Mr. CHAFEE. I do wish to stress this because some might be operating under a misconception. This amendment does not deal with HCFC's. It deals solely with methyl chloroform. Now you can say, well, they might come up with an HCFC amendment later on. That is an entirely different subject.

Mr. SYMMS. Does the Senator intend to do that?

Mr. CHAFEE. If we do, then that can be considered on its merits. Indeed, I will make no secret that we have been in discussions with the principal producer of CFC's; namely, the Du Pont Co. and the Allied Chemical Co. who are concerned about this very subject and wish to develop substitutes which might involve HCFC's. So there is a discussion with them. How long they would need for time to produce those HCFC's, what period of assurance, that is something entirely different. This amendment is solely concerned with methyl chloroform.

Mr. SYMMS. I thank my colleague from Rhode Island who is our Republican leader on this committee and has worked with this issue long and hard, and I respect him for his concern. But my understanding was that methyl chloroform is also a raw material for some of the HCFC's now, so that is why I was bringing HCFC's into the discussion. And over 100 users commented to EPA in response to an advance notice of proposed rulemaking that they need methyl chloroform and have no replacements available for the foreseeable future. That was from the Federal Register, April 17, 1989. I am quoting from the views of the junior Senator from Idaho on page 485. More recently these points were underscored by the user company representatives on EPA's Stratospheric Ozone Protection Advisory Council. That is from the transcript of the meeting of the Stratospheric Ozone Protection Advisory Council, October 26, 1989.

So I just think that for Senators that are not involved in this fight and have not been until now, you need to be well aware of what it is you are voting for. You may be right to do it. I am not challenging the opinion of other Senators. But I am just saying that we are voting on the Senate floor on banning a specific product and putting ourselves in the position to ban something that otherwise would be negotiated in a protocol probably in the future with other countries; is that not correct?

Mr. CHAFEE. Mr. President, if I might, I would just like to address that concern which is a legitimate concern that the Senator raised. He is quite correct in saying this methyl chloroform is indeed an ingredient that goes into the HCFC's. As I mentioned previously, the HCFC's have not been touched in this legislation, and furthermore, this legislation says the ban on production of methyl chloroform does not apply to that portion of methyl chloroform which is used as feedstocks; in other words, which is used as an ingredient to make something else; that is, HCFC's.

So we have particularly addressed the concern of the Senator from Idaho. Not only do we not ban HCFC's, we do not ban the production of methyl chloroform used as an ingredient in the production of HCFC's.

Mr. SYMMS. I guess the next question could be: What do we do to the economic ability of those producers of methyl chloroform, a product which is used for metal and precision cleaning in electronics, aerospace, and automobile industries for civil and defense applications. If we disallow it for use in that form but then allow it to be used for feedstock, is it going to become uneconomical to produce and will some producers quit producing it?

Mr. CHAFEE. I do not know the answer to that. Obviously, by the year 2000, not as much methyl chloroform will be produced, clearly because we will have banned it for the use in its natural ingredients; that is in its normal form as methyl chloroform. Whether there is enough out there to sustain it as a feedstock, I have no doubt that there will be enough demand to keep some of the production going. How much, I am not able to say.

But Mr. President, I do want to remind the Senator from Idaho what we are dealing with here. We are dealing with a concern of the destruction of the ozone layer. Now this is a legitimate concern. This is not some group of environmentalists that are saying something may happen someday that will be of concern not only to the health but to the environment of the globe. This is something that is absolutely uncontroverted. There is not a single reputable scientist today that argues with the fact that CFC's and methyl chloroform and halons are destroying the ozone layer.

The destruction of the ozone layer leads to greater incidence of cataracts, it leads to greater incidence of skin cancers, it leads to the destruction of the plant life and the ability of the plant life to regenerate itself; it can well be devastating.

What we are seeing over the Antarctic and what we are seeing increasingly over other sections of the globe, including the Arctic, are these tremendous gaps way beyond anything forecast, way beyond what any models predicted, are occurring. We just do not want to lose sight of that.

Yes, somebody in the United States and somebody else, where this is part of the Montreal protocol, as it inevitably will be, is going to lose his job producing this.

When we do something to solve a tremendous problem like this, some jobs are going to be lost. At the same time, let us not lose sight: In the United States over the past 70 months we have created some 20,000 jobs in every single month. And I am not belittling anybody losing their job.

But if we are going to have a better globe, substitutes will be developed. Individuals will find work in these substitutes.

Finally, I want to say to the distinguished Senator from Idaho, the actions of the United States pursuant to this legislation are going to see the production of substitutes that will be in demand throughout the world. I will guarantee to the Senator that the rest of the nations are going to follow the United States in this effort and certainly the Montreal protocol is going to go just as far, which will be adopted in measured steps dealing with CFC's methyl chloroform, whatever it might be, in the years ahead.

Mr. SYMMS. I thank the Senator from Rhode Island.

Mr. President, if I might just carry on briefly for a few more minutes, because I know there are a lot of my colleagues who have talked to me in the last 2 days that wonder what in the world it is we are talking about on chlorofluorocarbons and methyl chloroform. I mention this just for those who have not come in contact with the subject.

It is used for metal and precision cleaning in the electronics, aerospace, and automobile industries for both civilian and defense applications.

It can replace CFC-113, one of the most difficult CFC's to replace, in many of these applications.

There is a great spirit of entrepreneurialship out there and many good things can happen. I am very optimistic for the future, of what can happen in a free society. But I do think, Mr. President, what we are doing here is we are going to use the whips and chains of government to tell people they have to go out and invent substitutes for this thing. We have to understand this is what we are doing.

Maybe it will work out all right. But normally people do better in a free environment, free from fear and free from concern. And capital can be invested in these areas for trial and error, rather than the Government coming in and just saying; bang, you have to stop doing it right now. You are no longer going to be able to use this product. Maybe it will work out. I hope it will.

While other materials and processes are available for some of these applications, many important products still must be cleaned using one or the other of these solvents. In these cases, use of methyl chloroform results in a six- to eight-fold reduction of potential ozone depletion.

I might say there are two issues at stake in this broad picture. We have the stratospheric ozone proposition that Senator CHAFEE was just talking about. I have had people tell me it is all the coriolis effect, it is the way the world spins. We have just discovered better ways to measure these things than we used to be able to; it is highly overstated and depends on the axis of the Earth, certain times of the year. I do not know who knows the truth.

But I do know that methyl chloroform, when it comes to the other issue of global warming, is a good product that has very little negative impact.

So methyl chloroform is the most environmentally acceptable substance currently available for most of its applications. It is not a hydrocarbon that contributes to the formation of ozone. It is virtually nonflammable.

None of the alternatives to methyl chloroform has been thoroughly tested for health effects. Some have shown evidence of carcinogenicity in animal tests. Many more have not been tested at all.

Many of the alternatives contribute directly to ozone formation and therefore may not be used in many parts of the United States where smog is a serious problem. Indeed, discouraging the use of methyl chloroform would work at cross purposes to the nonattainment provisions of the bill.

Alternative water-based cleaning systems may be available for some applications, yet they require much greater amounts of energy mostly for heating and drying than does solvent cleaning.

Increased use of these water-based systems would lead to increased use of fossil fuels for energy, in turn contributing to the buildup of greenhouse gases.

So I think my colleagues need to recognize when we do one thing, it is going to be impact on something else. If we remove the use of good cleaning solvents we may have to use steam and hot water, burn kerosene, and create gases which will contribute to global warming.

The committee amendment equates ozone-depleting chemicals with greenhouse gases and states it will address global climate change resulting from the greenhouse effect as well as ozone layer destruction. In this regard it should be noted that HCFCs have far less greenhouse effect than CFC's, and that methyl chloroform has virtually no effect at all.

A recent paper by two National Aeronautics and Space Administration scientists concludes that continued use of methyl chloroform at current levels until 2030 will not cause an increase in peak atmospheric chlorine concentrations over what would otherwise be the case if CFC's, halon, and carbon tetrachloride emissions are phased out in the year 2000.

Such continued use of methyl chloroform also will not impede our ability to reduce atmospheric chlorine to two parts per billion, the level of the atmospheric chlorine prior to the appearance of the Antarctic ozone hole, by the year 2070.

So I think we are getting into an area here where the U.S. Senate is starting to legislate on areas where it is doubtful whether we know what we are doing or not. My concern is that it is generally recognized that the ongoing international negotiations will result next year in an expanded Montreal Protocol that will phase out CFC emissions by 2000 and will freeze methyl chloroform emissions at current levels.

The expanded protocol is likely to become part of U.S. law after that event takes place. There is no reason in my view, Mr. President, that the U.S. Congress should be considering unnecessary legislation that would at best duplicate the expanded Monteal Protocol and at worst could hinder the ability of the United States to phase out CFC use and subject U.S. companies to production controls and regulations that are more stringent than those imposed on companies operating in other nations.

Mr. President, I do not have too much more to say about this amendment. I feel very, very uncomfortable that Senators are going to be asked to vote on this amendment. I believe it would be wise for the Senate to set this amendment aside and go on and debate this bill and bring other amendments in and debate them for a few days and give Senators and their staffs time to study what it is that is in this bill.

I call my colleague's attention to the Wall Street Journal article of Friday, December 15, 1989. It is listed on page 475 of the committee report. I will not go through and read the Wall Street Journal editorial now but it is called, the "Hermetically Sealed Law." It points out how the committee considered some 40 amendments in 1 day; it passed the committee very rapidly; business groups were frantic, wondering if their firms were getting gored. They still did not quite know what was in the bill at the time. Now it is printed and out here for everybody to look at.

I urge all my colleagues who missed this great, glorious procedure that we go through in the Environment and Public Works Committee every 2 years to read that editorial on page 475 of the committee report.

It is true that they have a point of view, but they point out some of the things that are represented in this general bill, not specifically to this amendment. It is unbelievable the potential for mischief that this bill carries with it in new authorities for, what will probable be by the time this becomes law, the new Department of the Environment, the Secretary of the Environment, if you will, to give incredible powers to make or break citizens in this country, to decide whether property is good or bad or can be utilized or not, put some people in business, all by the direct edict of law from those great, brilliant thinkers along the banks of the Potomac River in Washington, DC.

Mr. President, the bill goes against the very grain of federalism. It has the power to overrule State environmental offices. It has penalties for businessmen that could be up to as much as $250,000 per individual, 15 years in jail, if their company releases a hazardous air pollutant. It places people in an immediate danger.

The distinction between malicious pollution and unintentional pollution is also eroded. None of us are in favor of anybody purposely polluting the admosphere. But as I said yesterday, and I will say again in closing, what this

Congress needs to fear more than anything else is that we do not pollute the very business climate, the very environment that free people live in and work in and enjoy by enacting massive bureacratic dictatorial powers in Washington, DC. That can have a snowball effect, a ripple effect that can be very destructive to the very lives of the people that we are here in Washington to represent.

I yield the floor.

The PRESIDING OFFICER. Who seeks recognition? The Senator from Oklahoma.

Mr. NICKLES. Mr. President, I would like to compliment my friend, Mr. SYMMS, not only for his statement on the amendment, on which I am not going to address myself on this occasion, but really for his analysis of the bill and his courageous leadership in trying to at least educate a lot of people across the country and certainly many of our colleagues on the various aspects of the bill.

I happen to believe that this bill is certainly one of th most important pieces of legislation that we will pass this year. It has the potential to possibly improve the environment, but it also has the potential to do a lot of negative damage to the economy of the United States. So I think we have to be careful.

I, for one, would like to see a good clean air bill passed this year. I see my friend and colleague from Rhode Island [Mr. CHAFEE].

I was recently in Europe with Senator CHAFEE. We were in East Berlin. I remember a couple things. One, I remember smelling the coal that is generated over there. I remember one day on a rather hazy Sunday afternoon, you could not see probably more than a few blocks in a downtown area. So they have real pollution problems.

I am glad at least in most areas of the United States, certainly in my State of Oklahoma, we do not have that significant a problem. I do not want to have it. I am willing to pay something to see we do not have it. I, for one, am willing to make some sacrifices, pay some money to have better air, cleaner air. I think that is an objective that is shared by all in this body, and, I am sure, by all Americans.

Mr. SYMMS. Will the Senator yield for a question?

Mr. NICKLES. I will be happy to yield.

Mr. SYMMS. I ask, is the Senator aware of the fact the West Germans have waived their environmental standards so that East Germans, who came across the border, could drive their polluting automobiles, which were manufactured in the people's paradise, into West Germany?

Mr. NICKLES. I appreciate the Sentor's comment. Yes, I had heard that.

Mr. SYMMS. I think that is a significant point, and we should not lose sight of it. The Communist bloc countries are some of the worst polluters in the world. It is capitalism and entrepreneural freedom that have made the world a cleaner place to live.

Mr. NICKLES. I appreciate the Senator's statement. I see the Republican leader here. I want to compliment him for alerting people of the need to be aware of the provisions of this bill, and also some of the hazards in this bill and, in addition to that, some of the costs.

I encourage the Republican leader and the Democratic leader to work together to see if we cannot come up with a bipartisan package, an affordable package, a reasonable package, one that will not break the backs of the American citizen. I think that is important.

I think these goals are achievable: clean air and an affordable package. I do not think they have to be mutually exclusive. I do not think we have to have clean air at the expense of thousands and thousands of jobs and to the detriment of the economy of the United States.

I do not think we have to have a clean air bill that could be the equivalent of a 10-percent income tax surcharge. Looking at some of the costs, and I know the cost estimates range all over the place, but estimates agree this is a very expensive bill. It may well be that it is not an affordable bill. I am not sure the committee had looked at costs. I think we should discuss what this bill would cost consumers and see if maybe we can make some changes.

This Senator will propose some amendments, in conjunction with other colleagues, to see if we cannot make changes to make the bill more reasonable, more affordable and yet still achieve our common objective of cleaner air. And that is the objective. I think we should not lose sight of our objective. The objective is cleaner air, but also we need to keep in mind making the bill reasonable and effective and affordable.

Mr. BAUCUS. Will the Senator yield for a question?

Mr. NICKLES. I will be happy to yield.

Mr. BAUCUS. I would like to ask the Senator from Oklahoma if he will allow the Senate to vote on the pending amendment? The majority leader was recently on the floor approximately a half-hour ago asking Members, particularly Members on the Republican side of the aisle, if they were willing to let this amendment be voted on.

As the Senator well knows, the pending question is the amendment offered by the Senator from Rhode Island [Mr. CHAFEE] to add methyl chloroform to the list of substances that are to be phased out by the year 2000.

Is it the Senator's intention to speak on that amendment and ask a couple of questions so that when the Senator is finished speaking on the amendment, we can vote? I ask that question because it is clear there will be other opportunities to debate other parts, other titles of the bill, whether it is the nonattainment section, or mobile source.

Mr. NICKLES. I will be happy to answer the Senator's question.

Mr. BAUCUS. I ask the question also because the President, in his State of the Union Message, could very well and probably will ask the Senate to proceed quickly in passage of clean air legislation.

If we are going to pass clean air legislation and accommodate the President, we certainly must take up and dispose of amendments.

Mr. NICKLES. I will be happy to answer the Senator.

Mr. BAUCUS. If I can finish my question. It is not a blockbuster amendment; it is not an amendment that goes to the heart of the bill. This bill, too, is a bipartisan bill. Every member of the committee voted for the bill, Republican and Democrat, for once.

The question again to the Senator is, Is it the Senator's intention to address the amendment and let the Senate then vote on the amendment?

Mr. NICKLES. To answer the Senator's question, it is not my intention to address the amendment. It is my intention to address the bill. My statement may not take as long as his question.

Mr. President, to continue with my statement on the bill, not on the pending amendment, and it is not my intention to object to a UC request——

Mr. SYMMS. Will the Senator yield for one more question? The Senator from Montana is talking about the President; he probably will ask us for a clean air bill tonight in the other body. I think he is talking about his clean air bill, not this bill.

I have a letter here dated January 19, 1990, signed by President Bush to Senator DOLE. I just ask the Senator from Oklahoma, who I am sure has seen a copy of this letter, is it his opinion that if we pass the bill that is before the Senate today, if we pass the bill as it is, and it passes the House this afternoon and goes to the White House tomorrow, the President will veto this bill? Does he believe that?

Mr. NICKLES. I agree with the Senator. As a matter of fact, the President states unequivocally he wants a bill that is affordable. I think he mentions in the range of $18 to $20 billion in one of the passages of that letter.

That is one of the points I wish to address, Mr. President. Yes, we want a clean air bill, but we also want a clean air bill that is effective; we want one that is affordable.

I think there are several sections in this bill, a bill that is very complicated, a bill that is very detailed. The bill itself is several hundred pages. The committee report is several hundred pages. The bill was passed through full committee in 1 day, yet this is a bill that will probably have as much impact on the economy as any piece of legislation we pass, certainly this year, and for what may well be several years. It is a very extensive bill, a very expensive bill, one for which I think a little time, a little further review and analysis would be very much warranted.

I hope the Senate during the next week or so, maybe in the next few weeks, will spend time becoming familiar with the bill. Hopefully, our constituents will become familiar with the bill. I hope we will not pass a bill just so it can be on the President's desk by Earth Day or any other particular day. This bill will have ramifications for decades. This bill will determine whether plants are opened or closed. This bill will determine the size of automobiles. This bill will determine whether refineries or other petrochemical plants will be open or whether we will be importing more goods from overseas. It will have an impact on goods and services, particularly petroleum products, agricultural service products, and automobiles.

This bill would have a dramatic impact on utility bills. I have had some utilities come in and say, "If this bill is passed, utility bills will go up in this region by 25 percent." Well, those consumers should know that, because, again, I am sure, if you ask the question, "Do you want cleaner air?" Everyone will say, "Yes."

I also think people would like to see cleaner air, but they would like to see it in some affordable mechanism. Yes, there are costs in this bill. I have heard some people say this bill will cost $1,700 per household, or $104 billion. I think the administration says its bill would cost around $19 billion, maybe $20 billion.

EPA says the committee bill which is pending before the Senate would cost $41 billion, but they do not even put in a cost estimate for the CO_2 standards, which have the effect of CAFE limitations, and that is a very expensive provision. I tried to find out how expensive it is, and most of the automobile manufacturers say they cannot tell us how expensive it would be because they do not expect they could make and sell a lot of cars that would average 40-miles-per-gallon by the year 2000.

Sure, I have automobile plants in my State. We have several tire companies. We have a big auto manufacturer. We have glass plants. I am concerned about those jobs. I want to keep those jobs. I think most Senators would like to keep a viable auto industry in their State.

I see this bill, if we do not amend it, will do great damage, very significant damage, to the automobile industry in the United States. It may prove to the betterment of the automobile industry outside the United States but be very much to our detriment.

Why is that? Well, because of the bill's tailpipe emission standards. Sure, you say the administration bill had emission standards. Yes; it went up through tier 1. This bill has tier 1, and, generally speaking I will not have an objection if we stop at tier 1. That would make further improvements of auto emissions over the current clean air law. And, yes, it will cost us some money, but we can make some improvements in auto emissions. I think that would be good for the country.

But this bill also imposes a tier 2 requirement to reduce emissions in the year 2000. This provision, if technologically achieveable, would be very expensive. Many people in the auto industry say, well, that would cost maybe $500, $600 per automobile, if it could be accomplished at all without abandoning the current mix of cars sold in the United States.

Why are we trying to pass a bill for the year 2003? Are we trying to pass two clean air bills? I think it would make more sense to let us pass the best clean air bill we can pass with available technology in the year 1990 and then, if we need to pass another clean air bill in the year 1999 or 1997, let us take a look at it then. Let us see what kind of progress we make with one tier. Maybe we will make great progress. Maybe technology will take off. Maybe we can do more and make our automobiles more fuel efficient. I think that is great. I hope that happens.

This bill not only mandates the tier 2 tailpipe standards going into effect clear out in the year 2003, but it also mandates CO_2 standards, which are really just reverse CAFE standards, corporate average fuel economy standards, that go to 33-miles-per-gallon by the year 1996 and, by the year 2000, to 40-miles-per-gallon.

I know the Presiding Officer has an interest in this issue. Do not get me wrong. I want greater fuel economy. Heaven forbid, I have two teenagers driving cars. I want economy. Automobiles and fuel are expensive. But I want fuel economy to be obtainable. I want it to be effective. I want it to be affordable. And I do not want the fuel economy standards to be so rigid it means all of us are going to have to buy Volkswagens or all of us, as the Senator from Idaho said, are going to have to buy these little cars from Germany that look like a cardboard box. I do not think that is what American consumers want.

I happen to have a family of six. That little Volkswagen-type car will not work. As a matter of fact, I started asking questions: How many American automobiles are made right now that meet the 40-miles-per-gallon standard? General Motors does have one. They said, "Oh, we make one. It is called a Geo." It is a three-cylinder Geo, and it is not made in the United States. They make one automobile that meets that 40-miles-per-gallon standard. I tell you this, my family of six will not fit in that car. It will not work.

Not only that, we are talking about this bill being a health bill. I have heard people say this bill is going to save lives. How many lives is it going to cost because we mandate that these automobiles get 40-miles-per-gallon? The cars would have be very light. I do not know the lightest, cheapest type cars that you can think of, but trying to meet our basic transportation needs with those cars is going to cost thousands of lives. Thousands of lives. I think we need to look at that cost as well, not to mention it is going to cost thousands of dollars per car it might add.

Mr. President, I do not know if you have purchased a new car lately, but it already costs a lot of money to buy a new car. I am concerned that if we put all these so-called CAFE standards on new automobiles, we are going to drive the costs up so high that people will not be able to buy the car. And if they cannot buy the car, that means they continue driving their older car, and their older car continues to pollute; it does not get 40-miles-per-gallon; it probably does not get the current standard of 27½-miles-per-gallon. If it is like my son's car, which is a 1969 piece of junk, it probably gets about 8-miles-per-gallon, and it really pollutes.

If we are going to drive the costs of these newer cars up so high people are not going to buy the newer cars, we are not going to have the fleet turnover needed to steadily improve overall air quality and fuel economy. People are going to drive the gas guzzlers and the ones that are the real polluters, and that is a bad result we must avoid.

So the bill may have very good intentions. I do not fault the intentions of the authors, whether it is the Senator from Montana or the Senator from Rhode Island or the Senator from Minnesota. I do not fault their intentions or objectives one iota. But if the result is that we are going to cost consumers thousands of dollars for automobiles or thousands of dollars on their utility bills—and in the case of automobiles we may not be reducing total emissions; we may actually be increasing them because we keep more automobiles in the fleet—I do not want to make that mistake. I do not want to pursue this legislation so

fast—and again I am not filibustering—that we make a serious mistake.

Going back to the Carter administration energy policy, they were concerned that we had an energy dilemma. We had gas lines. We had an energy shortage: A gasoline shortage in urban areas, a natural gas shortage in the Midwest and Northeast caused by Federal price and allocation regulations. So Congress passed several pieces of legislation to remedy that. You know what? We spent the last 8 years undoing all of these so-called Carter administration energy programs. They said, well, let us see, we have a natural gas shortage, so we will pass a Fuel Use Act saying you cannot burn natural gas. We finally repealed the Fuel Use Act because it did not make sense. Why should the Government decide who should burn natural gas? We finally have repealed that.

Just last year we finally passed a natural gas deregulation bill that undid the 1978 Natural Gas Policy Act Amendments which had some 29 categories of wellhead price regulation. We finally undid that piece of handiwork. We finally repealed the so-called windfall profits tax that said, "Oh, industry, you are making too much money," and so they taxed the oil industry. It took about $77 billion from a handful of States. We finally were successful in repealing that. We finally repealed the so-called Synfuels Corp., another one of these ideas that Government can solve energy supply problems.

Do not get me wrong. I wanted to have synfuel development. I just did not want the Federal Government writing the check. But it was this idea that we have a problem, let us pass a bill. They passed a series of massive laws in response to an energy crisis. It was wrong. It was a mistake. It took us 8 years to repeal all that legislation.

Last year Congress finally repealed two pieces of legislation; section 89 and the so-called catastrophic health insurance bill, thanks in large part to the Senator from Idaho. Both of those were mistakes that went back to the 1986 tax bill and one was passed in the catastrophic bill which just passed the previous year.

They were passed with good intentions. Again I do not fault the authors. They were well intended, but they were faulty legislation. They were mistakes.

I am afraid Congress is getting ready to make another mistake now. I am afraid we will make a mistake if we do not spend enough time in studying how much this bill is going to cost. How much will this bill increase the cost of automobiles in Idaho or Oklahoma. How much will this bill increase the cost of utilities in Oklahoma or maybe in New Jersey or maybe in Illinois or possibly in Alabama? How much will the utility bills go up? Will they go up 25 percent? How much will the environment be improved at that cost? What about acid rain? How much sulfur reduction is really needed to protect the environment and how much is this going to cost?

I have been told in my State we are well below 1.2 pounds. We have been a clean State, so if we want to have any growth after 2000 we might have to go out and buy credits from a so-called dirty State or State that has been polluting more than our State. We might have to buy credits, if they are available, from those States so we can have industrial expansion in Oklahoma.

I expect that would apply for Nevada, New Mexico, and a lot of the Western States. It is really fair for those States to have to subsidize the cleanup in other States because they are burning dirty coal and we happen to be burning clean coal? The fact is that we have been paying extra to import coal all the way from Montana and Wyoming into my State so we have clean coal, and we have more modern plants so we have a cleaner environment. Why then should we help subsidize improvements made in other States which have been burning dirtier coal and have pollution problems? I think we have to address these questions.

I happened to have been a manufacturer before coming to the Senate. I ran a manufacturing plant. I look at this air toxic section, and I can see those provisions sending a chill down the back of every single manufacturer in the country. How are we going to comply? I am sure if you went by many of the plants in the country you would say they are in compliance. There are many clean plants. I think the solution in this bill is a problem.

Then you start reading about maximum technology, maximum achievable control technology. OK, maybe they can do that. I do not know how much that will cost. As defined in the Senate bill maximum means—the Senator from Montana can correct me—if anybody else is doing it in the industry you need to do it as well. They must do everything they can do.

I understand that MACT is also in the administration's bill. MACT is a big first step in controlling toxic emissions. But this bill goes beyond MACT. It also specifies a residual risk standard. Residual risk? What is this? Well, I started to look at it. I am not an expert. I looked and said, "wait a minute." If you happen to be emitting any one of the 200 or more so-called hazardous pollutants, and the emission rate is such that if a person on the perimeter of that plant was exposed—and by exposed they mean a person standing outside the plant 24 hours a day, 70 years in a row—if one out of 10,000 people could possibly contract cancer, then that plant has to close if that plant cannot get the emission level reduced below that 1 in 10,000 risk.

And that analysis is nothing but a model. That is nothing but a theoretical model that may or may not be right, and in all cases I would think it would be wrong because who in the world would stand outside the plant in the most vulnerable area possible for 24 hours a day, 70 years in a row? Of course no one would.

Yet, that is the standard in this bill. I think that goes too far. Why are we trying to pass two bills? Why are we not only going to MACT, but we have to go into a bright line standard for residual risk? It is not in the administration's bill, and it is not in the House bill. It is the most expensive provision in the Senate bill.

For those who are really concerned about the acid rain provisions, I will encourage them to look at the toxic provisions. The toxics provisions are far more onerous on the economy, on consumers, and taxpayers—on people who buy and sell things—a lot more onerous than the acid rain provisions.

So people need to become more familiar with the toxics provisions. I am afraid most people are not. I think they would have a real detrimental impact.

I have looked at the nonattainment provisions. We had a hearing on this bill before the Energy Committee. Tulsa happens to be in ozone nonattainment, because in the 3 base years one detector was deemed to be in nonattainment because of EPA modeling. Excessive ozone was not actually measured.

We think now Tulsa should be declared to be in attainment because in the last 3 years we have not had ozone levels above the limits. If we do not get Tulsa delisted, I understand this bill expands the definition of nonattainment area to continuous counties in the Tulsa area. The metropolitan area is 570 miles. With the expansion as contemplated in this bill, it could easily be 4,400 square miles.

Wow. What kind of damping impact can that have on the economy, not only in the Tulsa area, but in a very significant portion of Oklahoma.

I do not want that to happen. We need to use a little common sense. We need to use some reason. We need to put together a bipartisan bill. We need to put together a bill that works—not one that just sets absurd goals and says we hope we can get it—and it is going to be a goal-driven bill. We need to get one that we can work with, that will achieve our objectives, that is, cleaner air one that will reduce emissions of toxics pollutants.

I am in favor of that. I think we can do it in an affordable manner. I think this bill in many cases fails that test.

So I am hopeful that now with the cost estimates that are becoming avail-

able from the administration and many environmental experts, we will listen to some of the objections that have been raised in trying to take care of those concerns. I do not really think people in this chamber want to eliminate the American automobile industry. I do not think people in this Chamber want to increase utility expenses by 10, 15, 20, 25, 30 percent all across the country.

Again, I think we can make some improvements. I think we can pay to make some improvements. The administration has a bill that will cost $18 to $20 billion. That is pretty expensive. But this bill is many times more expensive.

So hopefully we can work out something that will clean the environment, clean our air, give our children a legacy that they can be proud of to pursue their objectives in a clean environment, and in a safe, healthy environment. I think we can meet those objectives and also have it be affordable; have it be effective, and actually have it work.

Mr. SYMMS. Will the Senator yield for a question?

Mr. NICKLES. I am happy to.

Mr. SYMMS. I want to compliment the Senator for his very excellent remarks. I think the Senator is right on target. The President's bill would cost at least half as little as this bill and would do 98 percent of all the clean up that the committee bill would do. So I think it is a fair trade.

The Senator was engaged in this discussion because I know his State is a large producer of automobile parts, is involved in the automobile industry, and is concerned about those jobs, as well he should be and as well he is. But I can tell the Senator if he had the opportunity to come to our committee—and he has an open invitation from this Senator to join this committee at any time—there is a large group of people who testify before that committee on a regular basis that are called professional environmentalists. Sometimes I get carried away and refer to them as elitists.

Ask these people what they want to do on the CAFE standards if they really advocate driving in disposable automobiles where Americans will be maimed, ruining many more lives in disposable lightweight cars than would be at risk in cars that may have a little more safety. The answer, the Senator will be surprised again, from many of those people is they want to get you out of the automobile.

It is kind of like the elitist of the past, when Marie Antoinette said "Let them eat cake." Some of these folks would say "Let them ride bikes, let them ride trains," take away that life that Americans have enjoyed to be able to go where they want to when they want to, on a road they paid for by buying their own fuel and paying a fuel tax. They want to take away the American automobile which is one of the things that gives Americans more mobility, more freedom, more opportunity than anything else practically we have—to set our own travel schedule on a road we helped pay for, and is paid for in advance.

But they want to remove that freedom. There is a large group of people—I am sure the Senator is aware of that being on the Energy Committee, who listens to these folks. They have a very elitist viewpoint; make cars so costly that you force human behavior to change. And the record shows clearly that the countries that have carried that elitist view the furthest have the most unhappy populations.

Mr. NICKLES. I appreciate the Senator's comments. Mr. President, I will conclude with one statement. The Senator made a valid point, and I guess again it goes back to the so-called CAFE standards.

Can we meet 40-miles-per-gallon? Yes, but we may not have automobiles. We may do it with motorcycles or mopeds and may do it with bicycles, but, yes, we can pass the law. It may change the way America moves.

I would like to see fuel economy increasing, as long as it is done in a free society. I do not want to mandate it by this bill. As a matter of fact, if you could change the CO_2 standards, instead of having 40-miles-per-gallon, make it 50. That has been proposed by some Members of this body. The point is, we are going to drive motorcycles or bicycles or automobiles so small and unsafe that it will cost a lot of lives.

My one son wanted to buy a motorcycle, and I did not want him to, because I thought it would be dangerous, particularly in a lot of areas around here. I did not want him to. That was our choice. I do not want to pass a law that will make it unsafe for millions of Americans. There are automobiles right now that get pretty good fuel economy. They do not get 40 miles a gallon, but maybe 30 something.

A lot of those automobiles, I can tell you from experience, are not very safe. I had a daughter that was driving a used 1985 American high mileage automobile that had a wreck when she was going 20 miles an hour, and it totaled the car. It was a tin can. That is not very safe. I would not buy that car again. It was too dangerous.

I think, again, we have to look at all considerations. Sure we want to look at fuel economy. I happen to be concerned about the amount of oil and gas we are burning in this country. I think we are becoming far too dependent on unreliable foreign sources. Last year we imported 46 percent. This year, I would guess, we will be importing right at 50 percent of our petroleum needs. I will project that in about 5 years it will be 60 percent. That leaves our entire country very vulnerable to unreliable foreign sources.

I do not like seeing that happen, but I still do not want to pass a CAFE law because it says, "this is going to reduce oil imports." I think it will be a tragic mistake for us to be mandating that type of thing on the American consumer, on the American society. We do not want to make that kind of mistake. That is another reason I think we need a little more time on this legislation. More people to become familiar with it. Not everyone has served on the Environmental Committee and has had the opportunity to work on this for years. So we need to acquaint ourselves more.

I encourage my colleagues to acquaint themselves on several specific provisions of this bill that really need to be addressed, if we are going to have a bill. I say, "have a bill," because either there is going to be a filibuster, or probably, because the President will veto the bill if it is not improved. One of the chief reasons is the overall cost of the bill.

The President said he does not want to have a bill that costs more than his original proposal, which was $18 to $20 billion. I think the President should stand on that feature, and I expect that he will.

Another provision, the CO_2 or CAFE standards I alluded to, that should be dropped. That is not in the House bill or in the President's bill, and it should not be included in the Senate bill. Maybe we can take it up on another issue another day, but it should not be part of this bill.

Another issue deals with the residual risk. We will have to use common sense, and we really should not have that portion of the bill. That is going far beyond maximum achievable control for technology, and it is enormously expensive.

The estimated cost of that is $60 billion some a year. Assuredly, that is hard to estimate. Who knows how much it will cost? Who knows how much the CAFE standard of 40-miles-per-gallon costs? It is hard to put a figure on it. How many automobiles are we going to make? If they do not make automobiles, how much does it cost? It means consumers are going to be buying a lot more foreign automobiles. How many jobs will be lost? How many tires are not going to be made, and so forth? It is hard to compute. It is a very expensive provision.

Incidentally, the administration's cost estimate of the bill, the committee bill, when they said $41 billion, they did not have a cost estimate for the CO_2 CAFE standard portion of the bill. It is kind of hard to figure. They did not get it. It is in the billions and is not even in this bill. So that is another serious problem.

The tier 2 emission standards need to be eliminated. We need to take that out. Senator LEVIN and I have an amendment dealing both with CO_2 CAFE standards and the second tier of the emissions. We need to strike those provisions, and hopefully that will be done.

There is a problem dealing with permitting. I will speak on that at another time. This bill leaves so much work to be done, including in the permitting section, and I will address that shortly.

I hope my colleagues, Senators BAUCUS, CHAFEE, MITCHELL, DOLE, SYMMS, SIMPSON, DURENBERGER, and others who have leadership expertise on this bill, can alleviate some of these concerns. It is not going to do anybody any good to pass a bill and have the President veto it. I hope we can form a bipartisan bill, alleviate a lot of the concerns that have been raised by utilities and industry, automobiles, consumers and others. Let us see if we cannot fashion a bill that is workable, that is effective, that is affordable, and that does clean the air.

I yield the floor.

Mr. CHAFEE addressed the Chair.

The PRESIDING OFFICER. The Senator from Rhode Island.

Mr. CHAFEE. Mr. President, I want to say to the distinguished Senator from Oklahoma that he is a very thoughtful Member of the Senate, and we appreciate hearing his views, and it seems to me that the objective of this exercise, which is now in its second week, is to educate everybody, and we want people to be familiar. Those of us in favor of this legislation are not trying to slip anything by anybody. We do not make any claim to perfection.

Indeed, if amendments come forward that are deserving of consideration—and hopefully amendments will come forward—I look forward to having the opportunity to speak further with the Senator from Oklahoma and get some of his ideas. I know he is concerned about the toxic air provision. Again, as he mentioned in his remarks, the cost estimates are all over the lot on that, but I hope we can incorporate some of the thoughts that the Senator might have in this legislation.

First of all, we want legislation that will pass, that is going to meet the President's approval, and we want legislation that accomplishes the goals of the bill, namely, cleaner air. I thank the Senator for his thoughtful remarks.

Mr. BAUCUS addressed the Chair.

The PRESIDING OFFICER. The Senator from Montana [Mr. BAUCUS].

Mr. BAUCUS. I, too, join the Senator from Rhode Island on his remarks, with respect to the statement made by the Senator from Oklahoma. This is a complicated bill. No doubt about it. The Congress has not enacted significant clean air legislation since 1977, and the first Clean Air Act was passed by the Congress in 1970. The next major change was 7 years later in 1977. Here it is in 1990, a full 13 years later. This is complicated stuff, no doubt about it.

It is important, though, that we set clean air policy that is the best possible policy. That is, a policy which in fact cleans up the smog in our dirtiest cities, which in fact cuts down toxic emissions so that we reduce the incidents of cancer, as much as we reasonably and possibly can, legislation which in fact cuts out SO_2 emissions so the rivers, lakes, and streams can begin to naturally regenerate.

It is important that we do so, because if we have not passed significant legislation in 13 years, it is unlikely that we are going to again address this subject at a later date in this decade. So the statute we pass now, that we enact and is signed by the President in 1990, will in effect not only set the policy for the 1990's, but also set the stage for the next century.

So it is imperative that we do the very best job we can now given the number of years it takes to pass clean air legislation.

The Senator from Oklahoma mentioned some legitimate concerns. They are concerns that have been raised by various other Senators. I submit, however, that the vast bulk of those concerns are concerns that can be answered and will be answered favorably once the full context of the bill is more fully understood, that is, once Senator go into the bill more deeply, look at the actual provisions of the bill, the actual language, look at the exemptions and the exceptions that are in the bill as well as the language as in the committee report accompanying the bill.

It is my experience in the last 2 weeks that the vast bulk of the questions that Senators have when they come up to me and come up to other members of the committee are questions that are answered favorably once they talk to us and once we try to answer. If we do not have the answers we go back to our staff and get the answers. That has been true in the vast bulk of the cases. There are some other cases where Senators have raised legitimate questions which we will probably have to address in amendments in most cases. Those will be amendments that the committee will agree with.

The Senator from Oklahoma mentions some questions about the acid rain portions of the bill. There are many Senators who have questions on the acid rain portions of the bill. In the main, they exist because the President has asked that we and the Congress enact legislation that reduces the total SO_2 emissions in this country from the present 23 million tons annually to 10 million tons annually by the year 2000. That is the cap. That is the enforcer which is driving the main provisions of the acid rain part of the bill.

We, in the bill, agree with the President. We have, in the main, adopted almost all of the President's requests in the acid rain portion of the bill. Nevertheless, we are trying to work out those questions that Midwestern States face, the State of Oklahoma faces and Missouri, Arkansas. There are a lot of States that are trying to find a way to grow in the future and yet comply with the provisions of the bill, that is, reduce SO_2 emissions. Those are legitimate concerns, and we are attempting to address that. And I can give full assurances to the Senator from Oklahoma that once we get more data back from EPA as to various alternatives, what the emission effects are, we are in a position to work not only with the Senator from Oklahoma but with the Senators from other States that are affected with the same kind of problems in the acid rain portion of the bill.

So I ask the Senator's patience as we try to work those provisions out. I am not confident we will have all the answers. It may be we do not have all the answers. It may be we are going to have to vote on the matter. But it is the intention of the Senator from Montana as well as the Senator from Rhode Island, I know, to undertake every effort to try to find a way to accommodate those concerns so long as they are within the 10 million ton cap, as requested by the President. The President stated that over and over again and also it is a provision in this bill.

If I might make one other point here, and that is this: The Senator raises legitimate questions about air toxic provisions of the bill particularly the residual risk. Residual risk is in the air, so to speak. That is, we hear it around the Senate, what is this residual risk, what is it all about, and what are its effects?

As the Senator said the provisions of the bill with respect to maximum achievable controlled technology are the same as recommended by the President. The next question though is what about residual risk? That is an important question to ask because if you compare the two, you will see that the vast bulk of the difference is really two areas. One area is the second round tailpipe emission and other residual risk, and that is really what we are talking about here.

We in the committee have heard countless hours of testimony on the first issue, the second round tailpiping, and I know the Senator from Oklahoma has a different view on this point. But it is my very strong view, after

looking at all the data, after questioning witnesses, from all the vast array of different points of view, that the roughly 7 million to 1 million difference in the cost of second round tailpipe is a difference which should not exist; that is, the higher estimate is based upon, as the Senator said, an industry estimate, say, roughly $500 to $550 per car by the year 2000 when the second round will go into effect.

The committee, though, in deep inquiring questions of the California Air Resources Board, of the manufacturers who make the catalytic converters and supply them to the auto industry tell us, no, EPA, no, the cost is not $500 per car, it would be about $127 per car. That is direct testimony of the companies who make that stuff, who make the catalytic converters, who make the equipment that must comply with the law in the year 2003, and the direct testimony of the documents backing it up with the California Air Resources Board, an agency that for years has been mightily endeavoring, struggling, trying to find a way to solve California air pollution control problems. In addition to that, I must say——

Mr. NICKLES. Mr. President, if the Senator will yield before he leaves the emission, I understand the difference in the estimate of tier 2 emission standards, range of $127 to $550 or $700. No one ever put a cost estimate on CO_2 standards or so-called CAFE standards; that is left blank. Anybody knows if you mandate automobiles to reach 40-miles-per-gallon, there is a cost involved, but it is hard to ascertain, and therefore I do not think you can say this bill is only going to cost $200 more per automobile when you have something undefined such as mandating all cars reach 40-miles-per-gallon. That is a cost involved, and I think we need to address that cost.

The administration did not put the cost down; the Business Roundtable did not have a gas mileage provision analysis. I asked GM for an estimate. They said, "We cannot do it. We think we are not going to be able to make cars if that standard exists, or not a significant number of cars."

My guess is they would make some but not much. But you are talking about the decimation of a major industry in the United States which would also have repercussions for steel, glass, rubber, and all the other multitudes of industries that are tied to the auto industry. That is not even calculated in anybody's cost estimate of the so-called EPA estimate that the cost of the committee bill is $41 billion, and it is an astronomical figure.

So I am kind of concerned when we talk about cost, and they leave something out. We have not figured out what the CAFE would be.

Mr. BAUCUS. The Senator makes a good point; that is, the cost estimates on the CO_2 provision of the bill are not as fixed as they are in the second-round tailpipe part of the bill. The Senator is correct on that. That is basically the point I am making here, the basic point; namely, this is a good-faith effort to determine what are the true costs of the whole bill, that is, to let us look at the facts and not get involved in histrionics or hyperbole and emotion, and so forth, let us get down to brass tacks and see what the cold, analytic facts are.

The Senator is correct with respect to the CO_2 portion. The costs are not nearly as available. That is something we have to nail down better than we now have. The Senator is correct on that.

With respect to the second round, I am telling the Senator I looked into that very clearly and deeply. I respectfully say to the auto industry that the costs are not what they say they are. The costs are going to be at a lower level.

One other point, I know the Senator wants to speak. There will be plenty of opportunity to speak later.

On residual risk, the cost difference on residual risk is really based on one assumption. It is the assumption of the EPA. It is the EPA's cost estimate of the Senate bill is based on assumption that present technology used, that is, if you look in the future—and remember on the committee's bill the earliest possible date will be the later date, but the earliest possible date that a plant might have to shut down would be 15 years after date of enactment. That is the earliest possible date. In all probability, it will be several years after that if the provision goes into effect.

Now there are some very dirty plants in this country. There is one in Texas where 3 out of 10 employees get cancer. There are a lot of plants in this country that are really dirty plants, that emit lots of toxic chemicals that are cancer causing; there are a lot. I do not know whether we want to keep those plants in operation.

Here is the point. EPA bases its cost assumptions on present technology. And then EPA goes on to say that that is unreasonable assumptions; that is, that from 15 to 23 years from now it is unreasonable to assume that present technology will be the technology that will be put in place 15 to 23 years from now. So it is an unreasonable assumption.

So EPA itself admits, therefore, in effect that its cost estimates are unreasonable.

Do not forget not too many years ago when this Congress asked the auto industry to build catalytic converters the industry said it could not be done, the technology was not there, impossible; that is, they could not reduce tailpipe emissions 90 percent, could not be done. Congress determined, "Well, we hear you, auto industry, but it is such a great problem we think you should proceed. By the way, we think you can. We trust you. We have more faith in you, auto industry, than you have in yourself. We think you can develop the new technology to reduce the tailpipe emissions 90 percent."

And guess what? It happened. Tailpipe emissions were reduced 90 percent. It happened not in 15 years, not in 23 years, but in 5 years. In 5 years, the auto industry developed catalytic converters to reduce tailpipe emissions by 90 percent.

I have great faith in American industry. They can do the job. And, frankly, Mr. President, I think the future of this country depends upon that. It depends on us having faith, American indusry having faith in developing new technologies for the future. Because if this country continues to say no, if this country stonewalls, if this country says it cannot be done, then Mr. President, it will not be done and the disservice will be to the American people; it will be to our kids and to our grandkids.
